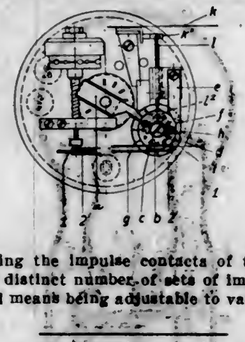
1. In a device of the character described and having a container provided with a perforate bottom, the marginal portion of the bottom being imperforate, the bottom adapted to receive a filter sheet, the marginal edge of

which rests upon said imperforate margin, and a filter sheet holding ring having internal flanges at its top and bottom, the bottom flange adapted to clamp the marginal edge of a filter sheet upon the imperforate marginal edge portion of the bottom, said ring adapted to frictionally engage the side wall of the container adjacent to the bottom and the upper flange serving as a finger hold for removing the ring.

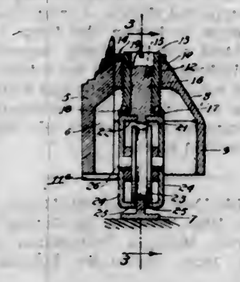
1,780,752. CONTROLLING DEVICE. FREDERICK C. KINNEY and WALTER T. STOCKTON, Evanston, Ill. Filed Feb. 16, 1925. Serial No. 9,461. 5 Claims. (Cl. 200—38.)

1. A controller comprising a clock mechanism, an electric switch, means associated with said clock mechanism for actuating said electric switch, means for prohibiting the operation of said actuating means, and an indicator for designating the position of said prohibiting means, said indicator comprising a resilient member, an indicating tab associated with said resilient member and adapted to appear when said resilient member is compressed.



1,780,753. PRICE-MARKING TAG. FREDERICK KOHNLE, Dayton, Ohio, assignor to The Monarch Marking System Company, Dayton, Ohio, a Corporation of Ohio. Filed Jan. 6, 1928. Serial No. 245,012. 1 Claim. (Cl. 40—23.)

A tag, comprising, a body of plural ply, the material thereof folded upon itself providing a fold edge at one end and the plies adhesively united, and a hook clip extending from the body of the tag to engage about the material to be tagged and to be folded therewith for securing the clip to the material, said clip having a pair of parallel prongs engaged through the fold edge at spaced points, the ends thereof between the plies formed into scrolls for anchoring the clip to the tag.

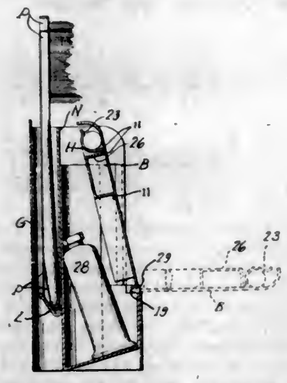


1,780,754. COIN-OPERATED TELEPHONE APPARATUS FOR AUTOMATIC TELEPHONE EXCHANGES. WILHELM KRUSE, Berlin, Germany. Filed Dec. 20, 1928, Serial No. 327,233, and in Germany Dec. 23, 1927. 5 Claims. (Cl. 179—6.3.)

1. An impulse dial apparatus for telephone systems of the character described comprising, in combination, a dial mechanism adapted to send out a consecutive number of sets of impulses according to special indications for calling a particular subscriber, a step-by-step mechanism associated with said dial mechanism and operated thereby, and means operated by said step-by-step mechanism for

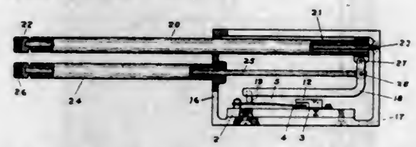
short circuiting the impulse contacts of the dial mechanism after a distinct number of sets of impulses has been sent out, said means being adjustable to vary said number.

1,780,755. ROLLER OR CASTER. MORRIS KURTZON, Highland Park, Ill., assignor to Garden City Plating and Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 23, 1928. Serial No. 272,254. 1 Claim. (Cl. 16—100.)



A device of the kind described comprising a housing attachable to the side of a sliding door and opening downwardly, said housing being substantially dome-shaped and having a threaded bore through the axis of the dome, a threaded sleeve extending through opposite ends of said bore, a rotatable spindle carried by said sleeve, a wheel below said spindle, a yoke secured to the lower end of said sleeve and in which said wheel is mounted, and means engaged with the upper end of the sleeve and abutting the housing to lock said sleeve against rotation, said means and said sleeve being exterior to the housing for ready access.

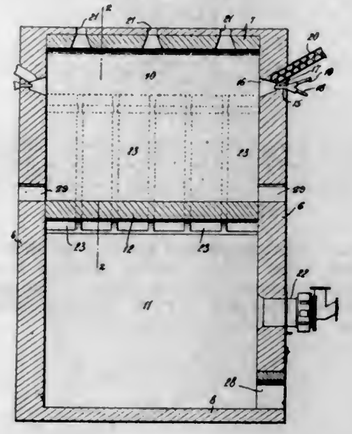
1,780,756. CIRCULAR-KNITTING MACHINE. NORMAN D. LANSDOWN, Wilmington, Del., assignor to Standard-Trump Bros. Machine Company, Wilmington, Del., a Corporation of Delaware. Filed Jan. 25, 1929. Serial No. 334,920. 9 Claims. (Cl. 66—123.)



2. In a circular knitting machine equipped with a yarn guide movable into position to fed yarn to the needles and another yarn guide adapted also to feed yarn to the needles, the process of knitting only the second yarn into the fabric which comprises moving into and maintaining in yarn feeding position the second named yarn guide during the knitting of approximately half a course and then withdrawing it, and during the knitting of approximately the same half course deflecting the yarn carried by the first named yarn guide so that it will feed yarn only to the first one or more needles and the last one or more needles which knit the said half course.

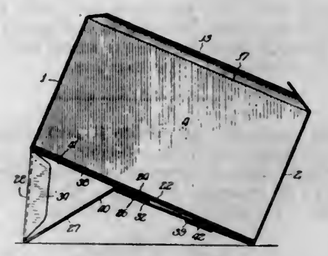
1,780,757. DENTAL CABINET. CLARENCE A. LAWSON, Sr., and CLARENCE A. LAWSON, Jr., Los Angeles, Calif. Filed Oct. 31, 1929. Serial No. 403,829. 1 Claim. (Cl. 132—84.)

A device of the character disclosed, including a casing having a plurality of brush holders formed and arranged for maintaining the brushes in upright position with the bristle heads above said holders; said casing having a compartment for a dentifrice holder and the like; said casing having an inclined bottom portion normally disposing such dentifrice in inclined position in the casing, and a closure for said opening provided with means for mounting thereon other dental requisites.



1,780,758. THERMOSTATIC APPARATUS. HENRY G. LEUPOLD, Cambridge, Mass., assignor to Electrical Laboratories, Inc., Boston, Mass., a Corporation of Massachusetts. Filed Mar. 3, 1927. Serial No. 172,225. 14 Claims. (Cl. 200—137.)

1. In an apparatus of the character described, the combination of a controlling element, an operating member for moving said element from one position to another comprising a leaf spring of substantially homogenous composition, and a support for a portion of said spring leaving another part thereof free to move from one position to another, said spring being split for a considerable portion of its length and the sections thereof sprung slightly toward each other whereby an area is produced adjacent to said support upon which a slight motion will produce an increased and abrupt movement of the free part of the spring.



1,780,759. METHOD FOR PRODUCING WATER GAS. SYDNEY JOHN MCAULIFFE, Sydney, New South Wales, Australia, assignor, by mesne assignments, to Fuller Lehigh Company, a Corporation of Delaware. Filed Sept. 21, 1921. Serial No. 502,141. 7 Claims. (Cl. 48—202.)

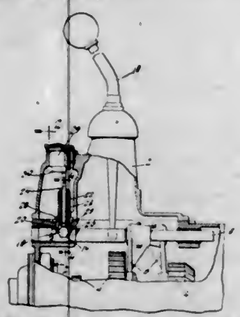
1. The method of producing water gas, which comprises maintaining a quantity of pulverized coal and steam in intimate mixture in suspension in the form of a relatively thin, vertical sheet of great expanse by continuously supplying pulverized coal and steam to the sheet near the top thereof, and distilling the coal while in suspension

and substantially dissociating the steam into its component elements in the presence of incandescent particles of the coal by the application of heat to both faces and along the bottom edge of the sheet.

1,780,760. DISPLAY BOX. RALPH MCCLELLAND, HENRY K. POWELL, and SAMUEL N. LEOPOLD, Chicago, Ill., assignors to Morris Paper Mills Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 18, 1929. Serial No. 333,270. 18 Claims. (Cl. 206—44.)

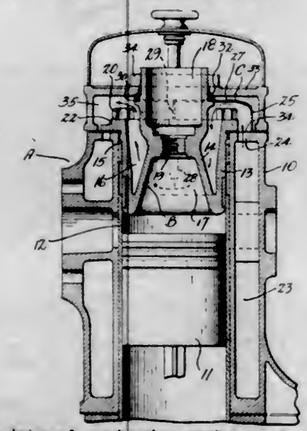
1. In a folding display carton, a foldable extension of the rear side of the carton forming a rest, a tab at the free end of the rest, the bottom of the carton having an opening to receive the tab, an additional member for normally securing the rest in a position flat against the bottom of the carton with the tab extending past the receiving opening, whereby the securing means may be released and the tab inserted in the receiving opening thus bending the rest and forming a support to hold the carton in a forwardly inclined position.

1,780,761. THREAD-GUARD CASTER. HARRY C. NASCHKE, Jr., Philadelphia, Pa., assignor to Morris Truck and Wheel Co. Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 17, 1928. Serial No. 320,096. 4 Claims. (Cl. 16—46.)



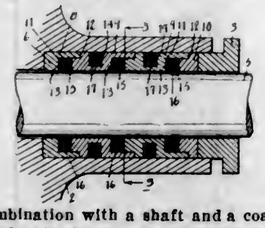
1. In a device of the character stated, a caster housing composed of a pair of symmetrical sections, each of said sections registering and aligning with the base of the other of said sections and having a base, pendant arms

and a body portion having inwardly converging, annular, peripheral outer walls, and a caster rotatably mounted within said housing sections and having a hub, a web,



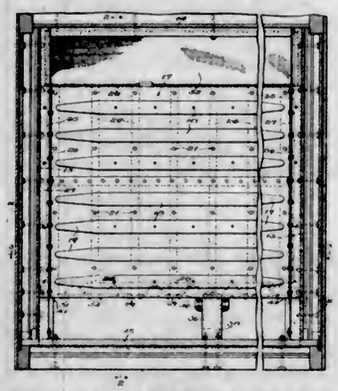
and having a tread whose edges overhang the juxtaposed peripheral edges of said housing sections, said base, arms and body portions of said housing sections being integral.

1,780,762. TRANSMISSION LOCK AND INTERLOCK. ROBERT NEEF, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 2, 1925. Serial No. 27,506. 16 Claims. (Cl. 70—126.)



1. The combination of a plurality of sliding members having notches formed therein, said members being cut away between said notches, a stationary part, means cooperating with said stationary part, said notches and said cut away portions adapted to lock one of said members in position when the other is moved and to limit the extent of movement of said members.

1,780,763. SLEEVE-VALVE ENGINE-CYLINDER HEAD. ARCHIE MACPHAIL NIVEN, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a Corporation of Virginia. Filed July 25, 1927. Serial No. 208,189. 7 Claims. (Cl. 123—173.)

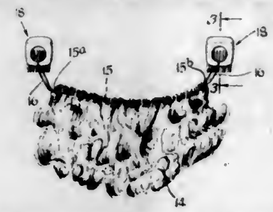


1. An internal combustion engine of the sleeve valve type comprising in combination, a water jacketed cylinder, a piston operable therein, a water jacketed cylinder head forming a sleeve pocket with the cylinder, a cylinder head water jacket cover cooperating with the cylinder head water jacket to provide a conduit for the cooling water, a cylinder head top cover forming a water header, and means engaging the cylinder head for clamping the top cover in position and for maintaining the jacket cover in proper position.

1,780,764. ROTARY-SHAFT PACKING. JOHN H. NOBLE, Kalamazoo, Mich. Filed Dec. 3, 1928. Serial No. 323,220. 2 Claims. (Cl. 286—33.)

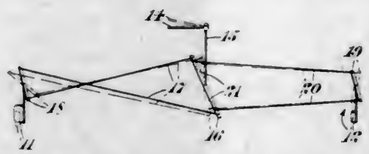
1. The combination with a shaft and a coacting stuffing box shouldered at its inner end and provided with a gland, annular packing ring holder members closely fitting within said box arranged in end to end abutting relation and comprising inner and outer members, and a plurality of intermediate members, the inner and intermediate members being internally shouldered at one end and the outer and intermediate members having external rabbets receiving the shouldered ends of the adjacent members providing internal annular packing ring grooves, the intermediate members having external annular packing ring grooves, and packing rings of resilient material arranged in said internal and external grooves.

1,780,765. ICE BUNKER FOR REFRIGERATOR CARS. ARTHUR F. O'CONNOR, Chicago, Ill., assignor to Union Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 20, 1928. Serial No. 307,114. 16 Claims. (Cl. 62—19.)



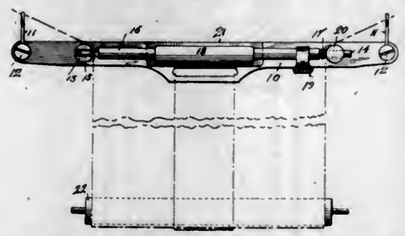
1. In a structure of the class described, a metallic bulkhead including a corrugated body portion and marginal plane surfaces, certain edge extremities of the latter being provided with flanges extending substantially at right angles to the main plane of the bulkhead in one direction and another edge extremity being provided with a flange extending in the opposite direction.

1,780,766. HAIRDRESSING ACCESSORY. JESSE OPPENHEIM, New York, N. Y. Filed Dec. 26, 1929. Serial No. 416,436. 4 Claims. (Cl. 132—53.)



4. A hair dressing device comprising a tuft of hair and an anchoring member therefor comprising a comb

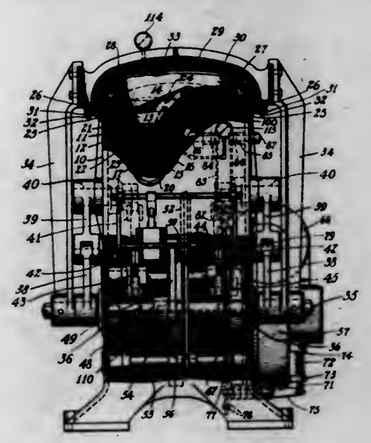
portion having teeth adapted to engage the natural hair and a portion interconnecting said teeth, a portion rigid with said interconnecting portion and extending in the



direction of said teeth, and means for attaching said tuft to said extending portion at a point thereon spaced from said interconnecting portion.

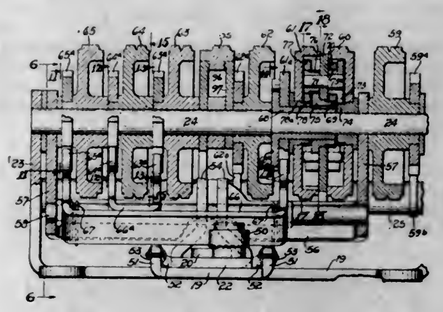
1,780,767. MEANS FOR STEERING WATER CRAFT. HUBERT SCOTT-PAINE, Hythe, Southampton, England. Filed Mar. 16, 1929, Serial No. 347,606, and in Great Britain Dec. 1, 1928. 1 Claim. (Cl. 114—163.)

A water-craft having a rudder situated forward of amidships, a rudder situated at or near the stern, a single controlling device for operating both rudders, and adjustable means interconnecting the rudders to permit the movement of one rudder as compared with that of the other to be varied at will.



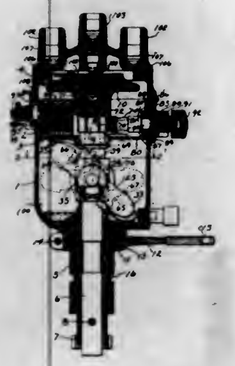
1,780,768. FABRIC-TENSIONING CLAMP. ALEXANDER C. PARLINI, Woodside, N. Y., assignor to Gotham Silk Hosiery Company, Inc., New York, N. Y., a Corporation of Delaware. Filed May 11, 1929. Serial No. 362,199. 3 Claims. (Cl. 66—149.)

1. In a fabric tensioning clamp for footer attachments, a base plate having studs mounted thereon in spaced relation, a bar swingably held on one of said studs and engaging the other of said studs at a definite distance from the base plate, an eccentric sleeve on said bar and means spaced apart from the sleeve to rotate said sleeve about said bar.



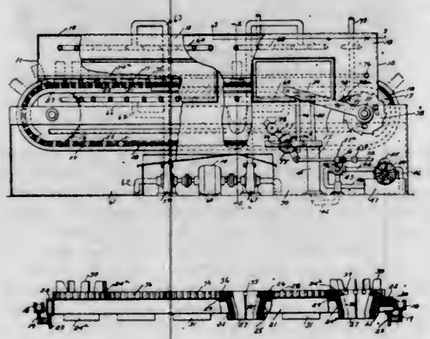
1,780,769. APPARATUS FOR SOLING AND PRESSING FOOTWEAR. CHARLES M. RICHARDSON and VIRGIL H. BODLE, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed July 7, 1927. Serial No. 204,016. 11 Claims. (Cl. 18—2.)

1. Apparatus for soling and pressing an article of footwear, the said apparatus comprising means for supporting a last with an upper and a sole thereon, a flexible diaphragm, means for applying a pressure fluid against said diaphragm on one side thereof to press it against the sole, fluid-confining means which with the other side of the diaphragm and with the upper defines a pressure



fluid chamber for applying pressure fluid locally to the upper in direct contact therewith, the said fluid-confining means comprising a lip-gasket member adapted to seal against the upper about the mouth thereof.

1,780,770. PORTABLE TIME-STAMPING MECHANISM. EMILIO SALUSTRI and GIACOMO SALUSTRI, Detroit, Mich. Filed May 31, 1927. Serial No. 195,286. 3 Claims. (Cl. 235—135.)

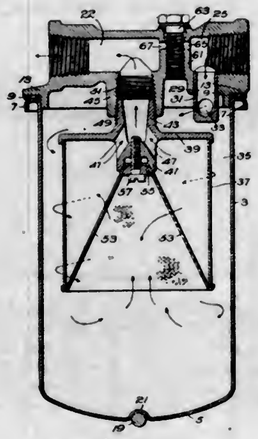


1. In a time stamp, the combination of a stationary guide plate, bearing brackets on said plate, a main shaft supported by said brackets, a plurality of type-rollers and ratchets loose on said main shaft, means for yieldingly connecting each ratchet with one of said rollers to permit limited circumferential movement, a holding dog and an actuating pawl for each ratchet, a common pivoted support for said pawls, said pawls being rigidly secured on said support in stepped relation whereby normally at least one pawl engages its associated ratchet, said ratchets having notches of variable depth to permit successive engagement of said pawls upon predetermined rotation of the adjacent ratchet, a clockwork controlled slide having upstanding slotted lugs on said guide plate adapted to operate said pawl carrying support, and a shaft oscillatable about said main shaft and carrying said support and extending through said slotted lugs, whereby said shaft is bodily moved to operate said support when the clockwork controlled slide is reciprocated.

1,780,771. GOVERNOR FOR BATTERY-IGNITION SYSTEMS. WOLFGANG E. SCHWARZMANN, Longmeadow, and CHARLES STRNISTE, Springfield, Mass., assignors, by mesne assignments, to The Electric Auto-Lite Company, a Corporation of Ohio. Filed June 4, 1921. Serial No. 475,065. 26 Claims. (Cl. 200—22.)

3. In an ignition system for internal combustion engines, the combination of a mechanical interrupter, a driving shaft, a governor mechanism rotatable with said shaft and connected to said interrupter for automatically adjusting the period of ignition upon change in engine speed, said governor mechanism having a tilting ring subjected to centrifugal force, a lever fast with said ring and having contact surfaces, a member fast with said shaft, and stop pins adjustably mounted in said member and cooperative with said surfaces for determining the initial and final limits of the tilting action of said ring.

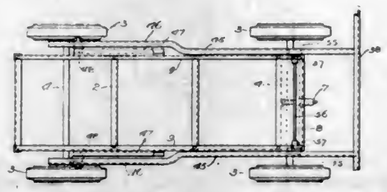
1,780,772. BOTTLE-CLEANSING MACHINE. ARTHUR L. WASHBURNE, Los Angeles, Calif., assignor to Sparkletts Bottled Water Corporation, Los Angeles, Calif., a Corporation of Nevada. Filed Nov. 27, 1928. Serial No. 322,132. 9 Claims. (Cl. 141—7.)



1. In a cleansing machine, a conveyor, transverse rows of turret collars for receiving bottle necks, the collars being rotatably mounted on said conveyor, one of said collars constituting a turbine rotor, and means to project fluid against said rotor to rotate the latter, the collars in a row being geared so as to be rotated together.

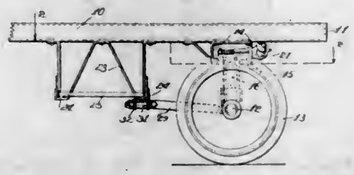
1,780,773. DISPLAY APPARATUS AND METHOD OF OPERATING THE SAME. GORDON AUGUSTUS WEARHAM, London, England. Filed May 21, 1929, Serial No. 364,855, and in Great Britain May 23, 1928. 15 Claims. (Cl. 40—28.)

4. Display apparatus comprising a container having one wall constituting a window, and liquid constituting a screen situated in the container so as to be visible through the window, in combination with a movable mass that is associated with the container and is arranged to move bodily under the influence of inertia in relation to a part of the container and thereby vary the thickness of the liquid screen.



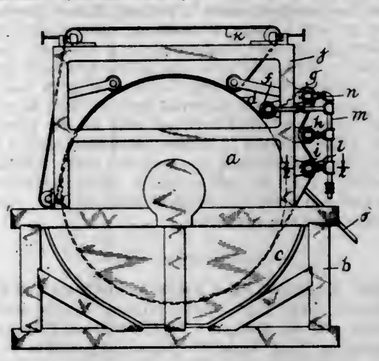
1,780,774. SEPARATOR. EZEKIEL F. WHITE, Hartford, Conn., assignor to Grover V. Lassen, West Hartford, Conn. Filed Nov. 9, 1928. Serial No. 318,257. 6 Claims. (Cl. 210—165.)

1. A separator comprising an outer cylindrical casing having a closed bottom, a cap closing the top thereof, a cylindrical cuplike shield having an upper closed end secured to the cap, extending with its open end down into the casing providing an annular circulating space between the shield and the casing, a generally conical screen having its edges secured to the cup, a wedge block for securing the apex of the screen to the closed end of the cap in



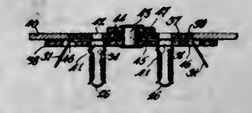
fixed tensioned relation, inlet passages for imparting a swirling motion to the entering fluid in the circulating space, and outlet passages communicating with the screen space of the shield.

1,780,775. DUMP-BODY VEHICLE. LEROY E. WILLIAMS, Edgerton, Wis., assignor to Highway Trailer Company, Edgerton, Wis., a Corporation of Wisconsin. Filed Apr. 27, 1927. Serial No. 186,837. 2 Claims. (Cl. 298—12.)



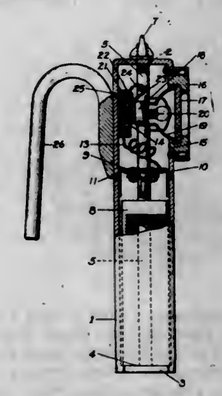
1. In a dumping vehicle, the combination of a vehicle frame or chassis having straight parallel side members with rollers journalled at the rear ends of said members and projecting from their outer faces, and with outwardly open guide channels secured to their forward portions; a body with longitudinal frame members comprising forward portions spaced laterally from the chassis side members to accommodate said guide channels and rearward portions offset inwardly from the forward portions to extend closely adjacent said chassis members, said rearward portions being inwardly facing channels engaged with the said rollers in the chassis and the forward portions carrying inwardly extending rollers engaged in the outwardly facing guide channels, said channels terminating rearwardly at a point to release said rollers when the body has rolled back to a position for tilting about the rollers at the rear of the vehicle frame.

1,780,776. TRAILER-FRAME STRUCTURE. LEROY E. WILLIAMS, Edgerton, Wis., assignor to Highway Trailer Company, Edgerton, Wis., a Corporation of Wisconsin. Continuation of application Serial No. 186,837, filed Apr. 27, 1927. This application filed Jan. 11, 1928. Serial No. 245,843. 1 Claim. (Cl. 280—106.)



In a vehicle having a main frame and supporting wheels and axles therefor, a pair of brackets depending from said frame on opposite sides thereof adjacent to and forwardly of the rear wheels, a pair of spaced transversely extending cross bars connecting said brackets together, a step pivotally connected to said cross-bars at one side of the vehicle, normally extending in horizontal position and adapted to be swung upwardly when out of use, an eye bolt swivelly mounted on the cross bar which is adjacent the rear wheels, and a pair of short radius rods each having one end connected to the rear axle, their other ends converging toward each other and pivotally connected to said eye bolt.

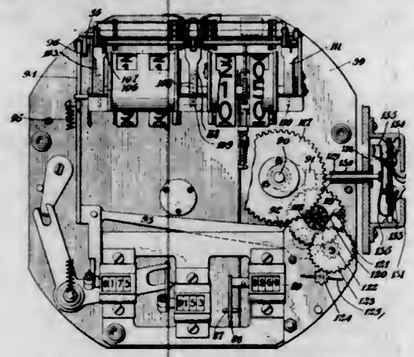
1,780,777. FILTERING DEVICE. FRANK W. YOUNG, Verona, N. J. Filed July 27, 1926. Serial No. 125,260. 8 Claims. (Cl. 210—198.)



1. In combination, a cake forming instrumentality, a plurality of heated rolls, and a filter cake re-enforcement comprising a plurality of substantially separate, endless strands encircling the instrumentality and the rolls.

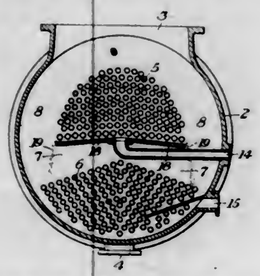
1,780,778. SOCKET FOR TUBES. WILFORD C. MACFADDEN, Fox Chase, Pa., assignor to Hugh H. Eby, Philadelphia, Pa. Filed Feb. 21, 1929. Serial No. 341,695. 3 Claims. (Cl. 173—328.)

1. In a punched metal spring connector for a pin terminal, a spring metal U strip having support at the ends of the strip, a contact element for engagement along one side of the terminal punched from an interior of each U arm portion of the strip, having free ends and intermediate side extensions integrally joining the contact element to the body of the strip, with the contact element offset from the plane of the strip toward the U exterior.



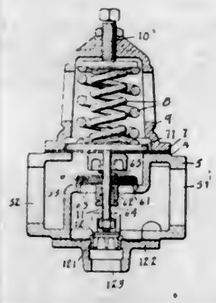
1,780,779. PORTABLE ELECTRIC LAMP. WILLIAM BUANETT, Jr., Marion, Ill., assignor to Modern Coal Burner Co., Chicago, Ill., a Corporation of Illinois. Filed Jan. 14, 1928. Serial No. 246,701. 3 Claims. (Cl. 240—10.5.)

1. A portable safety electric lamp, comprising a case, a cover plate for closing the bottom thereof, threaded rods



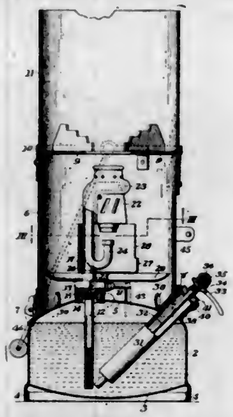
extending from said cover plate through the top of said case, nuts on the ends of said rods, an electric battery within said case, a shelf above said battery dividing said case into two compartments, a contact plate adjacent one terminal of said battery, a yieldable connection between said terminal and said contact plate, a yieldable connection between said case and the other terminal of said battery, a socket contact plate connected with said first contact plate, insulation material between said first plate and the case, insulation between said second plate and the case, a lamp socket in contact with said second plate, a connection between said case and the other terminal of said socket, a lamp in said socket, a reflector attached to said socket, and a lens in front of said reflector, substantially as shown and described.

1,780,780. TAXIMETER. JACOB A. COSTUMA and HARRY E. BAUER, New York, and CHARLES L. LOVERCHECK, Brooklyn, N. Y., assignors to International Taxameter Corporation, New York, N. Y., a Corporation of New York. Filed May 29, 1926. Serial No. 112,442. 19 Claims. (Cl. 235—30.)



1. In a fare indicator a plunger, a switch controlled thereby, a circuit controlled by the switch, an electrical illuminating device in the circuit, a shaft extending thru the fare indicator, said shaft being adapted to control the fare registering parts of the indicator, and a cam carried by the shaft and adapted to actuate the plunger.

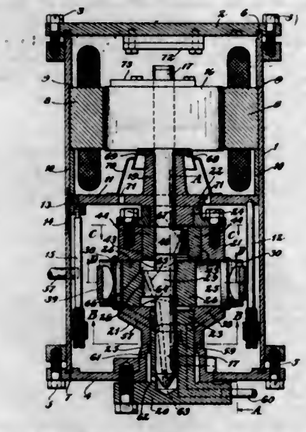
1,780,781. CONDENSER. RAYMOND N. EHRHART, Edgewood, Pa., assignor to Elliott Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 28, 1926. Serial No. 105,169. 9 Claims. (Cl. 257—43.)



1. In a surface condenser, a shell having a steam inlet, a wall in said shell providing free steam flow spaces between at least two of its edges and the shell and providing a free steam space therebelow, a tube nest on each side of said wall, means for passing cooling water through said tube nests in series, and means for subjecting the respective tube nests at substantially their steam flow termini to different pressure conditions.

1,780,782. RELIEF VALVE. HERBERT G. HOLMES, Lansing, Mich., assignor to Novo Engine Company, Lansing, Mich. Filed June 4, 1928. Serial No. 282,714. 4 Claims. (Cl. 277—21.)

3. A relief valve structure comprising a main check valve casing with a central opening, a valve seat with a spider supporting a central hub and a valve disk adapted to said seat with a spring for holding the same in position, a relief valve axially in line with the main check valve, the valve stem extending through the said main check valve, a diaphragm connection to the relief valve stem, and means to hold the same yieldingly to its seat whereby the reaction of back pressure will open the relief valve and permit the main check valve to seat.



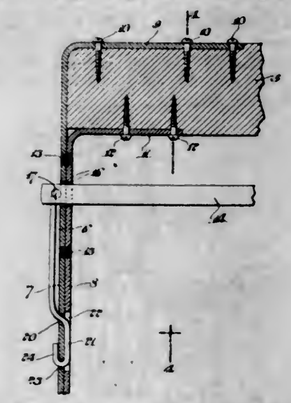
1,780,783. FURNACE. HARRY E. LEETY and JOHN A. ECKERT, Pittsburgh, and AUSTIN W. PAGE, Penn Township, Allegheny County, Pa., assignors to P. Wall Manufacturing Supply Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 8, 1925. Serial No. 48,978. 8 Claims. (Cl. 158—32.)

1. In a furnace, a fuel reservoir, a burner supplied thereby, a guard having a connection with said reservoir permitting movement of the guard to operative and inoperative position relative to said burner, a drip cup for said burner, and a shield cooperating with said burner and drip cup and positioned within the guard when the same is in operative position to protect said reservoir, substantially as described.

1,780,784. FLUID-DISPLACEMENT APPARATUS. THOMAS M. GUNN, Brooklyn, N. Y., assignor of one-sixth to Gorham Crosby, Glen Ridge, N. J. Filed Mar. 15, 1927. Serial No. 175,509. 6 Claims. (Cl. 230—177.)

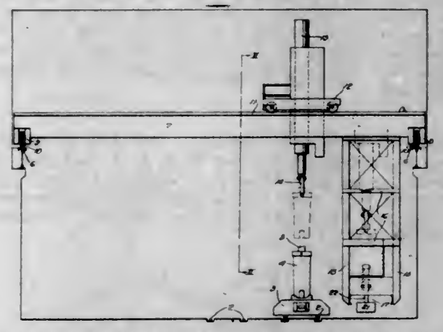
1. In a motor-driven fluid compressor, the combination of a motor enclosed within space occupied by the fluid being compressed; a compressor having a driving member directly connected to the rotor of said motor and having also a piston and a cylinder operating in conjunction with one another to accomplish compression of the fluid, said compressor being of such construction that the piston com-

pletes its cycle of motion once in two revolutions of the driving member; and a casing enclosing all of said parts, said casing being provided with electrical connections for said motor and with suitable connections for introducing to the compressor and withdrawing therefrom fluid to be compressed.



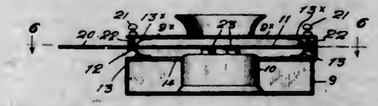
1,780,785. SCREW DRIVER. BENNETT G. JANSSON, Kittery, Me., and CHARLES J. EMERSON, Winchester, Mass. Filed Sept. 9, 1929. Serial No. 391,306. 3 Claims. (Cl. 145—50.)

1. A screw driver tip comprising a body and two blades integral therewith and extending in different planes from opposite ends of said body, one of said blades being offset sufficiently from the axis of said body to expose a substantial end surface of the body, said body having a socket in said exposed end surface thereof beside one of said blades and another socket in the side of said body, each of said sockets being adapted to receive the end of a screw driver shaft.



1,780,786. HEDDLE FRAME. JOHN JACOB KAUFMANN, Elkins Park, Pa., assignor to Steel Heddle Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 16, 1928. Serial No. 319,778. 1 Claim. (Cl. 139—92.)

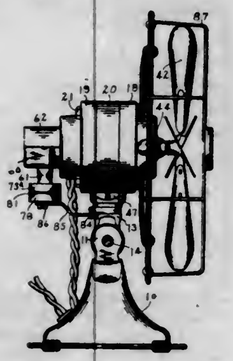
A heddle frame comprising top and bottom rails, end members each comprising two separate flat metallic strips permanently united to each other at a plurality of points, one of said strips having its end portions extending across the ends of the top and bottom rails and bent over and secured on the outer sides thereof, the other of said strips having its end portions bent over and secured to the top and bottom rails along the inner sides thereof, heddle supporting bars extending through regis-



tered slots in the end members, and retaining devices comprising spring wire hook members each having its free end engaging one end of a heddle supporting bar and having its other end extending through apertures in the outer strip of each end member, the portion thereof which is located on the inner side of said outer strip being positioned entirely within a slot in the inner strip of the end member.

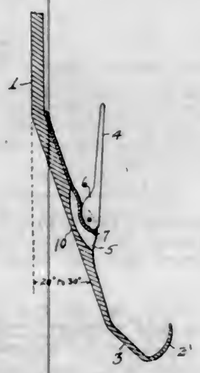
1,780,787. INGOT-STRIPPING MECHANISM. WALTER D. KELLER and WILLIAM L. POTO, Alliance, Ohio, assignors to The Alliance Machine Company, Alliance, Ohio, a Corporation of Ohio. Filed Sept. 4, 1928. Serial No. 303,770. 8 Claims. (Cl. 22—95.)

1. An overhead travelling crane and a stripper for inverted-type ingots carried thereby, the stripper having a portion which engages the bottom of the ingot for stripping it, the crane being adapted to transfer an ingot and its mold onto the stripper.



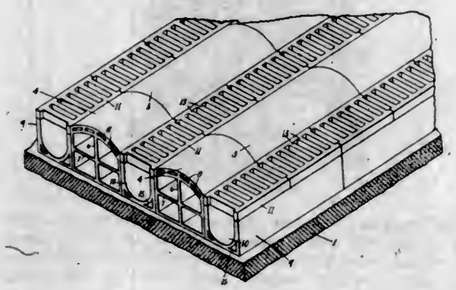
1,780,788. SOUND-REPRODUCING MECHANISM FOR RADIOS. AUBREY M. KENNEDY, Los Angeles, Calif. Filed Aug. 3, 1929. Serial No. 383,270. 2 Claims. (Cl. 179—100.)

1. In radio reproducing mechanism, in combination with a magnetic assembly of a support, diaphragm holding



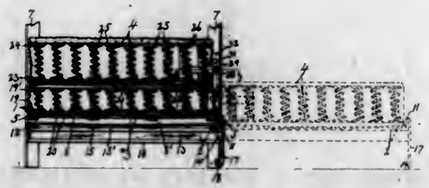
means in said support and a diaphragm provided with a carrier, the diaphragm being so related to the holding means that it may be moved into the support and gripped by the holding means for coaction with the magnetic assembly, and removed therefrom by withdrawal in the plane of its face.

1,780,789. ELECTRIC FAN. JOHN LANZ, New Haven, Conn., assignor, by mesne assignments, to The A. C. Gilbert Company, New Haven, Conn., a Corporation of Maryland. Filed July 29, 1926. Serial No. 125,702. 5 Claims. (Cl. 230—256.)



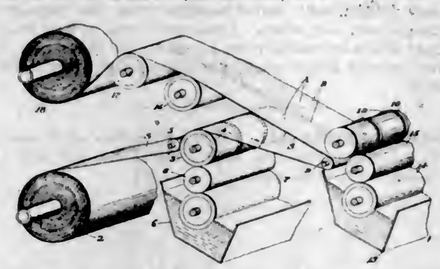
1. In an electric fan, an electric motor, a base upon which said motor is mounted to oscillate, and means to oscillate the motor comprising a shaft rotated from the motor shaft, a disk mounted on said shaft, a screw having an enlarged head secured to the under side of said disk, a second disk provided with a counter-bored recess to receive said screw, a spring within said counter-bore and acting between the lower shoulder thereof and the head of the screw to urge the second disk toward the first, a friction washer between said disks, and a link having one end pivotally connected to a stationary part of the fan, and the other end having a pivotal connection with the second-named disk, the last-named connection being eccentric with respect to the axis of rotation of the second-named disk.

1,780,790. KNITTING NEEDLE. WILLIAM H. LEAVIN and SAMUEL B. LEAVIN, New York, N. Y., assignors, by mesne assignments, to Gotham Knitbac Machine Corporation, New York, N. Y., a Corporation of Delaware. Filed July 17, 1928. Serial No. 293,430. 3 Claims. (Cl. 66—117.)



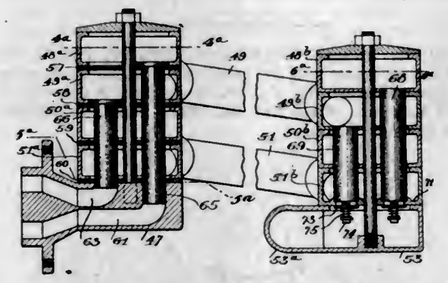
1. A needle for repairing runs in knitted fabrics comprising a shank having a straight portion and a slotted inclined portion and a hooked portion joined to said slotted inclined portion by a second inclined portion, a latch member pivotally connected at one end in the slotted inclined portion and co-operating at its free end with the tip of the hooked portion, said second inclined portion being disposed at such an angle with respect to the slotted inclined portion and the hooked end portion that the width of the hook will permit the latch member to lie at a predetermined angle with respect to the tip of the hook and the inclined slotted portion of the shank when it is closed upon said tip.

1,780,791. FILTER BED. ANDREW LENDERINK, Kalamazoo, Mich. Filed Mar. 8, 1929. Serial No. 345,291. 9 Claims. (Cl. 210—148.)



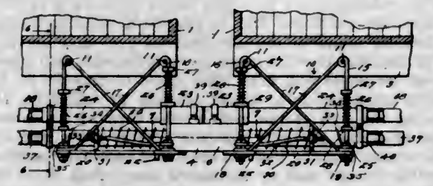
4. In a filter, the combination with a foundation provided with a side wall at one end thereof, a plurality of bed members disposed in alined rows on said foundation, a plurality of channel members open at the top arranged in alined rows between said bed members and supported laterally thereby, and grid members comprising longitudinal side bars and cross bars disposed in spaced parallel relation arranged on said channel bars between said bed members and supported laterally thereby, the end channel members and their superimposed grid members being arranged through openings provided therefor in said side wall.

1,780,792. CONVERTIBLE SINGLE OR DOUBLE BED. WILLIAM LEWIS, Utica, N. Y. Filed Sept. 2, 1927. Serial No. 217,115. 1 Claim. (Cl. 5—185.)



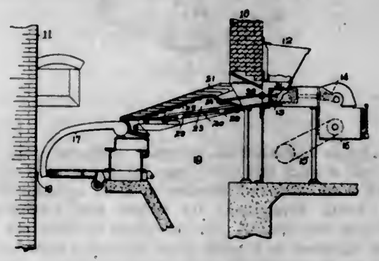
In a convertible single or double bed, the combination of a main frame having relatively fixed corner posts, a mattress mounted on the main frame, and a supplemental frame slidable on the main frame from a position beneath the mattress to a position mainly at one side thereof and vice versa, the corner posts adjacent said side of the main frame being provided with vertical slots wholly above the supplemental frame, and an additional mattress provided with pivotal pins slidable vertically in said slots and having pivotal connection therewith to permit the additional mattress to be moved vertically relatively to and independently of the first named mattress to a position at one side thereof directly over the supplemental frame when the latter is extended for use.

1,780,793. COATED PAPER AND PROCESS OF MANUFACTURING SAME. WILLIAM WALLACE MCLAURIN, Brookfield, Mass. Filed Nov. 6, 1926. Serial No. 146,630. 6 Claims. (Cl. 91—68.)



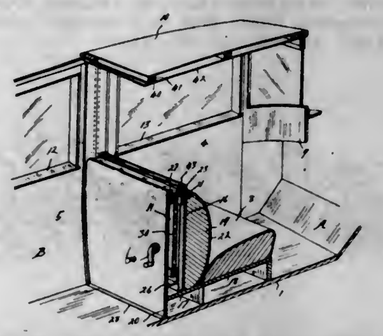
5. An article of the character described comprising paper, the greater part of the surface on one side thereof being coated with a relatively hard non-adhesive material adapted to facilitate printing, an adjacent portion of said surface being coated with a softer non-adhesive material adapted to facilitate folding.

1,780,794. LIQUID-PROCESSING APPARATUS. EDGAR B. NICHOLS, Camden, N. J., assignor to The Pfaudler Co., Rochester, N. Y., a Corporation of New York. Original application filed Jan. 27, 1928, Serial No. 250,048. Divided and this application filed Dec. 22, 1928. Serial No. 328,032. 24 Claims. (Cl. 257—205.)



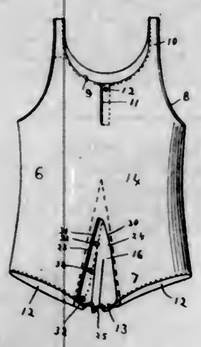
3. In a fluid pressure circulating system, a plurality of superimposed pipe sections having outlet portions resting one upon another, separate supply pipes for said sections, a receiving head for the fluid circulated through said sections, tubes leading from the outlet portions of a plurality of the sections through the outlet portions of the remaining sections therebeneath to said head, and automatic valves for said tubes responsive to the difference in pressure within the tubes and the head.

1,780,795. AUTOMATIC TRAIN-PIPE COUPLING. CHARLES E. PHARO, Cortez, Colo. Filed June 22, 1926. Seria. No. 117,783. 5 Claims. (Cl. 285—58.)



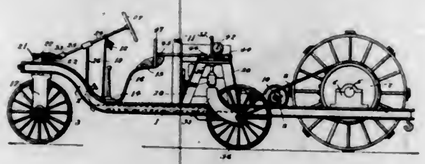
2. An automatic train pipe coupling comprising heads, each head having one of its sides forwardly and inwardly inclined and provided adjacent its other lateral side with a longitudinally extending opening, an extension projecting forwardly from the last mentioned side of the head and having its inner side forwardly and outwardly inclined, the projection of one head contacting with the inclined side of the other head and provided in its inner side with a recess communicating with the opening in the head, a forwardly tapering rib on the inclined lateral side of each head, the rib of one head fitting snugly in the recess of the extension of the other head, and a pin extending forwardly from the forward end of each rib, the pin of the rib of one head fitting in the opening of the other head.

1,780,796. UNDERFEED STOKER. ROBERT SANFORD RILEY and JAMES H. MCELROY, Worcester, Mass., assignors to Riley Stoker Corporation, Worcester, Mass., a Corporation of Massachusetts. Filed Sept. 18, 1920. Serial No. 411,051. 12 Claims. (Cl. 110—44.)



6. In an underfeed stoker, in combination, an underfeed retort, a movable grate member effective to supply air for combustion of fuel in said retort throughout a major portion of the length of said retort, means to slidably support said grate member in said retort, a fuel feeding ram for said retort, driving mechanism therefor, and a lost motion connection between said ram and said grate member.

1,780,797. CONVERTIBLE VEHICLE BODY CONSTRUCTION. RALPH S. ROBERTS and JOHN VOTYPKA, Detroit, Mich., assignors to Lebaron Detroit Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 6, 1929. Serial No. 337,958. 5 Claims. (Cl. 296—48.)



1. In a vehicle body, the combination with a cross bow, a lining concealing the cross bow, and a partition below the cross bow and including a sliding window and a pocket for receiving said window, of window guides extending between the pocket and cross bow, a header of yieldable material for the window located between the cross bow and lining at the upper ends of the window guides and concealed by said lining, and means for concealing the window guides and the window when the latter is in the pocket, including strips of flexible material carried respectively by said guides and a wall of said pocket.

1,780,798. STEP-IN COMBINATION GARMENT. MICHAEL F. ROBISCHON, Utica, N. Y., assignor of one-half to Herbert Robischon, Utica, N. Y. Filed Oct. 30, 1926. Serial No. 145,315. 1 Claim. (Cl. 2—78.)

A step-in combination garment comprising in a one-piece suit a shirt and short-legged drawers, said suit being formed from material tubular in form substantially the same width throughout its length and provided with front and rear central slits extending up from the bottom of the garment to a point near the waist-line, with gore pieces of wedge-shaped form with rounded bases united at their rounded bottoms at the crotch for the greater part of the width of the gore pieces and forming a closed-bottomed fulness at the crotch, said gore pieces being secured at their other opposite sides to the edges of said slits and reaching from the top of said slits to the bottom of the garment, one of the upright sides of the front gore being detachably secured, said garment having a closed seat and a closed crotch, and being wider across the seat than the width of the said tubular formed material, the leg portions of said drawers having a circumference adapted to substantially fit the legs of the wearer and extending down only a short part of the distance from the crotch to the knees of the wearer.

1,780,799. HILLSIDE TRACTOR. WALTER G. ROGERS, Leavenworth, Kans. Filed Sept. 23, 1929. Serial No. 394,563. 1 Claim. (Cl. 180—21.)

A hillside tractor comprising a relatively narrow elongated chassis, a single steering wheel at the front end of the chassis, means for setting said wheel from a seat on the chassis, a single driving wheel at the rear end of the chassis, a motor on the chassis between the ends thereof operatively connected with the driving wheel, a cross frame rigidly secured to and extending from the sides of the chassis in advance of the driving wheel, vertically movable rack bars mounted in the outer ends of the cross frame, caster wheels swiveled in the lower ends of the rack bars, transverse shafts mounted on the cross frame, pinions at the outer ends of said shafts meshing with the respectively adjacent rack bars, worm pinions at the inner ends of said shafts, longitudinal shafts journaled upon the cross frame and extending forwardly beyond the front of the same adjacent the opposite sides of the chassis, worms on the rear ends of said longitudinal shafts meshing with the respective worm pinions, and means at the front ends of said longitudinal shafts accessible from a seat on the chassis for rotating the said shafts whereby to maintain the level of the tractor.

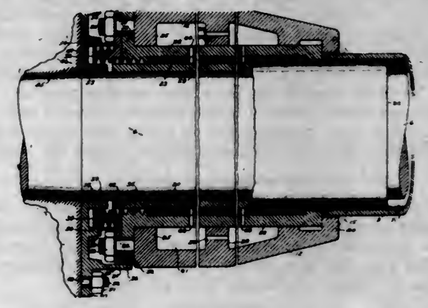
1,780,800. ENEMA PAD. ADELA F. SHEKTER, Jamaica, N. Y. Filed Nov. 15, 1929. Serial No. 407,424. 5 Claims. (Cl. 129—227.)

1. An enema pad having a flat bottom body portion and an opening in the top, the said body having a passage extending in a curving direction from the said opening, the mouth of the said passage being arranged adjacent to one edge of the pad, and the said passage being adapted to guide the movement of a catheter and to cause the same to project vertically from the said opening.

1,780,801. INSECT-GUARD ATTACHMENT FOR HATS. LEON M. SHLENKER, St. Louis, Mo., assignor to International Harvest Hat Co., St. Louis, Mo., a Corporation of Missouri. Filed Mar. 24, 1930. Serial No. 438,583. 3 Claims. (Cl. 2—4.)

1. In combination a hat brim folded upon itself to form an inwardly extending fold to provide a reinforced edge, an annular guard of net-like material gradually decreasing in diameter from its upper to its lower end, said guard having its upper end bent upon itself to provide an inwardly extending fold, means common to said folds for securing the fold of the brim to the body of the latter, the fold of the guard to the body of the latter, and the body of the brim and body of the guard together, the bend provided by the fold of the guard being flush with the bend provided by the fold of the brim, said guard having its lower portion bent upon itself and secured together to provide a hem, and a whirring string positioned within and extending from said hem.

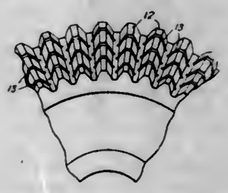
1,780,802. GOLF BAG. STANLEY HARRY SUTCLIFFE, Radlett, England. Filed Oct. 18, 1929, Serial No. 400,632, and in Great Britain Sept. 27, 1929. 6 Claims. (Cl. 150—1.5.)



1. The combination with a golf bag, of at least one spindle dividing said bag into a plurality of compartments, means for mounting said spindle across the mouth of the bag, and at least one anti-friction roller mounted on said spindle.

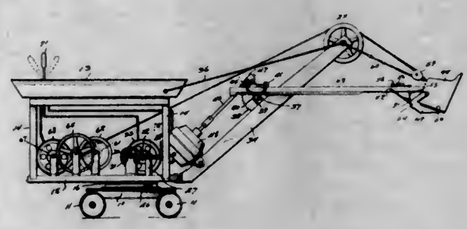
1,780,803. COKING RETORT OVEN. JOSEPH VAN ACKEREN, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 31, 1923, Serial No. 654,875. Renewed Mar. 27, 1930. 11 Claims. (Cl. 202—143.)

10. A coke oven battery having side by side coking chambers with intermediate heating walls, characterized by heating walls individually having at least two groups of inflow flues and at least two groups of outflow flues, with a bus flue connecting an inflow group with an outflow group, combined with pairs of inflow and outflow regenerators, each such pair of regenerators being connected with a similarly operating group of flues of each of the two heating walls on the opposite sides of an intervening coking chamber; substantially as specified.



1,780,804. SEAL FOR STERN BEARINGS FOR PROPELLER SHAFTS. CHARLES E. WARD, Charleston, W. Va. Filed Sept. 14, 1927. Serial No. 219,516. 6 Claims. (Cl. 308—134.)

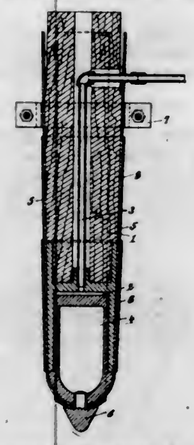
1. In a stern support for a propeller shaft in combination with said shaft a sleeve therefor; a packing plate provided with a circular boss in prolongation of said sleeve; a strut casting encasing said sleeve and to which said plate and sleeve are secured; a hub for said shaft



provided with a packing plate having on one face thereof a channel telescoping said boss; and lubricant filled corrugations on said boss as well as on said sleeve.

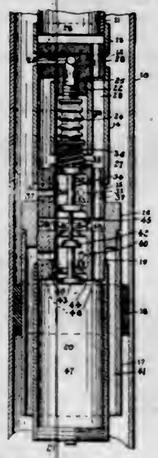
1,780,805. METHOD OF MAKING HELICAL CUTTERS. WALTER HARRY WHEATLEY, London, England, assignor to Wheatley Patents Ltd., London, England, a Corporation of England. Filed Mar. 30, 1927, Serial No. 179,651, and in Great Britain July 21, 1926. 5 Claims. (Cl. 76—101.)

1. That method of making a rotary helical cutter by use of a toothed master bevel wheel with teeth in staggered formation to provide cutting edges, the master wheel being hardened and finished to correct shape, comprising roughing out a helical cutter blank having a single thread helix corresponding in pitch to the minor pitch of the master wheel, placing the master wheel and the helical cutter blank in the gear cutting machine, feeding the helical cutter blank over the master wheel and rotating the blank and the master wheel at relative speeds to cause the helical cutter blank to make one complete revolution during the turning of the master wheel through a distance equal to the pitch of one tooth, to generate on the helical cutter blank a helix of correct shape, and cross-cutting the helix formed on the helical cutter blank to the desired number of cutting teeth.



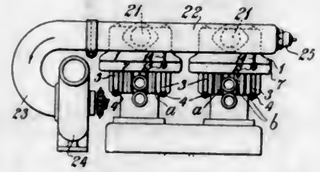
1,780,806. TOY ELECTRICALLY-OPERATED SHOVEL. ALFRED PETTON WILLIAMS, Madisonville, Ky. Filed Jan. 24, 1929. Serial No. 334,754. 1 Claim. (Cl. 214—146.)

In a toy power shovel the combination of a boom, a scoop, a pair of arms mounted upon the scoop and extending



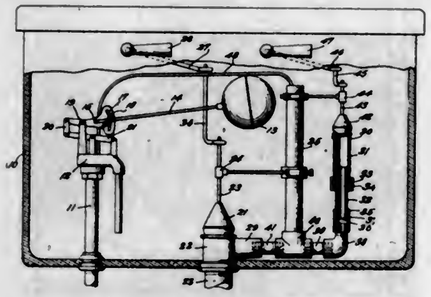
transversely of the boom, means on the boom for shifting the arms outward or inward, means on the boom for raising or lowering the scoop, angular arms pivoted upon the scoop and carrying a scoop bottom, the angular arms having notches, a latch pivoted upon the first named arms and adapted to engage with the notches in the bottom supporting arms, a spring mounted on the arm and engaging said latch for urging the latch into latching position, a shaft upon which the latch is mounted and having a radial arm, and a lever having a slot in which said radial arm is disposed, the lever being shiftable to release the latch.

1,780,807. **PILE.** IGNAZ ZEISSL, Vienna, Austria, assignor to Stern-Gesellschaft fur Moderne Grundbautechnik m. b. H., Vienna, Austria, a Company of Austria. Filed June 22, 1928, Serial No. 287,595, and in Austria Nov. 21, 1927. 7 Claims. (Cl. 61—78.)



1. A device for forming pit holes for piles comprising in combination a pile core, a pile shoe, and an hydraulic press located between the pile core and pile shoe and parts forming a removable unit.

1,780,808. **INTERMITTENT GAS-LIFT PUMP.** MERTON T. ARCHER, Pittsburgh, Pa., assignor to The National Supply Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 25, 1928. Serial No. 272,781. 5 Claims. (Cl. 103—232.)

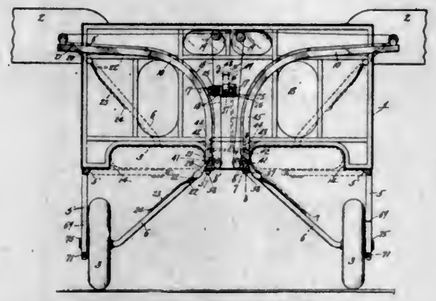


1. In a gas-lift pump for wells, a vertical conduit in which liquid in the well rises, a valve dividing the liquid into upper and lower columns, a conduit to supply compressed gas for aerating the upper column, a bellows having one surface in communication with the upper column and the other surface in communication with the gas-supply conduit, a valve between the upper column and the gas supply conduit, and means connecting together the belows and the valves, one valve being open when the other is closed.

1,780,809. **MEANS FOR AIR COOLING THE CYLINDERS OF INTERNAL-COMBUSTION ENGINES.** JAMES BOWEN, Swansea, Wales. Filed Aug. 8, 1928, Serial No. 298,324, and in Great Britain Aug. 23, 1927. 2 Claims. (Cl. 123—171.)

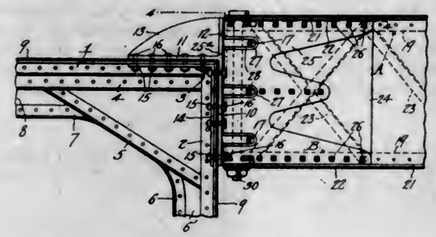
1. An internal combustion engine having its cylinder provided with heat dissipating fins, a cooling device for the cylinder comprising a jacket having heat dissipating fins therein for engagement between the fins of the cylinder when the jacket is engaged thereon, means engageable with the fins of the cylinder for retaining the jacket thereon, and means for creating suction in the jacket.

1,780,810. **CLOSET-FLUSHING DEVICE.** CHARLES WATKINS BROWN, San Diego, Calif. Filed Jan. 21, 1930. Serial No. 422,403. 5 Claims. (Cl. 4—37.)



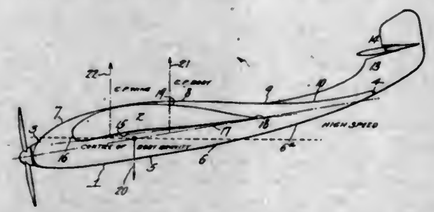
1. A closet bowl flushing device for use in a flushing tank, comprising a connection between the tank chamber and the closet bowl, a means for selectively releasing different amounts of water through the connection to the bowl and adjustable means for predeterminedly and differentially controlling the amounts of water released by the selective releasing means.

1,780,811. **RETRACTABLE LANDING GEAR.** VINCENT J. BURNELLI, New York, N. Y., assignor, by direct and mesne assignments, to The Uppercu-Burnelli Corporation, a Corporation of Delaware. Filed Dec. 31, 1928. Serial No. 329,441. 5 Claims. (Cl. 244—2.)



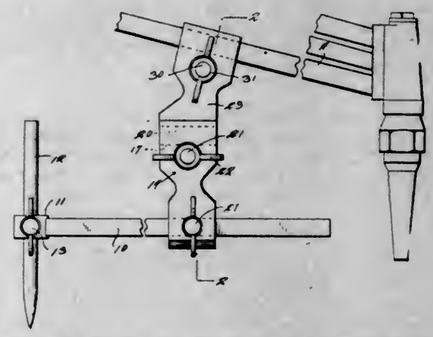
1. The combination with an air plane having a fuselage of unusual width of retractable landing gear comprising pendent brackets hinged to the fuselage, axles mounted in said brackets, wheels journalled on said axles, said axles being angled upwardly toward the fuselage bottom in converging relation with the wheels extended, said fuselage bottom provided with recesses adapted to receive said wheels, laterally extending, slotted arcuate channels

secured within said fuselage, goose-neck axle extensions respectively engaging said channels through their slots, and means connected with said axles respectively to si-



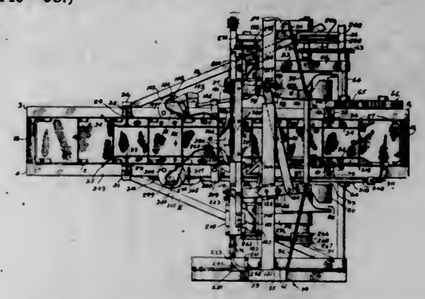
multaneously move said extensions along said channels, thereby causing said axles and wheels to travel between their extended and retracted positions.

1,780,812. **MEANS OF AIRFOIL AND FUSELAGE CONNECTION.** VINCENT J. BURNELLI, New York, N. Y., assignor, by direct and mesne assignments, to The Uppercu-Burnelli Corporation, a Corporation of Delaware. Filed Jan. 4, 1929. Serial No. 330,366. 1 Claim. (Cl. 244—31.)



Means for releasably attaching an airfoil spar to a fuselage bulkhead comprising a bracket secured to said bulkhead and provided with a number of superposed projecting tongues, said tongues having aligned holes therethrough, reinforcement for said spar comprising a sheath having side plates connected with an end plate, said end plate having superposed slots, a U-plate of hardened steel fitted in each slot to receive said tongues, said U-plates provided with holes to align with the holes in the tongues and a bolt to engage said holes for connecting said tongues and reinforcement.

1,780,813. **AIRPLANE.** VINCENT J. BURNELLI, New York, N. Y., assignor to The Uppercu-Burnelli Corporation, a Corporation of Delaware. Filed Mar. 1, 1929. Serial No. 343,796. 3 Claims. (Cl. 244—12.)

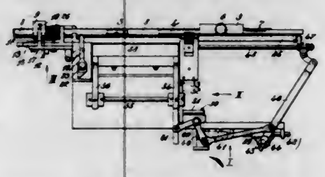


1. The combination in an airplane of a central airfoil of relatively short span and considerable extent of chord, and a main supporting airfoil, of moderate chord, extended from opposite sides of said central airfoil, said airfoils being contoured and arranged to have their respective centers of pressure coincide in the center of gravity of the airplane when in the attitude of cruising speed, and said contours and arrangement causing the respective centers of pressure to shift in opposite directions, at varying speeds, in changes of longitudinal attitude.

1,780,814. **BLOWTORCH SUPPORT AND SCRIBER.** ROE B. CREGGER, Richmond, Va. Filed Sept. 19, 1929. Serial No. 393,769. 3 Claims. (Cl. 266—23.)

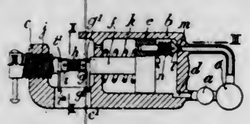
3. A blow torch support of the character described, comprising a radius rod having a pivot pin in one end, a lower clamping member slidingly mounted upon the radius rod and having means whereby it may be held in adjusted position thereon and formed to engage and clamp on a blow torch, a second clamping member formed for detachable engagement upon the first named clamping member and when so engaged, being angularly disposed relative thereto, and the second named clamping member being formed to clamp upon a blow torch.

1,780,815. **BAG-TYING MACHINE.** GEORGE K. CRUTCHFIELD, Jr., WATERS C. NORTHAM, and JOHN C. KINKER, Jr., Richmond, Va., assignors to said Crutchfield. Filed June 1, 1929. Serial No. 367,787. 19 Claims. (Cl. 140—93.)



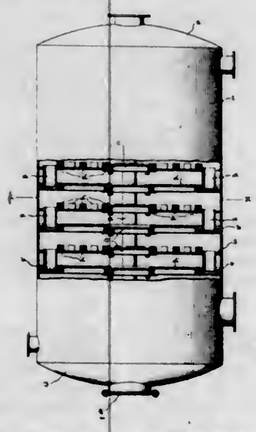
1. A machine for closing filled sacks, comprising an intermittently moving conveyor, and means controlled by contact with filled sacks in predetermined positions on said conveyor for closing and tying the mouths of said sacks.

1,780,816. **MATRIX-SETTING AND TYPE-LINE-CASTING MACHINE.** JULIUS DORNETH, Berlin-Konradshone, Germany, assignor to The Firm Typograph-Gesellschaft m. b. H., Berlin, Germany. Filed June 4, 1929, Serial No. 268,237, and in Germany Nov. 29, 1928. 9 Claims. (Cl. 199—51.)



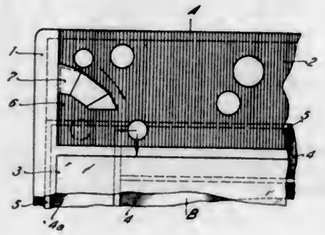
1. In a matrix-setting and type-line-casting machine of the type having a frame, matrices, ring spacers, wires

guiding said matrices and ring spacers, means to set the matrices, and ring spacers to a line, and means to bring the set line to the casting point and after the



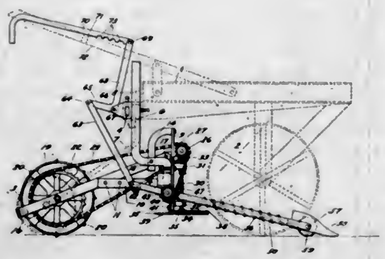
casting operation, to move away therefrom, a square spindle for the ring spacers and means to withdraw the square spindle from the ring spacers after the casting of the line.

1,780,817. MOTOR-DRIVEN SHEARS. CHARLES DUBOIS, Paris, France, assignor to Société Industrielle de Matétriel d'Entreprise et de Construction, Paris, France. Filed Feb. 6, 1930, Serial No. 426,425, and in France Feb. 28, 1929. 4 Claims. (Cl. 164—56.)



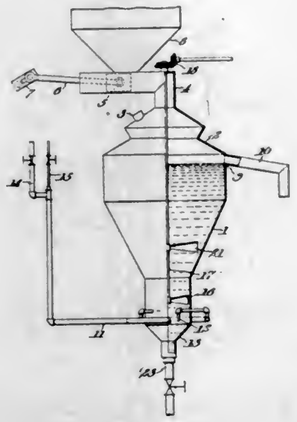
1. Shears actuated by a driving fluid under pressure and adapted to shear members of a definite width, comprising a cylinder having an inlet orifice and an exhaust orifice, a piston in this cylinder, a fixed cutter, a movable cutter actuated by the said piston, a valve on the exhaust orifice and opening inwardly of the cylinder, a spring adapted to close the said valve, the said spring being connected to the piston so as to be progressively stretched in proportion as the piston advances in the direction corresponding to the closing of the shears, a spring adapted to move the piston in the reverse direction, and means for continuously delivering the driving fluid into the cylinder through the said inlet orifice.

1,780,818. FRACTIONATING APPARATUS. WAYNE Z. FRIEND, Charleston, W. Va., assignor to Baltimore Gas Engineering Corporation, a Corporation of Maryland. Filed Sept. 17, 1928. Serial No. 306,564. 2 Claims. (Cl. 261—114.)



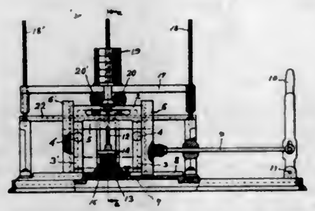
1. In a fractionating apparatus, a series of superposed plates, a shell enclosing said plates, a manhole in each plate, a removable cover completely closing each manhole, and a manhole in the shell provided with a removable cover to permit the operator to gain access to the interior of the shell and plates.

1,780,819. COIN ASSORTER. ARMAND GODEFROID, Berlin, Germany. Filed Feb. 20, 1929, Serial No. 341,423, and in Germany Feb. 24, 1928. 1 Claim. (Cl. 133—3.)



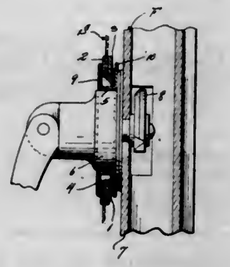
A coin assorter comprising a tilting table, a drawer having a separate compartment, and a deflector in line with said compartment and arranged so as to extend from one side of said table to a point short of the longitudinal edge of the table which faces the position assumed by the clerk so as to leave a space sufficient to permit the passage of small size coins by the deflector and to a point on the table opposite the separate compartment.

1,780,820. VEGETABLE TOPPER. ROY HAHN, Pleasant Valley, Iowa, assignor of one-half to William Leese. Filed Apr. 4, 1927. Serial No. 180,738. 6 Claims. (Cl. 55—107.)



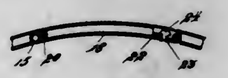
1. In a vegetable topper, a supporting framework, a pair of relatively angularly disposed guide bars carried by said framework, a shaft carried by the framework and extending between the guide bars, a cutter head carried by and rotating with said shaft in a horizontal direction and cooperating with the guide bars in cutting vegetable tops, means to cause actuation of said shaft and head, and means to elevate vegetable top and deliver them between the guide bars in position to be severed by the cutting head, the actuating means for the shaft including a trailer wheel and a frame in which the wheel is mounted, said frame being pivoted adjacent one end on the supporting framework to move vertically and follow the contour of the ground.

1,780,821. PROCESS OF AND APPARATUS FOR SLAKING LIME. WILLIAM H. HENDERSON, Youngstown, Ohio. Filed Apr. 6, 1928. Serial No. 267,934. 2 Claims. (Cl. 23—188.)



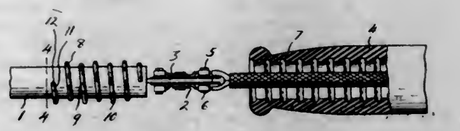
1. Process for the production of milk of lime from quick lime which comprises establishing an upwardly moving body of aqueous liquid having a progressively decreasing regulated rate of flow, countercurrently adding thereto quick lime containing hydratable and soluble solids and an insoluble residue in regulated amounts and at a regulated rate, thoroughly agitating the liquid and the lime and promoting hydration and solution of the hydratable and soluble components of the lime in a lower zone of said body, hydraulically segregating the insoluble residue at and removing the same from beneath the base of said body, and abstracting aqueous liquid with its dissolved and suspended solids at the top of said body.

1,780,822. MACHINE FOR TESTING AND QUANTITATIVELY INDICATING THE CUTTING POWER AND DURABILITY OF BLADES AND CUTLERY. KOTARO HONDA, Sendai, Japan. Filed Sept. 18, 1926, Serial No. 136,370, and in Japan Jan. 20, 1926. 4 Claims. (Cl. 73—51.)



1. The method for the quantitative indication of the sharpness and durability of a cutting blade, consisting in stacking a number of thin laminated testing sheets of fibrous material, moving the blade to be tested a definite distance with a constant weight applied thereto and with its cutting edge contacting the uppermost sheet to effect a cutting action of the laminated sheets so as to determine from the number of cut sheets an indication of the sharpness of the said blade, and determining from the number of cutting repetitions necessary to reduce the cutting action to a definite fraction the durability of the blade.

1,780,823. SCREEN. PAUL GEORGE JOHNSON, Erie, Pa., assignor to Johnson Metal Products Co., Erie, Pa. Filed Jan. 21, 1930. Serial No. 422,428. 9 Claims. (Cl. 156—14.)

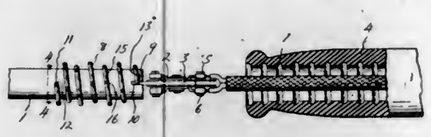


8. A window screen cloth having an opening, a floating baffle carried by the cloth and coacting with the opening.

1,780,824. EXTENSION DEVICE FOR BRACELETS. AUGUST F. KRAEMER, Providence, R. I., assignor to Louis Stern Company, Providence, R. I., a Corporation of Rhode Island. Filed July 12, 1929. Serial No. 377,739. 4 Claims. (Cl. 24—71.)

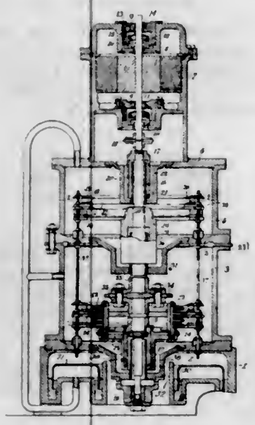
1. In a bracelet, an extension device comprising a plurality of hingedly connected members, the upper member having a lock loop depending from the free end thereof, the lower member having a lock loop extending upwardly from the end thereof which is adjacent the said free end when in folded position, the loop of said upper member being of larger diameter than the loop of said lower member to permit the smaller loop to snap past the center of the larger loop.

1,780,825. HANDLE ASSEMBLY. FRANK KUHN, Detroit, Mich., assignor to American Electrical Heater Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 3, 1927. Serial No. 223,733. 4 Claims. (Cl. 306—30.)



1. In a handle assembly, a shank, a helix on the shank and having portions of certain convolutions thereof extending tangentially to said shank and providing at spaced points about the periphery of said shank substantially V-shaped portions with the apices of the V's projecting outwardly with respect to said shank, and a handle threadedly engaging the apices of the V-shaped portion aforesaid.

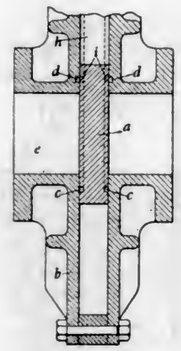
1,780,826. HANDLE ASSEMBLY. FRANK KUHN, Detroit, Mich., assignor to American Electrical Heater Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 27, 1927. Serial No. 242,947. 3 Claims. (Cl. 306—30.)



1. In combination, a cylindrical shank having a smooth external surface, and a helix having spaced convolutions

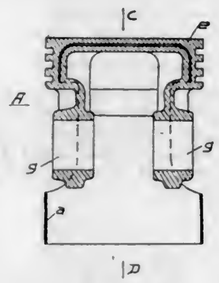
sleeved upon said external surface and having one end secured to said shank, the convolutions at the other end of the helix being freely movable longitudinally of the

external surface of the shank, the pitch of the convolutions at the fixed end of the helix being less than the pitch of the convolutions at the other end thereof.



1,780,827. RECTIFIER OF THE SYNCHRONOUS TYPE. ANDRÉ LATOUR, Grenoble, France. Filed Dec. 14, 1926, Serial No. 154,773, and in France Dec. 16, 1925. 9 Claims. (Cl. 175—364.)

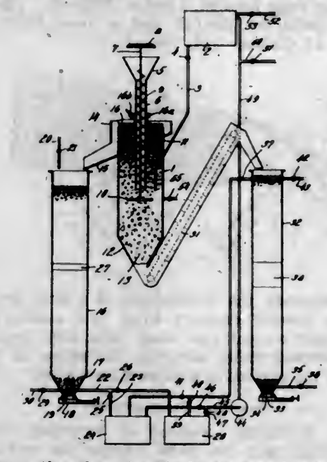
9. The combination, in a rectifier employing streams of mercury, of a first series of nozzles, a second series of nozzles, means for forming a continuous stream of mercury into the two series of nozzles, the said stream of mercury forming a pole of the rectified electric current, a collector arranged at the level of the said nozzles and adapted to be impinged upon by the streams of mercury issuing from the nozzles of the second series and to supply the alternating current which is to be rectified, the said nozzles being adapted to be moved relatively to the said collector, and commutation grids, the streams of mercury produced by the nozzles of the first series being longer than the streams of mercury produced by the nozzles of the second series, the said commutation grids being adapted to be impinged upon by the said longer streams and to avoid the formation of destroying sparks springing between the streams of mercury of the second series and the contact pieces of the collector at the moment the commutation takes place, and the said grids comprising a series of conductive bars and electric resistances connecting these bars together.



1,780,828. VALVE. ROBERT WILLIAM LEACH and WILLIAM HENRY BATEMAN, Newport, England. Filed Jan. 17, 1929, Serial No. 333,072, and in Great Britain Jan. 21, 1928. 5 Claims. (Cl. 251—51.)

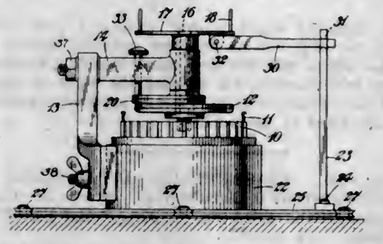
5. In a valve, a body part having a passage therein, a part movable in the body part and also having a passage, lubricant distributing channels adapted for connection with a supply of lubricant under pressure situated in the adjacent faces of the two parts, said channels surrounding said passage and certain of the channels being put

out of communication with the lubricant supply means when the movable part is being moved from one position to another.



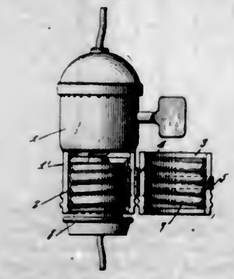
1,780,829. PISTON FOR INTERNAL-COMBUSTION ENGINES. ALFRED LESAGE, Brand-Erbisdorf, Germany, assignor to Elite-Diamantwerke Aktiengesellschaft, Brand-Erbisdorf, Saxonia, Germany. Filed July 24, 1928, Serial No. 294,968, and in Germany July 27, 1927. 1 Claim. (Cl. 74—108.)

A piston for internal combustion engines comprising in combination a light-metal head and a hard metal liner in the head, the said liner having perforations in the head and lateral openings in the wall for the passage of the piston pin bearings integral with the light-metal head while the said piston pin bearings do not come in contact with the said lateral openings in the wall of the piston and the cylinder wall.



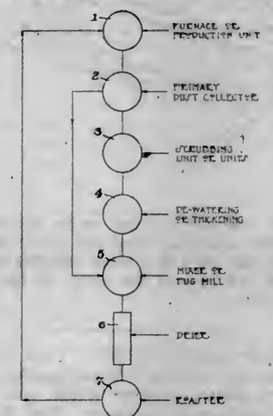
1,780,830. TREATMENT OF CARBONACEOUS MATERIALS. RUDOLF LESSING, London, England. Filed May 23, 1927, Serial No. 193,610, and in Great Britain May 27, 1926. 16 Claims. (Cl. 209—173.)

1. In the process of separating coal into its heavier and lighter components by delivering it into a bath of calcium chloride solution having a specific gravity intermediate between the specific gravities of the components to be separated so that the fragments of said heavier component sink and the fragments of said lighter component float, removing the floated material and removing



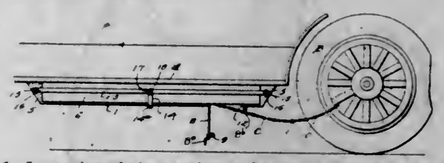
bath liquor therefrom by displacement with a continuous unbroken body of washing liquor until a predetermined small quantity of calcium chloride remains.

1,780,831. KNITTING MACHINE. HELEN GERTRUDE LEYTON and GEOFFREY BERTRAND LEYTON, Oxford, England. Filed Jan. 3, 1930, Serial No. 418,285, and in Great Britain Dec. 31, 1928. 5 Claims. (Cl. 66—135.)



1. A knitting machine including a needle cylinder, a slotted dial mounted for vertical, eccentric and inclined adjustment with respect to the cylinder, thread guides movable radially in the dial, a cam for operating the thread guides, and means connected with the dial for supporting a plurality of spools carrying threads to be passed through the thread guides.

1,780,832. ELECTRIC-LIGHT SOCKET. SHASTA E. McADAMS, HOWARD P. SKAGGS, and JAMES T. SINGHURST, Erie, Kans. Filed June 4, 1928, Serial No. 282,605. Renewed Mar. 14, 1930. 3 Claims. (Cl. 173—362.)

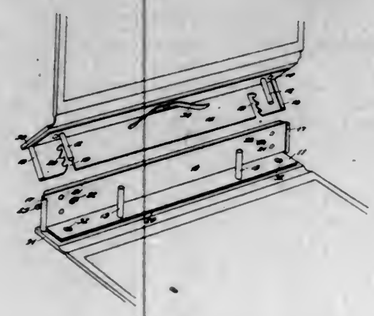


1. A socket of the class described having a receiving part of semi-circular shape in cross section and a door hinged to the socket, said door being of semi-circular shape in cross section and forming with the semi-circular part of the socket, when the door is closed, a complete circle for receiving a ping or lamp bulb, a threaded member of semi-circular shape in cross section in the semi-circular part of the socket and a similar member connected with the inner face of the door.

1,780,833. METHOD OF PROCESSING FURNACE DUST. WILLIAM J. MCGURTY, Baltimore, Md., assignor to The Bartlett Hayward Company, Baltimore, Md., a Corporation of Maryland. Filed Apr. 24, 1928. Serial No. 272,545. 2 Claims. (Cl. 75—14.)

1. That method of processing solids carried by gases emanating from a furnace which consists in discharging the gas into a dust collector and therein arresting a portion at least of the solids carried by the gas; passing the gas thus partially cleaned through a scrubbing unit wherein the gas is washed and a further recovery of solids is effected; dewatering the solids thus recovered; admixing such material with the solids removed by the dust collector; and then drying the mass.

1,780,834. CHAIN CARRIER AND PULL. JAMES R. MOORE, Springfield, Colo. Filed Aug. 25, 1927. Serial No. 215,401. 2 Claims. (Cl. 152—14.)

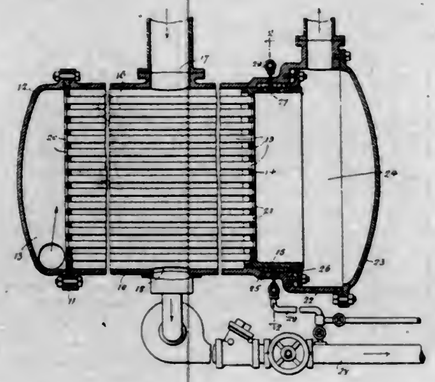


1. In a tire chain carrier, a hanger adapted to be secured to a motor vehicle running board and consisting of a base member having an opening therein adapted to aline with an opening in a tire chain container and through which a closure for the opening in the container is actuable, flanges offset from the base member for supporting the hanger on the running board, angular brace members at the ends of said hanger, a transverse strap secured to the base member, an arm hingedly secured to said strap, and a horizontal rod supported by said arm and provided with means to secure it to the angular brace members and to the container.

1,780,835. LOOSE-LEAF BINDER. JENS N. MORTENSEN, Brooklyn, N. Y., assignor to Boorum & Pease Company, New York, N. Y., a Corporation of New York. Filed Oct. 11, 1928. Serial No. 311,844. 3 Claims. (Cl. 129—13.)

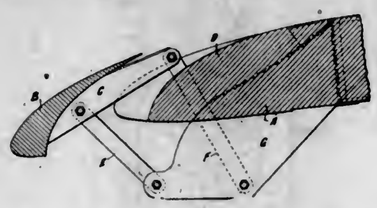
1. In a loose leaf post binder, a flanged binding bar, the flange being slotted adjacent each end, and the edge of

each slot nearest the end of the flange being notched, in combination with a second flanged binding bar, movable studs carried by the flange of the second bar cooperating with the notches in the flange of the first bar, and stud-operating means on said second flange comprising a pin



carrying each stud and a spiral spring surrounding each pin to press the stud away from the center of the binder to lock the binder, said pins being adapted to be pressed inwardly from the ends of the binder by the operator to unlock the binder.

1,780,836. NEW VAT DYESTUFFS. PAUL NAWIASKY and ARTUR KRAUSE, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 23, 1928, Serial No. 264,274, and in Germany Mar. 30, 1927. 5 Claims. (Cl. 260—32.)

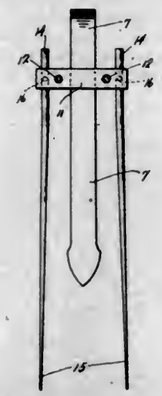


1. A process for the production of new condensation products, which consists in treating anthrapyrimidines with alkaline condensing agents.

1,780,837. SURFACE CONDENSER. ALBIN J. NOTT, New York, N. Y. Filed May 14, 1929. Serial No. 363,067. 3 Claims. (Cl. 257—43.)

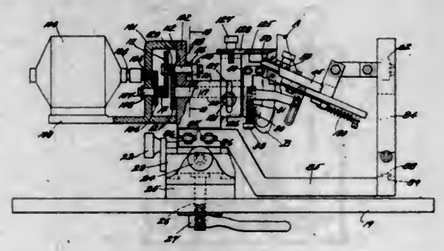
1. A surface condenser including a drum, tubes extending therethrough, tube sheets with which the tubes are permanently sealed, one of the tube sheets being axially movable within the drum to compensate for longitudinal contraction and expansion of the tubes, a packing interposed between the movable tube sheet and that portion of the drum with which the movable sheet engages and means for introducing condensate from the condenser to the packing for maintaining the same in a moist condition.

1,780,838. MEANS FOR CONTROLLING AEROPLANES. FREDERICK HANDLEY PAGE, London, England, assignor to Handley Page Limited, London, England. Filed Jan. 23, 1928, Serial No. 248,919, and in Great Britain July 9, 1927. 12 Claims. (Cl. 244—12.)



1. In aeroplanes, the combination of a main wing and a forwardly located auxiliary wing, said auxiliary wing freely movable toward and away from said main wing within prescribed limits solely by the action of the air pressure on the surface of said auxiliary wing.

1,780,839. WASHER. JUDSON C. PEWTHER, Wichita, Kans. Filed Mar. 30, 1929. Serial No. 351,389. 3 Claims. (Cl. 85—50.)

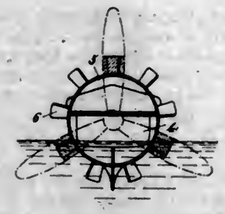


1. A bendable metal washer having a slot opening through one edge and an aperture inwardly spaced from the inner end of said slot, and means located between said slot and said aperture for drawing the walls of the slot toward each other when said means is driven against an object straddled by the washer.

1,780,840. GRASS-PULLING ATTACHMENT FOR SPRING-TOOTHED HARROWS. JOHN H. PIXLEY, Harrison, Mich. Filed Oct. 4, 1928. Serial No. 310,328. 3 Claims. (Cl. 55—97.)

1. A grass pulling attachment for harrow teeth comprising a pair of attaching plates disposed at the opposite faces of the harrow tooth, means carried by the plates for securing the same in position thereon, and a pair of grass pulling teeth adjustably secured to said attaching plates at opposite sides of the harrow tooth.

1,780,841. HEEL-SHANK-SHAPING MACHINE. LYMAN BARUCH POPE, Haverhill, Mass., assignor to Pope Machinery Corporation, Haverhill, Mass., a Corporation of Massachusetts. Filed June 9, 1928. Serial No. 284,032. 17 Claims. (Cl. 12—47.)

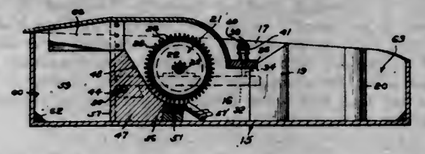


1. In a heel shank shaping machine, in combination, a shaping tool, a rotatably mounted shaft, a work carrier mounted on said shaft to rotate therewith, means for rotating said shaft to move the heel past said tool, means for clamping a heel upon said carrier, and means permitting the adjustment of the position of said heel to bring its breast at right angles to its axis of rotation.

1,780,842. PRODUCTION OF SULPHITE PULP. GEORGE A. RICHTER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Jan. 5, 1927. Serial No. 159,243. 12 Claims. (Cl. 92—11.)

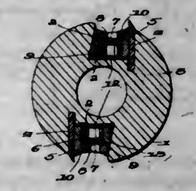
1. A process which comprises digesting raw cellulosis material at elevated temperature and pressure conditions in a solution comprising sulphurous acid and ammonium sulphate.

1,780,843. PROPELLER FOR VESSELS AND AIRCRAFT. MAX SCHUL, Brussels, Belgium. Filed Aug. 2, 1928, Serial No. 296,973, and in Germany Aug. 3, 1927. 1 Claim. (Cl. 115—34.)



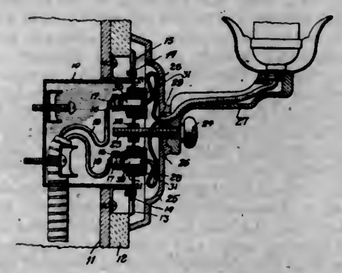
A propeller for vessels and aircraft, comprising, in combination, a member adapted to be moved transversely with respect to the longitudinal axis of the hull of the vessel or the body of the aircraft, and blades attached to said member and being formed by portions of an ideal propeller, the middle of the shaft of which coincides with the centre of said member, said portions being those, the efficiency of which lies between the maximum efficiency and another efficiency which is from 3 to 5% less.

1,780,844. APPLYING NITROCELLULOSE VARNISHES. HANS F. SCHULZ, Bomlitz, near Walsrode, Germany. Filed Nov. 30, 1926, Serial No. 151,827, and in Germany Dec. 4, 1925. 6 Claims. (Cl. 91—68.)



4. In a method of applying coats of nitrocellulose varnishes to surfaces of work with the aid of a primary binding layer, the using for the primary binding layer, of a nitrocellulose having a nitrogen content above 12.6%, and for the following layers, of nitrocelluloses having another nitrogen content than the nitrocellulose of the primary coating.

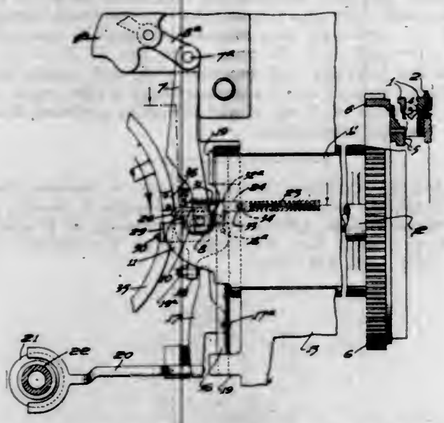
1,780,845. PAPER-PULP BEATER. WALTER N. SHERWOOD, North Hoosick, N. Y. Filed Oct. 13, 1928. Serial No. 312,363. 4 Claims. (Cl. 92—24.)



3. The method of beating paper pulp in the presence of water, comprising the steps of circulating the mass in a continuous passage, subjecting the pulp to the action of a high speed rotary beating roll driven at a speed of approximately 2500 to 3500 peripheral feet per minute and thereby projecting the pulp thus treated by the action of centrifugal force into the air from the high speed beating roll and causing the same to travel substantially completely across and above the pulp at the rear of the beating roll and collecting such projected pulp, and causing the collected pulp to travel at substantially a right angle to the direction of travel of the on-coming projected pulp for effecting a cross-mix.

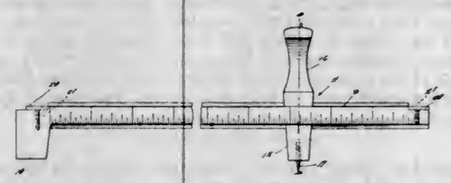
1,780,846. CUTTER HEAD. ELMER S. SHIMER and HAROLD L. SHIMER, Milton, Pa., assignors to Samuel J. Shimer & Sons, Milton, Pa., a Corporation of Pennsylvania. Filed June 19, 1928. Serial No. 286,667. 1 Claim. (Cl. 144—230.)

A cutter-head of the character described comprising a body portion having a channel formed in a side thereof, the walls of said channel converging toward the periphery, said channel having an extended groove at a corner thereof, the base of the channel being flat and smooth from said groove to the opposite side wall, a knife disposed in said groove, a wedge-shaped block disposed in the channel and having an approximately flat under side to normally fit against the flat base of the channel, said block having a hole extending radially therethrough and of two different bores with a shoulder therebetween, the larger portion of the hole being innermost and screw-threaded, and a set-screw threaded into said larger portion and having a recess to receive a tool, the inner end of the set-screw being approximately flat to bear against the flat base of the channel.



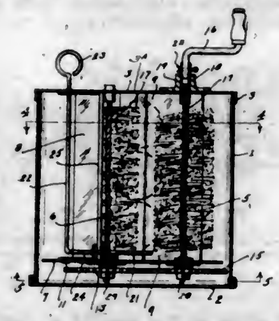
1,780,847. ELECTRICAL FIXTURE. ALFRED A. SMITH, New York, N. Y. Filed June 19, 1929. Serial No. 372,183. 4 Claims. (Cl. 240—85.)

1. In a device of the character described, a wall box, a cover for said box extending beyond the forward edges



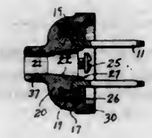
thereof, a wall connecting flange carried by said box and extending therefrom in spaced relation to said cover, a pair of spaced conductor receiving plugs carried by said cover, a threaded bushing centrally arranged in said cover, an ornamental outer cover for said wall box and its cover, a light fixture bracket mounted on said outer cover, and a threaded bolt extending through said bracket and outer cover for threadedly engaging said bushing to retain the wall box outer cover and bracket in assembled position.

1,780,848. SAFETY DEVICE FOR TYPOGRAPHICAL MACHINES. ARTHUR G. SPEARY, Hollis, N. Y., assignor to Intertype Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Aug. 31, 1929. Serial No. 389,826. 10 Claims. (Cl. 199—52.)



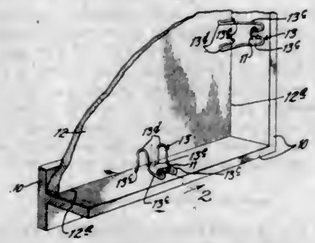
1. A typographical machine including means for supporting a line of matrices, a mold carrier and mold movable to present the mold to the line of matrices, power-driven means for moving the mold carrier, and means on the mold carrier for yieldingly transmitting motion thereto from said power-driven means.

1,780,849. SIDING GAUGE AND SCRIBE. PORTER R. SPILLMAN, South Bend, Ind. Filed Sept. 28, 1928. Serial No. 308,900. 1 Claim. (Cl. 33—187.)



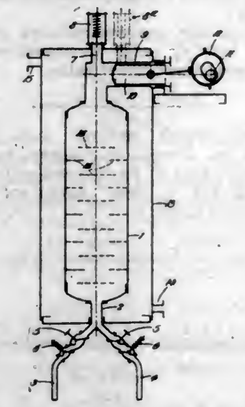
A siding gauge comprising a graduated measuring stick functioning as a rule and provided at its opposite ends with notches and formed at one end with a right angularly disposed extension functioning as a stationary abutment, a slide comprising a body having an opening receiving said rule, a bearing plate located in said opening and in slidable contact with said rule, said bearing plate having a recess formed therein, a set screw carried by said slide and having its shank portion extending into said recess, the portions of said slide extending in opposite directions on opposite sides of said rule, one portion being formed to provide a hand grip, the other portion constituting a slidable abutment for cooperation with the first-named abutment, the last named portion being equipped with an anchoring spur, and a pair of metal fingers removably mounted in the notches at the ends of said rule, said fingers extending in a direction at right angles to said abutments and to said rule.

1,780,850. GOLF-BALL WASHER. CHARLES W. STRONG, Portland, Oreg. Filed Aug. 31, 1927, Serial No. 216,622. Renewed Sept. 22, 1930. 3 Claims. (Cl. 15—21.)



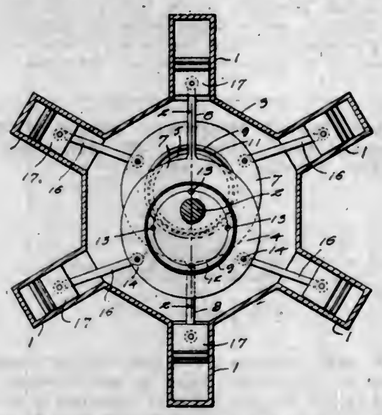
1. In a device of the class described, the combination of a liquid holding body, a removable closure adapted to the top of the body and having an opening therein, a base disposed within the body, suspending elements disposed between the closure and the base, means removably securing said base to the suspending elements, a multiple of bristle elements vertically disposed within the body and journaled in the base and closure, common driving elements for the bristle elements, and means for removing golf balls from the body through the opening in said closure.

1,780,851. PLUG CAP. HERMAN L. STRONGSON, New York, N. Y. Filed Mar. 27, 1929. Serial No. 350,146. 13 Claims. (Cl. 173—361.)



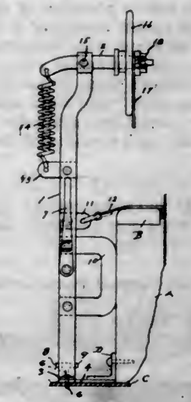
1. An electrical plug cap comprising a soft rubber-like body provided with a wire passage, a pair of feet of substantial length embedded within the body and separated at their ends by short stretches of rubber and separated at their centers by the passage, a contact upstanding from each foot, and wire connecting means.

1,780,852. GLAZING CLIP. LEO V. SULLIVAN, Warren, Ohio. Filed May 17, 1929. Serial No. 363,954. 1 Claim. (Cl. 189—78.)



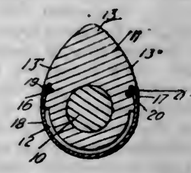
A glazing clip formed of a single piece of wire bent in the middle to form a double wire, said double wire formed into an upwardly turned hook adapted to be inserted into a hole in a frame member, the two ends of the wire from said hook being carried downwardly to form spacing members with their lower ends separated and bowed to form spring portions, the extreme ends of the wires being bent downwardly to form projections adapted to be snapped over the edge of a pane of glass.

1,780,853. EMULSIFYING AND ANALOGOUS APPARATUS. VINCENT GREGORY WALSH, London, England. Filed Dec. 26, 1929, Serial No. 416,718, and in Great Britain Oct. 4, 1928. 2 Claims. (Cl. 259—98.)



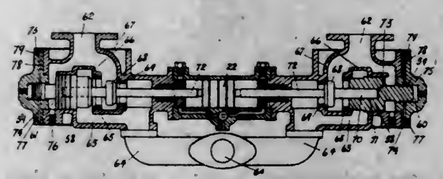
1. Apparatus of the class described comprising a closed container having inlet means for admitting thereto material to be treated, a discharge valve for said container, and reciprocatory means for subjecting material in said container to a continuous series of oscillations of pressure and thereby effecting continuous changes in the volume of the material according to the compressibility thereof, the discharge valve being operative to discharge part of the material from said container under the increases in pressure to which the material is subjected and to close under the intervening decreases in such pressure.

1,780,854. INTERNAL-COMBUSTION ENGINE. CLEAL T. WATTS and FRANK N. BAY, Albia, Iowa. Filed Dec. 29, 1928. Serial No. 329,262. 3 Claims. (Cl. 74—1.)



2. In an internal combustion engine, a plurality of cylinders arranged radially about a fixed center, a shaft arranged transversely of the engine upon said center, a pair of eccentric bodies cast integral with said shaft in side by side relation and extending in diametrically opposite directions, eccentric straps about said bodies, pistons in each of said cylinders and connecting rods attached to each of said pistons, the rods of certain of the pistons being connected to one eccentric strap and those of the remaining pistons being connected to the other eccentric strap, said eccentric straps having recesses formed in the peripheral faces thereof in each of which an inner end of a connecting rod positions for connection with the strap.

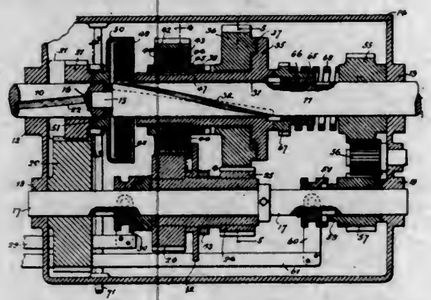
1,780,855. TOY. WILLIAM R. WILLIAMS, Salt Lake City, Utah. Filed Sept. 20, 1928. Serial No. 307,289. 2 Claims. (Cl. 46—37.)



1. In a toy of the character described comprising an upright support carrying a shaft pivotally attached to its upper end, said shaft having a wheel on one end thereof and a spring on the other end thereof, said wheel to be moved by a child, said spring at its lower end being attached to the support, said spring holding said shaft in its proper position, graduate marks on the face of said wheel to indicate to the child the desired movement it wishes to make of the wheel, levers pivotally placed on said support, means for attaching said toy to a vehicle all substantially as set forth.

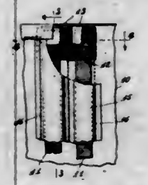
1,780,856. VALVE-OPERATING MECHANISM. JOSEPH FERDINAND ADAM, Toronto, Ontario, Canada, assignor of one-half to Joseph Tessier, Toronto, Ontario, Canada. Filed Aug. 27, 1928. Serial No. 302,872. 4 Claims. (Cl. 74—1.)

1. The combination with a cam body, of a resilient member carried by the cam body and forming the heel portion of the cam.



1,780,857. ENGINE DRAIN OR COMPRESSION-RELIEF VALVE. JOHN GALILEO BARCLAY and COLIN THOMSON BARCLAY, Kilmarnock, Scotland. Filed Dec. 18, 1929, Serial No. 415,086, and in Great Britain Oct. 22, 1928. 10 Claims. (Cl. 121—184.)

3. A relief or drain valve apparatus for a reciprocating engine comprising a valve chamber having a plurality of of inlet ports, each communicating with an inlet passage connected to the engine cylinder, one of said ports com-

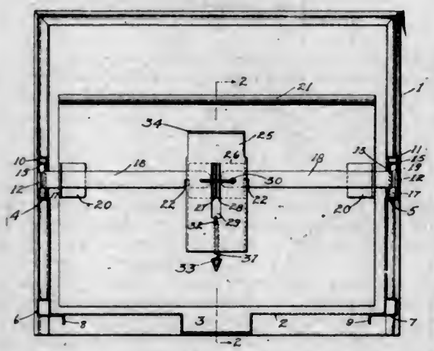


municating with an enclosed space at the end of said chamber, a plurality of coaxial outlet ports in said chamber and coaxial therewith, each outlet port being constituted by a valve seat, a plurality of coaxial valve elements, each adapted to seat upon one of said valve seats, one of said valve elements being constituted by a trunk piston which forms one confining wall of said enclosed space, said valve elements being operatively associated to simultaneously close upon their seats under the pressure of fluid admitted to said enclosed space, and automatic means for lifting said valve elements off their seats.

1,780,858. POWER TRANSMISSION. CLAUDE BEARENS, Brooklyn, N. Y. Filed July 28, 1928. Serial No. 295,996. 12 Claims. (Cl. 74—59.)

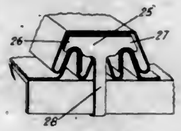
1. In a multiple speed selective gear transmission which includes a drive shaft, a driven shaft and a counter shaft having constant operative connection with the drive shaft; a tubular shaft section on the counter shaft having low and intermediate speed gears secured thereto, manually operable means for coupling said tubular shaft section to and uncoupling the same from the counter shaft, a sleeve having a clutch face, mounted on the driven shaft, a spiral splined connection betwen the sleeve and driven shaft, a low speed gear loosely mounted on said sleeve having a clutch face adapted for engagement with the clutch face of the sleeve for obtaining low speed drive, an intermediate speed gear loosely mounted on said sleeve, a normally inactive multiple disk clutch connection between said intermediate gear and the sleeve adapted when active to obtain an intermediate speed drive, a normally active multiple disk clutch connection between said driven shaft and drive shaft, disk clutch actuating means operable to successively render the multiple disk clutches active upon shifting of the sleeve in one direction and tensioned means operating upon said sleeve to shift the same axially for effecting the selective actuation of the transmission in accordance with the load.

1,780,859. CORSET-STEEL PROTECTOR. MARGARET L. BENZIE, New York, N. Y. Filed May 4, 1929. Serial No. 360,531. 3 Claims. (Cl. 2—257.)



3. The combination of a stay, a metal tip, a piece of fabric, said tip having integral means securing the tip to said fabric, said tip embracing said stay and fabric, and said fabric projecting beyond the edges of said tip, whereby said tip may be secured to an article by means of stitching passing through said fabric.

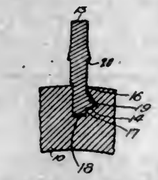
1,780,860. BETAINETHIOCYANATE. RUDOLF BERENDES and LUDWIG SCHÜTZ, Elberfeld, Germany, assignors to Winthrop Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed June 18, 1928, Serial No. 286,484, and in Germany June 28, 1927. 1 Claim. (Cl. 260—25.)



Betaine thiocyanate, forming colorless crystals of the melting point 167° C. (with decomposition) and being a product of great therapeutical value.

1,780,861. FOLLOWER BLOCK. CONRAD BERGMANN, Philadelphia, Pa., assignor to Columbia Steel Equipment Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 7, 1929. Serial No. 330,728. 10 Claims. (Cl. 129—28.)

1. In a filing compartment having side walls, longitudinal recesses extending therealong, ratchet members arranged longitudinally of the sides of said side walls, a follower block within said cabinet arranged transversely of said side walls, bearing means for said follower block extending along said recesses and having a contact member thereon for contacting with said ratchet members to normally permit movement of the follower block in but a single direction, and a single means for actuating both bearing members to release the contact member to permit movement of the follower block in both directions.

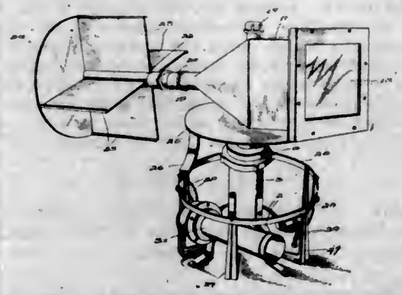


1,780,862. METAL SHEETING. RICHARD R. BLOSS, Columbus, Ohio. Filed Dec. 17, 1927. Serial No. 240,900. 3 Claims. (Cl. 189—88.)

1. A joint structure for metal sheeting comprising gutters on the adjacent edges of said sheeting, beads formed in said sheeting and lying outwardly of said gutters, a cap strip having complemental beads to embrace the beads of said sheeting, and clamping means for embracing the beads of said cap strip from within and clamping said cap strip to said sheeting.

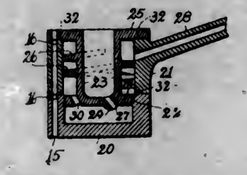
1,780,863. JORDAN PLUG. BROWNELL BUEHLER, Philadelphia, Pa., assignor to Noble & Wood Machine Company, Hoosick Falls, N. Y., a Corporation of New York. Filed Aug. 28, 1929. Serial No. 389,002. 8 Claims. (Cl. 92—27.)

2. In a device of the type described, a bar and a rotatable body having a groove, said bar having an enlargement upon its groove-engaging portion forming a longitudinally-extending rib combining with the bar to produce a wedge-shaped portion the butt end of which is disposed toward the bottom of the bar, the bottom of the bar converging



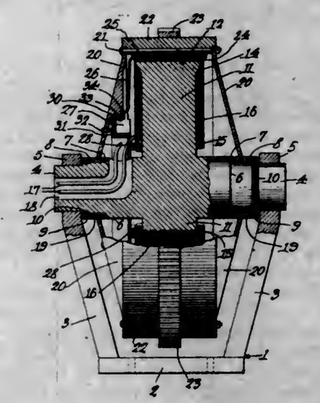
upon said rib from end to end of the bar, the groove being formed to receive said bar and having a shoulder for engagement with the rib simultaneously with the engagement of the bottom of the bar with the bottom of the groove when the bar is fully seated in the groove.

1,780,864. NONSKID DEVICE FOR THE WHEELS OF ROAD VEHICLES. FREDERIC BULL and FRANK WHITE, Walsall, England. Filed Sept. 9, 1929, Serial No. 391,420, and in Great Britain Mar. 25, 1929. 8 Claims. (Cl. 152—14.)



1. In a non-skid device a plate element, a spindle on said plate, and a roller on said spindle, the roller being adapted to take the majority of the wear to which the non-skid device is subjected by its engagement with the road.

1,780,865. LOCOMOTIVE HEADLIGHT. WILLIAM N. COBBS, Pittsburgh, Pa. Filed Dec. 22, 1928. Serial No. 327,831. 6 Claims. (Cl. 240—62.)

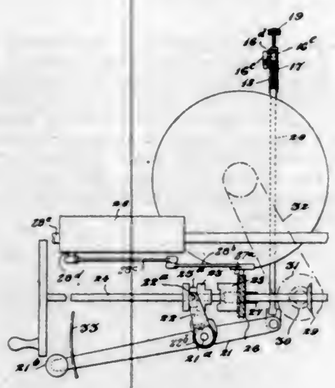


1. The combination of a headlight for a vehicle, tubular supporting means for said headlight for pivotal movement, bearings upon which said tubular supporting means is mounted, means removably projecting through the tubular supporting means and carrying a lamp positioned in the headlight, said lamp being smaller in diameter than the tubular supporting means, and a weather vane connected with the headlight for automatically causing a turning movement thereof corresponding with the direction of movement of the vehicle.

1,780,866. SMOKER'S PIPE. WALTER E. COPITHORN, Natick, Mass. Filed May 27, 1927. Serial No. 194,646. 4 Claims. (Cl. 131—12.)

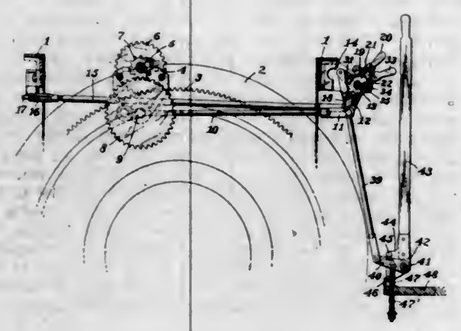
1. A smoker's pipe comprising, in combination, a stem portion, a body portion having a bowl therein, a cistern removable from said body, the lower portion of said bowl extending to said cistern and having a restricted outlet thereto, the walls of said body and bowl being spaced apart to provide a chamber between, a transverse partition between said chamber and said cistern provided with a restricted outlet therethrough, said pipe stem having a passage therein communicating with said chamber at or near the top thereof.

1,780,867. INVERTED ELECTRIC MOTOR. EMANUEL CORNELLA, Chicago, Ill. Filed May 2, 1929. Serial No. 359,860. 1 Claim. (Cl. 172—36.)



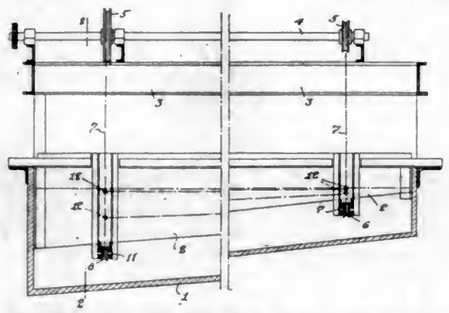
In a motor of the class described, a stator including a fixed shaft, field magnets carried by the shaft, a rotor including rings journaled on the shaft, side plates connected to the rings, an annular body secured between the side plates, armature windings carried by the body, one side plate being thickened to form an internal annular shoulder disposed concentrically with respect to the shaft, a ring located within the shoulder and engaged therewith, commutator segments connected to the armature windings and disposed within the ring, an annular retainer disposed within the ring, the retainer embodying an inwardly extended flange arranged parallel to the shaft, and an outer flange arranged at right angles to the shaft, the outer flange extending toward therein, the flanges and the ring forming a casing for the segments, means for securing the segments to the ring and to the flanges of the retainer, and securing elements connecting the outer flange of the retainer with said side plate.

1,780,868. KNIFE-GRINDING MECHANISM FOR USE WITH SLICING MACHINES. EDWIN COULSON, Chiswick, London, England. Filed May 7, 1928, Serial No. 275,926, and in Great Britain June 1, 1927. 3 Claims. (Cl. 51—248.)



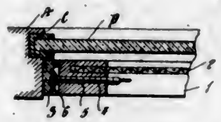
2. A grinding mechanism for slicing machines of the rotary disc knife and reciprocating carriage type com-

prising a support, a pair of grinding wheels rotatably and slidably mounted relatively to said support, means for moving said wheels into and out of contact with the knife edge, a rotatable driving shaft, means driven from said shaft for effecting a reciprocation of the carriage, a clutch member slidably but non-rotatably mounted on said driving shaft, an actuating means adapted to effect the engagement and disengagement of the said clutch member, means connecting said actuating means to the means for



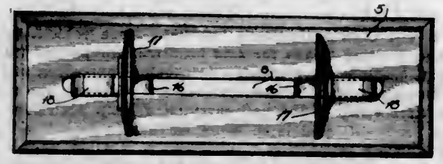
moving the grinding wheels into and out of their acting position the connection between the actuating means and the clutch member and between the actuating means and the grinding wheel control means being such that the operation of moving the said member for disengaging the clutch and thereby disconnecting the carriage reciprocation mechanism from the driving shaft simultaneously causes the member connecting the actuating means and the grinding wheel control means to cause the said grinding wheels to move into their acting position.

1,780,869. POWER-CONTROL MECHANISM. FRED L. DAKE, Nunda, N. Y., assignor to The Foote Company, Inc., Nunda, N. Y., a Corporation of Delaware. Filed Apr. 12, 1929. Serial No. 354,539. 17 Claims. (Cl. 74—39.)



1. A power operating control comprising a control shaft, means for oscillating said shaft, a control lever loosely mounted on said oscillating shaft, a handle on said control lever, means for locking said handle to said control shaft to thereby operate the control lever by an oscillation of the control shaft.

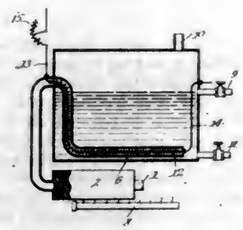
1,780,870. DEVICE FOR TREATING ROUGH TUBES AND ANALOGOUS ARTICLES WITH LEAD. GASTON DE DUDZEELE, Paris France. Filed Nov. 13, 1928, Serial No. 319,176, and in France Nov. 16, 1927. 4 Claims. (Cl. 91—12.6.)



1. In a device for treating rough hewn tubes and analogous articles with lead comprising, in combination, an inclined melting pot, a diaphragm disposed in said melting pot in spaced relation to the bottom thereof, a plurality of pulleys on said diaphragm disposed at equal distances from the bottom of said melting pot, a plurality of pulleys of decreasing diameters cooperating with said first named pulleys, a chain passing over each pair of said first and second named pulleys, and a finger mounted on each of said chains whereby the articles to be treated are passed around said diaphragm in inclined position from one of said chambers to the other for the purpose disclosed.

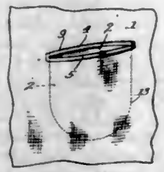
1,780,871. SCREEN FOR WINDOWS, WINDSHIELDS, AND THE LIKE. GEORGE A. DICKSON, Medway, Mass., assignor of one-third to Lillian M. Dickson, Medway, Mass., and one-third to James A. Anderson, City Mills, Mass. Filed June 27, 1929. Serial No. 374,138. 2 Claims. (Cl. 156—14.)

1. A screen for windows, windshields and the like, comprising a frame shaped and proportioned to fill an opening in a window casing and the like and having screen fabric secured thereto, packing material secured to the outer edges of said frame to prevent abrasion of the engaged surface of the window casing and providing a weather and insect proof between the frame and window casing, and means mounted in the frame and engaging the packing to clamp the frame in the casing, the packing adjacent to said means being unsecured to the frame to permit movement thereof away from the frame by adjustment of said means.



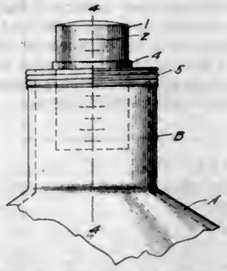
1,780,872. BOOK RACK OR SUPPORT. HENRY J. DUMBEN, Waterville, Iowa. Filed Dec. 28, 1928. Serial No. 329,031. 8 Claims. (Cl. 211—43.)

1. In a book support of the character described including an elongated base having a central longitudinal slot



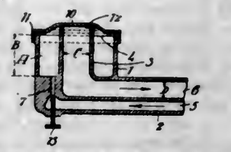
therein, a cut away portion formed in the underside of the elongated base, a pair of longitudinal strips having one of their ends grooved and secured in the cut away portion of the elongated base, a pair of sliding supporting members loosely mounted in the grooved portion of said longitudinal strips, a slidable block secured to each of the slidable supporting members, a book end support secured to each of the slidable blocks, and means associated with the slidable supporting member for holding the slidable supporting members in place relative to the elongated base.

1,780,873. PROCESS OF TREATING HYDROCARBONS. CLARENCE J. FRANKFORTER, Lincoln, Nebr., assignor to Frankforter Oil Process, Inc., Omaha, Nebr., a Corporation of Nebraska. Filed Aug. 27, 1929. Serial No. 388,646. 29 Claims. (Cl. 196—24.)



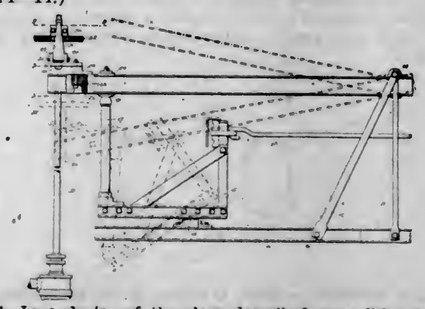
1. The process of treating liquid hydrocarbon oils and distillates containing sulphur and sulphur compounds, while in heated condition, comprising chemically re-acting upon the sulphur and sulphur compounds with a gas containing hydrogen preliminarily activated by contact with a heated contact substance, by presenting the activated gas to the liquid and further activating the gas in contact with a heated contact substance in the presence of the liquid to cause intimate contact of the activated gas with the sulphur and the sulphur compounds to produce chemical union therewith and to change the major portion of said sulphur and sulphur compounds into volatile sulphides, and separating said sulphides.

1,780,874. SHIRT POCKET AND METHOD OF MAKING THE SAME. JACOB FRIEDMANN, Freeport, N. Y., assignor to Kaylon, Incorporated, New York, N. Y., a Corporation of New York. Filed Apr. 7, 1930. Serial No. 442,315. 3 Claims. (Cl. 2—247.)



2. The method of providing a shirt with a pocket, which consists in stitching a pocket piece along the edge to the inner face of a shirt, forming a pocket opening in the shirt below the line of the aforesaid connection of the pocket piece with the shirt, securing to the outer face of the shirt, a slitted reinforcement, with the slit therein in alignment with the pocket opening in the shirt, turning the members of said reinforcement separated by the slit through the pocket opening, securing the inturned portion of the lower of said members against the inner face of the shirt, securing the inturned portion of the upper said member to the pocket piece and shirt, and stitching the previously free edges of the pocket piece to the shirt.

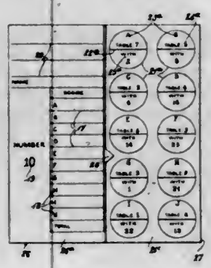
1,780,875. BOTTLE CAP AND MEASURING DEVICE. EDWARD L. GORDON, McKees Rocks, Pa. Filed Nov. 25, 1927. Serial No. 235,707. 1 Claim. (Cl. 215—57.)



A combined bottle closure and measuring device, comprising a cap having an annular depending flange for association with the bottle, and characterized by an enlarged centrally located opening, an upwardly extending flange rising from the edge of said opening, a one-piece cup like measuring vessel arranged in said opening and frictionally supported by the last mentioned flange, said vessel being normally inverted and used as a stopper, and adapted to be arranged in an upright position for use subsequent to the removal of the cap from the bottle and inverting said cap, and graduations provided on said vessel and cooperating with the last mentioned flange of the cap as and for the purpose specified.

1,780,876. VIBRATORY APPARATUS. CARL GROSSE, Berlin-Hermsdorf, Germany. Filed Mar. 8, 1928, Serial No. 260,129, and in Germany May 12, 1927. 2 Claims. (Cl. 128—64.)

2. A fluid-driven vibratory apparatus for massage purposes including a casing, a duct for the inflow of the fluid, a duct for the outflow of the fluid, a handle having inflow and outflow ducts communicating with the first mentioned ducts, both ducts in the handle being connected to the ducts in the casing with a sharp change of direction, said casing forming an annular space, a yielding diaphragm for receiving the fluid stretched freely movable over the annular space, the portion of the diaphragm overlying said annular space being freely movable inwardly and outwardly.

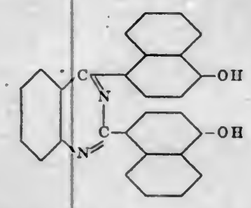


1,780,877. SUCKER-ROD TURNER. FRANK H. HALL, Bradford, Pa., assignor to Bovaird & Company, Bradford, Pa., a Copartnership composed of Joseph H. Bovaird, George W. Bovaird, and Mary B. Downs. Filed July 16, 1928. Serial No. 292,978. 2 Claims. (Cl. 74—14.)

1. In a device of the class described, a walking beam, means for swinging the walking beam, a polish rod, a guide

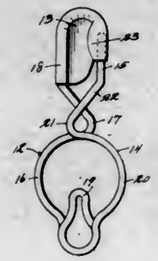
for the polish rod having trunnions mounted on the free end of walking beam, a ratchet wheel on the upper end of the polish rod, a laterally extending member secured to the free end of the walking beam and having an angular end, and a pawl pivoted to the angular end of said member and extending upwardly for engagement with the ratchet wheel, said pawl having an arm between its pivot and the point of engagement with the ratchet wheel for holding it in engagement with the ratchet wheel.

1,780,878. TALLY. CLARA C. HARRIS, Sabina, Ohio. Filed Apr. 13, 1928. Serial No. 269,741. 4 Claims. (Cl. 283—49.)



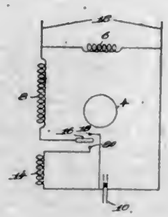
1. A tally for games played progressively at a tournament involving either of two different number of tables, said tally being formed of a plurality of foldably connected sections, one of said sections having printed on one face thereof a score field, the two remaining sections each having printed on one of its faces a series of guiding instructions, one of the two remaining sections having its series of guiding instructions displayed on the face thereof opposite to the display face of the other remaining section so that the first mentioned remaining section may be folded against the back face or against the front face of the second mentioned remaining section to leave exposed only one of the series of guiding instructions and to conceal the other series and means for holding the first mentioned remaining section in either of its operative positions.

1,780,879. CONDENSATION PRODUCT OF THE BENZODIAZINE SERIES. WINFRID HENTRICH and MAX HARDTMANN, Wiesdorf-on-the-Rhine, and RUDOLF KNOCHE, Leverkusen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 8, 1928, Serial No. 260,239, and in Germany Mar. 18, 1927. 5 Claims. (Cl. 260—32.)



1. Process for producing new condensation products of the benzodiazine series, which process comprises causing a halogenated benzodiazine containing at least one halogen atom in the diazine nucleus to react upon an aromatic phenolic compound in the presence of aluminum chloride.

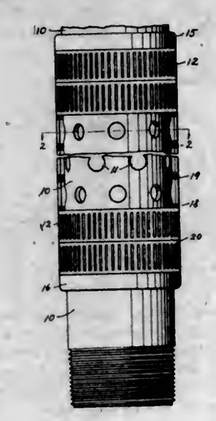
5. As a new product 2.4-di- (4'-hydroxynaphthyl)-quinazoline



being a yellowish powder, insoluble in water, soluble in alcohol with a yellowish coloration and in concentrated sulfuric acid with an intense violet coloration.

1,780,880. BAG CLASP. ERIC G. JOHNSON, Trenton, N. J., assignor of one-half to Leonard M. Davenport, Trenton, N. J. Filed Mar. 25, 1930. Serial No. 438,790 4 Claims. (Cl. 24—30.5.)

4. A clasp of the character described comprising a resilient wire member, a locking member secured to one end of said wire and adapted to releasably engage the opposite end thereof, said wire having a pair of arcuate portions intermediate the ends thereof, an anchor integrally formed with said wire and adapted to prevent turning of a laundry net bag secured within said clasp, and gripping means integrally formed with said wire and positioned intermediate the free ends thereof and said arcuate portions, said gripping means being adapted to prevent longitudinal movement of the clasp on the bag and cooperating with said anchor whereby to prevent circumferential movement of the clasp on the bag.

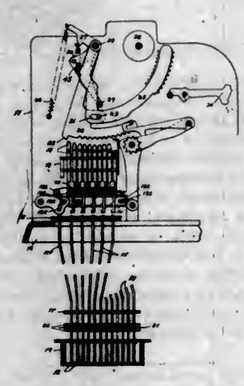


1,780,881. INDUCTION MOTOR. CARLTON L. KENNEDY, Braintree, Mass., assignor to The Holtzer-Cabot Electric Company, Roxbury, Mass., a Corporation of Massachusetts. Filed Oct. 15, 1926. Serial No. 141,756. 4 Claims. (Cl. 172—278.)

4. An induction motor having, in combination, a rotor, a stator having a line winding and an auxiliary winding displaced from the line winding, a condenser circuit including the auxiliary winding and a condenser connected in parallel with the line winding and maintained continuously energized under running conditions, the reactance of the condenser being sufficient to draw a leading current in the condenser circuit under running conditions, and means for placing additional inductive reactance in series with the condenser in the condenser circuit to approach resonance at starting.

1,780,882. WELL SCREEN. MARTIN F. KETTLER, Houston, Tex. Filed July 18, 1929. Serial No. 379,217. 4 Claims. (Cl. 166—5.)

1. A well screen having in combination a perforated tube, a series of individual reenforcing and straining rings each of channel shape in cross section having spaced inwardly directed annular flanges to engage directly on the wall of the perforated tube, said rings butting one against the other on said tube and being shrunk on said perforated tube with their webs in spaced relation to the tube and covering certain of the perforations therein, said webs having straining openings therein, the perforations in said tube being arranged to provide a plurality of circumferential perforated portions and imperforate circumferential portions extending completely around said tube and be-

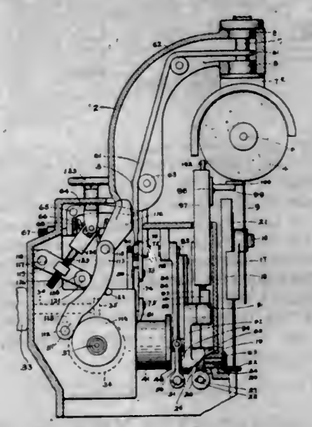


tween perforated portions thereof, said rings being arranged with their flanges between each pair of perforated portions whereby to reenforce the perforated portions of the tube.

1,780,883. SOLUTION OF CELLULOSE DERIVATIVES. ANGELO KNORR, Berlin, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Mar. 16, 1928, Serial No. 262,329, and in Germany Dec. 23, 1924. 18 Claims. (Cl. 134—79.)

2. A cellulose lacquer comprising a cellulose derivative, the hydrogen atom of at least one hydroxyl group of which is substituted by alkyl or acyl, dioxane and a liquid hydrocarbon.

1,780,884. TABULATING MACHINE. MARTIN LEBEIS, Berlin, Germany, assignor to Remington Rand Incorporated, New York, N. Y., a Corporation of Delaware. Filed Oct. 23, 1929, Serial No. 401,832, and in Germany Oct. 9, 1925. 18 Claims. (Cl. 235—61.)



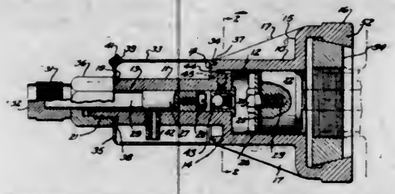
1. In a machine of the class described, a registering mechanism, setting means therefor consisting of one or more units of aligned stops, setting members for said means mounted for movement in the direction of alignment of said stops, a card analyzer for individually actuating said setting members both in a sliding direction and collectively in the direction of alignment of said stops.

1,780,885. PROCESS OF DEGREASING TEXTILE MATERIALS. WILHELM PFAFFENDORF, Hochst-on-the-Main, Germany, assignor, by mesne assignments, to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed May 26, 1927, Serial No. 194,533, and in Germany June 14, 1926. 1 Claim. (Cl. 87—6.)

The process which comprises washing textile materials with ethylene chloride $CH_2Cl—CH_2Cl$ at a temperature between about 0° C. to about 80° C.

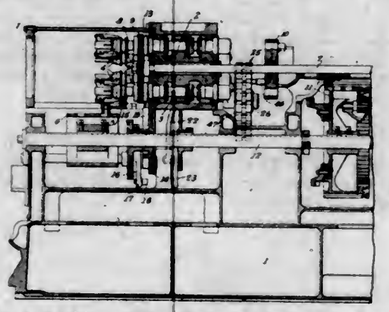
1,780,886. CIRCULAR-SAW-SHARPENING MACHINE. JOHN F. PRIBNOW, San Diego, Calif., and EUGENE F. MITCHELL, Spokane, Wash.; said Mitchell assignor to Arthur W. Pribnow, San Diego, Calif.; M. L. Schultz administrator of said John F. Pribnow, deceased. Filed Feb. 23, 1928. Serial No. 256,456. 12 Claims. (Cl. 76—40.)

1. In a saw sharpening machine, a supporting arm, a grinding head journaled in the supporting arm, a flexible member secured to the grinding head, tensioning means connected to one end of the said flexible member, cam controlled means connected to the other end of said flexible member adapted to move the flexible member lengthwise in one or more directions, and thus oscillate said grinding head and means adapted to adjust the relative positions of said cam controlled means while in motion to limit the degree of the oscillation of said grinding head.



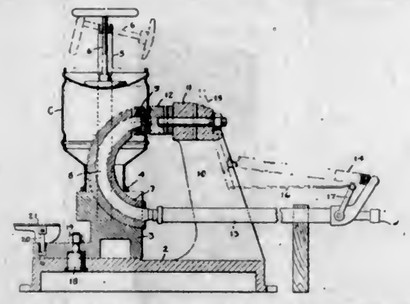
1,780,887. MARCEL CAP. MABEL H. THORNBURGH, Denver, Colo. Filed May 6, 1929. Serial No. 360,637. 1 Claim. (Cl. 2—198.)

A cap having a central portion shaped to fit the top of the head and having an oval space in the rear above the neck, this space being open at the bottom and closed at the top by a gathered portion provided with an elastic



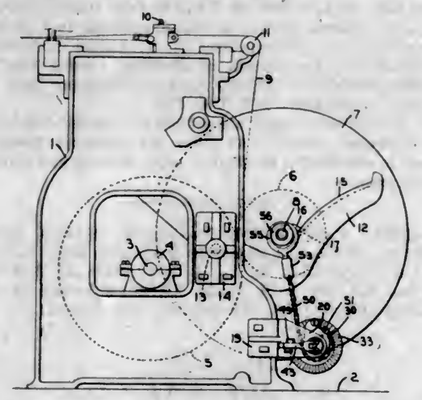
element normally holding the edge adjacent the opening in the retracted position, a loose flap partially closing said rear space and connected at the top to the elastic portion of the cap and provided with a corresponding fulness to permit expansion, and elongated portions extending downwardly from each side, said portions being adapted to cross over the flap at the rear and to be brought upwardly along the side of the head and there fastened whereby they serve to secure the cap to the head and to hold the flap in place.

1,780,888. WHEEL PULLER. WALTER UEBELHOER, Buffalo, N. Y., assignor of one-half to Marvin Uebelhoer, Buffalo, N. Y. Filed Feb. 23, 1929. Serial No. 341,989. 9 Claims. (Cl. 29—86.)



1. A wheel puller comprising a body portion having a cylindrical bore extending therethrough, said bore being enlarged adjacent one end of the body portion, a work engaging piston slidably mounted in the enlarged bore portion of the body, an impact piston slidably mounted in the bore in the opposite end of the body, said impact piston projecting beyond the body and having a striking surface on the end thereof, said pistons being spaced, and a body of incompressible fluid between the pistons, said impact piston being free to move longitudinally in one direction only under the influence of an impact force applied normally to said striking surface.

1,780,889. METAL-WORKING MACHINE. ROBERT S. BROWN, New Britain, Conn., assignor, by mesne assignments, to The New Britain-Gridley Machine Company, New Britain, Conn., a Corporation of Connecticut. Filed Jan. 14, 1928. Serial No. 246,843. 8 Claims. (Cl. 29—38.)

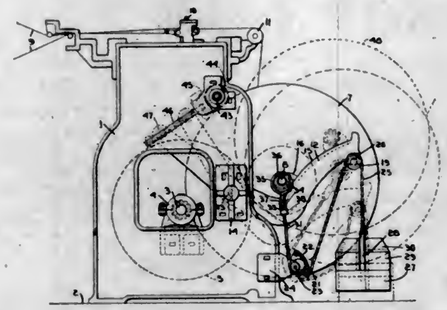


1. In a machine of the character indicated, a spindle carrier, a group of spindles carried by said spindle carrier and arranged equidistant from the axis of the carrier, work holding means for each spindle, means for indexing said spindle carrier including a gear on said carrier, means for holding said carrier in indexed position, a second work holding carrier, a plurality of work holding means on said second work holding carrier and arranged equidistant from the axis of said carrier, gearing connecting said first carrier with said second carrier for indexing said second carrier when said first carrier is indexed, said gearing being arranged to periodically bring work holding means in said second carrier opposite work holding means in said first carrier to permit work held in one carrier to be transferred to the other carrier.

1,780,890. APPARATUS FOR EMBOSSING CANS. WALTER H. HAUPT, Ludlow, Ky., assignor to Augustine Davis, Jr., Cincinnati, Ohio. Filed Apr. 22, 1930. Serial No. 446,259. 7 Claims. (Cl. 101—4.)

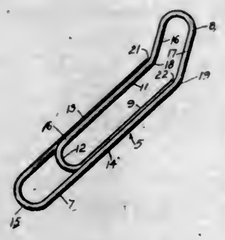
2. Can embossing means, comprising the combination of can receiving means, an outer die holder, a curved horn to enter through the mouth of a can, a curved ram guided in said horn, and an embossing die at the inner end of said ram, and hammer mechanism for applying a succession of blows to the outer end of said ram.

1,780,891. WARPER. HARRY A. DAVIS, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Jan. 3, 1929. Serial No. 330,096. 18 Claims. (Cl. 28—38.)



1. A warper comprising a driving drum, a warp beam supported to rest against the drum and to move away from the drum as the yarn is wound on the beam by the frictional engagement of the drum therewith, means acting to cause the resultant pressure on the drum from the beam due to weight to remain substantially constant as the yarn is wound on the beam, and means for presenting a gradually decreasing additional resistance to the movement of the beam as the yarn is wound on the beam, said two means acting in conjunction to effect a gradually decreasing total resultant pressure of the beam on the drum to compact and prevent bulging of the yarn mass as the yarn is wound on the beam and to prevent the beam from jumping when rotated at high speed.

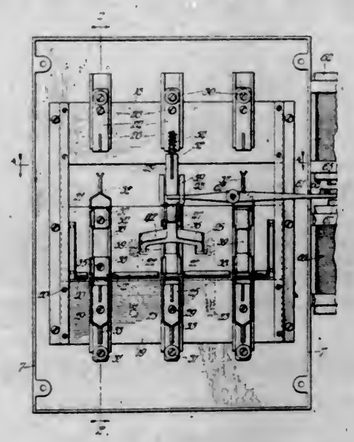
1,780,892. WARPER. CLARE H. DRAPER and EARL H. TREVETT, Hopedale, Mass., assignors to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Dec. 5, 1928. Serial No. 323,842. 22 Claims. (Cl. 28—38.)



1. A warper comprising a driving drum, a warp beam having gudgeons, a pair of supporting arms extending forward of the drum, a pair of gudgeon blocks supporting

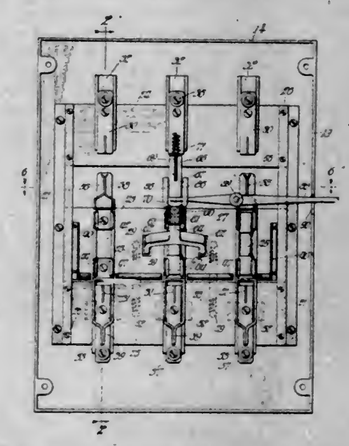
the beam gudgeons and movable along the arms as the yarn is wound on the beam by the frictional engagement of the drum therewith, the surfaces of the arms upon which the gudgeon blocks move extending forward and upward in a convex curve shaped to prevent increase in the resultant pressure on the driving drum due to the increase in the total weight of the beam and yarn as the yarn is wound

on the beam, means for applying additional weight to the gudgeons to prevent the beam from jumping when rotating at high speed and means for gradually decreasing the amount of said additional weight from the beginning of the winding operation thus to cause a gradual decrease in the resultant pressure of the beam on the drum from said additional weight to compact and prevent bulging of the yarn mass.



1,780,893. PAPER CLIP. GEORGE P. SCHMITT, Oakland, Calif. Filed Oct. 8, 1928. Serial No. 311,040. 1 Claim. (Cl. 24—261.)

A paper clip constructed of resilient wire to provide two substantially plane clamping members having base edges thereof defined at lines through the free ends of the wire and a substantially plane connecting loop having its plane intersecting at a sharp angle to the plane of a member at the base line thereof.



1,780,894. ELECTRIC SWITCH. LOUIS KELLNER, Brooklyn, N. Y., assignor to Jefferson Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 21, 1926. Serial No. 82,636. 12 Claims. (Cl. 200—3.)

1. A switch having, in combination, a plurality of fixed contacts, a member movable between said contacts, a plurality of movable contacts on said member adapted to be moved simultaneously into and out of engagement with said fixed contacts, said fixed and movable contacts constituting a circuit with two switch breaks, a fuse connected in said circuit between said breaks, spring means tending continuously to move said member to open said contacts, means for actuating said member to close said contacts, and spring pressed means adapted to be cammed by said

actuating means into locking engagement with said actuating means when the switch is closed, said actuating means being operable to disengage said locking means.

1,780,895. ELECTRIC SWITCH. LOUIS KELLNER, Brooklyn, N. Y., assignor to Jefferson Electric Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 21, 1926. Serial No. 82,637. 10 Claims. (Cl. 200—3.)

1. A switch having, in combination, a support, a movable member, contacts on said support and on said movable member, said contacts being arranged to form a pair of parallel circuits, fuses in one of said circuits, said member having an open position in which both circuits are open, a closed position in which said unfused circuit is closed, and a closed position in which said unfused circuit is open and said fused circuit is closed, spring means tending to maintain said member in open position, an actuator for moving said member from open to closed position, and cam means controlling the movement of said actuator, said cam means limiting the movement of said member upon the first movement of said actuator to said intermediate position and necessitating a partial release and a second actuation of said actuator to move said member into its closed position.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office

Vol. 400—No. 2 TUESDAY, NOVEMBER 11, 1930 Price—$10 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual index, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

NUMBER OF TYPEWRITTEN BRIEFS REQUIRED WHEN PRINTING HAS BEEN DISPENSED WITH

FINAL HEARINGS

BEFORE EXAMINERS OF INTERFERENCES, both patents and trade-marks:
1 original and 1 good carbon—
3 days before hearing.

ON APPEAL TO BOARD OF APPEALS:
1 original and 2 good carbons—
30 days for appellant and
10 days for appellee.

ON APPEAL TO THE COMMISSIONERS:
1 original and 1 good carbon—
30 days for appellant and
10 days for appellee.

ALL BRIEFS SHOULD BE SERVED

DESTRUCTION OF FILES

ABANDONED APPLICATIONS

ACT OF APRIL 11, 1930

DEPARTMENT OF COMMERCE,
U. S. PATENT OFFICE, *Washington, Oct. 20, 1930.*

(ORDER No. 3,166)

Section 6 of the act of April 11, 1930 (393 O. G. 1031–2) reads as follows:

The Commissioner of Patents is hereby authorized to annually destroy or otherwise dispose of all the files and papers belonging to all abandoned applications which have been on file for more than twenty years.

(1) If any patentee calls attention within 60 days from the date of this order to an abandoned application referred to in his patent, the file of that abandoned application will be retained in this Office.

(2) If any member of the public similarly calls attention to a patent having reference to such an abandoned application, the file of that application will be retained.

(3) Except as indicated in paragraphs (1) and (2), where any applicant or the assignee of any application wishes to obtain the file of an application which has been abandoned for more than 20 years, such application will be sent to him if request therefor is made within 60 days from date of this order, provided that if request is made by the applicant for such file and the record shows an assignment thereof, the request must be accompanied by the assent of the assignee.

Except as above indicated, steps will be taken to destroy the files of all abandoned applications which have been on file longer than the 20-year period fixed by statute.

THOMAS E. ROBERTSON,
Commissioner.

Adjudicated Patents

(D. C. N. Y.) Trussell patent, No. 1,025,170, for loose-leaf binder, claims 6, 7, and 8 *Held* valid and infringed. *Trussell Mfg. Co.* v. *Irving-Pitt Mfg. Co.*, 42 F. (2d) 750.

(C. C. A. Pa.) Benedictus patent, No. 1,182,739, for manufacture of strengthened glass, claim 12 *Held* valid and infringed. *Duplate Corporation* v. *Triplex Safety Glass Co.*, 42 F. (2d) 737 and 739.

(D. C. N. Y.) Johnston patent, No. 1,388,434, for method and apparatus for butt welding thin-gage tubing, claims 4, 5, 10, 16, 17, and 19 *Held* infringed. *Steel & Tubes* v. *S. Jackson Tube Co.*, 42 F. (2d) 760.

(D. C. N. Y.) Johnston patent, No. 1,435,806, for butt-welded thin-walled tubing, claims 3, 5, 6, and 9 *Held* infringed. *Id.*

(D. C. N. Y.) Belmont patent, No. 1,611,875, for welding apparatus, claims 1, 2, 3, and 4 *Held* valid and infringed. *Id.*

Condition of Applications Under Examination at Close of Business October 31, 1930

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 114,509; Trade-Mark Division, 1,478. Oldest new case, Dec. 31, 1929, oldest amended, Dec. 31, 1929. The dates given are 1930 except where † indicates 1929.) DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE ISHERWOOD

No. 2,366. Decided May 28, 1930

[40 F.(2d) 987]

1. PATENTABILITY—SELECTION OF OLD FEATURES.

"It is true, as a matter of law, that if the applicant has taken one feature from one patented device, and another feature from another patented device, and combined them, and has produced no results other than were produced by the original devices in their individual operation, then he has invented nothing."

2. SAME—SAME—NEW AND USEFUL RESULT.

"The converse of this proposition, that where a new and useful result is accomplished by this combination, there may be invention."

3. SAME—VESSEL CONSTRUCTION.

Claims for an alleged improvement in the construction of vessels *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. George E. Tew and *Mr. William E. Seavert* for Isherwood.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

GRAHAM, *P. J.:*

This appeal involves the application of Joseph W. Isherwood, Serial No. 710,574, filed June 12, 1924, for patent on certain alleged improvements in methods of constructing floating vessels. Six claims were involved, all of which were rejected by the Examiner by reference to the following: (British) patent to Millar, 106,124 (6,558 of 1917); (British) patent to Millar, 210,867 of 1924; (British) patent to Lambie, 13,712 of 1908; (British) patent to Asakawa, 115,237 (6,825 of 1918); Isherwood, 1,029,546, June 11, 1912 (114–79).

This decision was affirmed by the Board of Appeals, the Board relying principally in its rejection upon the Lambie reference. All parties seem to agree that claim 4 is fairly typical of all the claims. It is as follows:

4. A vessel provided with a longitudinal consrucion in its deck and bottom portions and involving widely spaced transverse and closely spaced longitudinal members and said vessel provided in its side portions with a plurality of closely spaced and shallow transverse members, devoid of reinforcements some of which are in line with said widely spaced deck and bottom transverse members and all of said framing extending to the side or deck plating of the vessel.

Applicant's claim for a patent involves his method for the construction of vessels, in particular those used for carrying cargo in their holds. In brief, his construction consists of a number of transverse frames extending throughout the length of the vessel, which frames consist each of a bottom frame, a deck frame and "relatively shallow" side frames, so that these transverse frames, connected, completely encircle the interior space of the vessel. The applicant proposes to use more of these transverse frames than are ordinarily used in vessels having heavy transverse frames, and, in addition to the frames completely encircling the cargo space of the vessel, he proposes to insert additional side frames intermediate of the side frames connecting with the deck and bottom frames, which are fastened at top and bottom to the deck and bottom plates, or to longitudinal members extending through the vessel at the bilge.

The applicant uses no longitudinal side frames, and inserts, as longitudinal deck beams, a large number of comparatively small longitudinals. The theory of the applicant seems to be that by this method of construction he is able to get the same strength for the vessel, and to greatly increase the cargo space by the elimination of the large projecting beams which were the result of using the Isherwood system, as embodied in his Patent 1,029,546, dated June 11, 1912.

It is true there is a considerable departure in this application from the original Isherwood plan. The Patent Office tribunals suggest that the appellant has reverted to the original type in use before his Patent 1,029,546 was granted. Whether this be true or no, it is evident that the appellant, however excellent his construction may be, is anticipated by references which have been cited. The reference Millar 106,124, shows substantially the same construction, having comparatively shallow side beams, and with additional beams interposed between each transverse frame entirely surrounding the cargo space. Millar also shows a plurality of comparatively small deck longitudinals, and has no side longitudinals. In Millar's Patent 210,867, a similar construction appears, and while the drawings given show certain gussets which are not apparent in the appellant's application, Millar shows that these may be omitted.

We are unable to see, also, why the Lambie reference is not a complete anticipation of this application. Lambie shows shallow side transverse beams, plurality of deck longitudinals, and interposed shallow side beams.

It is contended by the appellant that the Patent Office has taken one feature from one reference, and another feature from another reference, combining them and thus attempted to justify a refusal of his application, and he insists that this cannot legally be done. While we are convinced this has not been done, it is true, as a matter of law, that if the applicant has taken one feature from one patented device, and another feature from another patented device, and combined them, and has produced no results other than were produced by the original devices in their individual operation, then he has invented nothing. *In re Vissering*, 57 App. D. C. 46, 356 O. G. 986, 16 F.(2d) 542; *Elite Mfg. Co.* v. *Ashland*, 235 Fed. 893; *Reflectolyte Co.* v. *Luminous Unit Co.*, 20 F. (2d) 607; *In re Bayer*, 17 C. C. P. A. ——, 35 F. (2d) 66, 390 O. G. 4. The converse of this proposition, that where a new and useful result is

accomplished by this combination, there may be invention, is stated in *In re Champeau*, 17 C. C. P. A. ——, 34 F.(2d) 1012, 388 O. G. 783 and in *In re Angert*, 17 C. C. P. A. ——, 34 F.(2d) 1014, 388 O. G. 782.

The decision of the Board of Appeals is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE GREENFIELD

No. 2,329. Decided May 28, 1930.

[40 F.(2d) 775]

1. PRACTICE—CLAIMS COPIED FROM A PATENT.
   Where an applicant copied claims from a patent *Held* that it was not contrary to any rule of law for the Patent Office to hold such claims unpatentable.
2. PATENTABILITY—REGULATION OF COMBUSTION OF FUEL.
   Certain claims for the regulation of combustion of fuel in furnaces *Held* unpatentable over the prior art.
3. APPEAL TO BOARD OF APPEALS—REJECTION ON NEW REFERENCES—CONFUSION IN THE RECORD.
   Where the Board of Appeals rejected a certain claim on a reference of record not theretofore cited against it and on petition for rehearing based its rejection on language of the Examiner with reference to other claims *Held* that the confusion was sufficient to entitle the applicant to have this claim reexamined and reconsidered by the Patent Office.

APPEAL from the Patent Office. Modified and remanded.

Mr. Edmund G. Borden and *Mr. Kenneth I. White* for Greenfield.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

GARRETT, *J.*:

Nine claims of appellant's application are before us on appeal from a decision of the Board of Appeals of the Patent Office sustaining the decision of the Examiner rejecting them, to wit, Nos. 13, 47–50 and 53–56.

First and last during the pendency of the matter in the Patent Office a large number of claims were presented, some of which were allowed, others withdrawn and others rejected which were not appealed here.

The application relates to "certain new and useful improvements in regulation of combustion of fuel in furnaces", or, to be more specific, to a system for feeding oil to boiler furnaces in an oil burning plant and for controlling combustion of the oil.

The Examiner rejected claim 13, citing as reference a prior patent to applicant Greenfield, No. 1,423,764, of July 25, 1922. This was affirmed by the Board.

As to claims 47–50 and 53–56, the Examiner held that applicant was not entitled to make them. The Board reversed this holding but rejected the claims on prior art, citing a number of patents which will be hereinafter more specifically referred to.

Claim 13 reads as follows:

13. In a fuel-oil feeding device for a boiler furnace, the combination with a burner through which fuel is supplied to the furnace for generating steam, of an oil stand pipe extending upwardly from the burner, means for maintaining a head of oil in said stand pipe over said burner and means for increasing the head of oil in the stand-pipe in proportional relation with the fall of steam pressure in the boiler, said means including a chamber containing oil under a constant head, a conduit leading from said chamber to the stand-pipe, the outlet end of said conduit being in substantially the same horizontal plane as the upper oil level in said chamber, and means for exerting a boiler-pressure-controlled pressure on the oil in said chamber to cause the oil to flow to the stand-pipe.

Appellant here insists that the rejection of the claim upon his prior patent was error because, among other reasons—

there is no apparatus element shown or described in the Greenfield patent which is in any way the equivalent of, or performs the same functions as the vent (boiler governor) valve 112 of the apparatus of the present invention.

The vent valve in the claim, as we understand it, is claimed to maintain an inverse proportional relation between the head of oil in the stand pipe over the burner and the boiler steam pressure, and appellant insists that the patent "contemplates the exact opposite of this procedure, i. e. it contemplates maintaining a direct proportional relation between the supply of oil to the burner and the boiler steam pressure", and he quotes from the patent specification in support of the contention.

The Solicitor for the Patent Office insists that the language of the specification upon which appellant relies has reference to the steam pressure in the feed tank and not the pressure in the boiler; that as the "boiler pressure falls * * * the pressure in the feed tank builds up," which is the operation described in claim 13, and, therefore, insists on the applicability of the reference.

Another feature of claim 13 which is urged by appellant as constituting invention over his prior patent is that the outlet end of the conduit leading from the oil contained in the chamber to the standpipe is in substantially the same horizontal plane as the upper oil level in the chamber, whereas this condition does not exist in his patent. The Board found this difference to exist but held that the disclosure of the application on this feature did not constitute invention.

We are in doubt as to whether appellant has succeeded in overcoming the presumption of correctness attaching to the concurring findings of the Patent Office tribunals relative to this claim and, in view of the fact that we deem it proper to remand this case for a restudy of claim 56, for reasons to be later discussed, we think it not improper to refrain from a definite finding upon it, and to remand claim 13 also for reconsideration by the Patent Office experts.

Claim 49 appears to be illustrative of claims 47 to 50, inclusive. It reads:

In a furnace, means for supplying fluid fuel to the furnace, a source of atomizing fluid under variable pressure, means for supplying the atomizing fluids at a substantially constant pressure, means for controlling the rate of supply of atomizing fluid in accordance with the rate of supply of fluid fuel, and means for varying the ratio of the rate of supply of atomizing fluid to the rate of supply of fluid fuel.

Claims 47–50 are stated to have been copied by appellant, during the pendency of his application, from a patent to McLean, No. 1,610,303, with a request that applicant be granted an interference on them.

They were rejected by the Examiner, first, in a decision of March 22, 1927, "as being for matter not disclosed," and with a further statement citing *Ferguson*. In a later decision of April 15, 1927, by the same Examiner it was stated that "claims * * * 47 to 50 * * * are rejected on the art and for the reasons of record" and, later in the same opinion, after saying that each of the claims "recites the atomizing fluid as controlled 'in accordance with variations in the rate of fuel supply'," the Examiner continued:

Moreover if the quoted expression be given the meaning contended for by applicant claims 47 to 50 and 52 to 54 would clearly be unpatentable over Doble or Bryan.

Following the appeal to the Board the Examiner in his statement of June 6, 1927, again referred to the reason for their rejection and again mentioned Doble and Bryan.

The Board of Appeals, however, seems to have proceeded upon the theory that the Examiner's decision as to these claims rested upon the proposition that "applicant cannot make claims 47–50," and reversed this holding, but followed the reversal with a decision of rejection in line with its own prior statement:

We find no good grounds why the claims 47–50 should not be rejected on Doble, notwithstanding Doble does not disclose the use of steam as an atomizing fluid. The use of steam as atomizing fluid is common and an example of such use is disclosed in the patent to Bryan of record.

The Doble patent is No. 1,279,874, issued September 24, 1918; that to Bryan, No. 1,316,880, issued September 23, 1919.

Appellant in his brief devotes much space to an analysis of the Doble patent, and a comparison of the parts thereof with his own claims in the effort to show that it is not an anticipation. It appears to be his idea that the Board rejected claims 47–50 upon Doble alone. It is true that there appears in the decision of the Board, following a statement relative to the Bryan specification, a sentence saying:

We do not regard Bryan as an anticipation of the claims against which it was cited by the Examiner.

But there will be noted what was said by the Board concerning the Bryan patent, supra.

We think that whether regarded technically as an anticipation, or otherwise, the Bryan patent did regularly become a reference, and we discern no error in the rejection based upon Doble in view of Bryan.

[1] The fifth assignment of error is:

That since rejected claims 47–50 were copied from McLean Patent 1,610,303 the Board's action in upholding the rejection of these claims on the Doble patent is contrary to the rule of law established and cited in the decisions of 32 App. D. C. 345, 200 O. G. 582, and 54 App. D. C. 280.

In its opinion the Board said:

We find upon inspection of the file of the McLean patent that claims 2, 6, 7 and 9 were allowed over the prior art, not because of any limited interpretation given to the words 'means for controlling the rate of supply of atomizing fluid in accordance with the rate of supply of fluid fuel,' but because of the limitation 'constant pressure' in the words 'means for supplying the atomizing fluid at a substantially constant pressure,' see discussion of these claims in applicant's remarks, page 3, filed with the amendment of February 9, 1926.

The cases cited in the assignment of error have been examined and it appears that the Court of Appeals of the District of Columbia did not reverse the Patent Office in either of them, because upon examination the Court found no error in the office holding that the claims involved were not patentable.

The situation here seems to be analogous to that of those cases and we are of opinion that the assignment of error on this point is not well taken.

[2] Claim 53 is stated to be typical of the group embraced in numbers 53 to 56, inclusive:

53. In a steam boiler furnace, means for developing a motive pressure uniformly lower than and varying in inverse proportional relation with variations in the boiler steam pressure for controlling the supply of fluid fuel to the furnace, means for atomizing the fluid fuel with a fluid, means for controlling the rate of supply of atomizing fluid in accordance with variations in the rate of supply of fluid fuel, and means for varying the ratio of rate of supply of atomizing agent to the rate of supply of fluid fuel.

These claims were rejected by the Board as being anticipated by patent to Schroeder, No. 784,436, March 7, 1905, or Strait, No. 760,818, May 24, 1904.

The opinion of the Board of Appeals, as well as the different decisions of the Examiners, give an explanation of the operations of the claimed mechanism which we do not deem it necessary to here restate. Appellant's analysis and comparison of the respective operations of his device and those of the references do not convince us that error is shown in the finding of the Board.

[3] Appellant makes an insistence relative to claim 56 which involves the procedure and rules of the Patent Office. This is stated in his seventh assignments of error. It is contended that the Examiner in his rejection of claim 56 did not cite the Strait and Schroeder patents; that the Board did reject the claim upon these references, and that there was not a compliance with Patent Office Rule 139.

The claim which became No. 56 seems to have been added to the application on May 3, 1927, by amendment, after there had been a number of decisions by examiners upon other claims. It reads as follows:

56. The method of operating a furnace for which fuel is atomized by a fluid which consists in supplying the fuel at a rate which varies in accordance with the heat demand on the furnace, supplying the atomizing fluid at a constant pressure, and controlling the rate of supply thereof to the furnace in accordance with the rate of fuel supply.

In a decision of an Acting Examiner of May 7, 1927, it is said:

Claim 56 does not differ materially from claims 47 to 50 and is rejected for the same reason as these claims and the rejection made final.

In the Examiner's statement of June 6, 1927, following the appeal to the Board, no reference was made to claim 56, but on November 11, 1927, he made a supplemental statement in which he said:

The rejection of claim 56 is based on the same reasons as that of claims 47 to 50.

It will be remembered that 47–50 were the claims copied from the McLean patent and we have heretofore quoted what seems to be the material portions of the decisions concerning them.

The Examiners seem to have classified claim 56 with claims 47–50 and to have rejected it for the reasons underlying their rejection, but in the decision of the Board 56 seems to have been grouped

with 53, 54 and 55 and the group is referred to throughout that decision as "claims 53–56."

Claims 53, 54 and 55 seem to have been first brought into the application by an amendment of March 17, 1927. The opinion of the Examiner of March 22, 1927, says: "* * * 52 to 54 are rejected as being for matter not disclosed," and "* * * further rejected on Strait or Schroeder." Also, as has been quoted, supra, this opinion mentions 52 and 54 along with 47 to 50 as "clearly unpatentable over Doble or Bryan." The first mention we find of 55 in any opinion is in that of an Acting Examiner under date of May 7, 1927, wherein it is said, "* * * and 53 to 55 are again and finally rejected on the art and for the reasons of record."

The Examiner's statement after the appeal to the Board says:

> Claims 53 and 54 are similar to claims 47 to 40, are thought to be similarly inaccurate and similarly unpatentable over Doble. Claims 53 to 55 also stand rejected on Strait or Schroeder.

The Board's opinion says:

> We think claims 53, 56 can be made by the applicant, but that they are fully anticipated by the patents to Schroeder or Strait.
>
> The decision of the Examiner holding that applicant cannot make claims * * * 53–56 is reversed.
>
> The decision of the Examiner rejecting claims * * * and 53–56 on prior art is affirmed. (Italics ours.)

It appears, therefore, that the Examiner did not, in any decision, specifically cite Strait or Schroeder against claim 56 but rather held it unpatentable for matter not disclosed, or else as being anticipated by Doble in view of Bryan, while the Board held it, along with 53, 54 and 55, "anticipated by Schroeder or Strait".

The material portion of Rule 139 reads as follows:

> The Board of Appeals in its decision shall affirm or reverse the decision of the Primary Examiner only on points on which appeals shall have been taken (see rule 133). Should it discover any grounds not involved in the appeal for refusing Letters Patent in the form claimed or in any other form, it shall include in its decision a statement to that effect and its reasons for so holding.
>
> This statement of the Board of Appeals, if adverse to the applicant's right to a patent, will reopen the case for amendment or showing of facts or both before the Primary Examiner responsive thereto—
>
> The applicant may waive the right to further prosecution before the Primary Examiner and have the case reconsidered by the Board of Appeals upon the same record. Where request for such reconsiderations is made the Board of Appeals shall render a new decision which shall include all grounds upon which a patent is refused.

The decision of the Board from which we have quoted was rendered October 10, 1928. On October 24, 1928, applicant filed a request for rehearing in which he urged relative to that tribunal's rejection of claim 56:

> That such decision constitutes in effect a final rejection of this claim by the board on each of two references, neither of which has ever been previously cited against this claim by any Patent Office tribunal.

From an examination of this petition for reconsideration, we take it to have been a waiver by applicant of any right he had to further prosecution before the Primary Examiner. It would seem, in view of the record as we have recited it, that under the rule he would have been entitled to such a review, but the rule also provides that an applicant may waive such right and have reconsideration by the Board itself, and this obviously is what applicant did.

It further appears that the Board complied with that part of the rule requiring a new decision. The second decision appears under date of November 6, 1928. In it the Board said:

> This is a petition for reconsideration and rehearing of appeal decided October 10, 1928.
>
> * * * * * * *
>
> In rejecting claims 53–56, as fully anticipated by the Schroeder or Strait references, the Board concurred in the rejection of these claims by the Examiner's statement wherein the Examiner said: "Each of these patents shows a constant level fuel chamber, and means for exerting on the fuel therein a steam pressure inversely proportional to the boiler pressure. This pressure is effective to feed both the oil and steam to the burner, so that the steam may be said to be fed 'in accordance' with the rate of oil feed, in exactly the same sense as in applicant's device.

In so far as the matter of reconsideration by the Board is concerned, we should feel that the fact that, in reconsidering the case there was not an oral rehearing, does not, of itself, sustain the contention of appellant that the rule was not complied with. When an applicant waives the right to have the claim referred back to the Examiner and accepts reconsideration by the Board, the rule does not make a rehearing mandatory; it only requires reconsideration *"upon the same record"* and the Board may exercise its sound discretion as to the procedure it will follow in this reconsideration, but in the instant controversy, the *decision* of the Board upon reconsideration does not seem to have cured a defect in its first decision relative to claim 56.

In its first decision claim 56 was rejected upon a reference not theretofore cited. This would have entitled applicant to have the claim again considered by the Examiner. He waived this right by filing a petition for rehearing before the Board itself. In its reconsideration the Board adhered to the reference but in stating its reasons quoted language of the Examiner which appears to have been used by the latter as applicable to certain other claims, but not as to claim 56, and this was all that the Board gave as a reason. In its original decision it had given no reason but merely cited a reference which was new to the proceeding so far as claim 56 was involved.

In view of this confused condition we are of the opinion that applicant is entitled to have claim 56 reexamined and reconsidered by the experts of the Patent Office. The statements in the respective decisions concerning it are extremely meager, and since this court is not trained in these technical matters, and is expected to pass primarily upon questions of law only, we should not feel justified now in reversing the Board and directing a patent to issue based upon this claim, but a sufficient doubt has been created as that we do feel justified in remanding it for further study.

As heretofore indicated, we also deem it proper to remand claim 13 for restudy.

Therefore the decision of the Board is affirmed as to claims Nos. 47, 48, 49, 50, 53, 54, and 55, and reversed as to Nos. 13 and 56, this reversal being merely to the end that these latter claims be remanded for a reconsideration of them de novo, and such action upon them as may appear proper in the light of their restudy.

Modified and remanded.

1,212,840, F. J. Straub, Building block and method of making, filed June 11, 1930, D. C., E. D. Pa., Doc. 6059, *Crozier-Straub, Inc., et al.* v. *J. Sullivan.*

1,302,205, A. Pagliuca, Chocolate-coating machine, filed Aug. 21, 1930, D. C. Mass., Doc. E 3318, *National Equipment Co.* v. *J. W. Greer Co.*

1,307,734, A. V. Guliborg, Lubricating means; 1,475,980, O. Zerk, Lubricating apparatus; Re. 14,667, F. D. Winkley, Lubricating system, appeal filed Aug. 27, 1930, C. C. A., 2d Cir., Doc. —, *The Bassick Mfg. Co.* v. *Adams Grease Gun Corp.*

1,324,293, E. K. Baker, Semiwood wheel for use with pneumatic tires; 1,399,719, C. G. Hawley, Wheel for automobiles, D. C., E. D. Mich., S. Div., Doc. 3596, *Baker Wheel & Rim Co.* v. *Motor Wheel Corp.* Dismissed Sept. 2, 1930.

1,353,197, J. F. Werder, Grinding compound, filed Aug. 19, 1930, D. C. Del., Doc. E 815, *The Zip Mfg. Co.* v. *The Pep Mfg. Co.*

1,396,070, Shoup & Oliver, Paper-feed device for autographic registers, filed Sept. 2, 1930, D. C. Mich. (Grand Rapids), Doc. 2380, *Autographic Register Co.* v. *The Sturgis Register Co.*

1,399,719. (See 1,324,293.)

1,404,369, F. C. Chapman, Dehydrater, D. C., N. D. Calif., N. Div., Doc. E 489, *Chapman Dehydrater Co.* v. *A. P. Leach, et al.* (*Capay Irrigated Orchards Co.*). Dismissed Aug. 26, 1930. Doc. 283, *Chapman Dehydrater Co.* v. *Capay Irrigated Orchards Co.* Dismissed Aug. 26, 1930.

1,414,387, B. Wexler, Dumb-waiter door, filed Aug. 5, 1930, D. C., E. D. Pa., Doc. 6169, *The Peelle Co.* v. *W. H. Stevens.*

1,454,837, B. W. Smith, Safety paper and method of making same, filed Aug. 27, 1930, D. C., S. D. N. Y., Doc. E 55/119, *The Todd Co., Inc.*, v. *American Bank Stationery Co. et al.*

1,467,556, A. Nagel, Camera case, filed Aug. 20, 1930, D. C., S. D. N. Y., Doc. E 55/42, *A. Nagel et al.* v. *D. H. Zell, Inc.* Doc. E 55/43, *A. Nagel et al.* v. *Girey, Inc.*

1,475,980. (See 1,307,734.)

1,513,398, J. P. King, Braiding machine, filed Aug. 21, 1930, D. C., R. I., Doc. 350, *Ideal Braiding Machine Co.* v. *Providence Braid Co.*

1,518,067, W. W. Hicks, Electric heater, D. C., N. D. Calif. (San Francisco), Doc. 2186–K, *Westx National Co.* v. *Sandoval Sales Co. et al.* Decree for plaintiff Aug. 7, 1930.

1,521,941, G. B. Graf, Stop signal, D. C., W. D. Okla. (Oklahoma City), Doc. E 697, *G. B. Graf* v. *Universal Traffic Control System of Oklahoma City.* Decree for plaintiff Mar. 24, 1926.

1,522,241, J. F. Hennessey, Mirror clock, filed Sept. 2, 1920, D. C., E. D. Mich., S. Div., Doc. 4376, *Phinney-Walker Co., Inc.*, v. *L. Sandoz-Vuille, Inc., et al.*

1,534,478, W. J. Wiswall, Manifolding book, filed Aug. 30, 1930, D. C., S. D. Ohio, W. Div., Doc. E 701, *American Sales Book Co., Ltd.*, v. *The Miami Systems Corp.*

1,550,332, P. A. Bancel, Surface condenser, filed July 11, 1930, D. C., E. D. Pa., Doc. 6125, *Ingersoll-Rand Co.* v. *Westinghouse Electric & Mfg. Co.*

1,562,787, I. M. Petersime, Incubator, appeal filed Aug. 23, 1930, C. C. A., 10th Cir., Doc. 333, *J. L. Robbins* (*Robbins Incubator Mfg. Co.*) v. *I. M. Petersime & Son.*

1,564,378, H. Stein et al., Bleached and dyed furs; 1,573,200, same, Process of bleaching and dyeing furs, filed Aug. 22, 1930, D. C., S. D. N. Y., Doc. E 55/77, *Steinfur Patents Corp.* v. *Brickner & Bernfeld, Inc. et al.*

1,571,916. (See Re. 16,433.) 1,573,200. (See 1,564,378.)

1,580,651, E. V. Daily, Radiator, C. C. A., 3d Cir., Doc. 4309, *Automatic Gas-Steam Radiator Co.* v. *J. B. Clow & Sons.* Decree affirmed Sept. 4, 1930.

1,586,367, F. E. Johnson, Electric-lamp socket, appeal filed Aug. 23, 1930, C. C. A. 2d Cir., Doc. —, *J. I. Paulding* v. *L. Leviton.*

1,623,564, P. Theurich, Advertising panel or decorative wall covering, D. C., S. D. N. Y., Doc. E 43/315, *Wezel & Naumann Aktiengesellschaft* v. *A. Lounis, Inc., et al.* Decree for plaintiff Aug. 22, 1930. Doc. E 43/353, *Wezel & Naumann Aktiengesellschaft* v. *Morgan Lithograph Co.* Decree as above.

1,661,755, B. F. Hubbell, Lubricating apparatus; 1,201,414, F. D. Winkley, Lubricating system, filed Aug. 20, 1930, D. C., E. D. Mich., S. Div., Doc. 4360, *The Alemite Corp.* v. *The Lubricating Equipment Co.*

1,686,549, A. W. Burks, Pump; Re. 16,074, A. Wahle, Rotary pump, D. C. Del., Doc. E 725, *A. W. Burks* v. *Westco Pump Co.* Claims 1 to 22, inclusive, of 1,686,549 held valid and infringed, counterclaim dismissed July 29, 1930.

1,699,459, G. C. Ulrich, Sprinkling can, D. C., W. D. N. Y., Doc. 1558–I, *The Republic Metalware Co., Inc.*, v. *Weed & Co., Inc.* Dismissed for want of equity Aug. 30, 1930.

1,709,543, J. N. Royal, Composite figure construction; Des. 74,122, same, Box, D. C. Del., Doc. E 751, *F. N. Burt Co., Ltd.*, v. *Central Fibre Co., Inc.* Consent decree dismissing bill without prejudice Aug. 14, 1930.

1,719,704, M. P. Katzander, Chair construction, filed June 24, 1930, D. C., E. D. Pa., Doc. 6099, *M. Katzander* v. *A. I. Pasternack et al.* (*Grand Furniture Co.*).

1,725,433, F. K. Vreeland, Band-receiving system; 1,730,987, same, Variable band amplifier; 1,749,930, same, Variable circuit elements for radio receiving sets, filed Aug. 12, 1930, D. C. Del., Doc. E 814, *Vreeland Corp.* v. *Grigsby-Grunow Co. et al.*

1,730,199, H. A. Farrand, Coiling means for concavo-convex springs, filed Aug. 4, 1930, D. C. Del., Doc. E 818, *H. A. Farrand, Inc.*, v. *Mayhew Steel Products, Inc.*

1,730,987. (See 1,725,433.)

1,747,822, 1,747,823, R. D. Foltz, Furnace construction, filed Aug. 28, 1930, D. C., W. D. Wis. (Madison), Doc. E 1583, *M. H. Detrick Co.* v. *Wisconsin Power & Light Co.*

1,747,823. (See 1,747,822.) 1,749,930. (See 1,725,433.)

1,754,486, H. C. Schott, Waffle iron; 1,764,908, H. M. Strauss, same, filed Aug. 28, 1930, D. C., W. D. N. Y., Doc. 345, *Robeson-Rochester Corp.* v. *Samson-United Corp.*

1,754,814, H. L. Budd, Frame clip, D. C., S. D. N. Y., Doc. E 54/49, *Friedman Silver Co., Inc.*, v. *I. Mershon et al.* (*Globe Silver Co.*). Consent decree for plaintiff Aug. 29, 1930.

1,764,908. (See 1,754,486.) Re. 14,667. (See 1,307,734.)

Re. 16,074, A. Wahle, Rotary pump, filed Aug. 20, 1930, D. C., N. D. Ohio, W. Div., Doc. 3455, *Westco-Chippewa Pump Co.* v. *The Auto-Prime Pump Co.*

Re. 16,074. (See 1,686,549.)

Re. 16,433, L. J. Grubman, Eye mounting for dolls; 1,571,916, same, Method and means for applying eye mountings in doll heads, appeal filed Aug. 29, 1930, C. C. A., 2d Cir., Doc. —, *Grubman Engineering & Mfg. Co.* v. *E. Goldberger.*

Re. 17,137, J. Eisenmann, Building block and construction, filed Aug. 5, 1930, D. C., N. D. W. Va. (Wheeling), Doc. 153, *The Manell Building Block & Tile Co.* v. *Suburban Brick Co. et al.*

Re. 17,329, J. Schmidt, Woodworking machine, filed July 11, 1930, D. C., E. D. Pa., Doc. 6123, *J. Schmidt* v. *Cresson-Morris Co.*

Re. 17,416, O. Aram, Stoker construction, filed July 21, 1930, D. C., E. D. Pa., Doc. 6157, *Westinghouse Electric & Mfg. Co.* v. *American Engineering Co.*

Re. 17,605, H. F. Schecker, Electrical condenser and method for making same, filed Aug. 25, 1930, D. C., S. D. N. Y., Doc. E 55/91, *Aerovox Wireless Corp.* v. *Polyment Mfg. Corp.*

Des. 74,122. (See 1,709,543.)

Des. 76,612, A. Von Frankenberg, Lamp, D. C., S. D. N. Y., Doc. E 49/316, *Frankart, Inc.*, v. *Aljac Lighting Fixture Co., Inc.* Consent decree for plaintiff (notice Aug. 26, 1930).

Disclaimers

Trade-Mark 206,421.—*The Kroger Grocery & Baking Company*, Cincinnati, Ohio. CANNED FRUITS—NAMELY, APRICOTS, PEACHES, AND CHERRIES; CANNED VEGETABLES—NAMELY, TOMATOES, PEAS, CORN, AND STRING BEANS; CANNED FISH—NAMELY, SALMON; TEA. Trade-mark certificate of registration dated December 1, 1925. Disclaimer filed October 23, 1930, by the registrant.

Having abandoned the use of "Clifton" as a trade-mark for salmon hereby disclaims any right to its use for said item of those enumerated in said registration, but without prejudice to its rights in respect to its use as a trade-mark for the other items named therein, or in any way waiving or modifying said rights.

1,725,304.—*Millard J. Roberts*, Buffalo, N. Y. GAS BURNER AND THE LIKE. Patent dated August 20, 1929. Disclaimer filed October 15, 1930, by the assignee, *Roberts-Gordon Appliance Corporation*.

Hereby enters the following disclaimer in relation to certain of said claims as follows:

Your petitioner disclaims from the scope of claims 1, 6, and 11 any overlapping of adjacent elements, in which an element adjacent its upper end contacts with or is approximately in contact with the fire box at or adjacent to both side edges of said element, as shown in the patent to Ebinger No. 753,250, of March 1, 1904.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,703,131, H. R. Woodrow, Electrical distribution system, decided October 22, 1930, claim 2.

Pat. 1,712,855, M. A. Thorne, Brake, decided September 30, 1930, claims 1, 2, 3, 4, and 7.

Changes in Classification

Order No. 3,168, October 23, 1930, directs:

In *class 178,—Telegraphy* (Division 16), establish the following subclasses and definitions:

Systems
Automatic
Printing
4.1 Remote control,
Multiplex
Rotary distributer
Synchronizers
53.1 Start stop,
69.5 Synchronizers,
69.6 Call.

4.1. SYSTEMS, AUTOMATIC, PRINTING, REMOTE CONTROL. Systems coming under subclass 4 of remote control for starting and/or stopping printer motors at called or calling stations or both by either manually or automatically transmitted impulses or code.
Search this class, subclass 53.1.

53.1. SYSTEMS, MULTIPLEX, ROTARY DISTRIBUTER, SYNCHRONIZERS, START STOP. The means for synchronizing operates to start the distributers simultaneously. The distributers (at both ends) usually after starting rotate one complete revolution and one or both are stopped at the initial point.
Search this class, subclass 4.1.

69.5. SYSTEMS, SYNCHRONIZERS. Methods and devices for synchronizing the operation of the receiving and sending mechanisms coming under class 178. This subclass includes cross-references of patents classified in systems but also showing, describing, and claiming the synchronizer as well as the system in which it is used, except multiplex rotary distributing systems.
Search this class, subclasses 4.1, 12, 41, 53, and 53.1.
Search Classes—
172, ELECTRICITY, MOTIVE POWER, subclass 293, Transmission of power, Synchronization, Rotary element, for electrical synchronizing systems of general application.
175, ELECTRICITY, GENERAL APPLICATIONS, subclass 355, Systems, Speed-controlled, for electrical systems of general application responsive to speed.

69.6. SYSTEMS, CALL. Means for signaling a remote operator, who, in response to such signaling, connects the recorder. This subclass includes cross-references of patents directed to other systems but including such means.

The patents contained in these subclasses have been taken for the most part from class 178, Telegraphy, subclasses 2, Systems, and 53, Systems, Multiplex, Rotary distributer, Synchronizers.

In *class 178,—Telegraphy* (Division 16), add the following note to the main class definition:

Note.—Inventions relating to television and picture transmission will be found for the most part in this class, subclasses 5–14 and 69.5. For photo-electric cells, see class 250, RADIANT ENERGY, subclass 27.5, Teledynamic, Apparatus, Receivers, Electrodynamic, Gaseous element, Tubes. For photo-resistive (selenium) cells, see class 202, RESISTANCES AND RHEOSTATS, subclass 63, Resistance elements. For electro-optical cells, see class 136, BATTERIES, subclass 89, Primary, Electrooptical. For receiver (neon) lamps see class 176, ELECTRIC LAMPS, principally subclass 122, Gas and vapor. For light valves, see class 88, OPTICS, subclass 61, Light valves, and for amplifiers, see class 179, TELEPHONY, subclass 171, Relays.

In *class 179,—Telephony* (Division 16), add the following note to the main class definition:

Note.—Inventions relating to the loud-speaker art will be found for the most part in this class, subclasses 108–120. The acoustic features are in class 181, ACOUSTICS, subclasses 27, Megaphones, 31, Diaphragms and mountings, and 32, Diaphragms, and the magnetic features of general utility are in class 175, ELECTRICITY, GENERAL APPLICATIONS. Systems including circuits of loud-speakers are in this class (179), subclasses 1 and 100.1 and the subclasses indented thereunder.

TRADE-MARKS

OFFICIAL GAZETTE, NOVEMBER 11, 1930

[VOL. 400. No. 2]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 298,776. AMERICAN CYANAMID COMPANY, New York, N. Y. Filed Apr. 14, 1930.

Applicant disclaims all the wording appearing on the drawing except "Hacco" apart from the remainder of the mark as shown.

For Stable Bedding for Domestic Animals, Poultry Litter or Bedding for Domesticated Fowl, Soil Conditioner in Garden Cultivating and Seed Growing; Packing Material for Shipping Shrubs, Plants, Fruits, and Vegetables, Insulating the Walls of Houses and Barns, and Packing Between Partitions of Building Walls.

Claims use since Feb. 17, 1930.

Ser. No. 298,777. AMERICAN CYANAMID COMPANY, New York, N. Y. Filed Apr. 14, 1930.

Applicant disclaims all wording appearing in the drawing, except "Hacco" apart from the remainder of the mark as shown.

For Stable Bedding for Domestic Animals, Poultry Litter or Bedding for Domesticated Fowl, Soil Conditioner in Garden Cultivating and Seed Growing; Packing Material for Shipping Shrubs, Plants, Fruits, and Vegetables, Insulating the Walls of Houses and Barns, and Packing Between Partitions of Building Walls.

Claims use since Mar. 5, 1930.

Ser. No. 298,778. AMERICAN CYANAMID COMPANY, New York, N. Y. Filed Apr. 14, 1930.

MADE IN GERMANY
HACCO
TRADE MARK
PEAT MOSS
FINE GRANULATED FINE

Applicant disclaims all wording on the drawing, except "Hacco" apart from the remainder of the mark as shown.

For Stable Bedding for Domestic Animals, Poultry Litter or Bedding for Domesticated Fowl, Soil Conditioner in Garden Cultivating and Seed Growing; Packing Material for Shipping Shrubs, Plants, Fruits, and Vegetables, Insulating the Walls of Houses and Barns, and Packing Between Partitions of Building Walls.

Claims use since Mar. 8, 1930.

Ser. No. 304,999. DU PONT VISCOLOID COMPANY, New York, N. Y. Filed Aug. 25, 1930.

Plastacele

For Thermoplastic Materials Which Can be Pressed or Molded Under the Influence of Heat and Will Hold This Shape After Being Cooled, the Chief Ingredient in Said Material Being Cellulose Acetate.

Claims use since Aug. 5, 1930.

Ser. No. 305,787. OCKLAWAHA NURSERIES, INC., Lake Jem, Fla. Filed Sept. 17, 1930. Under 10-year proviso.

Hamlin

For Citrus Trees—Namely, Orange Trees.

Claims use since 1883.

Ser. No. 306,217. APOTHECARIES HALL COMPANY, Waterbury, Conn. Filed Sept. 29, 1930.

HY-SYLO

For Seed Corn.

Claims use since Apr. 15, 1930.

CLASS 2

Receptacles

Ser. No. 305,748. CRAWFORD-AUSTIN MANUFACTURING COMPANY, Waco, Tex. Filed Sept. 16, 1930.

DUX-BAK

WATERPROOFED
AND
MILDEWPROOFED

No claim is made to the words "Waterproofed" and "Mildewproofed" apart from the mark as shown.

For Ice-Cream-Packers' Milk-Can Jackets and Tub Covers Made of Waterproofed Canvas.

Claims use since Jan. 1, 1930.

CLASS 3

Baggage, Animal Equipments, Portfolios, and Pocketbooks

Ser. No. 296,853. ASSOCIATED MERCHANDISING CORPORATION, New York, N. Y. Filed Mar. 5, 1930.

Barbara Lee.

The trade-mark as it appears on the specimens is a facsimile of the name "Barbara Lee" as written by Mrs. Charles Carroll, née Comas Enright. Applicant is the owner of registration No. 175,964, effected under the 1905 act.

For Women's and Misses' Hand Bags and Pocketbooks of Leather, Beads, Silk, and Other Fabrics.

Claims use since Oct. 1, 1929.

Ser. No. 302,186. PHOENIX MANUFACTURING COMPANY, Joliet, Ill. Filed June 5, 1930.

Neverslip

RED  TIP

The drawing is lined to indicate the color red. The representation of a calk in said drawing is disclaimed. Applicant is the owner of registration No. 275,477, effected under the 10-year proviso of the 1905 act.

For Calks for Horse and Mule Shoes.

Claims use since September, 1923.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 290,061. MARIE EWING, Oregon City, Oreg. Filed Sept. 21, 1929.

SAPO-SAL

For Soap.

Claims use since Aug. 18, 1925.

Ser. No. 302,309. H. KOHNSTAMM & CO., INC., New York, N. Y. Filed June 10, 1930.

RE-MOV-IT

For Cleaning Powder for Laundry Purposes.

Claims use since Jan. 2, 1928.

Ser. No. 305,405. KUEHNLE, INC., Philadelphia, Pa. Filed Sept. 6, 1930.

TOTEM

For Valve-Grinding Compound, Automobile Soap, Hand Soap, Automobile Top Dressing, Chromium Plate Cleaner, Brake Dressing, and Nickel Polish.

Claims use since July 31, 1930.

Ser. No. 305,471. AL-BERT CO., Hamilton, Ohio. Filed Sept. 9, 1930.

Chase-It

For Hand-Soap Paste.

Claims use since July 25, 1930.

Ser. No. 305,533. MARVAL-AC CO., San Jose, Calif. Filed Sept. 10, 1930.

MARVAL-AC

For Cleaning Compounds.

Claims use since Aug. 4, 1930.

Ser. No. 306,071. THE PROCTER & GAMBLE COMPANY, Cincinnati, Ohio. Filed Sept. 25, 1930.

IVORY SNOW

For Soap in Comminuted Form.

Claims use since June 17, 1930.

Ser. No. 306,152. VIVILLE (PARIS), INC., New York, N. Y. Filed Sept. 27, 1930.

Baccara

For Soaps and Shaving Creams.

Claims use since Sept. 6, 1930.

Ser. No. 306,153. VIVILLE (PARIS), INC., New York, N. Y. Filed Sept. 27, 1930.

Coeur de l'Ete

For Soaps and Shaving Creams.

Claims use since Sept. 6, 1930.

Ser. No. 306,154. VIVILLE (PARIS), INC., New York, N. Y. Filed Sept. 27, 1930.

Dame de Laque

For Soaps and Shaving Creams.

Claims use since Sept. 6, 1930.

Ser. No. 306,155. VIVILLE (PARIS), INC., New York, N. Y. Filed Sept. 27, 1930.

Ecaille

For Soaps and Shaving Creams.

Claims use since Sept. 6, 1930.

Ser. No. 306,156. VIVILLE (PARIS), INC., New York, N. Y. For Sept. 27, 1930.

Laquer Lady

For Soaps and Shaving Creams.
Claims use since Sept. 6, 1930.

Ser. No. 306,157. VIVILLE (PARIS), INC., New York, N. Y. Filed Sept. 27, 1930.

Prés de Moi

For Soaps and Shaving Creams.
Claims use since Sept. 6, 1930.

Ser. No. 306,207. VIVILLE (PARIS), INC., New York, N. Y. Filed Sept. 29, 1930.

Peony

For Soaps and Shaving Creams.
Claims use since Sept. 6, 1930.

CLASS 5

Adhesives

Ser. No. 304,425. POLOX MANUFACTURING COMPANY, Merriam, Kans. Filed Aug. 9, 1930.

POLOX

For Combined Adhesive Cement and Solder.
Claims use since Jan. 1, 1924.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 273,376. SALVATOR PENNY, doing business as Rheumatol Co., Palisades Park, N. J. Filed Oct. 4, 1928.

RHEUMATOL

For Medicine for the Treatment of Rheumatism and Gout.
Claims use since July 1, 1899.

Ser. No. 281,607. HARRY L. GREENBAUM, doing business as Technical Color and Chemical Works, Brooklyn, N. Y. Filed Mar. 30, 1929.

RED-DEVIL

For Deodorizers, Radiator Antifreeze Compounds, Battery Antifreeze Compounds, Laundry Starch, and Baking Soda.
Claims use since Jan. 15, 1918.

Ser. No. 284,639. WILLIAM H. RORER, INC., Philadelphia, Pa. Filed May 25, 1929.

RECTACONES

For Rectal Suppositories.
Claims use since June 1, 1913.

Ser. No. 286,644. MAY DEPARTMENT STORES COMPANY, New York, N. Y. Filed July 5, 1929.

Oudinet

For Toilet Preparations, Toilet Articles, and Cosmetics—Namely Perfumery, Toilet Water, Face Powder, Dusting Powder, Talcum Powder; Face Cream—Namely, Vanishing, Nourishing, being a Cream for Building up the Pores, Cleansing Cream; Lipstick, Rouge Compacts, Powder Compacts, Refill Sets of Compact Rouge, Refill Sets of Compact Powder, and Bath Salts.
Claims use since Mar. 27, 1929.

Ser. No. 298,687. EDWARD J. BRENNAN, doing business as The Crevisol Company, Harrisburg, Pa., assignor to Nasalets, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 11, 1930.

NASALETS

For Medicinal Preparation Used in the Treatment of Head Colds, Headaches, Sinus Trouble, Nasal Catarrh, and Irritated Conditions of the Nasal and Respiratory Passages.
Claims use since Dec. 10, 1929.

Ser. No. 298,703. KAY LABORATORIES, INC., West Haverstraw, N. Y., assignor to Kay-Fries Chemicals, Inc. Filed Apr. 11, 1930.

DERRATROL

For Agricultural Insecticides.
Claims use since Dec. 14, 1929.

Ser. No. 299,103. AMERICAN CYANAMID COMPANY, New York, N. Y. Filed Apr. 19, 1930.

BARBAK

For Seed Disinfectants.
Claims use since Apr. 7, 1930.

Ser. No. 300,006. ELIZABETH ARDEN, INC., New York, N. Y. Filed May 6, 1930.

Ardena

For Cosmetic Creams for the Skin, Lotions for Application to the Skin, Sunburn Ointment, and Hair Tonic.
Claims use since July, 1920.

Ser. No. 303,000. CHARLES J. DU BATO, doing business as Du Bato Products Co., New York, N. Y. Filed June 30, 1930.

NOMOHOLE

For Composition for Treating Stockings and the Like, Being in the Form of a Chemical Compound of Soaplike Consistency and Being Applied to Stockings and the Like by Rubbing the Same into Such Portions Thereof Which Are Subject to Most Severe Strains to Prevent an Early Wearing Out of Such Portions.
Claims use since May 24, 1930.

Ser. No. 303,060. LIONEL TRADING CO. INC., New York, N. Y. Filed July 2, 1930.

The drawing is lined for color, to wit, for blue, black, yellow, green, purple, and red. No claim is made to the representation of a label apart from the mark shown on the drawing. Applicant is the owner of registered Trade-Mark No. 209,518.
For Lip Sticks.
Claims use since January, 1930.

Ser. No. 303,225. CHARLES W. HUTCHINSON, doing business as Tackett Medicine Company, Huntington, W. Va. Filed July 7, 1930.

No claim is made for the exclusive use of the words "Herb Compound" apart from the other features of the mark as illustrated herein.
For Liquid Preparation for Treating Rheumatism, Stomach Trouble, Blood Impurities, and for Use as a General Tonic.
Claims use since Mar. 14, 1930.

Ser. No. 303,582. SOCIÉTÉ ANONYME FRANÇAISE REDFERN, Paris, France. Filed July 17, 1930.

Redfern

The mark consists of the personal signature of the last name of Mr. Redfern, the founder of the applicant company.
For Perfumery Goods—Namely, Perfumed Waters, Oils, and Paints for the Face.
Claims use since Aug. 9, 1929.

Ser. No. 303,649. NATURE'S HERB COMPANY, San Francisco, Calif. Filed July 19, 1930.

The drawing is lined to indicate green. The words "Tonic-Laxative Tea" are disclaimed apart from the mark as shown.
For Laxatives.
Claims use since May 14, 1930.

Ser. No. 304,797. ELIZABETH BRYANT, New York, N. Y. Filed Aug. 20, 1930.

The portrait shown on the trade-mark is a portrait of the applicant. Applicant disclaims the use of the word "Har-Gro" apart from the trade-mark as shown.

For Preparation for Promoting the Growth of Hair.

Claims use since March, 1929.

Ser. No. 304,847. PHARMA-MAX LOEBINGER & Co., Berlin-Charlottenburg, Germany. Filed Aug. 20, 1930.

EUJECOR

For Cod-Liver Oil.

Claims use since Oct. 31, 1929.

Ser. No. 304,880. FELIX MORGENSTERN, doing business as Morgenstern Chemical Co., New York, N. Y. Filed Aug. 21, 1930.

NEOGESTIN

For Medicinal Preparation for the Treatment of Stomach and Intestinal Diseases.

Claims use since June 1, 1930.

Ser. No. 305,310. JACOB L. ELLMAN, doing business as The Ephedrine Company, University City, Mo. Filed Sept. 4, 1930.

No claim is made herein to the exclusive use of the phrase "Harvard's Ephedrinated Compound."

For Various Preparations for Relief of Nasal Mucosa Affections.

Claims use since Aug. 25, 1930.

Ser. No. 305,333. THE BASTIAN-BLESSING COMPANY, Chicago, Ill. Filed Sept. 5, 1930.

REGO BASIC

For the purpose of this registration only. No exclusive claim is made to the word "Basic" apart from the mark as shown.

For Welding Flux.

Claims use since July 26, 1930.

Ser. No. 305,359. JOSEPHSON DISINFECTING CO., INC., Bronx, N. Y. Filed Sept. 5, 1930.

All the wording appearing on the drawing with the exception of the word "X-Ray" are hereby disclaimed.

For Insect Exterminator, Disinfectant, Deodorant, and Insecticide in Powder or Liquid Form.

Claims use since Aug. 1 1891

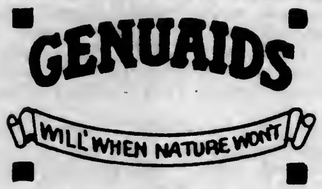
Ser. No. 305,407. KUEHNLE INC., Philadelphia, Pa. Filed Sept. 6, 1930.

TOTEM

For Antifreeze for Automobile Radiators, Automobile Radiator Cement, and Automobile Radiator Cleaner.

Claims use since Aug. 12, 1930.

Ser. No. 305,452. ORZYME LABORATORIES, Pittsburg, Kans. Filed Sept. 8, 1930.



The drawing is lined for shading purposes only.

For Medicinal Preparation for Stomach Disorders, Indigestion, Constipation, Sour Stomach, Biliousness, Nervousness, Loss of Appetite, and Rundown Condition.

Claims use since Aug. 1, 1930.

Ser. No. 305,469. ROBERT S. AGNEW, doing business as Merle Laboratories, Clarion, Pa. Filed Sept. 9, 1930.

For Medicine Tablet for Constipation.

Claims use since May 10, 1930.

Ser. No. 305,511. THE AYER COMPANY, Lowell, Mass. Filed Sept. 10, 1930.

Vita-ray

Applicant is the owner of registered Trade-Mark No. 273,941.

For Hand Lotion, Astringent, Special Astringent, Shampoo, and Hair Lotion.

Claims use since Mar. 21, 1930.

Ser. No. 305,579. MARSHALL & BELL, Atlanta, Ga. Filed Sept. 11, 1930.

GLUCALX

For Medicine in Powder Form for Treatment of Calcium Deficiency.

Claims use since January, 1930.

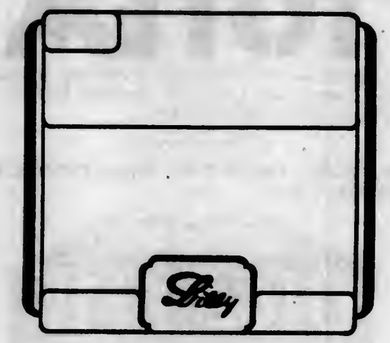
Ser. No. 305,583. NYANZA COLOR & CHEMICAL CO. INC., New York, N. Y. Filed Sept. 11, 1930.

IMMERSOL

For Chemical Compounds Used in the Preparatory Treatment of Textiles, Leather, and Other Fibers—Namely, Wetting Out and Penetrating Agents.

Claims use since March, 1928.

Ser. No. 305,618. ELI LILLY AND COMPANY, Indianapolis, Ind. Filed Sept. 12, 1930.



The name "Lilly" is printed in red.

Claims use for the following merchandise since the dates indicated.

Merchandise	*Used since*
Agar, Laxative, Lilly	Feb. 28, 1930
Agar, Plain (Granular)	Feb. 28, 1930
Agar, Prepared, Lilly	Feb. 28, 1930
Alkaline Aromatic, Pink (in Tablets)	Mar. 5, 1930
Alkaline Aromatic, White (in Tablets)	Mar. 12, 1930
Alum Compound (Ointment)	Sept. 28, 1929

Frances Sheridan

The trade-mark consists of the signature of the applicant.

For Beauty Creams.

Claims use since Sept. 3, 1930.

Ser. No. 305,711. THE KELLS COMPANY, INC., Newburgh, N. Y. Filed Sept. 15, 1930.

Cat-Aid
VEG-ALL

For Medicinal Preparation for the Relief of Constipation and Urinal Difficulties, with Starch-Digestant Properties and Appetizing Qualities.

Claims use since Aug. 5, 1930.

Ser. No. 305,772. OTTO PASSMAN, Baltimore, Md. Filed Sept. 16, 1930.

Nox Riasis

For Healing Salve for Skin Eruptions.

Claims use since June 1, 1930.

Ser. No. 305,932. LEDERLE LABORATORIES INCORPORATED, New York, N. Y. Filed Sept. 22, 1930.

Lederle

For the following products for human use: Acne Vaccine, Acne Combined Vaccine, Antianthrax Serum, Antidysenteric Serum, Antigonococcus Serum, Antimeningococcus Serum, Antistreptococcus Serum, Bacillus Acidophilus Culture, Bacillus Bulgaricus Culture, Catarrhalis Combined Vaccine, Catarrhalis Influenza Vaccine, Cholera Vaccine, Colon Vaccine, Combined Bacterial Vaccine (Van Cott), Corpus Luteum Extract (Ampuls), Diphtheria Antitoxin, Diphtheria Toxin Antitoxin Mixture, Diphtheria Toxin Antitoxin Mixture (Goat), Schick Test, Schick Test, Control; Epinephrine Hydrochloride, Erysipelas Antitoxin, Gonococcus Vaccine, Gonococcus Combined Vaccine, Influenza Combined Vaccine, Normal Horse Serum, Normal Saline Solution, Pertussis Glycerol Vaccine, Pertussis Vaccine, Pertussis Combined Vaccine, Plague Vaccine (Bubonic), Pneumococcus Vaccine I, II, and III; Pneumococcus Combined Vaccine, Rabies Vaccine (14 Doses) (Semple Method), Staphylococcus Vaccine, Staphylococcus Aureus Vaccine, Staphylococcus Combined Vaccine, Staphylococcus-Streptococcus Vaccine, Streptococcus Vaccine, Streptococcus Combined Vaccine, Tetanus Antitoxin, Thromboplastin (for Local Application), Thromboplastin (for Hypodermic Use), Tuberculin (Mantoux Test), Tuberculin "O. T.," Tuberculin "B. E.," Tuberculin (Von Pirquet Test), Typhoid Vaccine, Typhoid Combined Vaccine, Urethritis Treatment, Vaccine Virus (Smallpox Vaccine), Anaerobic Antitoxin, Digitalis Tablets, Tincture Digitalis, Pituitary Extract (Ampuls), Poison-Ivy Extract, Poison-Oak Extract, Catarrhalis Influenza Glycerol Vaccine, Corpus Luteum Tablets, Gonococcus Glycerol Vaccine, Ovarian Residue; Pituitary, Anterior (Tablets); Pituitary, Post (Tablets); Pituitary, Whole (Tablets); Pollen Antigens (Hay Fever), Pollen Diagnostic Tests, Thyroid Tablets, Whole-Ovary Tablets, Loeffler's Blood Serum Culture Medium, Antipneumococcic Serum (Felton), Bacillus Acidophilus Milk, Ephedrine Inhalant, Ephedrine Hydrochloride (Solution), Ephedrine Hydrochloride (Tablets), Liver Extract, Silver-Nitrate Solution, Digitalis Suppositories; and the following products for Veterinary Use: Abortion Vaccine (1 Injection), Abortion Vaccine (3 Injections), Anthrax Prophylaxis (Simultaneous Method), Anthrax Prophylaxis (Simultaneous Method, Bovine), Anthrax Prophylaxis (Simultaneous Method, Sheep), Anthrax Spore Vaccine (Double Vaccination), Anthrax Spore Vaccine (Special), Antianthrax Serum (Curative), Antianthrax Serum (Bovine), Anticanine Distemper Serum, Antiinfluenza Serum, Equine; Blackleg Aggressin, Blackleg Vaccine (Cultural), Blackleg Vaccine (Pellets), Antiblackleg Serum (Curative), Canine Distemper Vaccine, Laidlaw-Dunkin Method; Canine Distemper Virus, Laidlaw-Dunkin Method; Canine Rabies Vaccine, Chicken-Pox Vaccine, Epinephrine, Equine Influenza Vaccine, Hemorrhagic Septicemia Vaccine (Cattle), Hemorrhagic Septicemia Vaccine (Chickens), Hemorrhagic Septicemia Vaccine (Sheep), Hemorrhagic Septicemia Vaccine (Swine), Hemorrhagic Septicemia Aggressin, Hemorrhagic Septicemia Serum, Liv-Vita, Mallein, Mastitis Mixed Vaccine (Bovine), Antimastitis Serum (Bovine), Mixed Bacterial Vaccine (Bovine), Mixed Bacterial Vaccine (Canine), Mixed Bacterial Vaccine (Equine), Mixed Bacterial Vaccine (Fowl), Mixed Bacterial Vaccine (Swine), Pituitary Extract, Rabies (Dilution Method of Hogyes), Tetanus Antitoxin, Tuberculin (Avian), Tuberculin (Bovine) (Subcutaneous), Tuberculin (Bovine) (Intradermal), Tuberculin (Bovine) Ophthalmic Discs), Antiwhite-Scours Serum, White-Scours Vaccine, Whole-Ovary Extract, Worm Capsules, Antihog-Cholera Serum, Hog-Cholera Virus.

Claims use since 1906.

Ser. No. 306,209. HENRY K. WAMPOLE AND COMPANY, INCORPORATED, Philadelphia, Pa. Filed Sept. 29, 1930.

BON-SOL

For Antiseptic Solution for Use as a Mouth Wash, Gargle, Lotion, Spray, and Douche.
Claims use since Sept. 13, 1930.

Ser. No. 306,221. X. PEL PROCESS CO., South Bend, Ind. Filed Sept. 29, 1930.

X. PEL

For Body Deodorants and Local Perspiration Astringents.
Claims use since July 15, 1930.

Ser. No. 306,249. J. W. SPENCER, doing business as Hygienic Laboratories, New Orleans, La. Filed Sept. 30, 1930.

SANIGYNE

For Antiseptic, Germicidal, and Therapeutic Composition of the Type Employed for Vaginal Douching.
Claims use since Aug. 1, 1930.

Ser. No. 306,318. A. J. KRANK COMPANY, St. Paul, Minn. Filed Oct. 2, 1930.

FACE-VALUE

For Face Lotion.
Claims use since Sept. 1, 1930.

Ser. No. 306,405. MARCY LEVINE, doing business as Marcy Laboratories, New York, N. Y. Filed Oct. 4, 1930.

LITTLE-MOVERS

For Laxatives.
Claims use since Feb. 6, 1929.

Ser. No. 306,424. SOCIETY OF CHEMICAL INDUSTRY IN BASLE, Basel, Switzerland. Filed Oct. 4, 1930.

CELLEX

For Chemical Substance for Use as a Protective Agent in the Textile Industry.
Claims use since May 16, 1930.

Ser. No. 306,430. MARY R. CAMPBELL, doing business as M. R. Campbell and Co., Fort Wayne, Ind. Filed Oct. 6, 1930.

"MAR-ZAN"

For Flesh-Reducing Preparations.
Claims use since Sept. 1, 1929.

Ser. No. 306,456. ONYX OIL & CHEMICAL CO., Jersey City, N. J. Filed Oct. 6, 1930.

DULLATONE

For Preparation for Application to Textile Fibers and Fabrics for Imparting a Dull Finish Thereto.
Claims use since June, 1929.

Ser. No. 306,457. ONYX OIL & CHEMICAL CO., Jersey City, N. J. Filed Oct. 6, 1930.

VELVOSHEEN

For Preparation for Application to Textile Fibers and Fabrics for Imparting a Soft, Glovey, or Chamois Feel Known as the Old French and for Strengthening Them.
Claims use since December, 1929.

CLASS 7

Cordage

Ser. No. 297,395. WILLIAMSPORT WIRE ROPE COMPANY, Williamsport, Pa. Filed Mar. 15, 1930.

No claim is made to the representation of the outline of a tape marker shown on the drawing.
For Wire Rope.
Claims use since Mar. 1, 1920.

Ser. No. 297,396. WILLIAMSPORT WIRE ROPE COMPANY, Williamsport, Pa. Filed Mar. 15, 1930.

The crosshatching in the drawing indicates the color black. No claim is made to the representation of the outline of a tape marker shown on the drawing.
For Wire Rope.
Claims use since Mar. 1, 1920.

Ser. No. 297,397. WILLIAMSPORT WIRE ROPE COMPANY, Williamsport, Pa. Filed Mar. 15, 1930.

The crosshatching in the drawing indicates the color brown. No claim is made to the representation of the outline of a tape marker shown on the drawing.
For Wire Rope.
Claims use since Mar. 1, 1920.

CARNEGIE LIBRARY OF ATLANTA

Ser. No. 297,399. WILLIAMSPORT WIRE ROPE COMPANY, Williamsport, Pa. Filed Mar. 15, 1930.

The crosshatching in the drawing indicates the color yellow. No claim is made to the representation of the outline of a tape marker shown on the drawing.
For Wire Rope.
Claims use since Mar. 1, 1920.

Ser. No. 297,400. WILLIAMSPORT WIRE ROPE COMPANY, Williamsport, Pa. Filed Mar. 15, 1930.

The crosshatching in the drawing indicates the color blue. No claim is made to the representation of the outline of a tape marker shown on the drawing.
For Wire Rope.
Claims use since Mar. 1, 1920.

Claims use since Mar. 1, 1920.

CLASS 8

Smokers' Articles, Not Including Tobacco Products

Ser. No. 305,745. THE CAMBRIDGE GLASS CO., Cambridge, Ohio. Filed Sept. 16, 1930.

No claim is made for the word "Cambridge" apart from the mark shown in the drawing.
For Glassware—Namely, Ash Trays, Cigarette Boxes, and Cigar Humidors.
Claims use since 1927.

CLASS 9

Explosives, Firearms, Equipments, and Projectiles

Ser. No. 272,121. AMTORG TRADING CORPORATION, New York, N. Y. Filed Sept. 10, 1928.

For Matches.
Claims use since Aug. 1, 1928.

Ser. No. 306,359. LION MATCH COMPANY, INC., New York, N. Y. Filed Oct. 3, 1930.

"FEATURE"

For Matches, Including Book Matches.
Claims use since Sept. 25, 1930.

CLASS 10

Fertilizers

Ser. No. 304,320. FRANKLIN LABORATORIES, INC., Columbus, Ohio. Filed Aug. 7, 1930.

Dry-Inoc

For Fertilizer and Nitrogen-Fixing Bacteriological Composition for Inoculation of Seeds and the Like, and More Particularly for the Inoculation of Leguminous Seeds.
Claims use since May 8, 1928.

Ser. No. 305,302. WILSON & TOOMER FERTILIZER CO., Jacksonville, Fla. Filed Sept. 3, 1930.

For Fertilizers and Fertilizer Materials.
Claims use since September, 1921.

CLASS 12

Construction Materials

Ser. No. 280,692. THE CARBORUNDUM COMPANY, Niagara Falls, N. Y. Filed Mar. 14, 1929.

CARBO

For Tiles, Treads, Granular Tread Material, Roof Tiles.
Claims use since April, 1928.

Ser. No. 301,444. INDIANA LIMESTONE COMPANY, Bedford, Ind., and New York, N. Y. Filed May 28, 1930.

ILCO DARK HOLLOW VARIEGATED

No claim being made to the exclusive use of the word "Variegated" apart from the mark as shown in the drawing.
For Building Stone as It Comes from the Quarry.
Claims use since May, 1926.

Ser. No. 301,445. INDIANA LIMESTONE COMPANY, Bedford, Ind., and New York, N. Y. Filed May 28, 1930.

ILCO DARK HOLLOW BUFF

No claim being made to the exclusive use of the word "Buff" apart from the mark as shown in the drawing.
For Building Stone as It Comes from the Quarry.
Claims use since May, 1926.

Ser. No. 303,618. THE BOND BROTHERS COMPANY, INC., Baltimore, Md. Filed July 9, 1930.

BOND SEAL

No claim is made to the word "Seal" apart from the mark shown on the drawing.
For Asbestos-Fibre Roof Cements.
Claims use since Sept. 1, 1928.

Ser. No. 303,679. AMALGAMATED ROOFING COMPANY, Chicago, Ill. Filed July 21, 1930.

NU-BRIK

For Outside Coverings for the Walls and Roofs of Buildings, Made of Flexible Felt Impregnated with Asphalt and Usually Surfaced with Small Particles of Weather-Resisting Material.
Claims use since July 16, 1930.

Ser. No. 305,187. JACOBSON & COMPANY, New York, N. Y. Filed Aug. 30, 1930.

CHROMAK

For Slabs, Casts, Bands, and Placques of Composition Material, Used as Wall Covering and Decoration, Yielding the Appearance of Inlaid Colored Designs.
Claims use since July 28, 1930.

Ser. No. 305,553. WOOD-MOSAIC CO., INC., Louisville, Ky. Filed Sept. 10, 1930.

Gothic Oak

For Collars.
Claims use since 1916.

277,526. (CLASS 14. METALS AND METAL CASTINGS AND FORGINGS.) BETHLEHEM STEEL COMPANY, Bethlehem, Pa. Filed July 26, 1930. Serial No. 303,832.

Silvery Mayari

For Pig Iron.
Claims use since Jan. 16, 1929.

277,527. (CLASS 42. KNITTED, NETTED, AND THX-TILE FABRICS.) J. A. FINN & COMPANY, New York, N. Y. Filed Aug. 11, 1930. Serial No. 304,455.

"Finnshrunk"

For Cotton Piece Goods.
Claims use since Sept. 5, 1928.

277,528. (CLASS 33. GLASSWARE.) OBEAR-NESTER GLASS COMPANY, East St. Louis, Ill. Filed Aug. 22, 1930. Serial No. 304,926.

INDIVIDUALLY WRAPPED

For Bottles Formed of Glass.
Claims use since Mar. 20, 1926.

277,529. (CLASS 45. BEVERAGES, NONALCOHOLIC.) PATRICK F. BELL, Los Angeles, Calif. Filed Feb. 6, 1929. Serial No. 278,928.

ORANGE NOG

For Nonalcoholic, Pure Citrus-Fruit Beverage.
Claims use since Jan. 1, 1928.

TRADE-MARK REGISTRATIONS RENEWED

35,788. WINDING MACHINES. Registered January 15, 1901. UNIVERSAL WINDING COMPANY. Renewed January 15, 1931, to Universal Winding Company, Boston, Mass., a Corporation of Massachusetts, assignee.

35,885. LIQUID LAXATIVE COMPOUNDS. Registered February 12, 1901. CALIFORNIA FIG SYRUP CO., San Francisco, Calif. Renewed February 12, 1931, to Sterling Products (Incorporated), Wheeling, W. Va., a Corporation of West Virginia, assignee by mesne assignments.

35,886. LIQUID PURGATIVE COMPOUNDS. Registered February 12, 1901. CALIFORNIA FIG SYRUP CO., San Francisco, Calif. Renewed February 12, 1931, to Sterling Products (Incorporated), Wheeling, W. Va., a Corporation of West Virginia, assignee by mesne assignments.

35,887. LIQUID PURGATIVE COMPOUNDS. Registered February 12, 1901. CALIFORNIA FIG SYRUP CO., San Francisco, Calif. Renewed February 12, 1931, to Sterling Products (Incorporated), Wheeling, W. Va., a Corporation of West Virginia, assignee by mesne assignments.

36,002. BISCUITS, CRACKERS, WAFERS, SNAPS, AND CAKES. Registered March 5, 1901. NATIONAL BISCUIT COMPANY, of Jersey City, N. J., and Chicago, Ill. Renewed March 5, 1931, to National Biscuit Company, of New York, N. Y., a Corporation of New Jersey.

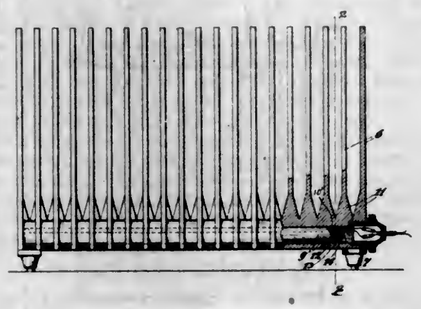
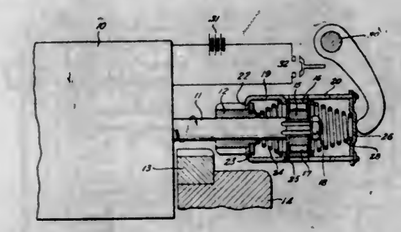
REISSUES



NOVEMBER 11, 1930

17,856. MULTIPLE-CUTTER-DISK BIT. IVAN C. BELL, Dallas, Tex., assignor to The Guiberson Corporation, Dallas, Tex., a Corporation of Delaware. Filed May 7, 1929. Serial No. 361,227. Original No. 1,657,604, dated Jan. 31, 1928, Serial No. 749,547, filed Nov. 12, 1924. 35 Claims. (Cl. 255—71.)

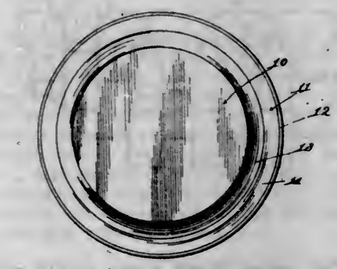


1. In a multiple cutter disk bit, a bit body, axes mounted transversely of the body in offset relation, cutter disks initially loosely mounted on said axles and movable laterally when rotating, and supports for the outer ends of the axles.

17,857. MEANS OF HEATING INCLOSURES ELECTRICALLY. CLARENCE L. BURGHER, New York, N. Y. Filed Sept. 26, 1930. Serial No. 484,863. Original No. 1,660,218, dated Feb. 21, 1928, Serial No. 65,106, filed Oct. 27, 1925. Reissue No. 17,386, dated July 30, 1929, Serial No. 366,074, filed May 24, 1929. 1 Claim. (Cl. 219—34.)

An electric heater consisting of a series of substantially unobstructed ascending air-heating ducts having heat-conducting walls of a length substantially greater than their width and an electrical heating element electrically insulated from but in direct heat-conducting relation to the duct walls.

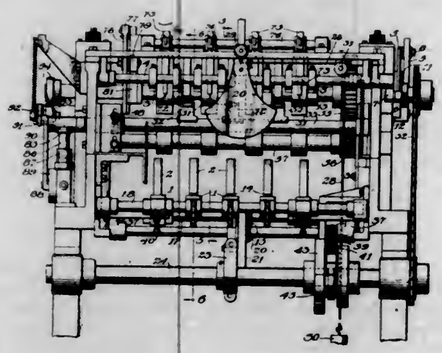
17,858. POWER-TRANSMISSION MECHANISM. FARNUM F. DORSEY, South Orange, N. J., and CHESTER W. CRUMRINE, Rochester, N. Y., assignors, by mesne assignments, to North East Appliance Corporation, Rochester, N. Y., a Corporation of New York. Filed Apr. 11, 1930. Serial No. 443,570. Original application filed June 4, 1923, Serial No. 643,231. Renewed Dec. 9, 1925. Original No. 1,590,150, dated June 22, 1926. 14 Claims. (Cl. 74—7.)



1. Power-transmission mechanism comprising: a gear; a driving pinion movable axially into and out of mesh with the gear; and manually-operable means for simultaneously rotating said pinion and moving it axially, said means being yieldable as to each of such motions so that either may continue alone when the other is arrested.

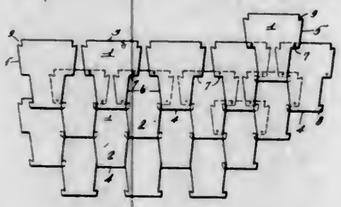
17,859. INNER-TUBE PATCH. CLARENCE E. DUNLAP, Sioux City, Iowa. Filed Sept. 8, 1930. Serial No. 480,605. Original No. 1,756,183, dated Apr. 29, 1930, Serial No. 330,820, filed Jan. 7, 1929. 2 Claims. (Cl. 152—26.)

2. An inner tube patch of preformed shape, comprising a layer of uncured rubber, a layer of protective fabric adhering to the adhesive face thereof, and a layer of cured rubber united with the rear face thereof, an edge of the cured layer being bevelled through a majority of its thickness, and the remainder of its thickness, together with all of the uncured layer and the fabric, being cut off squarely to leave a shoulder of cured rubber completely covering the rear face of the uncured layer.



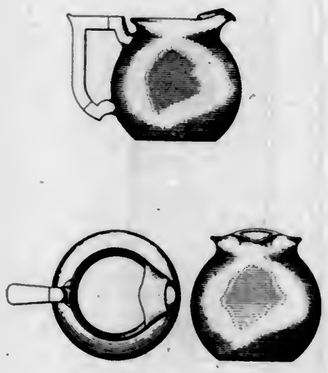
17,860. BEVEL-CUT PATCH FOR TUBES AND OTHER RUBBER GOODS. JACOB G. GROSS, San Gabriel, Calif. Filed May 5, 1930. Serial No. 449,996. Original No. 1,596,430, dated Aug. 17, 1926, Serial No. 733,172, filed Aug. 20, 1924. 4 Claims. (Cl. 152—26.)

4. A rubber patch consisting of a layer of cured rubber, and a layer of uncured rubber therebeneath having its



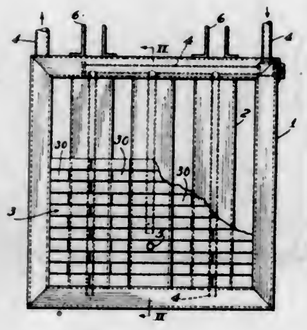
edges projecting symmetrically from beneath the edges of the layer of cured rubber, said two layers being round and both having annular beveled edges.

17,861. PNEUMATIC FEED MECHANISM. SEVERIN HALVORSEN, Chicago, Ill., assignor to The Newspaper Stuffing Machine Company, Seattle, Wash., a Corporation of Washington. Filed Dec. 18, 1929. Serial No. 415,110. Original No. 1,676,897, dated July 10, 1928, Serial No. 757,340, filed Dec. 22, 1924. 10 Claims. (Cl. 271—28.)



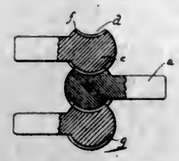
1. Feeding mechanism in which the articles are arranged in vertical position, said feeding mechanism having means acting upon the articles to advance them in a substantially horizontal manner and feeding devices comprising suckers for engaging and pulling out the upper edge of the foremost article, means for reciprocating said suckers vertically, and for swinging the same outwardly when moved downwardly, a rotary segment cooperating with the suckers and a gripping roll cooperating with said rotary segment.

17,862. ROOFING SHINGLE. WILLIAM A. HARRIS, Newton, Mass., assignor to Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed June 10, 1930. Serial No. 460,242. Original No. 1,732,229, Serial No. 11,965, filed Feb. 27, 1925. 6 Claims. (Cl. 108—7.)



3. A flexible roofing shingle having parallel ends, the upper portion, which is substantially one half the length of the shingle, being wider than the lower portion, said shingle having lateral shoulders located substantially in the transverse median line thereof, and the lower portion having tabs projecting laterally from the extremity thereof.

17,863. PITCHER. MARSDEN J. PERRY, Jr., Providence, R. I. Filed June 12, 1929. Serial No. 31,655. Term of patent 14 years. Original No. 77,027, dated Nov. 27, 1928, Serial No. 27,705, filed Aug. 4, 1928, for 14 years.



The ornamental design for a pitcher substantially as shown.

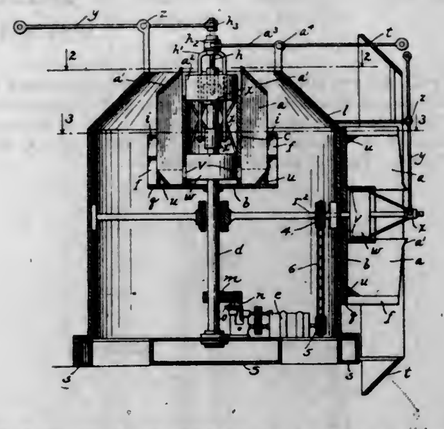
17,864. FURNACE DOOR. EDWARD WILLIAMS, Charleroi, Pa., assignor, by mesne assignments, to Blaw-Knox Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed May 23, 1929. Serial No. 365,585. Original No. 1,690,606, dated Nov. 6, 1928, Serial No. 209,274, filed July 29, 1927. 11 Claims. (Cl. 122—498.)

11. A wrought metal furnace door having a closed top and comprising a hollow rim with spaced tubular members extending across the rim and forming a continuous water space therewith.

17,865. FASTENING FOR WEARING APPAREL AND THE LIKE. MARTIN WINTERHALTER, Halle-on-the-Saale, Germany, assignor, by mesne assignments, to Mishawaka Rubber & Woolen Manufacturing Company, Mishawaka, Ind., a Corporation of Indiana. Filed Feb. 26, 1927. Serial No. 171,755. Original No. 1,610,839, dated Dec. 14, 1926, Serial No. 50,508, filed Aug. 15, 1925, and in Germany Nov. 25, 1924. 15 Claims. (Cl. 24—205.)

1. A fastening for wearing apparel and the like comprising staggered rows of fastening members connected to the edges to be joined and adapted to mesh and interlock, each member being formed with interlocking means in the form of a spherical head and with a semispherical recess in said head, the heads being formed with intermeshing ribs and grooves which break the continuity of the spherical surfaces of said head and recess so as to prevent pivotal relative displacement of the members, and a slide for guiding the members successively into and out of engagement with each other.

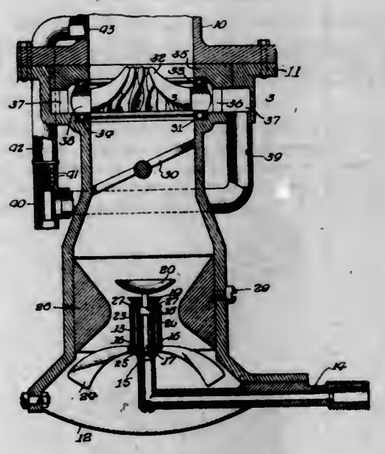
17,866. CIRCULATING TUBE. JAMES F. ARTHUR, Dickson City, Pa. Filed Feb. 18, 1928. Serial No. 255,454. Original No. 1,639,252, dated Aug. 16, 1927. Serial No. 139,209, filed Oct. 2, 1926. 9 Claims. (Cl. 137—111.)



1. A circulating tube for hot water heating boilers, comprising a tube of relatively thin metal, one end of the tube being closed and the sides of the tube having holes for lateral exit of water, the other end of the tube being anchored in a threaded bushing of heavier metal, the bushing having an interior annular recess and the tube having an outwardly extending annular shoulder fitting into the recess, whereby the tube and bushing are permanently secured together.

17,867. COMPOSITION OF MATTER AND PROCESS OF FORMING SAME. MARC DARRIN, Pittsburgh, Pa., assignor to F. N. Burt Company Limited, Toronto, Canada, a Corporation of Ontario, Canada. Filed Dec. 21, 1929. Serial No. 415,819. Original application filed June 10, 1924, Serial No. 719,059. Renewed Mar. 11, 1927. Original No. 1,644,711, dated Oct. 11, 1927. 19 Claims. (Cl. 106—12.)

18. A substance of the character described comprising a continuous porous material having its pores completely filled with a substance containing free sulphur and having the physical characteristics of free sulphur and crystallized into contiguous cobering rhombic crystals forming a durable, impermeable mass.

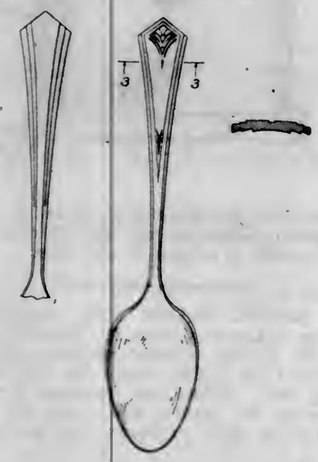


17,868. AIRCRAFT DEVICE. ELMER GRANT STILL, Livermore, Calif. Filed Mar. 13, 1928. Serial No. 261,367. Original No. 1,634,239, dated June 28, 1927, Serial No. 697,953, filed Mar. 8, 1924. 9 Claims. (Cl. 244—18.)

1. In an aircraft device, a disc; a central axis; a plurality of practically radially disposed rotating vanes, the rotating vanes creating a partial vacuum on their side of said disc by centrifugal action, and means for

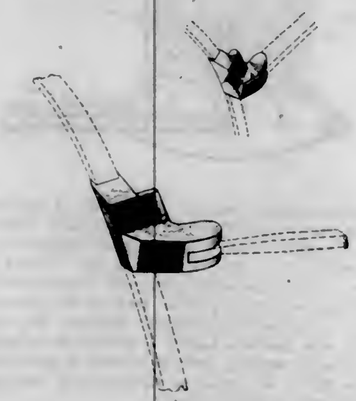
regulating, during the operation of the device, the degree of the partial vacuum on said disc otherwise than by varying the speed of rotation of said vanes.

17,869. MIXING DEVICE FOR CARBURETORS. JOHANNES B. KESSEL, Chicago, Ill. Filed May 21, 1930. Serial No. 454,466. Original application filed May 2, 1925, Serial No. 27,882, Patent No. 1,636,187, dated July 19, 1927. Divided and application filed Nov. 1, 1926, Serial No. 145,393, now Patent No. 1,717,509, dated June 18, 1929. 11 Claims. (Cl. 48—180.)



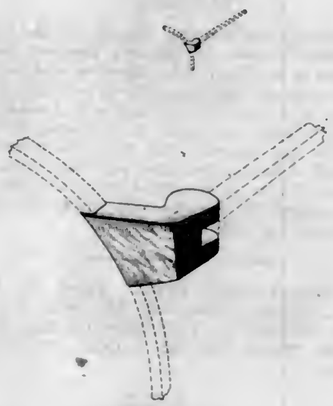
8. A mixing device located on one side of the throttle valve of a carburetor, including a rotor, said rotor comprising an annular body, a mixing blade disposed within and extending in a direction across the annular body, propeller portions connected with said annular body and encompassing said mixing blade, and an air passage for directing air against the propeller portions for rotating the rotor, said passage having communication with the mixing chamber whereby suction created in said chamber will cause air to be entrained through said passage and against the said propeller blades.

DESIGNS



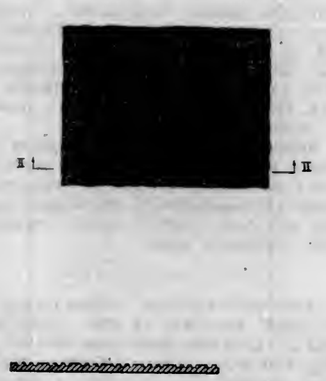
NOVEMBER 11, 1930

82,472. SPOON OR SIMILAR ARTICLE. GROSVENOR N. ALLEN and ELMER H. KREBS, Oneida, N. Y., assignors to Oneida Community, Limited, Oneida, N. Y., a Corporation of New York. Filed Jan. 21, 1930. Serial No. 34,206. Term of patent 14 years.



The ornamental design for a spoon or similar article as shown and described.

82,473. END PIECE FOR AN OPHTHALMIC MOUNTING. NELSON M. BAKER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Aug. 26, 1929. Serial No. 32,586. Term of patent 14 years.

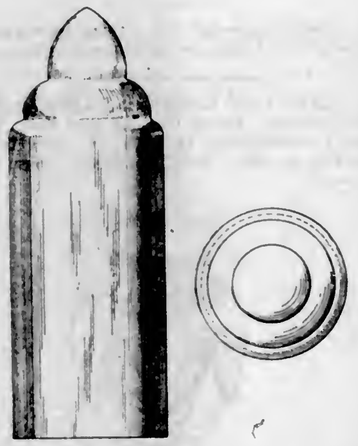


The ornamental design for an endpiece for an ophthalmic mounting as shown and described.

82,474. END PIECE FOR AN OPHTHALMIC MOUNTING. NELSON M. BAKER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Apr. 5, 1930. Serial No. 35,176. Term of patent 14 years.

The ornamental design for an endpiece for an ophthalmic mounting as shown and described.

82,475. RUBBER OR SIMILAR MATERIAL. JO D. BERWICK, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 24, 1929. Serial No. 32,855. Term of patent 14 years.



The ornamental design for rubber or similar material, as shown.

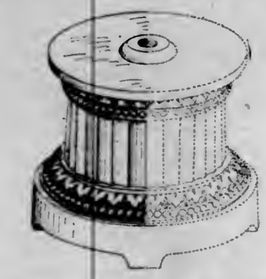
82,476. TEXTILE FABRIC. LUCIEN BIVA, Brooklyn, N. Y., assignor to Pennsylvania Textile Mills, Inc., Clifton, N. J., a Corporation of New Jersey. Filed July 18, 1929. Serial No. 32,025. Term of patent 3½ years.

The ornamental design for a textile fabric substantially as shown and described.

82,477. GLASS SHADE FOR A LIGHTING FIXTURE OR ARTICLE OF SIMILAR NATURE. HUGO BOHL, Westfield, N. J., assignor to Radiant Lighting Fixture Co., Inc., New York, N. Y. Filed Feb. 12, 1930. Serial No. 34,501. Term of patent 3½ years.

The ornamental design for a glass shade for a lighting fixture, or article of similar nature, as shown.

82,478. GLASS SHADE FOR A LIGHTING FIXTURE OR ARTICLE OF SIMILAR NATURE. HUGO BOHL, Westfield, N. J., assignor to Radiant Lighting Fixture Co., Inc., New York, N. Y. Filed Feb. 12, 1930. Serial No. 34,503. Term of patent 3½ years.



The ornamental design for a glass shade for a lighting fixture, or article of similar nature, as shown.

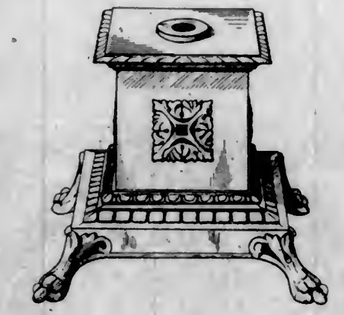
82,479. LAMP-BASE MEMBER OR ARTICLE OF SIMILAR NATURE. FRANK COLLINS, New York, N. Y., assignor to Metropolitan Lamp Co., Inc., New York, N. Y. Filed July 25, 1930. Serial No. 36,465. Term of patent 3½ years.

The ornamental design for a lamp base member, or article of similar nature, as shown.

82,480. LAMP BASE MEMBER OR ARTICLE OF SIMILAR NATURE. FRANK COLLINS, New York, N. Y., assignor to Metropolitan Lamp Co., Inc., New York, N. Y. Filed July 25, 1930. Serial No. 36,466. Term of patent 3½ years.

The ornamental design for a lamp base member, or article of similar nature, as shown and described.

82,481. LAMP BASE MEMBER OR ARTICLE OF SIMILAR NATURE. FRANK COLLINS, New York, N. Y., assignor to Metropolitan Lamp Co., Inc., New York, N. Y. Filed July 25, 1930. Serial No. 36,467. Term of patent 3½ years.



The ornamental design for a lamp base member, or article of similar nature, as shown.

82,482. LAMP BASE MEMBER OR ARTICLE OF SIMILAR NATURE. FRANK COLLINS, New York, N. Y., assignor to Metropolitan Lamp Co., Inc., New York, N. Y. Filed July 25, 1930. Serial No. 36,468. Term of patent 3½ years.

The ornamental design for a lamp base member, or article of similar nature, as shown and described.

82,483. LAMP BASE MEMBER OR ARTICLE OF SIMILAR NATURE. FRANK COLLINS, New York, N. Y., assignor to Metropolitan Lamp Co., Inc., New York, N. Y. Filed July 25, 1930. Serial No. 36,469. Term of patent 3½ years.

The ornamental design for a lamp base member, or article of similar nature, as shown.

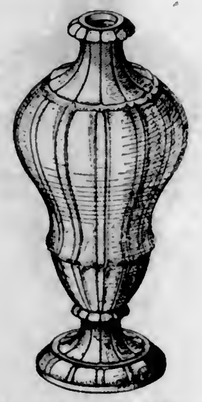
82,484. LAMP BASE MEMBER OR ARTICLE OF SIMILAR NATURE. FRANK COLLINS, New York, N. Y., assignor to Metropolitan Lamp Co., Inc., New York, N. Y. Filed July 25, 1930. Serial No. 36,470. Term of patent 3½ years.

The ornamental design for a lamp base member, or article of similar nature, as shown and described.

82,485. LAMP BASE MEMBER OR ARTICLE OF SIMILAR NATURE. FRANK COLLINS, New York, N. Y., assignor to Metropolitan Lamp Co., Inc., New York, N. Y. Filed July 25, 1930. Serial No. 36,471. Term of patent 3½ years.

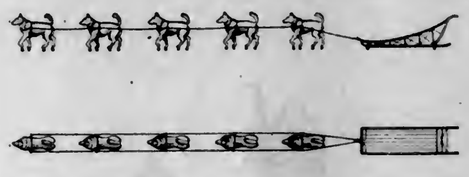
The ornamental design for a lamp base member, or article of similar nature, as shown and described.

82,486. LAMP BASE MEMBER OR ARTICLE OF SIMILAR NATURE. FRANK COLLINS, New York, N. Y., assignor to Metropolitan Lamp Co., Inc., New York, N. Y. Filed July 25, 1930. Serial No. 36,472. Term of patent 3½ years.



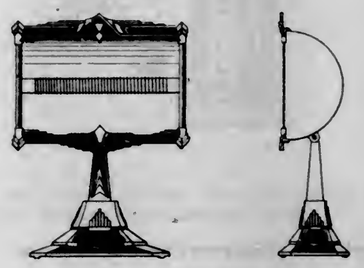
The ornamental design for a lamp base member, or article of similar nature, as shown and described.

82,487. LAMP BASE MEMBER OR ARTICLE OF SIMILAR NATURE. FRANK COLLINS, New York, N. Y., assignor to Metropolitan Lamp Co., Inc., New York, N. Y. Filed July 25, 1930. Serial No. 36,473. Term of patent 3½ years.



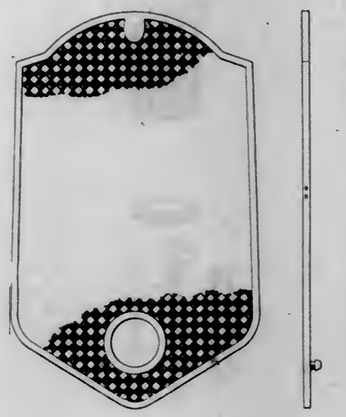
The ornamental design for a lamp base member, or article of similar nature, as shown and described.

82,488. LAMP BASE MEMBER OR ARTICLE OF SIMILAR NATURE. FRANK COLLINS, New York, N. Y., assignor to Metropolitan Lamp Co., Inc., New York, N. Y. Filed July 25, 1930. Serial No. 36,474. Term of patent 3½ years.



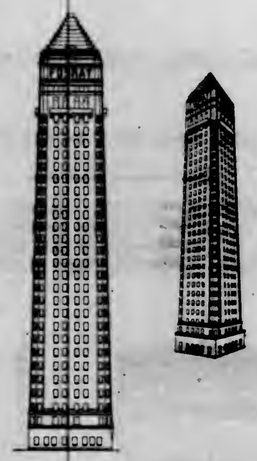
The ornamental design for a lamp base member, or article of similar nature, as shown.

82,489. TOY DOG TEAM AND SLED. JAMES EDWIN DAVIS, Glen Cove, N. Y. Filed Aug. 13, 1930. Serial No. 36,653. Term of patent 3½ years.



The ornamental design for a toy dog team and sled, as shown.

82,490. ELECTRIC HEATER. ALBERT E. ELLINGER, Snyder, N. Y., assignor to Markel Electric Products, Inc., Buffalo, N. Y., a Corporation of New York. Filed May 31, 1930. Serial No. 35,875. Term of patent 3½ years.

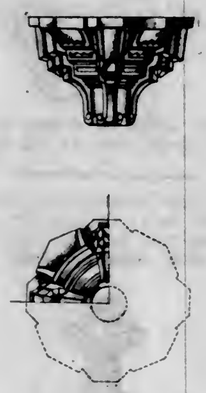


The ornamental design for an electric heater substantially as shown.

82,491. AUTOMOBILE RADIATOR SCREEN. MAX M. FISCHER, Brooklyn, N. Y. Filed Aug. 15, 1930. Serial No. 36,677. Term of patent 7 years.

The ornamental design for an automobile radiator screen, substantially as shown.

82,492. BUILDING. WILBUR B. FOSHAY and GOTTLIEB R. MAGNEY, Minneapolis, Minn., assignors to W. B. Foshay Co., Minneapolis, Minn. Filed Feb. 1, 1929. Serial No. 29,871. Term of patent 14 years.



The ornamental design for a building, as shown.

82,493. VANITY BOX. WALTER A. GOERTZ, East Orange, N. J., assignor to August Goertz & Company, Inc., a Corporation of New Jersey. Filed Aug. 27, 1930. Serial No. 36,790. Term of patent 7 years.

The ornamental design for a vanity box, as shown.

82,494. LIGHTING-FIXTURE CANOPY OR THE LIKE. HENRY GOODFRIEND, Chicago, Ill., assignor to Mutual Metal Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 31, 1930. Serial No. 35,082. Term of patent 3½ years.

The ornamental design for a lighting fixture canopy or the like, as shown and described.

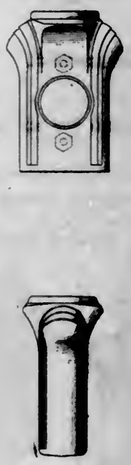
82,495. LIGHTING-FIXTURE-GLOBE HOLDER OR THE LIKE. HENRY GOODFRIEND, Chicago, Ill., assignor to Mutual Metal Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 31, 1930. Serial No. 35,083. Term of patent 3½ years.

The ornamental design for a lighting fixture globe holder or the like, as shown and described.

82,496. OUTER DRESS GARMENT FOR LADIES' WEAR. HARRY GREENBAUM, Kansas City, Mo. Filed May 23, 1930. Serial No. 35,732. Term of patent 3½ years.

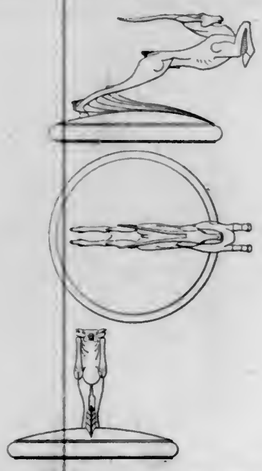
The ornamental design for an outer dress garment for ladies' wear as shown.

82,497. GLOBE FOR A LIGHTING FIXTURE. CARL F. HAAS, South Bend, Ind., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 16, 1930. Serial No. 36,057. Term of patent 14 years.



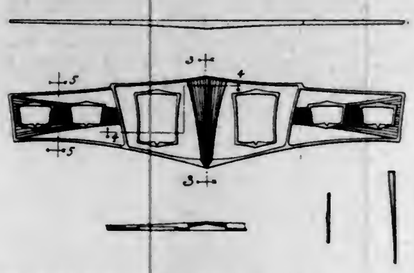
The ornamental design for a globe for a lighting fixture substantially as shown.

82,498. FINIAL FOR LIGHTING FIXTURES OR SIMILAR ARTICLES. CARL F. HAAS, South Bend, Ind., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed June 16, 1930. Serial No. 36,059. Term of patent 14 years.



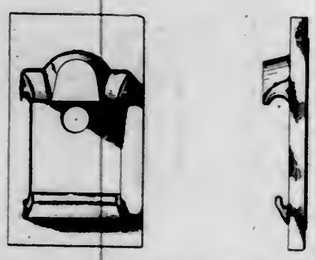
The ornamental design for a finial for lighting fixtures or similar articles substantially as shown.

82,499. ELECTRICAL CONNECTER OR SIMILAR ARTICLE. DONALD L. HADLEY, Mansfield, Ohio, assignor to The Bryant Electric Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Aug. 9, 1930. Serial No. 36,612. Term of patent 14 years.



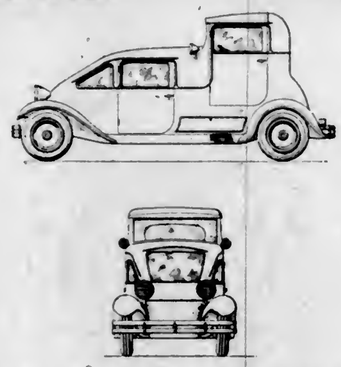
The ornamental design for an electrical connecter or similar article, as shown and described.

82,500. AUTOMOBILE FILLER CAP OR SIMILAR ARTICLE. HERBERT V. HENDERSON, Detroit, Mich., assignor to Chrysler Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 21, 1929. Serial No. 33,889. Term of patent 14 years.



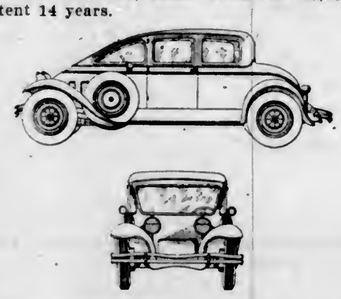
The ornamental design for an automobile filler cap or similar article, substantially as shown.

82,501. INSTRUMENT PANEL. HERBERT V. HENDERSON, Detroit, Mich., assignor to Chrysler Corporation, Detroit, Mich., a Corporation of Delaware. Filed July 28, 1930. Serial No. 36,493. Term of patent 3½ years.



The ornamental design for an instrument panel substantially as shown.

82,502. MATCH-HOLDING PAPER WEIGHT. ARTHUR J. HERSCHMANN, New York, N. Y. Filed June 18, 1930. Serial No. 36,083. Term of patent 14 years.

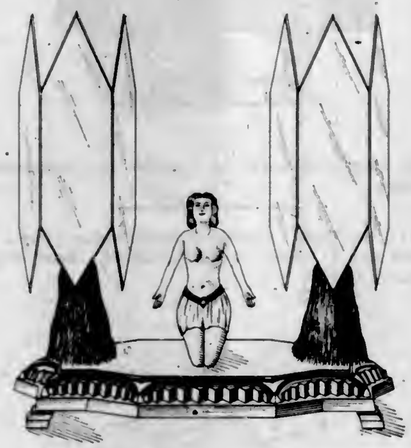


The ornamental design for a match holding paper weight, as shown.

82,503. AUTOMOBILE. PAUL H. HORWITT, Hartsdale, N. Y. Filed Aug. 23, 1930. Serial No. 36,743. Term of patent 14 years.

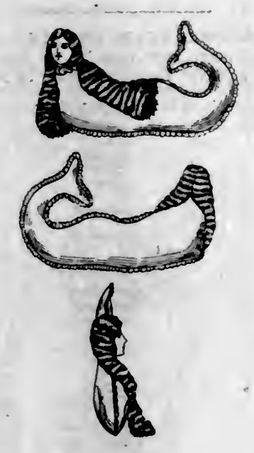
The ornamental design for an automobile as shown.

82,504. AUTOMOBILE. PAUL H. HORWITT, Hartsdale, N. Y. Filed Sept. 13, 1930. Serial No. 36,960. Term of patent 14 years.



The ornamental design for an automobile as shown.

82,505. WALL MOUNTING FOR A HAND TELEPHONE. DOUGLAS H. KING, Irvington, and HAROLD T. MARTIN, Ridgewood, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 13, 1930. Serial No. 36,045. Term of patent 14 years.



The ornamental design for a wall mounting for a hand telephone, as shown and described.

82,506. LAMP OR ARTICLE OF ANALOGOUS NATURE. MICHAEL KIWAD, New York, N. Y., assignor to La Belle Specialty Co. Inc., a Corporation of New York. Filed Aug. 30, 1930. Serial No. 36,843. Term of patent 3½ years.

The ornamental design for a lamp or article of analogous nature substantially as shown and described.

82,507. PILLOW. WILLIAM KUSHLIN and HERMAN KESNER, Brooklyn, and IRVING OLSTIK, New York, N. Y. Filed Feb. 21, 1930. Serial No. 34,624. Term of patent 3½ years.

The ornamental design for a pillow, as shown.

82,508. BRACELET CHAIN. SIGMUND L. LEDERER, Providence, R. I., assignor to Providence Stock Company, a Corporation of Rhode Island. Filed June 24, 1930. Serial No. 36,154. Term of patent 3½ years.

The ornamental design for a bracelet chain, substantially as shown.

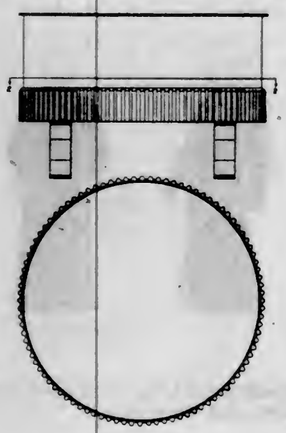
82,509. CLOCK CASE OR SIMILAR ARTICLE. ABRAHAM LEVY, Brooklyn, N. Y. Filed Jan. 22, 1930. Serial No. 34,209. Term of patent 7 years.

The ornamental design for a clock case or similar article, as shown and described.

82,510. ENSEMBLE DRESS. DOROTHY LONG, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 8, 1930. Serial No. 36,596. Term of patent 3½ years.

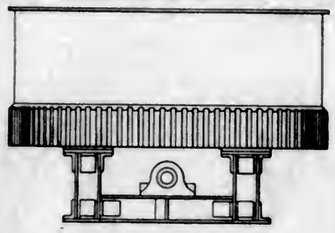
The ornamental design for an ensemble dress substantially as shown and described.

82,511. TEXTILE FABRIC. HARRY MAURUS, New York, N. Y., assignor to Duplan Silk Corporation, New York, N. Y., a Corporation of Delaware. Filed July 17, 1930. Serial No. 36,385. Term of patent 3½ years.



The ornamental design for a textile fabric substantially as shown and described.

82,512. OPHTHALMIC MOUNTING. ROBERT R. MCCOY, Cumberland, Md., assignor to White and Haines Optical Co., Columbus, Ohio, a Corporation of Ohio. Filed May 18, 1929. Serial No. 31,288. Term of patent 14 years.



The ornamental design for an ophthalmic mounting substantially as shown.

82,513. MULLER PAN. ROY H. MCELROY and PAUL A. MEEHAN, Dayton, Ohio, assignors to Carol Engineering, Inc., Dayton, Ohio, a Corporation of Ohio. Filed July 23, 1930. Serial No. 36,451. Term of patent 7 years.

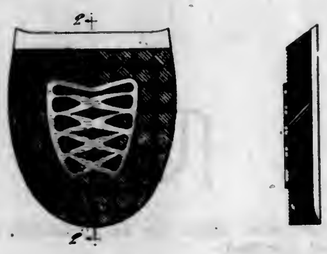
82,513.—Continued.

The ornamental design for a muller pan, substantially as shown.

82,514. SANDAL. ROBERT MONSCH, Union City, N. J. Filed May 12, 1930. Serial No. 35,591. Term of patent 3½ years.

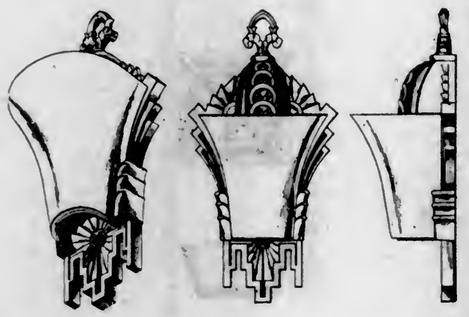
The ornamental design for a sandal, as shown.

82,515. ELECTRIC BULB OR SIMILAR ARTICLE. GOTTFRIED NIEBEL, New York, N. Y. Filed Dec. 5, 1929. Serial No. 33,057. Term of patent 14 years.



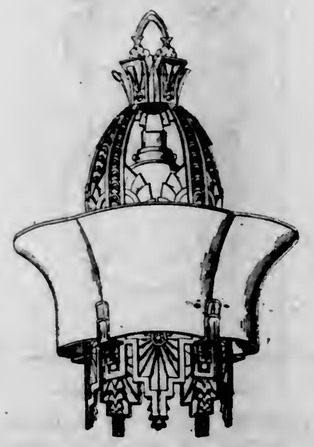
The ornamental design for an electric bulb or similar article substantially as shown.

82,516. SHOE SOLE. LAURENCE M. OAKLEY, Trenton, N. J. Filed Aug. 5, 1930. Serial No. 36,558. Term of patent 7 years.



The ornamental design for a shoe sole as shown.

82,517. SHOE HEEL. LAURENCE M. OAKLEY, Trenton, N. J. Filed Aug. 5, 1930. Serial No. 36,559. Term of patent 7 years.

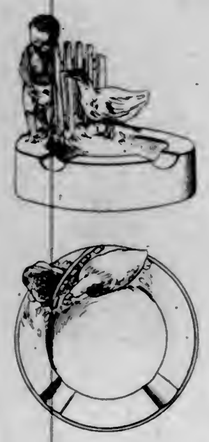


The ornamental design for a shoe heel as shown.

82,518. LIGHTING FIXTURE. ALBERT J. D. OHM, Oak Park, Ill., assignor to Beardslee Chandelier Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed June 25, 1930. Serial No. 36,170. Term of patent 3½ years.

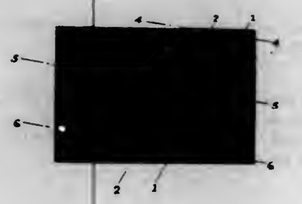
The ornamental design for a lighting fixture as shown.

82,519. LIGHTING FIXTURE. ALBERT J. D. OHM, Oak Park, Ill., assignor to Beardslee Chandelier Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed July 31, 1930. Serial No. 36,526. Term of patent 3½ years.



The ornamental design for a lighting fixture as shown and described.

82,520. SHOE BUCKLE. ORLANDO RICHARD RECCHIA, Cranston, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Filed Aug. 20, 1930. Serial No. 36,717. Term of patent 3½ years.



The ornamental design for a shoe buckle as shown.

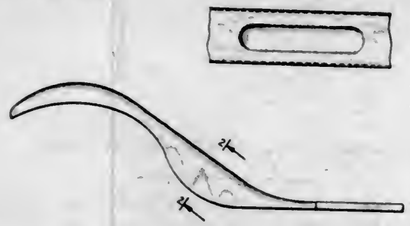
82,521. ASH RECEIVER. JOHN B. SCELZI, Hopewell, Va. Filed Apr. 3, 1930. Serial No. 35,144. Term of patent 7 years.

The ornamental design for an ash receiver as shown.

82,522. KNITTED FABRIC OR SIMILAR ARTICLE. MOSES SCHREIBER, New York, N. Y., assignor to Allentown Knit Fabrics Company, New York, N. Y., a Corporation of Pennsylvania. Filed May 15, 1930. Serial No. 35,652. Term of patent 7 years.

The ornamental design for a knitted fabric or similar article substantially as shown and described.

82,523. BABY'S SHOE BOX. BENNO SCHUBART, Nuremberg, Germany, assignor to the Firm Vereinigte Schuhfabriken Berneis-Wessels, A. G., Augsburg-Oberhausen, Germany, a German Firm. Filed Mar. 6, 1930, Serial No. 34,758, and in Germany Nov. 16, 1929. Term of patent 7 years.



The ornamental design for a baby's shoe box, as shown and described.

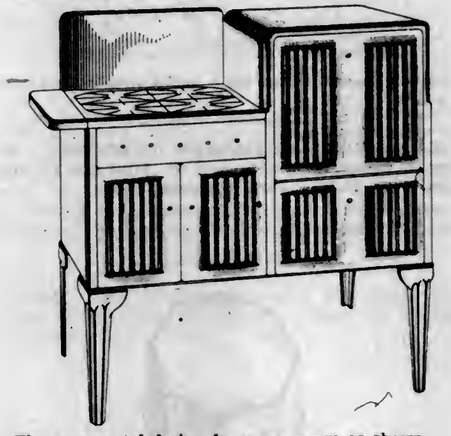
82,524. BABY'S SHOE BOX. BENNO SCHUBART, Nuremberg, Germany, assignor to the Firm Vereinigte Schuhfabriken Berneis-Wessels, A. G., Augsburg-Oberhausen, Germany, a Firm of Germany. Filed Mar. 6, 1930, Serial No. 34,759, and in Germany Nov. 16, 1929. Term of patent 7 years.

The ornamental design for a baby's shoe box, as shown and described.

82,525. FENDER. JOSEPH SCHULMAN, Brooklyn, N. Y. Filed Nov. 15, 1929. Serial No. 33,463. Term of patent 14 years.

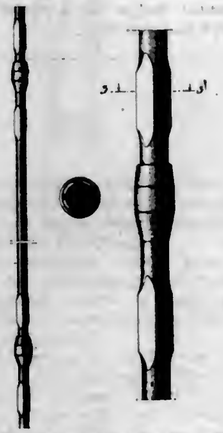
The ornamental design for an automobile fender as shown and described.

82,526. CONTAINER FOR PASTRY OR THE LIKE. JOSEPH SICILIANI, Chicago, Ill. Filed Mar. 6, 1930. Serial No. 34,756. Term of patent 14 years.



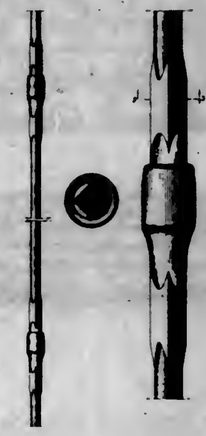
The ornamental design for a container for pastry or the like, as shown.

82,527. SHOE ORNAMENT. WALTER EDWARD SMITH, Warwick Downs, R. I., assignor to C. G. King & Co., Inc., Providence, R. I. Filed Aug. 5, 1930. Serial No. 36,564. Term of patent 3½ years.



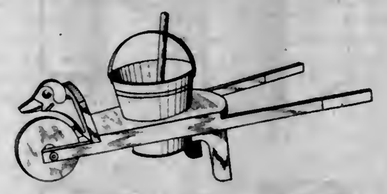
The ornamental design for a shoe ornament as shown.

82,528. GAS RANGE. ARTHUR STOCKSTROM, St. Louis, Mo., assignor to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed Aug. 25, 1930. Serial No. 36,762. Term of patent 14 years.



The ornamental design for a gas range as shown.

82,529. ROD OR LIKE ARTICLE. ALFRED MORRIS THOMSON, Newark, N. J., assignor to Dardelet Threadlock Corporation, New York, N. Y., a Corporation of Delaware. Filed July 24, 1930. Serial No. 36,455. Term of patent 14 years.

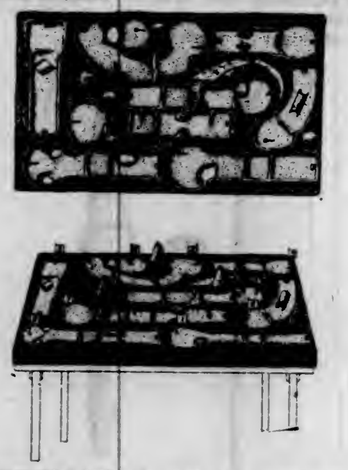


The ornamental design for a rod or like article, as shown.

82,530. ROD OR LIKE ARTICLE. ALFRED MORRIS THOMSON, Newark, N. J., assignor to Dardelet Threadlock Corporation, New York, N. Y., a Corporation of Delaware. Filed July 24, 1930. Serial No. 36,456. Term of patent 14 years.

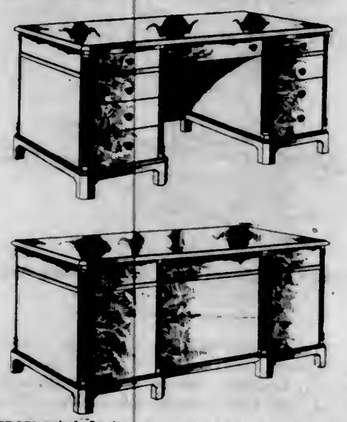
The ornamental design for a rod or like article, as shown.

82,531. WHEEL-BEARING FIGURE TOY. CLARE A. WETZELL, Sterling, Ill. Filed Jan. 11, 1930. Serial No. 34,112. Term of patent 3½ years.



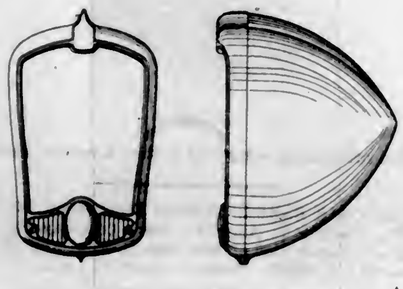
The ornamental design for a wheel bearing figure toy as shown.

82,532. PLATE OR SIMILAR ARTICLE. PAUL ZENKER, Paris, France, assignor to Haviland & Co. (Societe Anonyme), Limoges, France, a Corporation of France. Filed May 13, 1930. Serial No. 35,632. Term of patent 3½ years.



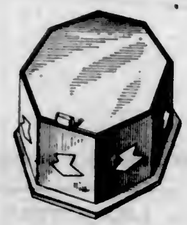
The ornamental design for a plate or similar article, as shown.

82,533. GAME TABLE. MARK HARRIS, New Rochelle, N. Y. Filed Sept. 3, 1930. Serial No. 36,855. Term of patent 14 years.



The ornamental design for a game table as shown.

82,534. DESK. JOSEPH R. MCCARGAR, Grand Rapids, Mich. Filed June 30, 1930. Serial No. 36,230. Term of patent 7 years.

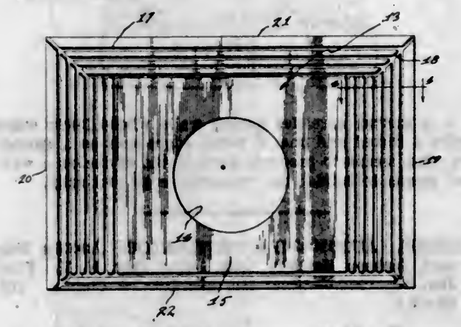


The ornamental design for a desk, as shown.

82,535. MOTOR VEHICLE HEAD LAMP. ROY W. JOHNSON, Columbus, Ohio, assignor to The Checker Cab Manufacturing Company, Kalamazoo, Mich., a Corporation of New Jersey. Filed Sept. 12, 1930. Serial No. 36,951. Term of patent 3½ years.

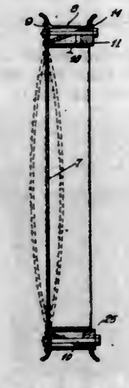
The ornamental design for a motor vehicle head lamp, as shown.

82,536. TOILET-ACCESSORIES CONTAINER. RUDOLPH EBERHARDT, Brooklyn, N. Y. Filed July 14, 1930. Serial No. 36,351. Term of patent 7 years.



The ornamental design for a toilet accessories container, as shown and described.

PATENTS

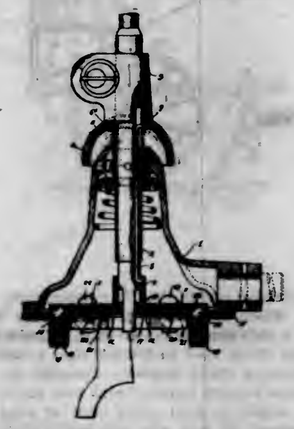


GRANTED NOVEMBER 11, 1930

1,780,896. PLATE FOR BURNERS. GEORGE C. ANDERSON, Detroit, Mich., assignor to Cope-Swift Company Incorporated, Detroit, Mich., a Corporation of Michigan. Filed Dec. 8, 1927. Serial No. 238,654. 7 Claims. (Cl. 158—2.)

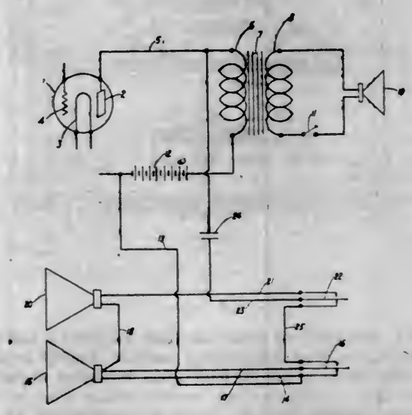
1. As a new article of manufacture, a substantially rectangular plate having a circular opening therein for receiving an oil burner and having a series of scores therein arranged parallel to the edges thereof, said plate further having diagonal scores extending inwardly from the corners thereof and intersecting the scores disposed parallel to adjacent edges of the plate for the purpose set forth.

1,780,897. DISK WHEEL. DAVID H. BELLAMORE, New York, N. Y. Filed Mar. 24, 1927. Serial No. 177,935. 10 Claims. (Cl. 301—6.)



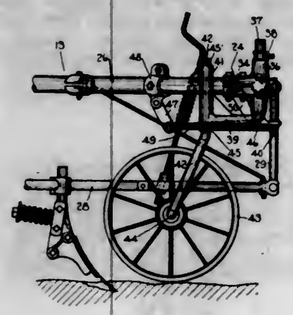
1. A disk wheel embodying a disk portion provided at its outer periphery with a laterally extending circumferentially corrugated flange constituting both the brake drum and the felly of the wheel.

7. A disk wheel embodying a brake drum, and a tire rim mounted on the brake drum, said drum being provided with transversely extending tapering box plaits to render the drum circumferentially adjustable without variation in its diameter.



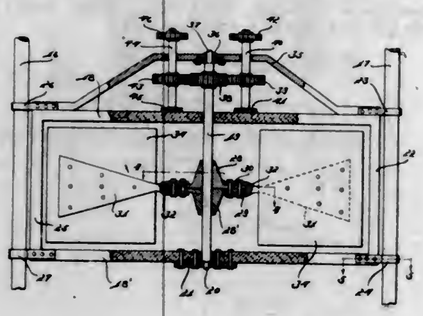
10. A disk wheel having a brake drum comprising a succession of relatively adjustable arcuate sections whereby said sections are adapted to individually circumferentially expand and contract under variations in temperature without appreciable change in their radius, and a tire rim, said drum forming a support for said rim.

1,780,898. GEAR-SHIFT MECHANISM. HOWARD E. BLOOD and ROBERT LAPSLEY, Detroit, Mich., assignors to Detroit Gear & Machine Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 27, 1925. Serial No. 71,511. 2 Claims. (Cl. 74—89.)



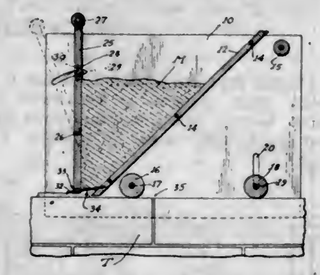
1. In a gear shifting mechanism, a casing, a lever pivoted in said casing, a support attached to the bottom of the casing, said support having a pair of parallel slots, a pair of shifter plates slidably supported on said support and comprising means extending into said parallel slots, a shifter fork supported by each plate, and means for operating said shifter plates.

1,780,899. SOUND-REPRODUCING APPARATUS. HAROLD C. BRADSHAW and MATTHEW J. DE FOREST, Chicago, Ill., assignors, by mesne assignments, to United Research Corporation, Long Island City, N. Y., a Corporation of Delaware. Filed Dec. 3, 1927. Serial No. 237,555. 16 Claims. (Cl. 179—171.)



1. The combination of a thermionic amplifier for amplifying audio frequency currents, a loud speaker, a transformer coupling said loud speaker to said amplifier and a second loud speaker connected to said amplifier at a point between said amplifier and said transformer.

1,780,900. CULTIVATOR-WHEEL MOUNTING. THEOPHILUS BROWN, Moline, Ill., assignor to Deere & Company, Moline, Ill., a Corporation of Illinois. Filed Apr. 30, 1928. Serial No. 273,872. 23 Claims. (Cl. 97—47.)

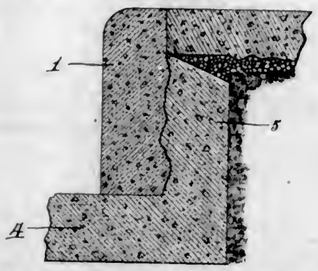


1. A cultivator comprising in combination, a frame, a supporting wheel therefor, cultivator rigs mounted on said frame, a rock shaft mounted on said frame and adapted to raise and lower said cultivator rigs, a sleeve mounted on said frame, a shaft rotatably mounted in said sleeve, a pair of arms formed integral with said shaft and extending at an angle to each other, one of said arms comprising a sleeve, an axle for said wheel mounted in said second named sleeve, and means connecting the other of said arms with said rock shaft whereby the movement of said rock shaft moves said wheel toward and from said frame simultaneously with the lowering and raising of said rigs.

1,780,901. WATER-POWER WHEEL. JAMES AMYAS BURROUGHS, St. Clair, Mich. Filed May 28, 1928. Serial No. 281,002. 1 Claim. (Cl. 170—173.)

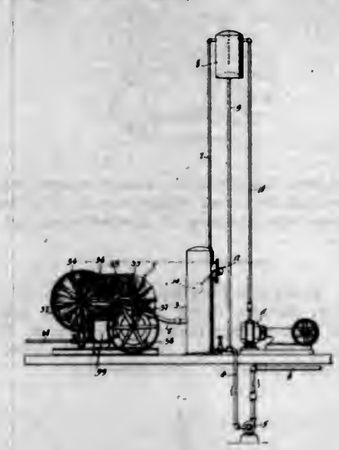
In a device of the class described, a shaft; a hub comprising a pair of cooperating sections fixedly mounted on said shaft; a plurality of arms radiating outwardly from each of said sections, corresponding arms of each of said sections being in alignment; a plurality of substantially triangularly shaped supporting arms; a neck extending inwardly from each of said supporting arms and provided with a socket for the reception of a pair of said radiating arms; and a paddle carried by each of said wedge shaped arms.

1,780,902. MORTAR SPREADER. ROBERT L. AINSLIE, Palm Springs, Calif. Filed Feb. 9, 1929. Serial No. 338,665. 6 Claims. (Cl. 72—128.)



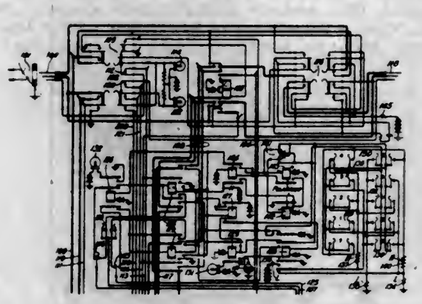
1. A mortar spreader having walls whose lower edges define a throat and one of which edges acts as a spreading edge, means to properly position the device on a wall, and means to adjust the spreading edge vertically.

1,780,903. AUTOMOBILE VENTILATOR. ADOLPH BERMAN, Jackson Heights, Long Island City, N. Y. Filed Jan. 30, 1930. Serial No. 424,710. 4 Claims. (Cl. 98—2.)



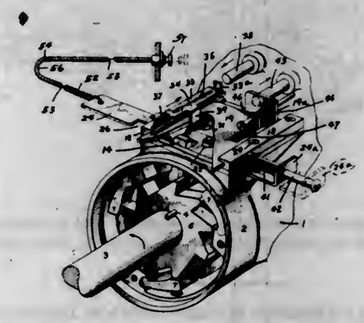
1. A ventilator for vehicles, comprising a frame having front and rear walls, the front wall being larger than the rear wall and forming a projecting flange all around said frame, the front wall being provided with a plurality of louvers facing inwardly, the rear wall being provided with apertures and with sliding doors within the ventilator frame to open and close said apertures, a screen partition intermediate the said walls, and an aperture in one of the sides of the frame.

1,780,904. CONCRETE CURBING. HYMEN A. BLANCHARD, Buffalo, N. Y. Filed Feb. 15, 1928. Serial No. 254,544. 1 Claim. (Cl. 94—31.)



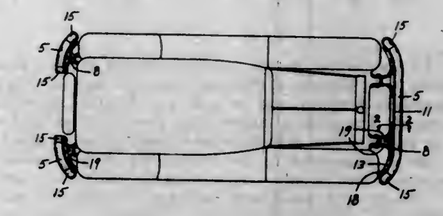
A precast curb section adapted to be united with a hard setting plastic backing of specified vertical extent comprising a body formed of concrete and having its rear face formed with an upper smooth surface and a lower rough surface, the latter being characterized by adjoining projections and depressions delimited thereby and being of the same vertical extent as the backing, said upper and lower surfaces providing a line of demarcation which marks the upper and lower limit of the rough surface whereby when the rough surface is placed in contact with the backing, the latter will extend at least up to said line of demarcation, the said backing being sloped downwardly away from its front upper edge in order to drain away any water that might seep past the smooth portion of the curb section.

1,780,905. FILTER APPARATUS. ROBERT STUART BUTLER, Los Angeles, Calif., assignor to Southwestern Engineering Corp., Los Angeles, Calif., a Corporation of California. Filed Dec. 12, 1928. Serial No. 325,468. 12 Claims. (Cl. 210—197.)



1. A filtering apparatus comprising a row of filter leaves with facing filter surfaces, means connecting the plates forming intermediate chambers for the material to be filtered, filtrate receiving means, means for moving the row of filter plates simultaneously with filtration and transversely to the plates and relative to said filtrate receiving means to translate the row of filter plates to and from the filtering zone, and means connecting the filtrate receiving means with said filter plates when the plates are in the filtering zone and disconnecting the filtrate receiving means with said filter plates when the filter plates pass from the filtering zone.

1,780,906. AUTOMATIC TOLL-SWITCHING TELEPHONE SYSTEM. WARREN W. CARPENTER, Queens Village, and RALPH E. HERSEY, Brooklyn, N. Y., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 4, 1929. Serial No. 360,458. 17 Claims. (Cl. 179—27.)

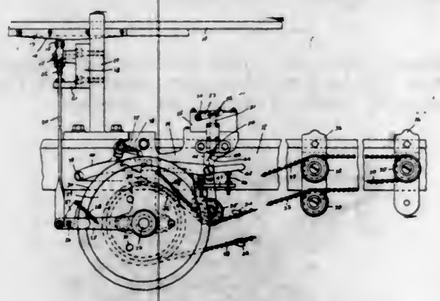


1. In a telephone exchange system, an operator's position having a plurality of cord circuits, called subscribers' lines, jack-ended trunk circuits and selector switches for extending a connection from an operator's position to said lines, a plurality of register senders common to said trunk circuits for controlling said selector switches, link circuits each comprising a trunk finder and a sender finder, means operative upon the connection of a cord circuit with a trunk circuit for causing an idle link circuit to associate an idle sender with said trunk circuit, a key set at said operator's position associable with any cord circuit of said position, and means controlled from said key set over the talking conductors only of said cord circuit for setting the registers of said sender.

1,780,907. REVERSE LOCK MECHANISM. CHARLES PAUL CIRAC, San Francisco, Calif. Filed Feb. 20, 1925. Serial No. 10,465. 5 Claims. (Cl. 188—80.)

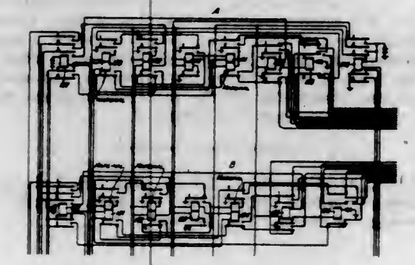
1. In a device of the character described the combination of a baseplate, a ratchet wheel, stop means for locking the ratchet wheel against movement in one direction relatively to the baseplate, a control plate controlling said stop means, and means for causing frictional engagement between said ratchet wheel and said control plate, whereby to engage the stop means when the ratchet wheel is moved in one direction, and to disengage the stop means when the ratchet wheel is moved in the other direction, and manually actuable means for placing said control plate under urge to disengage said stop means.

1,780,908. PNEUMATIC BUMPER. HERBERT M. CLAUSEN, Spokane, Wash. Filed Oct. 14, 1929. Serial No. 399,460. 1 Claim. (Cl. 293—55.)



A pneumatic bumper comprising an outer resilient casing open at both ends, an inner-tube installed within said casing and having its ends projecting exteriorly thereof, a clincher frame member, a stiffener rib for said frame, metal caps for the ends of said inner-tube and casing secured to said stiffener rib, oppositely curved and twisted spring supports secured to the stiffener rib, and a valve for the inner-tube interposed between said spring supports.

1,780,909. AUTOMATIC COURSE COUNTER AND STOP. FRED CLEMENS, Indianapolis, Ind. Filed May 14, 1927. Serial No. 191,379. 6 Claims. (Cl. 66—167.)

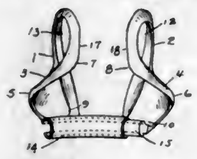


1. In a knitting machine or the like, including a switch operating member for controlling the operation of the machine and a machine operable element from which power may be derived, the combination of mechanism for transforming intermittent actuation derived from said machine operable element into progressive rotary motion, a lever

pivotally supporting a catch, a plurality of actuating members progressively presented by the progressive rotary motion to said lever for tilting the same, and a latch car-

ried by said switch operating member and engageable by the catch for actuating a switch after the lever has been tilted.

1,780,910. TESTING SYSTEM. BERT G. DUNHAM, Hawthorne, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 30, 1928. Serial No. 289,390. 19 Claims. (Cl. 179—175.)



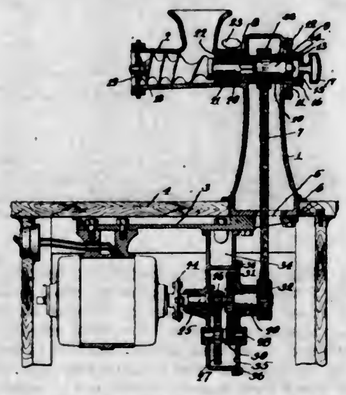
1. In a signaling system, a switch having brushes each movable in a plurality of different directions and terminals arranged in primary and secondary ordinates, signaling apparatus for said primary and secondary ordinates, means for directing said brushes to particular terminals, and means responsive to the positioning of said brushes to operate said signaling apparatus in accordance with the primary and secondary ordinate locations of said brushes.

1,780,911. SMOKELESS POWDER. FRANCIS I. DU PONT, Wilmington, Del., assignor to U. S. F. Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 29, 1926. Serial No. 145,102. 6 Claims. (Cl. 52—5.)

1. A propellant powder including colloidal nitrocellulose in dominating proportion and a substance substantially non-volatile at a normal temperature for drying of powder, which is non-solvent of the nitrocellulose, which is liquid at atmospheric temperatures, which contains carbon and hydrogen and which is soluble in and will form a substantially stable mixture with water.

1,780,912. DILATOR. HENRY E. GAU, Cincinnati, Ohio. Filed Dec. 13, 1926. Serial No. 154,471. 3 Claims. (Cl. 128—3.)

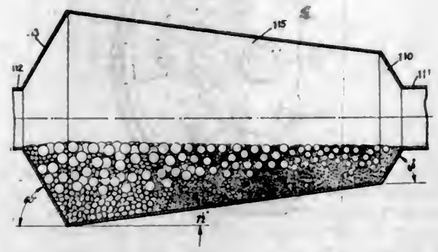
1. A dilator comprising a pair of blade members having curved laterally flaring flanges disposed substantially transversely of the length and width of the blades, a pair of arcuate telescopically sliding members secured one each to the flanges at the top of the blades, the arc of the telescoping members lying in a downwardly and forward-



ly inclined plane relative to the flanges whereby to provide for self binding frictional engagement to hold the blades apart against the pressure of tissues separated by the blades.

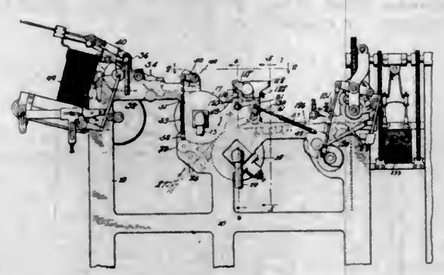
1,780,913. CURTAIN FOR RAILROAD-CAR WINDOWS. ROBERT F. GOLDEN, South Orange, N. J., assignor to National Lock Washer Company, Newark, N. J., a Corporation of New Jersey. Filed Feb. 26, 1930. Serial No. 431,362. 4 Claims. (Cl. 156—31.)

2. A bottom bar structure for curtains consisting of a hollow bottom bar made of sheet metal having its edges at the top, between which edges the lower portion of the curtain is held, said edges having deformations, and a keeper strip applied inside said deformations for holding said edges from spreading.



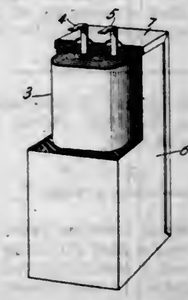
1,780,914. MEAT CHOPPER. ROY KARL GULLBERG, Dayton, Ohio, assignor to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed June 3, 1925. Serial No. 34,571. 2 Claims. (Cl. 146—189.)

1. In a grinder wherein a shaft is provided co-axial with and driving a feed screw for the meat, a casing having



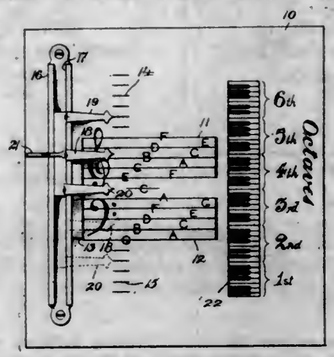
a reduced portion in which said shaft is journaled, a bearing element carried by one end of the shaft, a co-operating bearing element carried by the casing, friction-reducing elements positioned between the bearing elements, a gear keyed to the shaft for rotating the shaft, said casing having an enlarged portion surrounding the gear and said reduced portion of the casing for accommodating the gear, and said bearing elements being formed with vertical and horizontal walls to resist radial and end thrust of the shaft.

1,780,915. APPARATUS FOR DISINTEGRATING ORE AND OTHER MATERIAL. HARLOWE HARDINGE, York, Pa., assignor to Hardinge Company, Incorporated, York, Pa., a Corporation of New York. Filed Jan. 30, 1929. Serial No. 336,175. 3 Claims. (Cl. 83—9.)



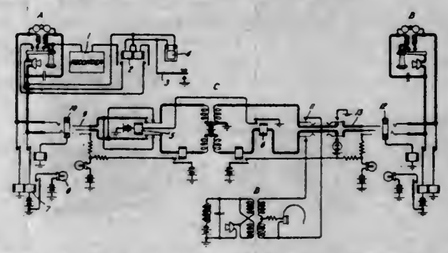
1. A rotatable mill for disintegrating ore and other material, comprising three conical portions joined together with the ends of the intermediate conical portion joined to the larger ends of the conical end portions, the conical end portion at the larger end of the intermediate conical portion having an inlet opening and the conical end portion at the smaller end of the intermediate conical portion having an outlet opening, and a plurality of crushing bodies freely movable in all directions within the mill.

1,780,916. TIPPING MACHINE. WILLIAM H. HARRISON, Jr., Chicago, Ill., assignor to W. F. Hall Printing Company, Chicago, Ill., a Corporation of Illinois. Filed June 4, 1928. Serial No. 282,859. 8 Claims. (Cl. 270—58.)



1. A machine of the class described comprising two co-operating feed and pressure drums, and two co-operating feeding mechanisms arranged to feed objects to said drums, said mechanisms being synchronized to cause said objects to pass between said drums simultaneously and be thereby superposed, both of said drums being equipped both with mechanical gripper fingers and suction means for engaging said objects, and means for successively causing the same to engage objects fed to said drums, the relation being such that said objects will be held to the drums by suction only as their advancing edges pass between said drums.

1,780,917. ELECTRIC CONDENSER. ELLERY T. HOCH, Bloomfield, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 29, 1926. Serial No. 112,422. 8 Claims. (Cl. 175—41.)



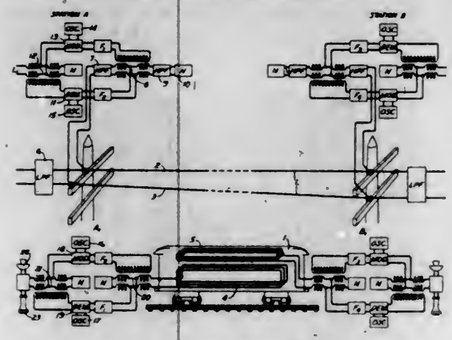
1. An electrical condenser comprising a container enclosing layers of metal foil and paper and an impregnating and filling mixture containing petrolatum and mineral beeswax.

1,780,918. MUSICAL-INSTRUCTION DEVICE. HERMAN HOLZMAN, Newark, N. J. Filed June 21, 1928. Serial No. 287,186. 4 Claims. (Cl. 84—471.)

1. A musical instruction chart comprising a representation of a staff and its leger lines, and connected pointer spaced apart the distance of an octave on the chart whereby a leger note can be identified by one pointer when the other pointer is placed on the corresponding note within the staff.

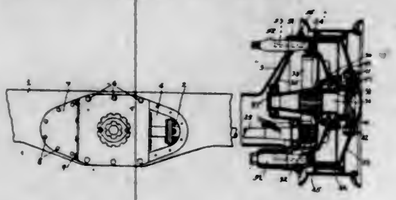
1,780,919. MEANS FOR RECORDING TELEPHONE CONVERSATIONS. NEWMAN H. HOLLAND, deceased, Upper Montclair, N. J., by Charlotte M. Holland, administratrix, Upper Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 26, 1928. Serial No. 280,826. 6 Claims. (Cl. 179—6.)

1. In a telephone system including substations and central office means for interconnecting the substations,



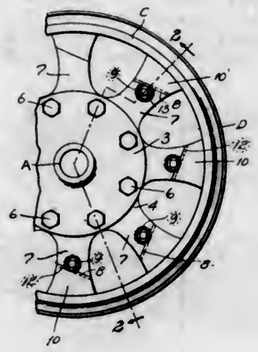
current reversing means at the central office, phonographic apparatus normally disconnected from the line at a substation prior to the reception of a call to record telephone conversations, and connecting means at a substation operated by a reversal of current through the system and controlled jointly from a plurality of substations for connecting the phonographic apparatus to the telephone line.

1,780,920. MATCH. HARRY H. HONIGBAUM, New York, N. Y. Filed Aug. 21, 1929. Serial No. 387,320. 2 Claims. (Cl. 44—46.)



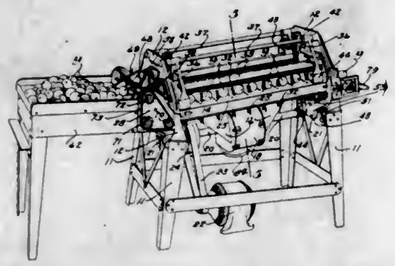
2. A match embodying a fibrous (wood or paper) combustible portion having a head extending in one direction from said portion, and a metallic portion extending from said combustible portion in the opposite direction from said head.

1,780,921. COMMUNICATION SYSTEM. JOSEPH W. HORTON, Cambridge, Mass., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 24, 1928. Serial No. 321,589. 11 Claims. (Cl. 179—82.)



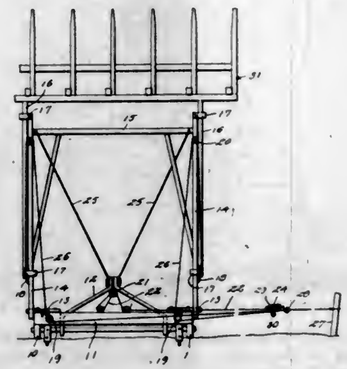
1. In a system for communicating between a moving body and a plurality of terminal stations between which it is moving, a transmission line connecting said stations adapted to transmit signal variations imposed thereon, transmission means on said moving body inductively coupled with said line in which are induced currents responsive to those transmitted over said line, and means for changing the transfer efficiency between said transmission means and said line from point to point along the route of travel of the moving body to provide a substantially constant transmission equivalent between said line and said transmission means, regardless of the position of said moving body with respect to said terminals.

1,780,922. AXLE CONSTRUCTION. FRANK D. HOWE, Cuyahoga Falls, Ohio. Filed Oct. 15, 1923. Serial No. 668,525. 11 Claims. (Cl. 74—7.)



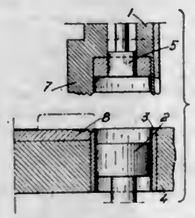
1. In an axle, the combination of a substantially tubular housing having enlarged end portions, a pair of plates secured to each of the ends of said housing in spaced relation to each other, bearings supported in each of said plates, a stub axle shaft rotatably mounted in said bearings at each end of the housing, a gear mounted on each of said stub axle shafts, and driving means extending to the respective ends of said tubular housing and engaging said respective gears.

1,780,923. WHEEL. CHRISTIAN J. HUG, Highland, Ill. Filed Oct. 14, 1927. Serial No. 226,061. 1 Claim. (Cl. 301—12.)



An improvement in wheels of the demountable rim type, comprising a spider carried on the hub and having a plurality of spokes, certain of the spokes having their outer ends formed wedge shaped circumferentially of the wheel, and alternate spokes having the wedge shaped surface extending in an opposite direction to the intervening wedge shaped ends, wedge shaped members carrying the tire rim and seated on the wedge shaped ends of the spokes, the face of the wedge shaped members facing the spokes formed with racks, and a pinion carried by each spoke engaging the racks of the several wedges to adjust the wedges on the spokes to align them with the periphery of the wheel; the alternate wedge shaped members being movable in opposite directions to similarly adjust the same thereby to prevent creeping of the rim.

1,780,924. FRUIT-CLEANING MACHINE. HARRY A. INGRAHAM, Zillah, Wash. Filed Mar. 2, 1928. Serial No. 258,480. 16 Claims. (Cl. 146—202.)

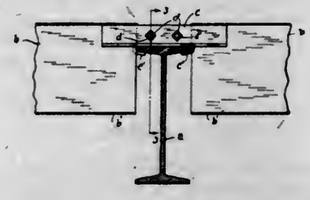


1. In a fruit cleaning machine, cleaning brushes spaced to afford a runway, means for producing relative movement of the brushes to clean the fruit, means for holding the fruit spaced while being progressively moved through this runway, and relatively stationary receiving brushes at the receiving end of said runway for delivering the fruit into the runway and between the vibratory brushes thereof.

1,780,925. STACKER. PETER B. JOHNSON, Fremont, Nebr. Filed Feb. 4, 1929. Serial No. 337,881. 2 Claims. (Cl. 214—141.)

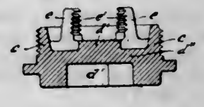
1. A stacker including a support, a vertically swingable stacker frame on the support having an outer extensible section, a cable operatively connected with the extensible section and with a stationary means adjacent the support, a stop means on said cable, a cable for swinging the stacker frame, and draft means for drawing the last-named cable to elevate the stacker frame and to engage with said stop to draw the second-named cable to raise the extensible section.

1,780,926. MACHINE FOR MAKING CAPS. ANDERS JOSEF JONASON, Linkoping, Sweden. Filed Dec. 6, 1928, Serial No. 324,199, and in Sweden Nov. 11, 1927. 8 Claims. (Cl. 153—21.)



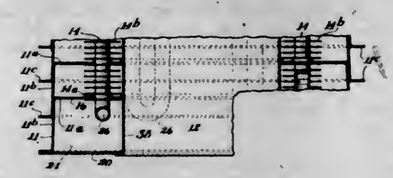
1. In a device of the character described, a packing inserting and crimping tool for tongued caps, comprising a reciprocating shell provided with the female section of the packing inserting tool and the male section of the crimper, a fixed bed having an opening registering with the female section of the packing inserting tool and the female section of the crimper disposed marginally of the opening, and a lower stamp forming the male section of the packing member reciprocally mounted in the opening.

1,780,927. LIQUID OF LOW FREEZING POINT FOR COOLING AND FOR SEALING VESSELS AND THE LIKE. OTTO JORDAN, Ludwigshafen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Mar. 9, 1927, Serial No. 174,091, and in Germany Mar. 5, 1926. 3 Claims. (Cl. 252—5.)



1. A liquid composition of low freezing point comprising water and a monoalkyl ether of a glycol.

1,780,928. BUILDING CONSTRUCTION. ISAAC T. KAHN, Cleveland, Ohio. Filed Mar. 26, 1926. Serial No. 97,579. 10 Claims. (Cl. 189—36.)

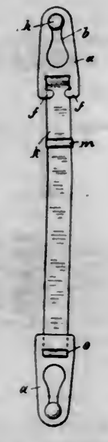


1. In a building construction, the combination with a supporting member comprising horisontally spaced vertically positioned metallic bars and means for limiting their spaced relation, of an unattached flanged supported member terminally inserted therebetween and carried by upper suspending flanges upon the vertical bars, substantially as set forth.

1,780,929. FAUCET-SUPPORTING PLUG. ISAAC T. KAHN, Cleveland, Ohio, assignor to The Consolidated Iron-Steel Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 2, 1929. Serial No. 337,081. 6 Claims. (Cl. 221—24.)

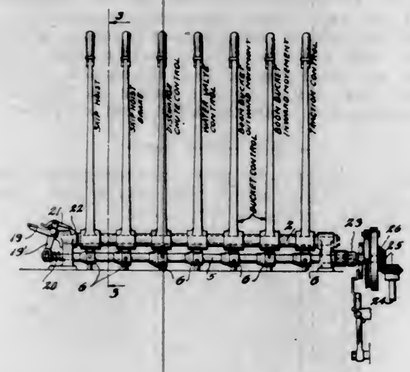
1. In a device of the class described, the combination with a cast metal closure member having an annular attaching member, of faucet-supporting means provided thereon, comprising a plurality of spaced members located within and radially spaced from the annular attaching member, said spaced members having an interrupted thread adapted to receive the threaded end of a faucet.

1,780,930. BRINE-TANK EVAPORATION UNIT. JOHN KARMAZIN, Detroit, Mich. Filed June 1, 1928. Serial No. 282,231. 12 Claims. (Cl. 62—95.)



4. A telescoping tray element for brine tank evaporating units having perforations therein, additional perforations having projecting bosses thereon, and a central opening adapted to form a compartment in said element.

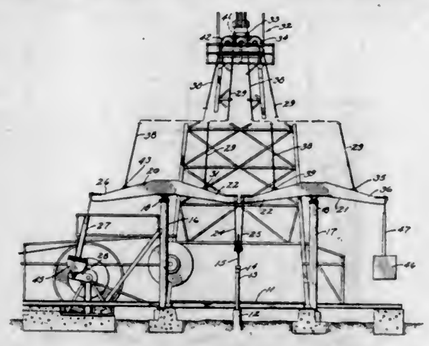
1,780,931. GARTER. WALTER KÖNIOSBERGER, Berlin, Germany. Filed Oct. 20, 1925, Serial No. 63,620, and in Germany Aug. 11, 1925. 4 Claims. (Cl. 241—6.)



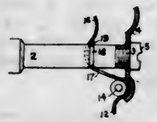
1. A garter comprising a strip of webbing, a substantially rigid slotted member engaging said strip for free sliding movement thereon, a transverse bar bordering the slot in said member and a pair of inwardly directed hooks surmounting the ends of said bar, a pliable member

associated with the slot in said rigid member, so as to brake the sliding movement of said member relative to

said strip, the free end of said strip being engaged by said hooks and the free edge of said pliable member being arranged to force said free end against said hooks.



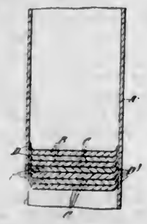
1,780,932. CONTROL MECHANISM FOR CONCRETE MIXERS. ERICH H. LICHTENBERG, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed Aug. 29, 1929. Serial No. 389,210. 16 Claims. (Cl. 83—73.)



1. In concrete mixing apparatus, the combination with a mixing drum and charging and discharging means, of means for independently initiating operations of said charging and discharging means, actuating means cooperating with said operation initiating means and constituting a common actuator for selectively controlling the charging and discharging means in a timed relation to each other, and means for rendering either of said initiating means inoperative relative to the common actuator.

1,780,933. STRAIGHT-LINE PUMPING OPERATING MECHANISM. ARTHUR E. MARTOIS, Compton, and WALDO E. MARTOIS, Gardena, Calif. Filed Feb. 25, 1929. Serial No. 342,428. 9 Claims. (Cl. 74—14.)

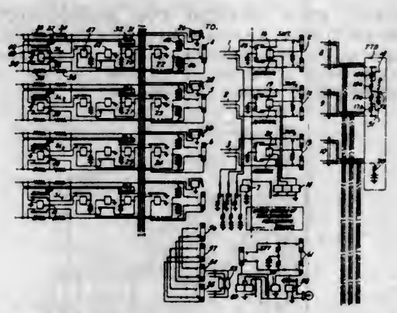
1. A long stroke pumping mechanism designed to be secured to a sucker-rod string, said mechanism including: a primary walking-beam; a secondary walking-beam; primary means for connecting said primary walking-beam to said string; secondary means for connecting said secondary walking-beam to said string, said walking-beams cooperating to reciprocate said string; and mechanism for oscillating said walking-beams.



1,780,934. SAFETY RAZOR. JOHN MENZAK, Manville, N. J. Filed Feb. 16, 1929. Serial No. 340,362. 2 Claims. (Cl. 30—12.)

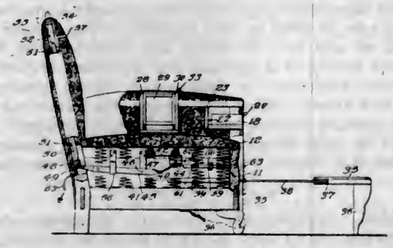
1. In a razor of the character described, the combination of a head frame having means for supporting a razor blade with provision for oscillation during stropping, a handle secured to the head frame, a pivoted guard hinged to the head frame and having portions which engage the cutting edge of the blade for holding it against oscillation, and an extension from the guard provided with an engaging means for detachably locking it to the handle whereby the guard is held in engagement with the blade during the shaving operation, and wherein further, the handle is provided with a notched portion and in which the engaging means of the guard is adapted to snap into the said notch when oscillated into engagement with the blade.

1,780,935. ALKALINE STORAGE BATTERY. JOHN FERREOL MONNOT, London, England. Filed July 31 1928, Serial No. 296,470, and in Great Britain Nov. 4, 1927. 3 Claims. (Cl. 136—28.)



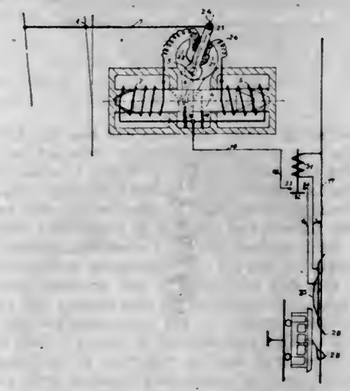
1. A metallic tube of substantially circular cross-section for use in the positive plates of alkaline storage batteries, said tube having a filling of alternate layers of nickel hydroxide and of pieces of perforated nickel foil having an area larger than the internal cross-sectional area of the tube.

1,780,936. CIGARETTE HOLDER. ALICE M. NUERNBERG, Port Townsend, Wash. Filed Dec. 17, 1928. Serial No. 326,527. 7 Claims. (Cl. 131—51.)



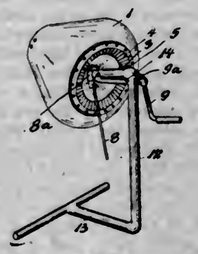
1. In a cigarette holder, in combination, a stem, a hook-shaped cigarette holding member secured to said stem, and means for ejecting cigarette stubs therefrom.

1,780,937. TESTING SYSTEM. HENRY W. O'NEILL, Elmhurst, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed May 25, 1929. Serial No. 365,913. 5 Claims. (Cl. 179—175.)



1. In a transmission measuring system, a plurality of lines to be tested, a busy signal for each line, a plurality of groups of trunks, each formed from a plurality of individual trunks, means for connecting any one of the lines with one end of any one of the trunks, a testing circuit including transmission measuring means, means for connecting said testing circuit with the other end of any one of said trunks, and means automatically responsive to such connection to actuate the busy signals associated with all of the lines connected to said trunks.

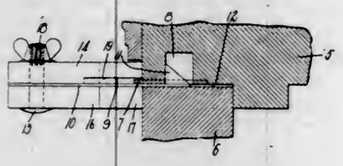
1,780,938. CHAIR. JOSEPH PASSIS, Chicago, Ill. Filed Feb. 27, 1929. Serial No. 342,974. 4 Claims. (Cl. 240—4.)



1. In an arm chair of the character described, comprising a frame structure formed to provide a base, a seat rest, side arms, and a back portion, an elongated compartment provided in the said back portion, a tubular member mounted for sliding movement in said compartment, an electricity conductor extending through said tubular member, a light bulb mounted at the upper portion of said tubular member, a rocker arm pivoted intermediate its ends and having the lower portion of said tubular member pivotally secured to one end thereof, the other end of said rocker arm being secured to the seat rest and adapted to be actuated thereby.

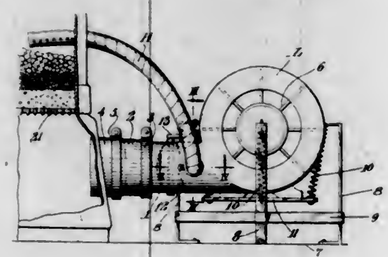
1,780,939. SWITCH-OPERATING MECHANISM FOR ELECTRIC RAILWAYS. ALEXANDER PATZ, Budapest, Hungary. Filed Dec. 15, 1927, Serial No. 240,245, and in Hungary July 17, 1926. 2 Claims. (Cl. 246—228.)

1. A switch-operating mechanism for electric railways in which the pointed rails are adjusted by means of a transmission lever and by an electromagnet of an exciter circuit when the driver of the car is running under a certain point of the railway feeder with the motor-starter switched in, comprising in combination with the pointed rails with the electromagnet and with the transmission lever, an adjusting armature on said electromagnet, an idle run inserted between said armature and said pointed rails for reversing the exciter circuit, a pivot axle, a pivotally mounted lever adapted to be operated by said electromagnet, a two-armed bow oscillatably mounted on said oscillatable lever the arms of said bow gripping with clearance over said lever and coupled with said lever toothlike for alternately earthing the ends of the electromagnet winding at the oscillation of said lever and an arm pivotally mounted on the said pivot axle and operated by said bow to operate the switch.



1,780,940. CONCRETE MIXER. VAINÖ PIISPANEN, Helsinki, Finland, assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed Jan. 30, 1930, Serial No. 424,638, and in Finland May 22, 1929. 6 Claims. (Cl. 83—73.)

1. A concrete mixing machine, comprising a drum open at one end, and closed at its other end, a support, an



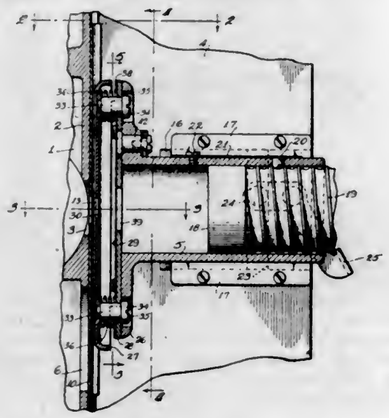
angular shaft rotatable upon the support and supported at one end of the support, means connecting the other end of the shaft with the mixing drum, and means for moving the shaft to turn the drum from mixing to discharging position, together with means for rotating the drum relatively to the shaft.

1,780,941. DOOR FASTENER. JOHN H. PINEO, Brookline, Mass. Filed July 15, 1929. Serial No. 378,218. 2 Claims. (Cl. 292—298.)

1. A fastening device for doors and the like having, in combination, a catch adapted to be inserted between a door casing and a door and project into a recess provided in said casing, a positioning member pivotally attached to the catch and provided with a peripheral portion eccentric to the axis thereof and adapted to engage the casing and hold the catch normal thereto a clamping member of the same general contour as the positioning member and also pivotally attached to the catch and provided with a peripheral portion eccentric to the axis thereof and reversely positioned with respect to the peripheral portion of the positioning member and adapted to engage a door and prevent the latter from moving relatively to the casing, and means to clamp the positioning member and clamping member to the catch.

1,780,942. FURNACE-CONTROLLING DEVICE. THORNTON W. PRICE, New Brunswick, N. J. Filed Nov. 24, 1928. Serial No. 321,626. 3 Claims. (Cl. 110—72.)

2. The combination, with a furnace having a grate, a combustion chamber above the grate and an ash pit below the grate, of a motor, a blower comprising a fan driven by said motor and a fan housing rigid with the motor having an air discharge pipe extending rigidly therefrom and supported thereby, means completing a closed air conduit from said air discharge pipe into the ash pit of the furnace, means forming a second air conduit between the blower and the combustion chamber of the furnace being connected in supported relation upon the blower and the furnace, both of said air conduits forming means being of a resilient character in order to decrease the inherent tendency of the motor and blower while in action to transmit vibration to the furnace and connected parts, and a carrying device by which the motor and the parts supported thereby are mounted resiliently.



1,780,943. FIBER LIBERATING AND BLEACHING PROCESS. GEORGE A. RICHTER and MILTON O. SCHUR, Berlin, N. H., assignors to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Apr. 19, 1927. Serial No. 184,879. 6 Claims. (Cl. 92—11.)

1. A process which comprises treating unbleached pulp with chlorine water, and then bleaching such pulp in a bleach liquor maintained distinctly alkaline throughout such bleaching and containing sufficient bleach to whiten such pulp.

1,780,944. METHOD FOR REFINING ANTIMONY BY ELECTROLYSIS OF ACID ELECTROLYTES. HEINRICH ROSCHER, Hamburg, Germany, assignor to Norddeutsche Affinerie, Hamburg, Germany. Filed Oct. 5, 1927, Serial No. 224,279, and in Germany July 18, 1927. 5 Claims. (Cl. 204—57.)

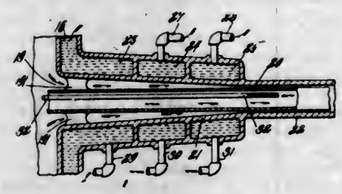
5. A process of refining crude antimony which comprises preparing an electrolyte with antimony trifluoride containing about 100 grams free sulfuric acid per liter and about 20 grams free hydrofluoric acid per liter, introducing thereinto an antimony anode soluble in said electroylte and containing impurities such as lead insoluble therein, said electrolyte being of a character such as to prevent said anode from becoming passive, and electrolyzing the electrolyte to deposit antimony substantially without the deposition of the lead therewith.

1,780,945. FILM FRAMER FOR MOTION-PICTURE PROJECTORS. ABRAHAM SAPIER, Chicago, Ill., assignor to Universal Stamping & Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed June 13, 1929. Serial No. 370,522. 5 Claims. (Cl. 88—17.)

2. A picture projecting machine comprising a casing having a vertical film guideway provided with a light aperture, said casing having a side wall extending forwardly of said guideway and disposed in a plane substantially normal to the plane of said guideway, tracks on said side wall, a lens mounting slidably supported on said tracks in front of said aperture, a film framer supported on said lens mounting, said lens mounting being movable axially in a straight line movement toward and from said guideway, for shifting said framer toward and from said aperture while maintaining said framer substantially parallel to said guideway, and an eccentric supported on said mounting and engaging said framer for shifting said framer vertically relative to said aperture.

1,780,946. UMBRELLA. HEINRICH SCHRÖDER, Cassel, Germany. Filed Sept. 12, 1928, Serial No. 305,488, and in Germany Aug. 16, 1928. 1 Claim. (Cl. 135—46.)

In combination with an umbrella stick having a longitudinal groove near its holding end; a handle having a longitudinal bore receiving said stick end in it, and having also a longitudinal groove in said bore; a helical compressive spring located in said bore between the end face of the stick and the opposite face of said bore; a pin projecting forth laterally from the stick into said groove in said bore; a cap nut screwed upon the handle end which is located opposite to that enclosing said spring, said nut having a recess at its centre hole; a flat spring

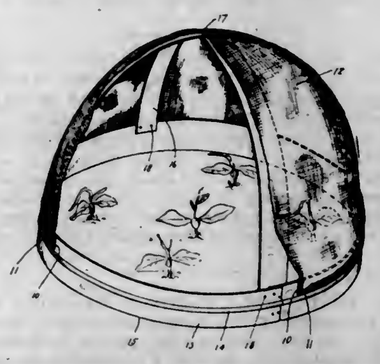


located in the longitudinal grove of the stick and being fixed therein; a pawl projecting outwardly from the other end of this spring and being adapted to enter into said cap nut recess when the handle is shifted towards it so as to compress the said helical spring and another projection extending also outwardly from the said flat spring and being adapted to be depressed together with this spring and the pawl by the usual staying rod slide substantially as set forth.

1,780,947. CRANK SHAFT. HANS SCHRÖN, Munich, Germany. Filed Dec. 14, 1926, Serial No. 154,838, and in Germany July 14, 1925. 2 Claims. (Cl. 74—38.)

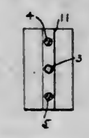
2. A crank shaft having five cranks in which the consecutive numbering of the cranks is 1 4 3 2 5 in the crank star or mirror reflection and the distances of the cranks in axial direction of the shaft are equal.

1,780,948. METHOD OF AND APPARATUS FOR MAKING CONDUITS BY EXTRUSION. JOHN C. SHERMAN, Gorham, Me., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Aug. 5, 1926. Serial No. 127,260. 10 Claims. (Cl. 18—14.)



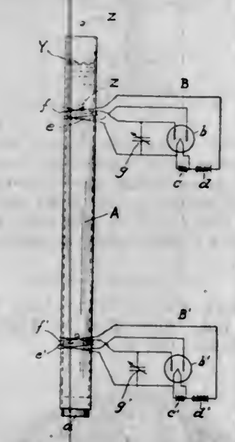
9. Apparatus for making conduit comprising a container having an orifice, a core extending through said orifice, means for extruding plastic material through said orifice into tubular form, a tubular shaper extending from around said orifice and surrounding said core, said shaper having a tapering internal diameter with its maximum diameter adjacent to said orifice, and means for maintaining and separately controlling a series of temperature zones along said shaper.

1,780,949. APPARATUS FOR EXCHANGING SAFETY-RAZOR BLADES. JOHN C. SHERMAN, Gorham, Me. Filed Feb. 3, 1928. Serial No. 251,561. 4 Claims. (Cl. 30—12.)



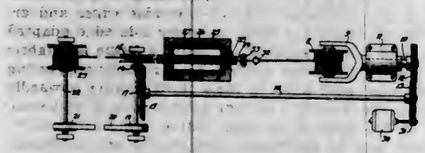
1. Apparatus for facilitating change of blades in a safety razor, comprising a supporting stand, a package of safety razor blades having spacing elements between successive blades, means on said stand for holding said blades in place, and means on said stand for releasably holding the cap of a safety razor in parallel relation to said blades.

1,780,950. PLANT PROTECTOR. JOHN L. STEVASON, Indianapolis, Ind. Filed Mar. 23, 1928. Serial No. 264,264. 1 Claim. (Cl. 47—31.)



A plant protector or the like, including a metal strap having a corrugation intermediate its side edges and arranged in rim formation with its lower side edge adapted for earth penetration, a hood including a dome like fabric portion, and a hood support including a fabric supporting rim and arms supported thereby and projecting upwardly for sustaining said hood in dome formation, said second mentioned rim having a similar outline and by which the mouth of the hood is secured and by which the second mentioned rim is detachably but rigidly and wedgingly supported by said first mentioned rim above the corrugation thereof when in plant enveloping and earth penetrating position to form a central clear dome like chamber within and beneath the hood.

1,780,951. SAFETY-RAZOR ATTACHMENT. JOHN G. SUAREZ, New York, N. Y. Filed Sept. 13, 1928. Serial No. 305,781. 1 Claim. (Cl. 30—12.)

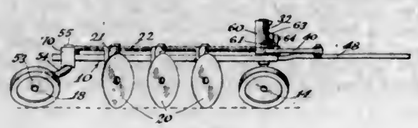


The combination in a safety razor of the class described, having a handle and guard and guide pins, of an adaptor for narrow razor blades comprised of a rectangular plate with three holes engageable with said guide pins and having edges that are adapted to engage and co-act with the rear edges of single edged blades, said blades positioned by the said adapter and rigidly held by the cooperative action of said handle and guard.

1,780,952. VISCOSIMETER. ERNEST M. SYMMES, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Sept. 27, 1927. Serial No. 222,373. 4 Claims. (Cl. 265—11.)

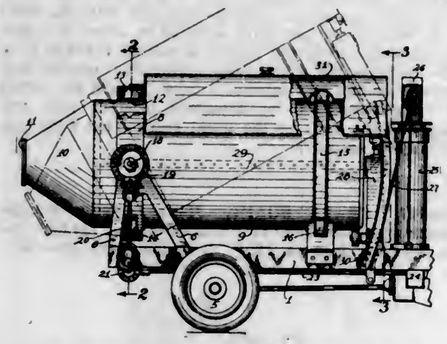
1. Apparatus for determining the viscosity of a fluid comprising a viscosimeter tube open for the reception of a fluid, a radio circuit including an oscillating radio tube having grid and plate filament circuits, the said grid and plate filament circuits extending about said viscosimeter tube, means for detecting variation in the rate of oscillation of said radio tube, and means for limiting the field of said grid and plate filament circuits adjacent to said tube.

1,780,953. CONDUCTOR. WILLIAM B. TEN EYCK, deceased, by Christine Z. Ten Eyck, administratrix, Montclair, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Mar. 25, 1925. Serial No. 18,333. 11 Claims. (Cl. 178—45.)



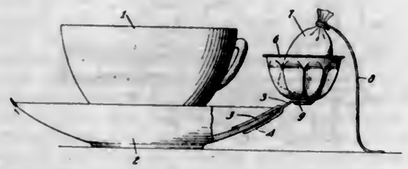
1. The method of constructing a continuously loaded conductor which comprises wrapping a layer of magnetic loading material about a conducting core, heat treating the loaded conductor to develop high permeability, and twisting the loaded conductor while it is undergoing said heat treatment.

1,780,954. BELT. STIRLING TOMKINS, South Nyack, N. Y. Filed June 30, 1928. Serial No. 289,361. 1 Claim. (Cl. 210—197.)



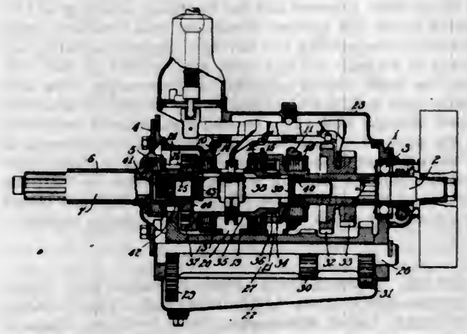
A belt for conveying and draining material comprising an elongated flexible sheet metal perforated load-carrying portion extending integrally a substantial distance in the direction of movement of the belt, and additional strips of material of relatively greater flexibility extending along and secured to each edge thereof and adapted to be flexed to variable degrees from the plane of said load-carrying portion for forming therewith a conveying trough.

1,780,955. DISK PLOW. STEVEN TOTH, Perris, Calif. Filed Sept. 17, 1929. Serial No. 393,219. 4 Claims. (Cl. 97—53.)



1. An implement of the character stated comprising a frame, wheels supporting said frame, cultivating tools carried by said frame, and cam means for raising said cultivating tools, said means automatically operated by turning movement of said wheels.

1,780,956. CONCRETE-MIXING APPARATUS. HARRY A. TOTTEN, Burlingame, Calif., assignor to Transit Mixers, Inc., San Francisco, Calif., a Corporation of Nevada. Filed Mar. 25, 1929. Serial No. 349,553. 9 Claims. (Cl. 83—73.)



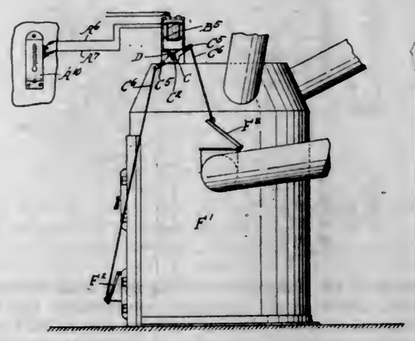
1. The combination with the main frame of a road vehicle, a mixer element disposed longitudinally of said vehicle frame, a cradle for revolubly supporting the mixer near the rear end of said frame, means for fulcruming said cradle on a horizontal axis at a point above the lower periphery of the mixer element, means for supporting the forward end of said mixer element when in normal positions, means independent of said last mentioned means for supporting the forward end of the mixer element in tilted positions, means for rotating the mixer element, and means for tilting the mixer element.

1,780,957. TEA-BALL HOLDER. FREDERIKA VEDER, New York, N. Y. Filed Jan. 21, 1929. Serial No. 334,098. 2 Claims. (Cl. 65—15.)

1. A tea ball holder comprising a water-tight cup-shaped container, and a saucer gripping support for the container, comprising a central resilient prong adapted to engage one face of the saucer and a pair of side prongs adapted to engage the opposite face of the saucer, the central prong being substantially longer than the lateral prongs to enable the protruding end portion of the central prong to be engaged with the saucer rim and stressed to provide a sufficient opening between the central and side prongs for easy reception of the margin of the saucer, the prong opening being situated at the inner extremity of the support and the container being mounted upon the outer extremity of the support.

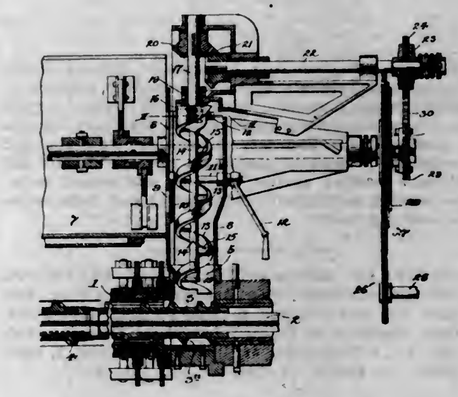
1,780,958. OILING MEANS FOR TRANSMISSION GEARING. SAMUEL O. WHITE, Muncie, Ind. Filed Dec. 3, 1928. Serial No. 323,434. 6 Claims. (Cl. 184—13.)

1. In an automobile transmission the combination with an enclosing casing of driving and driven shafts projecting through the end walls of said casing, a transmission gearing for drivingly connecting said shafts and operating in a plane higher than the normal oil level in said casing, a supplemental shaft operating in said casing below said gears and in the oil adapted to be maintained in said casing and a supplemental oil reservoir for supplying oil to said gears and having bottom openings therein in such close proximity to said supplemental shaft that the walls of said opening will scoop the oil picked up by said shaft therefrom forcing it through said openings into said supplemental reservoir.



1,780,959. SURGICAL SPLINT. THOMAS S. WILKES, Corvallis, Oreg. Filed Dec. 1, 1927. Serial No. 236,890. 2 Claims. (Cl. 128—87.)

1. A surgical splint including tubular side bars presenting concave faces at their inner sides and provided at their outer sides with spaced longitudinal flanges of hook formation extending laterally of the side bars in opposite directions, and a plurality of semi-circular bands having hook-shaped terminals engaging the hook-shaped flanges of the side bars, the hook shaped flanges of the of the side bars being provided with inwardly extending lips forming abutments for the adjacent ends of the semi-circular bands, and clips spanning the space between the flanges of the other side bar and securing the semi-circular bands in the flanges thereof.

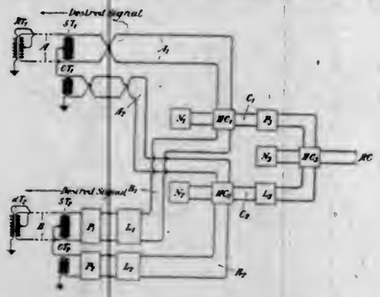


1,780,960. DAMPER CONTROL FOR HOUSE-HEATING SYSTEMS. JAMES R. WILLIAMS, Quincy, Ill., assignor to H. M. Sheer Company, Quincy, Ill., a Corporation of Illinois. Filed June 8, 1928. Serial No. 283,790. 18 Claims. (Cl. 236—16.)

1. In combination a thermostat responsive to temperature variation, a motor, the operation of which is controlled by the thermostat, a furnace, dampers controlling the furnace operation, an actuating member operated by the motor for controlling the dampers in response to the thermostat, means for temporarily disconnecting the motor and the damper actuating member to permit damper

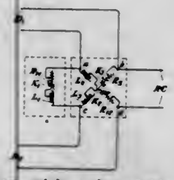
adjustment independent of the thermostat control and automatic means for connecting the motor and the actuating means, means independent of the thermostat for operating the motor during the time that the motor and the actuating means are disconnected.

1,780,961. PRESS. RAYMOND T. ANDERSON, Cleveland, Ohio, assignor to The V. D. Anderson Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 28, 1928. Serial No. 281,214. 5 Claims. (Cl. 100—48.)



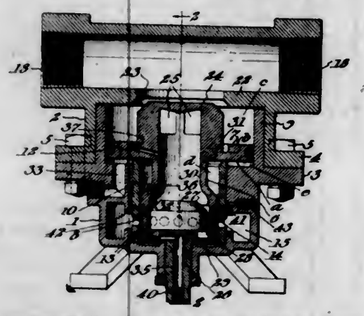
1. In combination with a press for expressing liquids from materials, a hopper opening into the intake end of the same; a chute extending upwardly from the hopper; and a feed element mounted in the chute, said element comprising a rigid open spiral which stands in spaced relation to the inner face of the hopper and chute.

1,780,962. RADIO SIGNALING SYSTEM. AUSTIN BAILEY, Freehold, N. J., and SAMUEL WINTHROP DEAN, Houlton, Me., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Apr. 13, 1927. Serial No. 183,532. 8 Claims. (Cl. 250—11.)



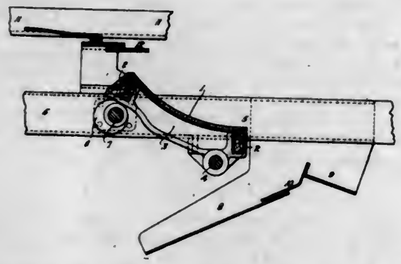
1. In a signaling system, the combination with a plurality of antennæ, constituting an array, of a common

receiving circuit, a transformer arrangement comprising a plurality of windings, a plurality of transmission paths, one transmission path extending from each antenna to a corresponding winding of the transformer arrangement, and a balancing net work connected to certain of the



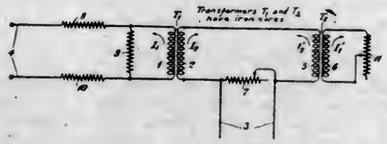
windings of the transformer arrangement, said balancing network exhibiting an impedance substantially equal to the impedance of the common receiving circuit, said common receiving circuit being also connected to certain of the windings of the transformer arrangement.

1,780,963. RADIO SIGNALING SYSTEM. AUSTIN BAILEY, Maplewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 7, 1927. Serial No. 238,377. 2 Claims. (Cl. 250—11.)



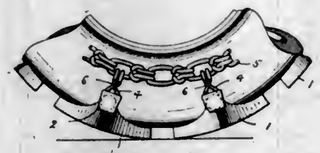
1. The combination with a broadside antenna system of a combining circuit having a resistance network to combine radio frequency currents representing signals and interference superposed thereon, a resistance network to combine radio frequency interference currents, and a resistance network to oppose the currents of said first resistance network against those of said second resistance network to eliminate the effect of said interference in a receiving circuit.

1,780,964. AUTOMATIC DRIFTING VALVE FOR STEAM LOCOMOTIVES. ARTHUR C. BECKWITH, Chicago, Ill., and FORDYCE B. FARNSWORTH, Wadsworth, Ohio, assignors to Chicago Lubricator Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 8, 1925. Serial No. 49,010. 6 Claims. (Cl. 121—137.)



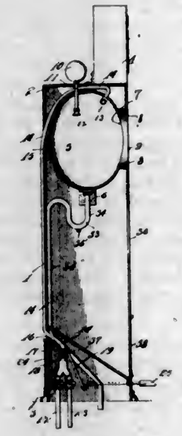
3. In an automatic drifting valve for steam locomotives, a valve casing provided with means defining a plurality of chambers therein, means for connecting said casing through one of said chambers with the valve chests of the locomotive engine cylinders, means for connecting said casing through a second of said chambers with a source of saturated steam, means for connecting said casing through a third of said chambers with the exhaust cavities of said engine cylinders, a tubular piston valve mounted in said casing and having a piston head forming a wall for each of said chambers and an extension for controlling communication between the source of saturated steam and said steam chests, said piston head subject to the influence of steam chest pressure and the combined pressures of saturated steam and exhaust steam and said extension being interiorly counterbored and having a circumferential lip adjacent to its end, and a headed plug carried by said casing, the head thereof adapted for cooperation with said counterbore and lip for controlling the passage of saturated steam through said valve to said steam chests relatively to the position of said valve in said casing as determined by the influence upon the piston head thereof of steam chest pressure and the pressure of saturated steam, to limit the amount of saturated steam admitted to said steam chests to the amount which may be used by said engine cylinders.

1,780,965. APPARATUS FOR SEPARATING COAL FROM DIRT AND LIKE FOREIGN SUBSTANCES. WILLIAM HENRY BERRISFORD, Stoke-on-Trent, England, assignor to Lockwood's Clean Coal Process Limited, London, England. Filed Jan. 3, 1930, Serial No. 418,329, and in Great Britain Nov. 17, 1928. 2 Claims. (Cl. 209—118.)



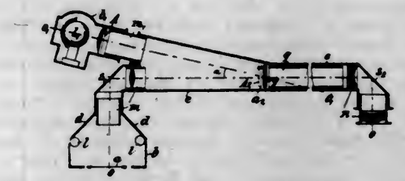
1. Separating apparatus of the class described comprising a plate onto the upper surface of which the materials are adapted to fall, means pivoting said plate adjacent its discharge end for movement on a horizontal axis, cam means cooperating with the plate rearwardly of said axis operable to adjust the position of the plate, said surface being substantially arcuate in the line of travel of the materials from the zone of reception thereof to the said discharge end, and said surface at the discharge end being arranged substantially horizontal.

1,780,966. ELECTRICAL TRANSMISSION SYSTEM. PAUL W. BLYE, Rutherford, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 1, 1926. Serial No. 91,628. 10 Claims. (Cl. 178—44.)



1. The method of eliminating the harmonics of a fundamental frequency generated in a transformer connected to a source of fundamental frequency with apparatus including a second transformer, which consists in generating the same harmonics in the second transformer, and balancing out these harmonics without affecting the fundamental frequency.

1,780,967. NONSKID DEVICE. WILLIAM R. BREWER, Duluth, Minn. Filed Aug. 19, 1929. Serial No. 387,068. 1 Claim. (Cl. 152—14.)

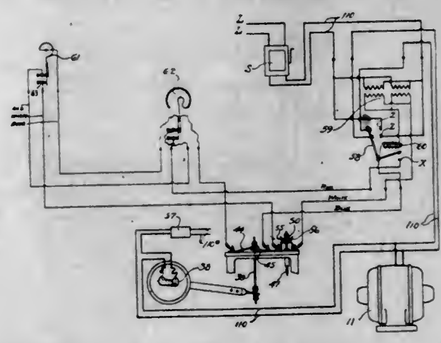


In a traction increasing device having diamond shaped traction treads and side chains, means for connecting said treads to said side chains comprising holding trunnions upon opposite vertices of said treads, said trunnions characterized by having grooves formed thereabouts, and side chain connecting links within said grooves having their terminal ends overlapped and hooked into one side of a side chain link.

1,780,968. LAVATORY. LAWRENCE W. BROPHY, Muskogee, Okla. Filed Sept. 29, 1928. Serial No. 309,333. 1 Claim. (Cl. 4—166.)

A lavatory comprising a tubular standard having a hand hole in its front side at a height appropriate for the insertion of the hands therein, a globular bowl supported within said standard having a hand hole therein between its top and bottom alined with the hand hole in the standard and provided with a flange edging said hole seating on and supported by the edge of the standard enclosing the hand hole, a spray nozzle supported within the upper front portion of the bowl above the hand hole therein, said nozzle being supported to direct a spray diagonally downward toward the rear face of the bowl and away from said hand opening, a water supply pipe extending from said nozzle having a normally closed valve therein, a treadle mounted on said standard operatively connected with said valve to open the same to supply water to the spray nozzle, and a drain pipe extending downwardly from the bottom of the bowl.

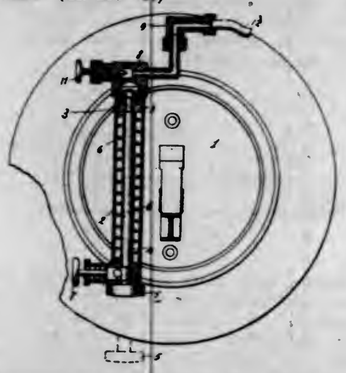
1,780,969. PROCESS AND APPARATUS FOR PRODUCING ARTISTIC DESIGNS. RUDOLF BRUNNER, Ruschlikon, near Zurich, Switzerland. Filed Feb. 26, 1926, Serial No. 90,923, and in Switzerland Mar. 5, 1925. 11 Claims. (Cl. 88—24.)



1. Process for episcopally and diascopically projecting kaleidoscopic images of one or more subjects, consisting in producing a real image of a distant opaque body closely before a mirror system, and in projecting the kaleidoscopic picture produced therein to a screen.

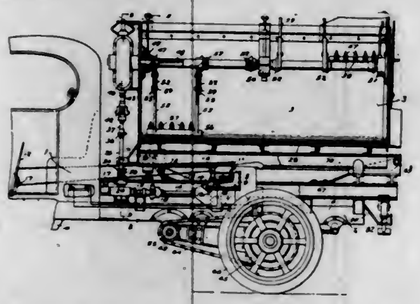
1,780,970. HULL FOR WATER CRAFT. ARCHIBALD NEIL CAMPBELL, London, England. Filed Jan. 11, 1930, Serial No. 420,200, and in Great Britain Oct. 24, 1928. 2 Claims. (Cl. 114—56.)

1. A surface water craft comprising a hull having a hollow keel wherein the deck of the hull forms the roof of the cabin in which internal head room is provided by the hollow keel which is left open between transverse bulkheads so as to form a central fore and aft corridor, on opposite sides of which corridor sleeping berths, lockers and the like are arranged in the hull proper, said bulkheads being provided with doors to give access to the cabin.



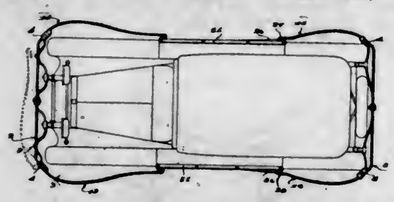
1,780,971. SAFETY-CONTROL MECHANISM FOR FUEL-BURNING DEVICES. CARL B. CHANDLER, Havana, Ill., assignor to Havana Metal Wheel Co., Havana, Ill., a Corporation of Illinois. Filed July 31, 1925. Serial No. 47,188. 3 Claims. (Cl. 158—28.)

1. In a fuel burning device, comprising an electrically operated means for projecting an atomized fuel mixture into a zone of ignition, safety control mechanism for



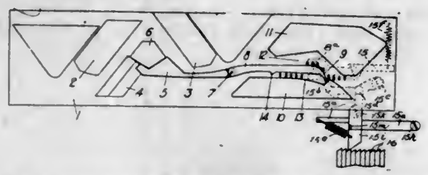
delaying the energization of the burner after cessation of operation for a substantial interval of time, including a main electrical circuit containing therein the said electrically operated means, a relay for opening and closing said main circuit, a secondary circuit for actuating said relay, a switch member therein normally closed to permit commencement of operation of the burner, a third circuit having a connection with the relay and being closed thereby simultaneously with the main circuit, whereby said switch member may be opened thereafter without stopping the burner, a float mechanism controlled by the accumulation of fuel induced by burner activity, and a connection between the float mechanism and switch member capable upon movement of the float caused by the fuel accumulation induced by burner activity of opening said switch and thereafter holding same open until the float has moved to its subsided position upon the cessation of burner activity.

1,780,972. FLUID-OPERATED APPARATUS FOR LIFTING AUTOMOBILE WHEELS. FERDINANDO BRUSCH DI NEUBERG, Treviso, Italy. Filed Feb. 13, 1929, Serial No. 339,726, and in Italy July 27, 1928. 2 Claims. (Cl. 138—9.)



1. Automobile wheel lifting apparatus of the type operated by liquid or gas under pressure, including in combination, a chassis, brake shoe carrying discs on the chassis near the wheels, and lifting cylinders rigidly fixed on the brake shoe carrying discs, substantially as and for the purposes set forth.

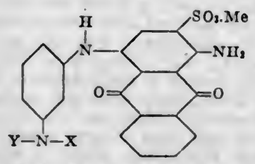
1,780,973. TRUCK FOR TRANSPORTING CEMENTITIOUS MATERIALS. OTA T. GRAHAM and OAKLEY J. GRAHAM, Richmond, Va. Filed Feb. 24, 1928, Serial No. 256,710. Renewed July 29, 1930. 19 Claims. (Cl. 83—73.)



1. In combination, in a vehicle for conveying cementitious material and including a chassis and a propelling power unit, a body carried by said chassis and including a movable mixing element, a separate mixer power unit carried by said chassis independently of the body, and power transmission means operatively connecting said mixer power unit with said mixer element to drive the latter.

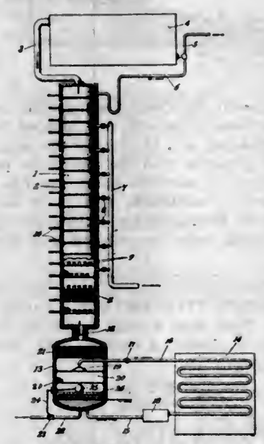
1,780,974. SIDE BUMPER FOR AUTOMOBILES. VERNE HOSTUTLER, Hollis, Okla. Filed Oct. 26, 1929. Serial No. 402,669. 8 Claims. (Cl. 293—55.)

1. In a motor vehicle, transverse bumpers extending across the front and rear of the vehicle, side bumpers extending along the entire sides of said vehicle and having intermediate and end portions, means for fixedly supporting said intermediate portions, a universal joint connecting said end portions to the ends of said transverse bumpers, and means for detachably securing said end portions in fixed position.



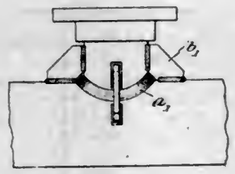
1,780,975. STRAIGHT-FRAME KNITTING MACHINE. FRITZ ISRAELSON, Stockholm, Sweden. Filed Nov. 14, 1927, Serial No. 233,117, and in Sweden Jan. 25, 1927. 3 Claims. (Cl. 66—75.)

1. In a straight frame knitting machine the combination with the beds and their needles, of carriages reciprocating on said beds, cams on said carriages to form a knitting position for the needles, a set of other cams on said carriages in front of said knitting position, a shiftable lever between the cams of said set to form two alternate passages to guide the needles into the knitting cams or outside thereof, means to normally cause said lever to keep one passage closed, and means to cause each needle introduced in said normally closed passage to automatically shift the lever to cause it to momentarily open said normally closed passage.



1,780,976. ACID WOOL DYESTUFFS OF THE ANTHRAQUINONE SERIES. GEORG KRÄNZLEIN and FRITZ ROEMER, Frankfort-on-the-Main-Hochst, and ERICH KRONHOLZ, Bad Soden-on-the-Taunus, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 19, 1928, Serial No. 327,182, and in Germany Dec. 23, 1927. 5 Claims. (Cl. 260—60.)

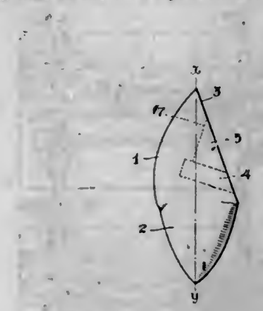
1. As new products, the dyestuffs of the following constitution:



wherein X stands for an alkyl or aralkyl group, Y for an aliphatic acyl-residue and Me for a metal or for hydrogen, said dyestuffs being, when dry, a blue powder and dissolving in water to a blue solution.

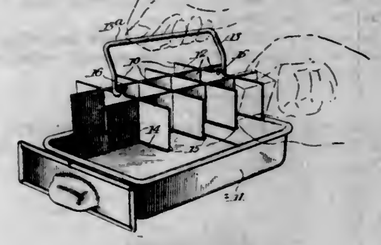
1,780,977. PROCESS OF AND APPARATUS FOR STEAM DISTILLATION. EUGENE H. LESLIE and EDWIN M. BAKER, Ann Arbor, Mich. Filed May 11, 1923. Serial No. 638,175. 3 Claims. (Cl. 196—139.)

1. A method of fractionating a petroleum oil comprising introducing it into a section of a fractionator, bringing ascending vapor into intimate contact with descending liquid, introducing condensed vapor at the top of the fractionator, collecting liquid in the sections, independently withdrawing liquid products from one or more sections, distributing the liquid residue from the fractionator over a confined packing zone to volatilize a portion of said liquid residue, allowing the unvolatilized portion to pass through another confined packing zone, injecting steam into the liquid flowing from the packing zones, and introducing volatilized vapors formed thereby into the bottom of the fractionator.



1,780,978. PROCESS FOR THE SECURING OF WELDS ON BENDED BODIES. ARTUR LÜTZOW, Cologne-Mulheim, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed May 26, 1927, Serial No. 194,491, and in Germany May 27, 1926. 4 Claims. (Cl. 113—112.)

1. The process of reinforcing a welded annular joint between two bodies which comprises arranging reinforcing strips in the form of thin plates across and edgewise to the joint, said reinforcing strips being out of contact with the weld between said bodies and welding edges of the strips to the said bodies at opposite sides of said angular joint.

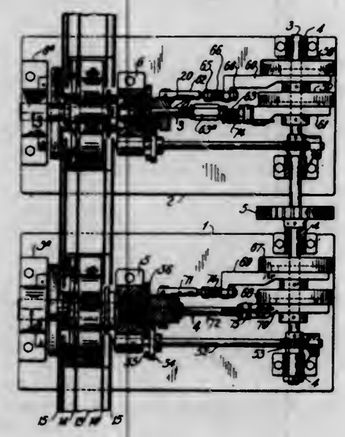


1,780,979. ARTIFICIAL PORCELAIN ROOT TOOTH. JAMES H. MOYER, Columbus, Ohio, assignor to The Columbus Dental Manufacturing Company, Columbus, Ohio, a Corporation. Filed July 12, 1923. Serial No. 651,146. 3 Claims. (Cl. 32—9.)

1. An artificial tooth having a root and a crown portion, and a flat plane extending the full width of the tooth in one dimension, and from the incisal end to the lingual surface of the root portion near the juncture of the crown and root portions in the other dimension, a post hole extending from the flat plane to a point within the labial half of the crown portion with its axis disposed

labially and incisally at an angle to the flat plane, and a slot triangular in longitudinal section in the crown portion communicating with and opening onto said flat plane throughout the length of the hypotenuse of the triangle, said slot also communicating with and opening into said post hole throughout the length of one leg of the triangle.

1,780,980. ICE GRID. EDWIN P. S. NEWMAN, Washington, D. C. Filed Feb. 4, 1929. Serial No. 337,424. 11 Claims. (Cl. 62—111.)

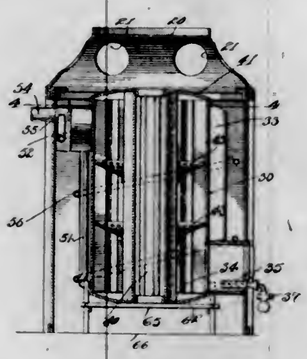


11. In combination, a grid for ice cube trays having a plurality of ice forming compartments, and a pivoted handle adjacent the top of the grid for removing the grid from the tray.

1,780,981. DYE PREPARATION. MARY B. PARRISH, Philadelphia, Pa. Filed Dec. 19, 1928. Serial No. 327,184. 1 Claim. (Cl. 8—6.)

A process of amplifying aniline dye colors comprising predigesting an aniline dye in the presence of pancreatin, ox gall, sodium chloride, citric acid, acetic acid and acetone; thereafter boiling the resulting mass with a mixture of soap and tinctures of vegetable fixatives consisting of camomile flowers, hyssop, ground cedar wood, and myrrh and permitting the mass to cool to blood heat; then redigesting the mass by adding pancreatin, gelatin, acetone, sodium chloride, ox gall and acetic acid at blood heat and permitting the resulting product to ferment in a warm room for approximately two weeks; and thereafter mixing the resulting product with dextrin and baking the mass at bread baking temperature until the product is of a crisp consistency.

1,780,982. CELL-FINISHING MACHINE. ALFRED SCHMIDT, Weehawken, N. J. Filed Mar. 17, 1928. Serial No. 262,479. 11 Claims. (Cl. 29—84.)

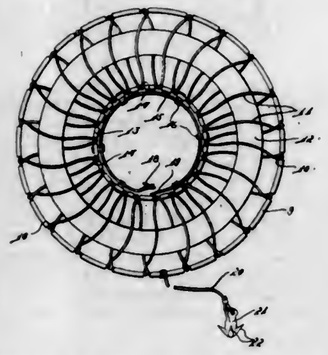


1. In a machine of the class described, intermittently rotatable means for advancing a cell, means operated during the rest period of said advancing means for capping the cell, and means for afterwards applying a washer to the cell.

1,780,983. TANNING AGENT. ALBRECHT SCHMIDT, Frankfort-on-the-Main, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Jan. 4, 1929, Serial No. 330,431, and in Germany Sept. 7, 1926. 8 Claims. (Cl. 149—6.)

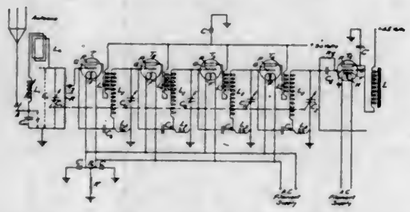
7. As a new product, a tanning agent consisting of an emulsion of an animal fat in an aqueous solution of a methyl cellulose.

1,780,984. FURNACE. JACK FENNER SHELTON, Memphis, Tenn. Filed Mar. 28, 1929. Serial No. 350,690. 8 Claims. (Cl. 126—116.)



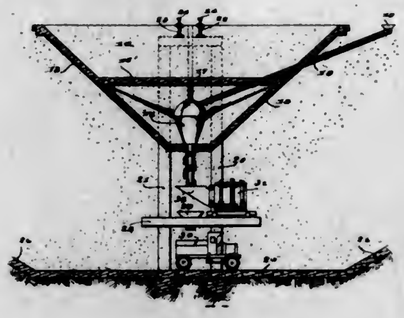
1. A furnace comprising an outer shell, an inner hollow shell having a passage therethrough for hot air, a combustion chamber in communication with the outer shell, a discharge pipe connected with the outer shell, spiral tubing having one end in communication with the outer shell and the other end connected to the discharge pipe.

1,780,985. SEED PAN. JACK F. SHELTON, Memphis, Tenn. Filed Apr. 3, 1929. Serial No. 352,216. 2 Claims. (Cl. 209—327.)



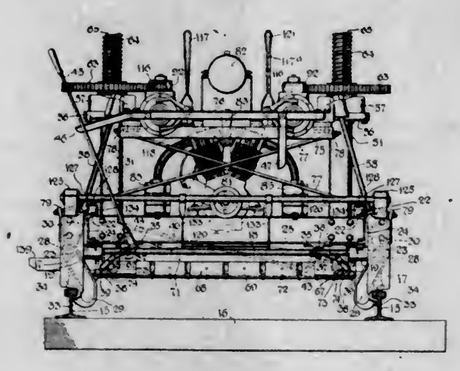
1. An attachment for threshing machines comprising a seed pan, a perforated plate having stepped sections, and means for oscillating said plate over the pan, and means on the plate engageable with the top of the pan for causing said plate to be elevated above the top of the pan when said plate is oscillated, said plate being inclined at an angle to the horizontal and having its outer elevated end freely movable over the outer end of the pan.

1,780,986. PROTECTIVE DEVICE. FRANK SIPOS, Detroit, Mich. Filed Mar. 8, 1929, Serial No. 345,281. Renewed Sept. 15, 1930. 3 Claims. (Cl. 9—17.)



1. A device of the class described comprising: an outer ring; an inner ring arranged concentrically thereof; means for securing the said inner ring on the body of a wearer; flexible means for connecting said outer ring to said inner ring; and a buoyant member positioned concentrically of said rings between said inner ring and said outer ring and retained in position by said flexible means; and a hook bearing member attached to said outer ring.

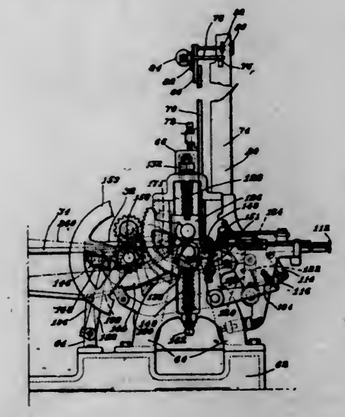
1,780,987. INPUT COLLECTOR SYSTEM FOR ELECTRICAL AMPLIFIERS. HAROLD A. SNOW and WILLIAM D. LOUGHLIN, Boonton, N. J., assignors to Radio Frequency Laboratories, Inc., Boonton, N. J., a Corporation of New Jersey. Filed Sept. 6, 1928. Serial No. 304,276. 6 Claims. (Cl. 250—20.)



1. An input-collector system for a radio frequency amplifier comprising, in combination, a series circuit including an inductance, a coupling condenser connected to ground, a tuning condenser, an electromagnetic collecting device, and means for connecting a suplementary electrostatic collecting device across said coupling condenser.

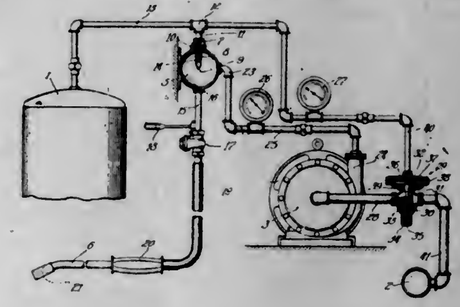
1,780,988. APPARATUS FOR PROPORTIONING AND MIXING MATERIALS FOR CONCRETE. JOHN W. SPRY, Dallas, Tex. Filed Aug. 19, 1929. Serial No. 387,004. 7 Claims. (Cl. 83—73.)

1. A gravity feed concrete mixing apparatus or plant comprising a pit divided into compartments with inclined walls to direct materials therein to flow toward the center of the pit, a container between the compartments, a mixer hopper beneath the center of the pit, vertically disposed outlet pipes whereby materials may be discharged from each of said compartments and the container into said hopper, and a loading funnel beneath the mixer hopper.



1,780,989. TRACK JACK. HENRY H. TALBOYS, Milwaukee, Wis., assignor to Nordberg Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 16, 1929. Serial No. 340,622. 20 Claims. (Cl. 104—7.)

1. A track jack for use on railway tracks whose rails serve as parts of signal circuits and the like, comprising in combination, a truck running on the rails of the track; means for insulating the treads of the wheels on one rail from the treads of the wheels on the other rail; rail-engaging means on the truck for each rail; means for insulating said rail-engaging means from each other; and hoisting means reacting between said rail-engaging means and the roadbed.

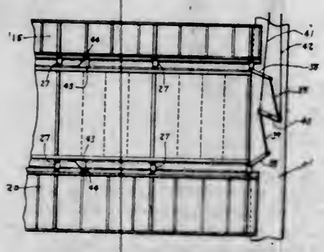


1,780,990. MACHINE FOR OPERATING UPON BLANKS. ERASTUS E. WINKLEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 7, 1922. Serial No. 593,126. 84 Claims. (Cl. 12—46.)

1. A machine for gouging and lip-cutting heel-blanks comprising, in combination, cutting means for forming two related cuts of substantially the same width but of different depths and different curvatures, and means relatively to move a flat heel blank and said cutting

means to make a shallow cut in the seat surface of the blank to form a gouge and to make an adjacent deeper cut at the breast end of said seat surface to form a lip.

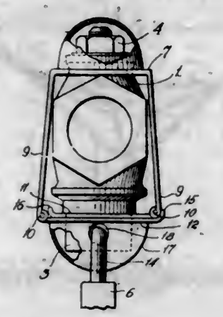
1,780,991. CAR-WASHING SYSTEM. BURTON S. AIKMAN, Milwaukee, Wis., assignor to National Brake & Electric Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 26, 1927. Serial No. 194,288. 1 Claim. (Cl. 299—83.)



In a car washing system, a spray nozzle for air and liquid having a restricted opening, a source of liquid, a source of air under pressure, a substantially spherical large volume mixing chamber, an outlet port leading from said chamber, an air nozzle located in said chamber diametrically opposite from said port, a water inlet port located midway between said outlet port and air nozzle, a hose having a cross-section area substantially equal to the area of said outlet port for connecting said spraying nozzle to said mixing chamber, a pump supplied with liquid from said source for increasing the pressure of the liquid and delivering it to said mixing chamber where it is thoroughly mixed with air blown from said air nozzle, and the mixture discharged from said chamber through said outlet port, hose and spraying nozzle, and a throttle valve in the intake of said pump opened by the pressure of the air proportionately to that pressure to thereby keep the pressure of the liquid delivered by the pump to the mixing chamber at a predetermined value with respect to the pressure of the air delivered thereto.

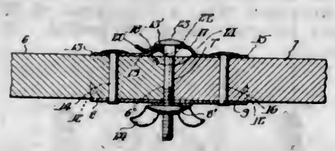
1,780,992. COKING OVEN. ARNOLD BECKERS, Cologne-Lindenthal, Germany. Filed Apr. 24, 1929, Serial No. 357,631, and in Germany Jan. 25, 1927. 3 Claims. (Cl. 202—248.)

1. A coke-oven door structure comprising a door frame and door having opposing walls forming an inwardly narrowing gap around the door, a packing medium disposed in the gap around the door, a sectional frame composed of sections engaging the packing medium, a main frame spaced from the sectional frame, cross members between the main frame and sections of the sectional frame, supported by the main frame to press the sections individually and simultaneously and through them to locally adjust upon the packing medium the pressure exerted by the main frame, cam-guide abutments on the door frame, rods supporting the main frame and having portions slidably supported by said abutments to direct and force the main frame to a position in which the packing medium will be forced inwardly into the gap and tightly against the opposing walls.



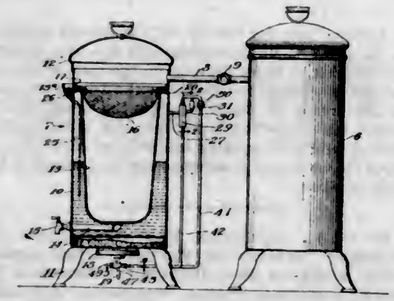
1,780,993. AIRCRAFT. VINCENT J. BURNELLI, New York, N. Y., assignor, by direct and mesne assignments, to The Uppercu-Burnelli Corporation, a Corporation of Delaware. Filed Nov. 2, 1927. Serial No. 230,645. 10 Claims. (Cl. 244—12.)

1. In an airfoil, a rigid section, an edge section, hinge means for joining the section, means preventing a flow of air between the sections, the axes of the hinge means being in a plane substantially perpendicular to the edge of the sections in one adjusted position of the edge section but the axes of said hinge means being in two divergent planes in another adjusted position of the edge section.



1,780,994. SEALING DEVICE FOR COCKS. CHARLES A. CALDWELL, Dallas, Tex. Filed Oct. 25, 1929. Serial No. 402,523. 1 Claim. (Cl. 70—122.)

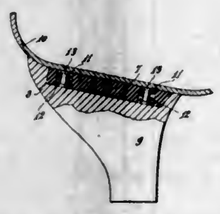
In a locking device for valves or cocks, a box-shaped member formed to enclose the sides and bottom of the valve or cock, the end of the member being countersunk and forming a projecting dome-like housing for enclosing the nut and one end of the valve or cock; a lid projecting from each side of the box-shaped member, each lid having a slot, one slot registering with the other



when the lids are closed on the valve; one of said lids including a housing disposed over its slot and adapted to entirely cover the stem of the valve, when the lids are closed; and a locking device traversing the stem and said housing to lock the valve stem in open or closed position.

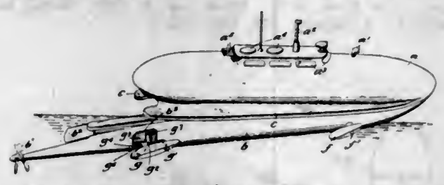
1,780,995. CURTAIN STRETCHER. CLARENCE G. CARLSON, Chicago, Ill., assignor to Chicago Curtain Stretcher Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 17, 1928. Serial No. 326,551. 3 Claims. (Cl. 45—24.)

1. A curtain stretcher comprising two sections, a hinge comprising two hinged plates fastened to the sections on the bottom thereof to enable the sections to be extended in alignment with their adjacent ends abutting, and shouldered plates fastened to the sections on the top and extending longitudinally thereof, and means for clamping said plates one upon the other with their shoulders in locking engagement.



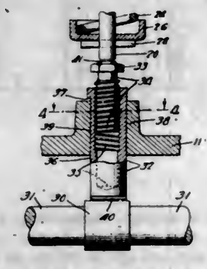
1,780,996. COFFEE URN. VINCENT D. CARROLL, Chicago, Ill. Filed Jan. 11, 1926. Serial No. 80,401. 4 Claims. (Cl. 53—3.)

1. A coffee urn comprising a container, a jar fitting within and surrounded by the container with a chamber



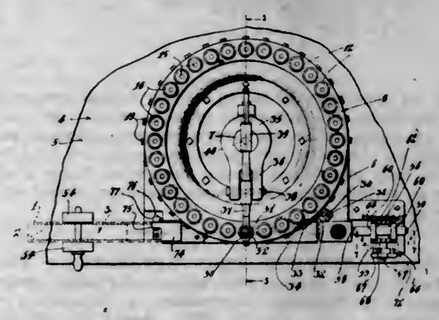
formed therebetween for the boiling of water therein, a heater for the container, and a pressure responsive device connected to the chamber between the container and the jar above the water level therein, and associated with the heater to control the same in accordance with the pressure in said chamber.

1,780,997. CUSHIONED HEEL FOR SHOES. WILLIAM M. COHAN and MICHAEL N. RATZAN, Brooklyn, N. Y. Filed June 5, 1929, Serial No. 368,652. Renewed Apr. 4, 1930. 5 Claims. (Cl. 36—37.)



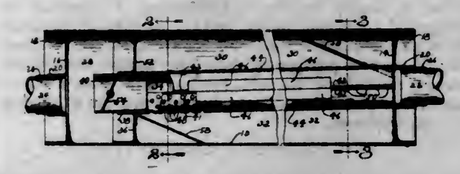
1. In combination with a shoe, a shoe heel having a recess at the shoe engaging side thereof, cushioning means arranged in the heel recess comprising a pad of resilient material conforming to the shape of the recess and arranged with perforations about the marginal portion thereof, and springs having greater resiliency than the material of the pad arranged in alternate perforations confined between the shoe and the bottom wall of the heel recess.

1,780,998. BOAT. ALDO CURIONI, Larchmont, N. Y., assignor of one-half to John R. Hinchcliffe, Carolina, R. I. Filed May 29, 1928. Serial No. 281,507. 11 Claims. (Cl. 114—66.5.)



1. In a power driven surface vessel, a hull, a keel, submerged vanes carried by the keel upon either side and forward and aft thereof, and means to vary the relative angularities of one set of vanes.

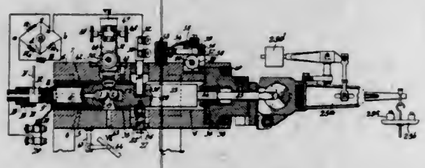
1,780,999. VALVE MECHANISM. HUGUES LOUIS DARDELET, Nantes, France, assignor, by mesne assignments, to Dardelet Threadlock Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 5, 1929. Serial No. 330,451. 15 Claims. (Cl. 123—90.)



1. In a poppet valve mechanism for internal combustion engines, the combination with a spring-seated poppet valve controlling a passage communicating with an engine cylinder and means forming a seat for said valve, of actuating means for the valve comprising an adjustable tappet having a main section and a relatively adjustable valve-impacting head section, and a rotary cam operative on the main section of the tappet to impart a fixed extent of throw thereto, said tappet sections having a screw thread coupling the axial line of which extends substantially in the direction of reciprocation of the valve and the threads of which coupling are relatively displaceable to a positively limited extent axially of the coupling from free-turning relation into self-locked relation by direct rectilinear movement of the impact section under reaction forces exerted on the tappet as an incident to operation of the valve mechanism.

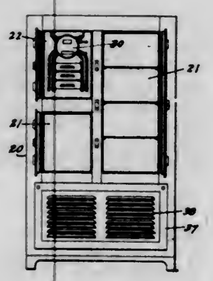
1,781,000. MEANS FOR FORMING LIGHT STRIPS FOR MOTION-PICTURE-FILM PRINTERS. LEON DE BEAULIEU, Hollywood, Calif., assignor, by mesne assignments, to Cinema Patents Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 12, 1927. Serial No. 174,989. 4 Claims. (Cl. 164—87.)

1. In an apparatus for forming light strips for motion picture printers, the combination of a base, a carriage mounted to rotate on the base, a plurality of punch members carried by the carriage; means of associating said base for supporting a light strip in a plane transverse with the axis of said punch members; means for arbitrarily moving said light strip in individual sections of uniform length; means for arbitrarily positioning the desired punch member over said light strip in selectively fixed position to center the punch in relation to a section of the light strip; and means for actuating the punch member.



1,781,001. MUFFLER. CHARLES W. EISELE, Detroit, Mich., assignor to Chrysler Corporation, Highland Park, Mich., a Corporation of Delaware. Filed Oct. 5, 1927. Serial No. 224,064. 7 Claims. (Cl. 137—160.)

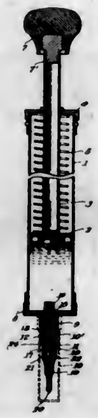
1. A muffler of the class described comprising an outer shell, end walls adapted to close the opposite ends of said shell, a partition extending longitudinally of said shell adapted to form a pair of chambers each on the opposite sides of said partition, said partition being formed by a



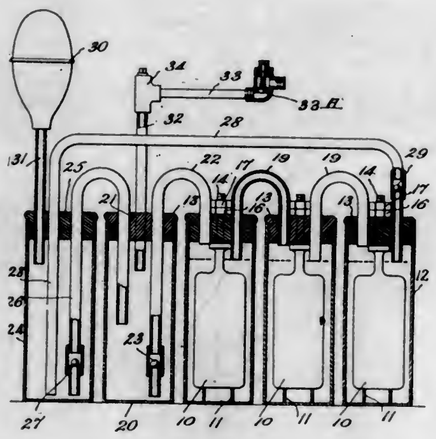
pair of stampings, each having a struck out portion forming a central chamber extending longitudinally between the stampings of said partition, an inlet passage communicating with one end of said central chamber, a communication between the opposite end of said central chamber and one end of one of the chambers formed by said partition, a communication between the opposite end of said last named chamber and the other of said chambers formed by said partition, and an outlet passage communicating with said last named chamber.

1,781,002. METHOD AND APPARATUS FOR USE IN TESTING MATERIALS. ROBERT ESNAULT-PELTERIE, Paris, France. Filed Apr. 4, 1927, Serial No. 180,874, and in Great Britain Feb. 4, 1927. 26 Claims. (Cl. 265—16.)

1. An apparatus for use in testing physical properties of materials, said apparatus including means for varying by known values the pressure between pieces of material, an electric circuit including the contact area between said pieces, and electric measuring means sensitive to variations in the electric resistance of said contact area.



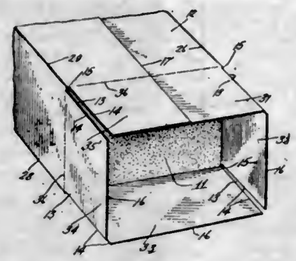
1,781,003. REFRIGERATING APPARATUS. JOHN RALPH FEHR, Dayton, Ohio, assignor, by mesne assignments, to Frigidaire Corporation, a Corporation of Delaware. Filed Dec. 2, 1926. Serial No. 152,262. 11 Claims. (Cl. 62—95.)



11. A cooling unit for mechanical refrigerators comprising a header for liquid refrigerant, a plurality of refrigerant conveying ducts, certain of said ducts being closed at their lower ends and connected at their upper ends to receive refrigerant from the header and return gaseous refrigerant to said header, said certain ducts cooperating with other of said ducts to provide a freezing zone therebetween.

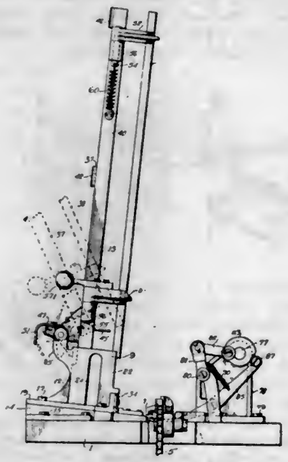
1,781,004. PLANT-TREATING APPARATUS. CHARLES L. GIEZENTANNER, Montesano, Wash. Filed Mar. 7, 1928. Serial No. 259,774. 5 Claims. (Cl. 47—49.)

2. A device of the class described comprising a cylinder for containing liquids, having a discharge nozzle at one end, a plunger in said cylinder, a handle connected to said plunger and projecting from the end of the cylinder opposite said plunger, a valve controlling the discharge through said nozzle from the cylinder, and a needle projecting through said nozzle and operatively disposed relative to the valve to unseat the same when its projecting end is pressed against an object.



1,781,005. ELECTRIC BATTERY SYSTEM. EDWIN R. GILL, Yonkers, N. Y., assignor to E. R. Gill Battery Co., Inc., New York, N. Y. Filed Aug. 7, 1925. Serial No. 48,711. 9 Claims. (Cl. 136—162.)

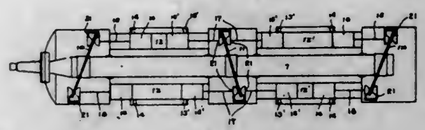
1. A wet battery system, comprising a series of intercommunicating cells, a filling chamber connected by a fluid passage with one end of the series, an overflow chamber connected by a fluid passage with the opposite end of the series, and communicating means joining said overflow chamber with said filling chamber.



CARNEGIE LIBRARY OF ATLANTA

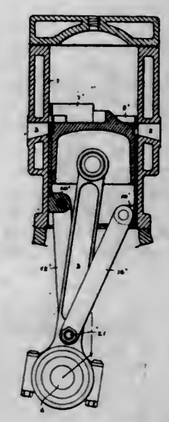
1,781,006. ICE-CREAM-CONTAINER LINER. PAUL L. GODDARD, Oak Park, Ill., assignor to Central Waxed Paper Company, Chicago, Ill., a Corporation of Illinois. Filed May 2, 1927. Serial No. 188,316. 3 Claims. (Cl. 229—87.)

1. An ice cream brick wrapper and carton liner, comprising a sheet of wrapping material provided with slots extending in from an edge and setting off flaps, said slots having rounded inner ends.



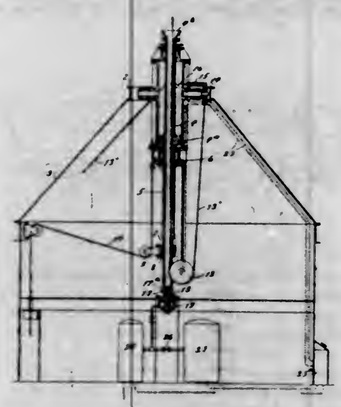
1,781,007. DELIVERY MECHANISM FOR ADDRESSING MACHINES. PAUL A. GOLLNICK, JOHN J. TOOLAN, and GEORGE HARRED, Chicago, Ill., assignors, by mesne assignments, to Selectograph Company, Chicago, Ill., a Corporation of Illinois. Filed May 31, 1928. Serial No. 282,014. 13 Claims. (Cl. 271—44.)

1. In a device of the class described, a magazine forming a vertically disposed guideway for cards and comprising a hopper part having an outlet opening adjacent its lower end, a movable part located above said hopper part and tiltable with respect thereto, and a shelf mounted on said tiltable part and movable into said guideway for temporarily supporting certain of the cards, said shelf being retractable to permit the cards to drop into said hopper part, said hopper being of sufficient length to permit the storing of a plurality of cards directly below said shelf.



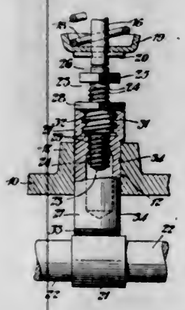
1,781,008. INTERNAL-COMBUSTION ENGINE. HERALD B. GREENING, Hamilton, Ontario, Canada, and JAMES W. GALLOWAY, Detroit, Mich., assignors to Galloway Engineering Company Limited, Hamilton, Ontario, Canada. Filed Jan. 14, 1929. Serial No. 332,383. 4 Claims. (Cl. 123—58.)

4. An internal comoustion engine comprising a rotatable shaft, a plurality of cylinders arranged around and parallel with said shaft, a pair of swash plates rigidly mounted on said shaft each disposed in angular relation to the shaft and in a plane parallel with the plane of disposition of the other, a swash plate mounted on said shaft between the aforesaid swash plates in angular relation to the shaft and being disposed in a plane intersecting the planes of disposition of the aforesaid swash plates, a group of cylinders arranged circumferentially of said shaft between each of said pair of swash plates and the intermediate swash plate, exhaust ports arranged at the ends of said



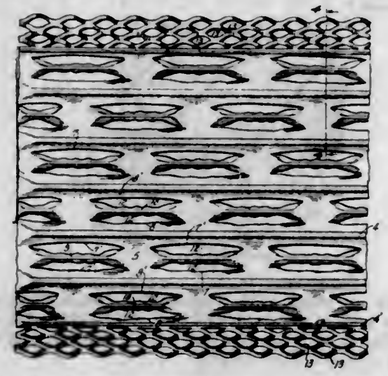
cylinders adjacent the intermediate swash plate, pistons in said cylinders co-operating with said ports and with said intermediate swash plate, intake ports in the other end of said cylinders, and pistons in said cylinders co-operating with said intake ports and with said pair of swash plates, the intermediate swash plate being set in a circumferentially advanced position relative to the first-mentioned pair of swash plates whereby all of the pistons co-operating therewith operate in a group in advanced relation to the remaining co-operating groups of pistons.

1,781,009. TWO-CYCLE INTERNAL-COMBUSTION ENGINE. HERALD B. GREENING, Hamilton, Ontario, Canada, and JAMES W. GALLOWAY, Detroit, Mich., assignors to Galloway Enginering Company Limited, Hamilton, Ontario, Canada. Filed Jan. 14, 1929. Serial No. 332,384. 7 Claims. (Cl. 123—47.)



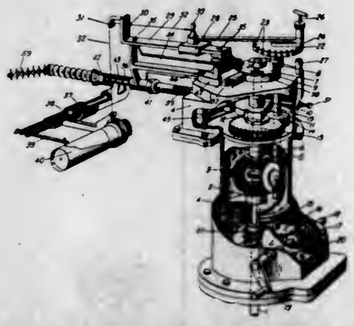
1. In a two-cycle combustion engine, the combination with a cylinder having inlet and exhaust ports, a crank shaft, a piston operating in the cylinder, and a connecting rod operatively connecting said crank shaft and piston, of a pair of valves moving with said piston, and means flexibly and operatively connecting said valves with said connecting rod beyond its longitudinal mid-point whereby a differential longitudinal reciprocation is imparted to said valves to control the inlet and exhaust ports.

1,781,010. AIRSHIP MOORING-MAST GEAR. ARCHIBALD HALL-BROWN, Purley, and EDWIN WALTER JONES, Lincoln, England, assignors to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed Nov. 26, 1927, Serial No. 235,850, and in Great Britain Dec. 4, 1926. 19 Claims. (Cl. 244—2.)



1. An airship mooring mast comprising two telescoping elements, means on one of said elements to receive a part of an airship, and fluid pressure means causing relative movement between said elements.

1,781,011. VALVE MECHANISM. WILLIAM E. HOKE, Baltimore, Md., assignor to Dardelet Threadlock Corporation, New York, N. Y., a Corporation of Delaware. Filed Apr. 16, 1929. Serial No. 355,571. 9 Claims. (Cl. 123—90.)

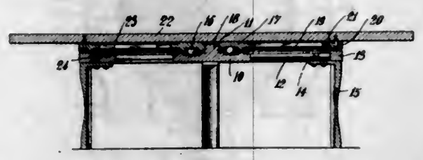


1. A poppet valve mechanism comprising a driven element, an actuating cam therefor, and an extensible and contractible tappet interposed directly between the cam and driven element and comprising an extensible and contractible duplex member having a main section and a locking section directly screw thread coupled and a unitary member directly screw thread coupled with both sections of the duplex member by threads of a different pitch from that of the threads coupling the sections of the duplex member, the axes of the threads being disposed for adjustment of one of the tappet members toward and from the driven element.

1,781,012. EXPANDED METAL LATH. WILLIAM G. HURLBERT, Jr., and ELMER E. MARSHMAN, Warren, Ohio. Filed Mar. 31, 1927. Serial No. 179,852. 12 Claims. (Cl. 72—116.)

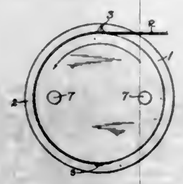
8. A metal lath comprising a body having a perforated unexpanded central portion, longitudinal reenforcing ribs in said portion, marginal perforated portions distorted and constituting open meshwork, said longitudinal ribs lying in a medial plane of said open mesh work.

1,781,013. METHOD AND APPARATUS FOR OBTAINING INDICATOR DIAGRAMS. HAROLD M. JACKLIN and CHARLES P. ROBERTS, Columbus, Ohio; said Roberts assignor to said Jacklin. Filed Mar. 15, 1926. Serial No. 94,776. 19 Claims. (Cl. 234—23.)



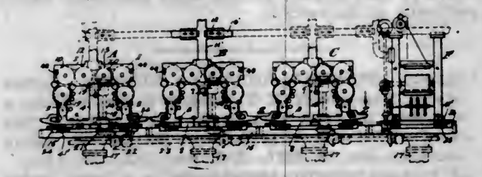
1. A device for indicating the pressure in engine cylinders comprising a means operable by the pressure from a cylinder for controlling one element of a recording means, a pitman and crank mechanism for operating the other element of such recording means, the pitman and crank of said mechanism being of the same proportion as the connecting rod and the crank of the engine being tested, said mechanism being driven from the engine by means of speed reduction gearing.

1,781,014. BUCKLE SUPPORT. MATTHEW J. KEEVERS, Northampton, Mass. Filed May 9, 1928. Serial No. 276,256. 1 Claim. (Cl. 2—245.)



In a support of the class described, a vamp embracing clamping section comprising two jaws, an upper and a lower jaw, adapted respectively to fit over and under a vamp, the upper jaw having a vamp engaging nib, and the lower jaw having a vamp engaging prong, the nib and the prong being offset with respect to each other and so relatively located that the nib tends to cause the prong to penetrate the material of the vamp upon attempted movement of said support off the vamp.

1,781,015. REVOLVING TABLE. ANTON KEIPP, Mansfield, Ohio. Filed Oct. 20, 1926. Serial No. 142,795. 1 Claim. (Cl. 45—26.)



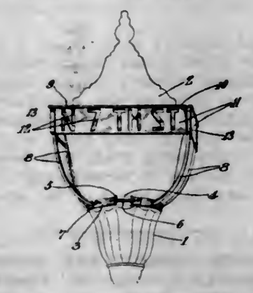
A revolving table comprising a lower support, an integral, central post on said support, an upper support mounted over said post, said lower support having a plurality of recesses in its under face, anti-friction bearings intermediate said supports, legs on said lower support, a top plate on said upper support, a flat spring depending from said upper support and means on said flat spring engageable with the recesses to check the revolutionary speed of said table.

1,781,016. ROOFING ROLL. HENRY KIELBERG, Martins Ferry, Ohio, assignor to Wheeling Steel Corporation, Wheeling, W. Va., a Corporation of Delaware. Filed July 31, 1929. Serial No. 382,524. 2 Claims. (Cl. 206—59.)

1. In a roofing roll, a pair of unconnected heads of drum-like form, radially outwardly struck tongues formed on each of said heads to engage through the inner end portions only of the roofing material and to be bent down into seated relation to said end portion for anchoring said material, portions of said heads being adapted to be abutted by the opposite lateral edges of the material and said heads being held by said material in their properly spaced relation.

1,781,017. PRINTING MACHINE. HARRY G. KNOX, New York, N. Y., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed June 29, 1926. Serial No. 119,268. 23 Claims. (Cl. 270—5.)

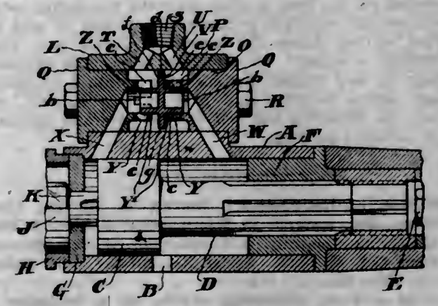
1. The combination of a base or support, a plurality of press units arranged in line on the support, and means arranged at each unit for adjusting the units in horizontal and vertical planes relatively to the support to align the unit with respect to any other unit so that the cylinders of the units will be in parallelism with each other.



1,781,018. PROCESS OF PREPARING ARTIFICIAL TEXTILE PRODUCTS WITH REDUCED LUSTER FROM VISCOSE. THEODOOR KOCH, Arnhem, Netherlands. Filed Oct. 3, 1927, Serial No. 223,831, and in the Netherlands Feb. 11, 1927. 4 Claims. (Cl. 106—40.)

1. As a new composition of matter to be spun into artificial silk, viscose containing chlorobenzene.

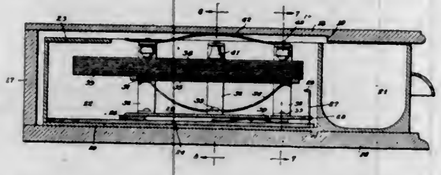
1,781,019. COLD-WATER PAINT AND METHOD OF MAKING SAME. LEON H. LARSON, Kalamazoo, Mich., assignor to The Kalbfleisch Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 29, 1927. Serial No. 164,657. 2 Claims. (Cl. 134—50.)



2. An improved cold water paint comprising substantially calcium aluminate and calcium caseinate in suspension in an alkaline aqueous solution.

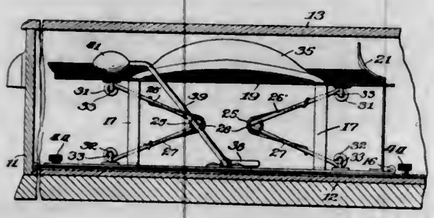
1,781,020. STREET SIGN. MAURICE RICHARD LEAHY, Kansas City, Mo., and MICHAEL JOSEPH PHELAN, Kansas City, Kans. Filed Aug. 22, 1928. Serial No. 301,278. 7 Claims. (Cl. 40—131.)

1. A construction of the character described, including in combination, a supporting member adapted to be mounted on a suitable post or support, a plurality of arms extending upwardly from said supporting member, an integral rectangular sign frame, stencil members secured to the sides of said rectangular frame, means for securing the ends of the stencil members together and to the ends of said arms, and means for holding translucent plates on said stencil members.



1,781,021. VALVE FOR ROCK DRILLS. EARL B. LEAR, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Aug. 25, 1927. Serial No. 215,868. 4 Claims. (Cl. 121—19.)

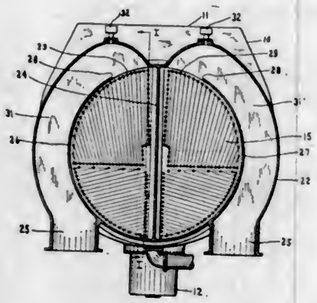
1. In a fluid actuated rock drill, the combination of a cylinder and piston, a valve chest having a valve cham-



ber, supply passages conveying pressure fluid into the valve chamber, inlet passages leading from the valve chamber to the cylinder and of larger area than the supply passages, a distributing valve in the valve chamber comprising cylindrical end projections controlling the inlet passages, said projections being intermittently exposed to compression from the cylinder for throwing the valve, and a flange on the valve reciprocable between the supply passages and constantly exposed at both ends to pressure fluid, said flange being of smaller diameter than the valve chamber to permit the flow of pressure fluid over the perimeter of the flange to create a suction thereon to assist the compression in throwing the valve.

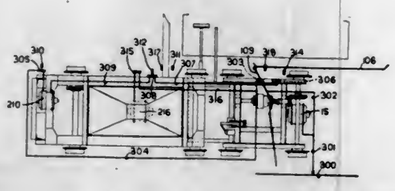
1,781,022. NOTE HOLDER AND DISPENSER. HAROLD LEVY, New York, N. Y. Filed Oct. 20, 1926. Serial No. 142,837. 17 Claims. (Cl. 129—35.)

1. In a note holder, a guide frame, a spring-pressed member on the frame guided thereby and normally held upwardly, engaging members on the frame having depending portions opposing the spring-pressed member and adapted to hold a stack of notes between the spring-pressed member and depending portions in flattened-out position, said frame being freely open between at least two depending portions to accommodate a hand in depressing the notes for removal of the same.



1,781,023. NOTE HOLDING AND DISPENSING DEVICE. HAROLD LEVY, Chicago, Ill. Filed Oct. 26, 1929. Serial No. 402,781. 19 Claims. (Cl. 129—35.)

1. A note holder and dispenser, a base, uprights mounted on the base, a plate mounted for sliding movement on said uprights, note-confining means on said uprights, spring means for yieldingly urging said plate upwardly, a support for said base, adjustable extension means on said support for engaging within a container, hinge means securing said base to said support, and means for elevating one end of said base and retaining it in elevated position.

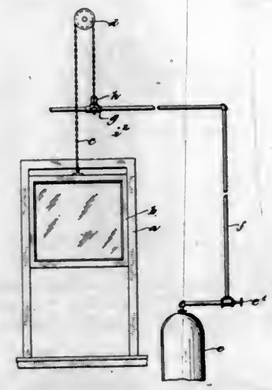


1,781,024. CONDENSER. JOSEPH P. LIDIAK, Lansdowne, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 4, 1929. Serial No. 397,354. 12 Claims. (Cl. 257—43.)

1. In a water circulating system for a condenser, a tube nest having water boxes located at each end thereof, one of said water boxes having an outlet connection located at its lower portion and an upwardly extending dam structure interposed between the outlet connection

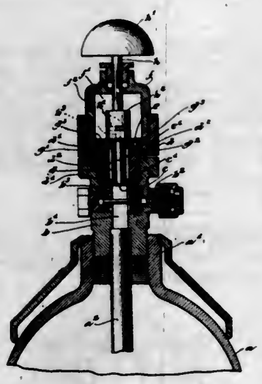
and the tube nest and terminating near the top of the tube nest, said dam structure being disposed laterally of the tube nest.

1,781,025. OPERATING MECHANISM FOR SCOTCH HEARTHS. HUGH R. MACMICHAEL, El Paso, Tex., assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 21, 1929, Serial No. 341,600. Renewed Apr. 5, 1930. 14 Claims. (Cl. 266—34.)



1. In combination with a hearth type furnace, a mechanical poker and shovel for operating said hearth, a first carriage carrying said poker and shovel, a mechanical feeder for said hearth, a second carriage carrying said feeder, means for intermittently moving said first carriage along said hearth, means for continuously moving said second carriage along said hearth, means for rendering said poker and shovel inoperative when said first carriage has traversed said hearth, means for rendering said feeder inoperative when said feeder carriage has traversed said hearth, and means for causing both of said carriages to return to their original position while said poker, shovel and feeder are inoperative.

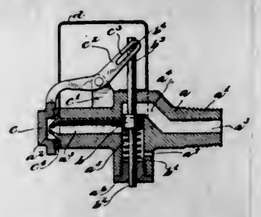
1,781,026. FIRE-EXTINGUISHING SYSTEM. DANIEL MAPES, Mamaroneck, N. Y., assignor to Walter Kidde & Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 2, 1928, Serial No. 296,879, and in Germany Aug. 18, 1927. 2 Claims. (Cl. 169—11.)



1. In a fire protective system including a closure having means to hold the same normally open, a source of fire extinguishing medium under pressure and a pipe line therefor, a release device interposed in the pipe line and actuated by the pressure of the fire extinguishing medium

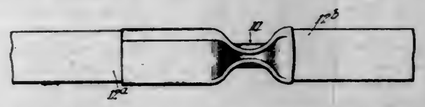
therein to release said closure, said release device comprising a fitting through which the fire extinguishing medium

passes, a cylinder in communication with the fitting, and a plunger in said cylinder having a stem extending through the fitting and engaging the holding means.



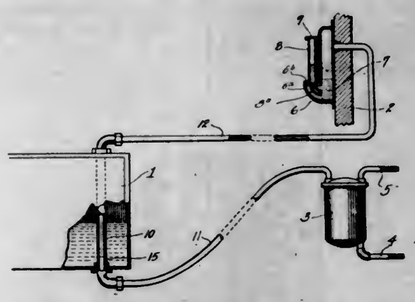
1,781,027. RELEASE DEVICE FOR FLUIDS UNDER PRESSURE. DANIEL MAPES, Mamaroneck, N. Y., assignor to Walter Kidde & Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 29, 1928. Serial No. 315,648. 15 Claims. (Cl. 137—53.)

1. A releasing mechanism of the character described comprising a container for a fluid under pressure, a frangible disc carried by the container, a reinforcing means, pressure transmitting means between the reinforcing means and the disc, and means to exert a pressure on the transmitting means to rupture the disc against the pressure in the container.



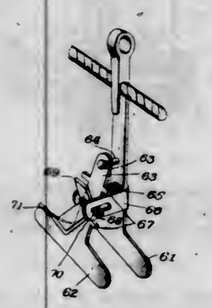
1,781,028. NONCLOGGING NOZZLE FOR FIRE-EXTINGUISHING SYSTEMS. DANIEL MAPES, Mamaroneck, N. Y., assignor to Walter Kidde & Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 30, 1928. Serial No. 315,940. 4 Claims. (Cl. 299—125.)

2. A discharge device for fire extinguishing systems comprising a nozzle, a cover for the nozzle, means to mount the cover pivotally on the nozzle, a cylinder formed in the nozzle and exposed to pressure of the fire extinguish-



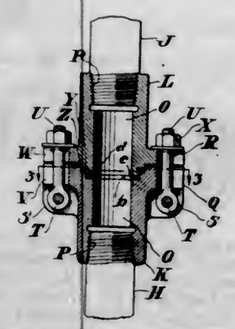
ing medium, a piston in the cylinder, a spring engaging the piston to urge it to a normally retracted position, and means operatively connecting the piston to the cover.

1,781,029. SEAL. EUGENE H. MCGEE, Chicago, Ill., assignor, by mesne assignments, to Signode Steel Strapping Company, a Corporation of Delaware. Filed Dec. 30, 1925. Serial No. 78,331. 4 Claims. (Cl. 24—23.)



1. A tension resisting joint for package strapping comprising in combination the portions of the strapping to be joined, and a sealing sleeve embracing said strapping and comprising two flanges, in which crimped deformations are made, one of said flanges overlapping the other and the outermost of said overlapping flanges having its edge lying well beyond the median line of the sleeve.

1,781,030. GAUGE FOR GASOLINE TANKS, ETC. HENRY MOSSBACH, Seattle, Wash. Filed Mar. 1, 1923. Serial No. 621,981. 3 Claims. (Cl. 73—54.)

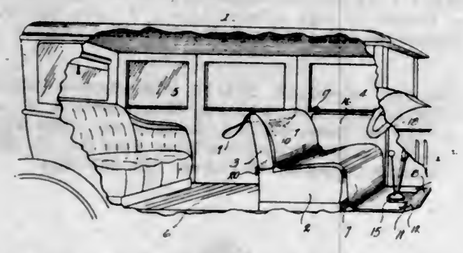


1. In combination, a gasoline supply tank, an intermittently operating suction device having a tube for withdrawing gasoline from the tank, a liquid level gauge adapted to be operated by air pressure and a pressure tube extending through the tank having connection at its lower end with the suction tube and at its upper end with the liquid level gauge, and having a relatively small port therein adjacent the base of the tank through which gasoline may flow into the tube during inactive periods of the suction device to cause a reading to be shown on the gauge in accordance with the degree of pressure created by the air that is trapped in the upper portion of the pressure tube when gasoline from the tank rises therein, the said port being of insufficient area to readily supply the suction tube in order that the upper portion of the tube will be cleared of gasoline and all air pressure removed from the gauge during active periods of the suction device.

1,781,031. CLOTHESPIN. FRANK PERSSENDA, Harrison, N. J. Original application filed Feb. 14, 1929, Serial No. 339,776. Divided and this application filed Apr. 7, 1930. Serial No. 442,249. 1 Claim. (Cl. 24—137.)

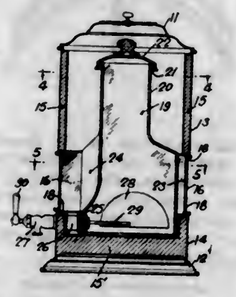
A clothespin comprising a shank, a jaw at the lower end of said shank, a pair of parallelly arranged ears projecting from said shank, said ears being provided with slots at their free ends, a strip positioned between said ears, a jaw formed at the lower end of said strip, the upper end of said strip being in pivotal association with said shank, a coil spring interposed between said shank and said strip for normally holding said last named jaw away from said first named jaw, a U-shaped plate positioned between said ears, and pins laterally extending from said U-shaped plate from one of its angles, said pins being positioned within said slots in said ears, said U-shaped plate being adapted for making angular shifting movement upon said pins for bringing one end of said U-shaped plate against the adjacent face of said strip for the purpose of bringing said last named jaw towards said first named jaw against the tension of said coil spring.

1,781,032. CONNECTION FOR DRILL RODS. SNOWDEN B. REDFIELD, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 12, 1929. Serial No. 332,129. 3 Claims. (Cl. 285—134.)



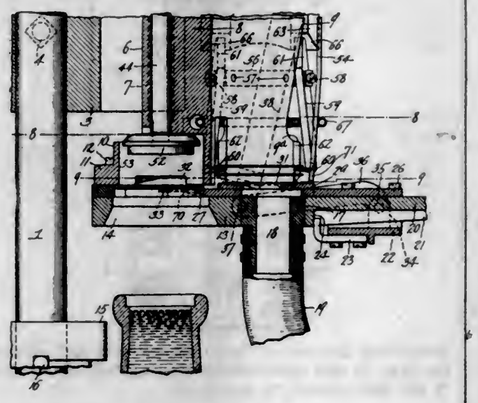
1. A connection for drill rods, comprising a pair of members, said members having passages therethrough, threads in the ends of the passages for threaded connection with sections of a drill rod, one of said members having a slot across one end, a projection on the other member extending into the slot and engaging the side walls of said slot to prevent relative rotation between the members, a recess in one member, a boss on the other member extending into the recess to centralize the members with respect to each other, and means for clamping the members together.

1,781,033. ELECTRICAL CONDENSER. SAMUEL RUBEN, New York, N. Y., assignor to Ruben Patents Company, New York, N. Y., a Corporation of Delaware. Filed May 6, 1927. Serial No. 189,231. 8 Claims. (Cl. 175—41.)



8. A dielectric composition for electric condensers, comprising a mixture of finely divided crystalline titanium dioxide and a viscous organic binder medium.

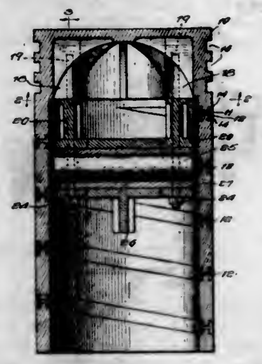
1,781,034. AUTOMOBILE SEAT COVER. BERTRAND M. RUSSELL, Seattle, Wash. Filed June 18, 1928. Serial No. 286,240. 2 Claims. (Cl. 155—182.)



1. A seat cover of the character described comprising a strip of paper, or the like, adapted to be extended over a seat and forwardly thereof along the floor of an automobile, and loops at one end of the strip adapted for application to fittings of the vehicle rearwardly of the seat to hold that end of the strip in place and means at the other end of the strip for holding engagement with the floor mat.

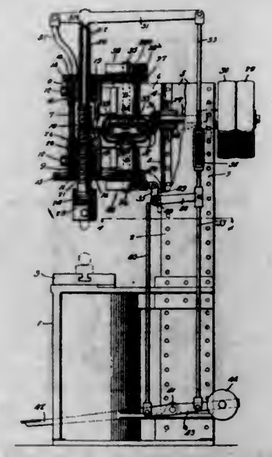
1,781,035. DISPENSER. WILLIAM A. SCHATZ, Astoria, N. Y. Filed Nov. 7, 1927. Serial No. 231,423. 18 Claims. (Cl. 225—40.)

2. A device of the class described, comprising in combination a liquid-tight container having upper and lower insulated sections, a transparent section intermediate said insulated sections, a beverage container disposed in said first-mentioned container and having a transparent wall adjacent said transparent section of said first-mentioned container.



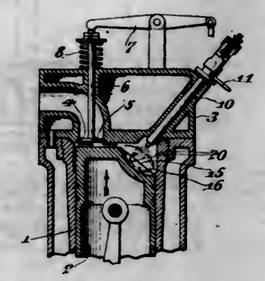
1,781,036. BOTTLE-CAPPING MACHINE. GEORGE W. SWIFT, Jr., Bordentown, N. J., assignor, by mesne assignments, to Bottle Cap Patents Company, Bordentown, N. J., a Corporation of New Jersey. Filed Nov. 16, 1928. Serial No. 319,837. 29 Claims. (Cl. 226—92.)

1. In a bottle-capping machine, the combination of a vertically-movable table provided with a cap-stacking hopper mounted thereon, said hopper being provided with an outlet at its lower end arranged to discharge caps onto said table, cap-retaining levers mounted on said hopper, means yieldably holding said levers in cap-retaining position, cams operated by the upward movement of said hopper for moving said levers to release position, and a reciprocable slide on said table for moving the caps from the lower end of said hopper to cap-applying position.



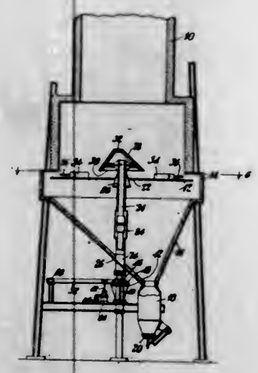
26. In a cap-feeding mechanism, the combination with a cap-stacking hopper provided with a downwardly-presented discharge outlet, a slide reciprocable across said discharge outlet, said slide being provided with a vacuum port-opening whereby it is adapted to grip the bottom cap in said hopper, means for controlling the suction in said vacuum port-opening, and means timed with the movement of said slide for controlling the release of successive bottom caps from said hopper.

1,781,037. PISTON. JOHN TATTER and WILLIAM H. PASCOE, Chicago, Ill. Filed Nov. 30, 1925. Serial No. 72,360. 10 Claims. (Cl. 74—108.)



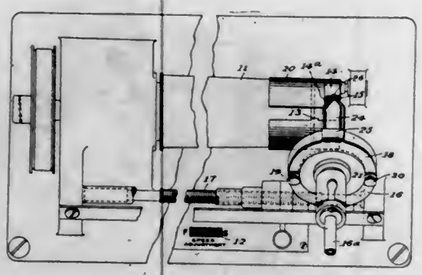
1. A piston having a helical member of at least one complete turn embedded therein and secured thereto by tongue and groove construction.

1,781,038. POWER PRESS. ROBERT THOMSON and ALFRED MORRIS THOMSON, Newark, N. J. Filed Dec. 21, 1927. Serial No. 241,555. 80 Claims. (Cl. 78—35.)



1. In a power press, a shiftably mounted ram; a differential gear mechanism; a drive element operatively connected to said mechanism; a driving connection between one side of the differential mechanism and said ram to move the latter on a working stroke; a driving connection between the opposite side of the differential mechanism and the ram to move the ram on a return stroke; means to control the movements of the ram; and automatic means to render said return driving connection inoperative and limit the extent of the return stroke of the ram.

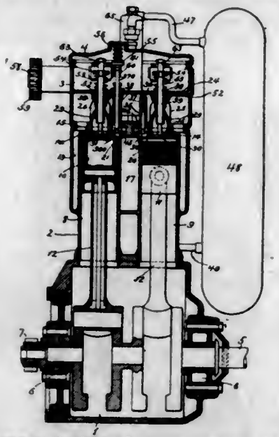
1,781,039. INTERNAL-COMBUSTION ENGINE. OTIS D. TREIBER, Narberth, Pa., assignor to Treiber Diesel Engine Corporation, Camden, N. J., a Corporation of New Jersey. Filed May 28, 1927. Serial No. 194,888. 1 Claim. (Cl. 123—33.)



An internal combustion engine comprising a cylinder and a piston adapted to operate in said cylinder, the crown of the said piston having a portion located in a plane substantially at right angles to the axis of said piston and a portion at one side thereof located in a plane forming an acute angle with said axis, the said last mentioned portion having therein a centrally located depression, the outer edge of which is flush with the remaining part of the surface of said portion, the said remaining part of the surface occupying a single plane.

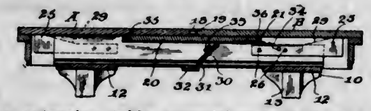
1,781,040. DISCHARGE CONE FOR GAS GENERATORS. HARVEY H. WONNING, Batesville, Ind., assignor to Combustion Utilities Corporation, New York, N. Y., a Corporation of Maine. Filed Dec. 12, 1925. Serial No. 74,934. 6 Claims. (Cl. 214—18.)

1. In discharging apparatus, a rotatable shaft, and a ratchet mechanism for operating said shaft comprising a member fixed to said shaft, a member loosely mounted on said shaft, means whereby said members operate said shaft in a given direction when said loosely mounted member is oscillated, said means producing a movement of said loosely mounted member longitudinally of said shaft, a power operated yoke for oscillating said loosely mounted member, and dashpot means attached to said yoke near said loosely mounted member and arranged to prevent pounding of said fixed and loosely mounted members during the operating of the ratchet mechanism.



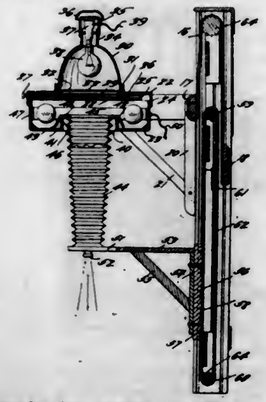
1,781,041. TIMING. CHARLES K. WOODBRIDGE, Flushing, N. Y., assignor to Dictaphone Corporation, Bridgeport, Conn., a Corporation of New York. Filed Aug. 21, 1923. Serial No. 658,597. 16 Claims. (Cl. 274—17.)

1. In combination, a rotating record-support having a contact member, a second contact member disposed in the path of the first contact member, one of the members being resilient, and means whereby the members produce staccato sounds upon contact with each other.



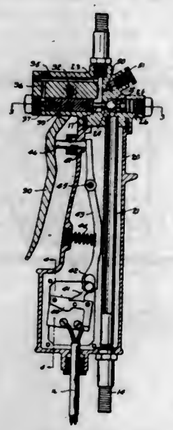
1,781,042. INTERNAL-COMBUSTION ENGINE. CHARLES H. ANDERSON, Lexington, Ky. Filed July 15, 1927. Serial No. 205,980. 23 Claims. (Cl. 123—1.)

1. An internal combustion motor, comprising a plurality of combined compression and power units including cylinders and pistons, means whereby air and gas are compressed separately by said units, means for mixing



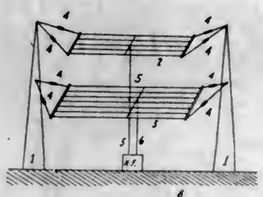
compressed gas and air under compression and supplying the same to said units alternately, and causing expansion of the fluid mixture in said units.

1,781,043. TABLE. GEORGE H. ANGERT, Cincinnati, Ohio, assignor to Angert Brothers, a Copartnership composed of Arthur C. Angert and George H. Angert, Cincinnati, Ohio. Filed Mar. 16, 1929. Serial No. 347,568. 10 Claims. (Cl. 45—112.)



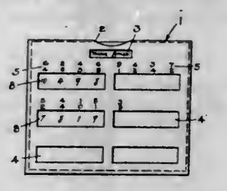
2. An extension table comprising a stationary frame including all of the supporting legs for the table, table top halves slidably mounted on the frame, a normally concealed leaf mounted within the table top and movably connected to the frame, means for raising said leaf into alignment with the tops of said halves when the latter are moved away from one another, a gate pivotally mounted on the frame and adapted to secure the leaf in its elevated position, and spring means for moving the gate into securing position.

1,781,044. PHOTOGRAPHIC REPRODUCTION APPARATUS. CAMILO MEDINA ARANA, Habana, Cuba. Filed Nov. 1, 1928. Serial No. 316,560. 6 Claims. (Cl. 88—24.)



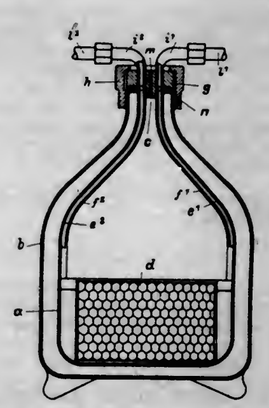
1. A reproduction camera including a hollow upright having the forward wall longitudinally divided and projected beyond the side walls, a camera supporting frame slidably guided by the projecting portions of the front wall, a band connected to the supporting frame, a roller within the upright over which the band passes, a counterbalance carried by the band within the upright, a camera including a lens supported in the camera supporting frame, a frame supporting lens, means for guiding the frame within the division of the front wall of the upright, an endless band connected to said means and operative within the upright, and a counterbalance carried by the endless band.

1,781,045. FLUID-DISPENSING APPARATUS. ROLLIN L. BACHER, Lakewood, Ohio, assignor to The United States Air Compressor Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 16, 1929. Serial No. 363,654. 4 Claims. (Cl. 221—47.1.)



1. In combination, a lubricant compressor, an electric motor for operating the same, a flexible discharge conduit leading from the compressor, a casing in the form of a hand grip connected in the conduit, said casing having a trigger associated therewith, an arm pivotally mounted within the casing, means operatively connecting the trigger and arm, a controller within the casing for the motor, said controller being adapted to be closed when the trigger is moved in one direction, a valve within the casing and in said conduit, and means associated with the trigger to open the valve when the controller is closed.

1,781,046. ANTENNA. JOSEPH BETHENOD, Paris, France. Filed July 1, 1925, Serial No. 40,764, and in France July 11, 1924. 2 Claims. (Cl. 250—33.)



1. An antenna system for the emission of short waves comprising a sheet antenna supported, on towers fixed to the ground, at a relatively great distance above ground, and a counterpoise, supported similar to said antenna, for said antenna likewise supported at a relatively great distance above ground, the distance between said antenna and counterpoise being equal to or less than the distance between said counterpoise and ground.

1,781,047. EDUCATIONAL DEVICE. SELMA O. BONDESON, Seattle, Wash. Filed May 31, 1929. Serial No. 367,334. 3 Claims. (Cl. 35—12.)

1. A device of the class described, comprising an envelope provided on each of its sides with a plurality of openings, a test problem disposed adjacent each opening, a plurality of writing sheets enclosed in the envelope, adapted to be successively exposed through said openings for receiving answers to said problems, a backing sheet of relatively stiff material disposed in the envelope and on one side of the writing sheets, and a key envelope adapted to enclose the first-named envelope and contents, said key envelope having on each side a plurality of openings registrable with said openings in the first-named envelope, and an answer to each test problem disposed adjacent each of the openings in the key envelope.

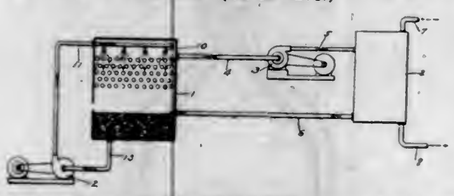
1,781,048. CONTAINER FOR STORAGE AND TRANSPORT OF LIQUEFIED GASES. SCHULIM BRAUNSTEIN, Berlin, Germany. Filed Apr. 16, 1929, Serial No. 355,534, and in Great Britain Mar. 23, 1928. 5 Claims. (Cl. 62—1.)

1. A container for the storage and transport of liquefied gases comprising a heat insulated vessel adapted to contain a liquefied gas, the vessel being formed to provide inlet and outlet conduits extending into the vessel and opening at the mouth thereof, a removable stopper for the mouth of the vessel having inlet and discharge pipes which when the stopper is in place communicatively connect with said conduits, and means for closing said conduits when the stopper is removed.

1,781,049. WELL-DRILLING TOOL. CHARLES E. BRINTON, Los Angeles, Calif. Filed Mar. 31, 1926. Serial No. 98,641. 8 Claims. (Cl. 255—28.)

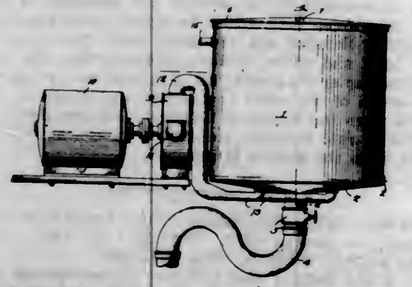
1. A well drilling tool, including in combination outer and inner conduits, said inner conduit being spaced from the wall of the outer conduit, sealing elements surrounding

the inner conduit and having sealed contact with the inner wall of the outer conduit longitudinally inwardly



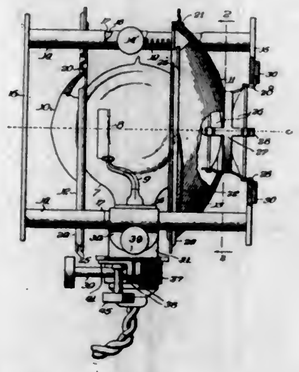
of its ends to form sealed buoyant chambers containing gas and means carried by some of the sealing elements for introducing a buoyancy creating gas to said chambers.

1,781,050. PROCESS OF PREPARING ETHYL ESTERS. ARTHUR R. CADE, Pittsburgh, Pa., assignor to Carbide and Carbon Chemicals Corporation, a Corporation of New York. Filed July 7, 1923. Serial No. 650,164. 3 Claims. (Cl. 260—103.)



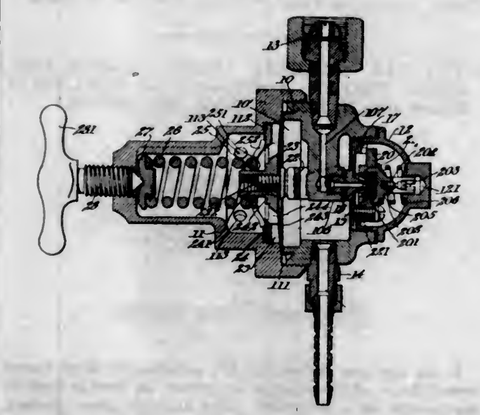
1. Process of preparing ethyl esters which comprises causing di-ethyl sulphate to react with a sodium salt of an organic acid in the presence of a solvent, substantially free from water, comprising a preformed portion of the ester to be prepared.

1,781,051. REFRIGERATION. WILLIS H. CARRIER, Essex Fells, N. J., assignor to Carrier Engineering Corporation, Newark, N. J. Filed Oct. 15, 1926. Serial No. 141,857. 7 Claims. (Cl. 62—178.)



1. A process of refrigeration which comprises evaporating, compressing and condensing methylene chloride under a pressure at all times not materially greater than one atmosphere.

1,781,052. DISHWASHING MACHINE. JOHN E. CATLETT, San Francisco, Calif. Filed Aug. 30, 1929. Serial No. 389,487. 1 Claim. (Cl. 141—9.)



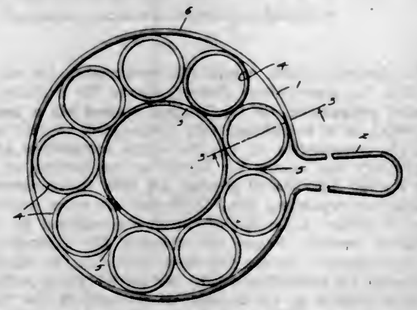
In a machine for washing dishes or the like the combination with a container having vent openings, of a valved drain extending downwardly from the bottom of the container, said bottom being flared upwardly from the drain, an air pump, means for actuating the pump, widely spaced ports extending through the bottom of the container at points remote from the drain, air pipes extending upwardly to the respective ports and connected to the air pump, said pipes and ports cooperating to direct widely-spaced, relatively-large jets of air upwardly into the container to throw the liquid contents of the container onto the dishes or the like in the container.

1,781,053. ILLUMINATING SYSTEM, REFLECTOR, AND LAMP ASSEMBLY. RALPH PULLIAM DE VAULT, Villa Park, Ill., assignor, by mesne asignments, to Acme Motion Picture Projector Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 5, 1925. Serial No. 54,625. 16 Claims. (Cl. 88—24.)

1. For use in a light projection apparatus, a reflector frame formed of a single metal disk, a rim portion formed thereon in a plane substantially transverse to the optical axis, the rim portion being disposed from a normal plane thereof to form a portion of a thead of a screw.

1,781,054. PRESSURE-REGULATING VALVE. CHARLES H. DOCKSON, Detroit, Mich. Filed Feb. 1, 1923. Serial No. 616,436. 16 Claims. (Cl. 50—10.)

4. In a pressure regulating valve, the combination of a casing providing a chamber having an inlet and an outlet, a nozzle at the discharge end of said inlet, a yoke movable in response to variations in pressure and having a threaded recess, a threaded retainer fitting in said recess, and valve means comprising a non-metallic disk held in said recess by said retainer and adapted to be seated against said nozzle, and a metal shell tightly fitting the periphery of said disk to prevent the breakage of the latter by impact against said nozzle, the threaded retainer being removable to permit the valve means to be replaced or reversed end for end when worn.

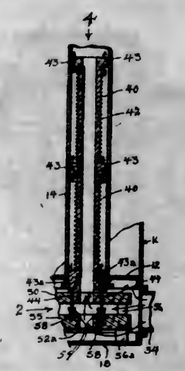


12. In a pressure regulating valve, the combination of a diaphragm, a valve-carrying member, a plate clamping said diaphragm to said member having means adapted to shear said diaphragm to relieve excessive pressure in said casing, and means for applying pressure to said diaphragm comprising a resilient plate bearing against such clamping plate and an adjustable spring bearing against said resilient plate.

13. In a pressure regulating valve for use with various kinds of containers of gas under pressure, the combination of a casing providing a chamber having an inlet and threaded openings; a high pressure gage coupled in one of said openings; and a low pressure gage, an outlet nipple and a blowpipe supporting hook coupled in the remaining threaded openings, the low pressure gage, the outlet nipple and the hook being interchangeable in the openings, to enable the shape of the pressure reducing valve to be changed to conform to the peculiarities of different kinds of gas supplying containers.

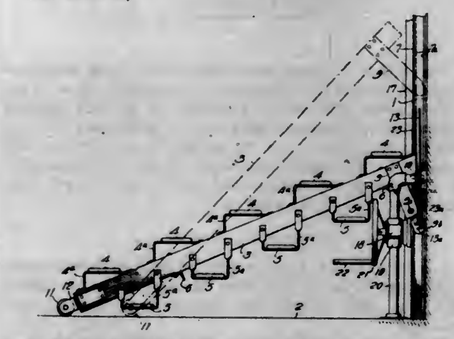
1,781,055. INDICATING DEVICE FOR CARRIERS. ROBERT L. DUDLEY, San Francisco, Calif. Filed Jan. 7, 1929. Serial No. 330,873. 3 Claims. (Cl. 40—68.)

1. An indicating carrier comprising in combination with a hollow tubular casing, a plurality of rotatable rings mounted on the casing, each ring being provided with a series of numbers or characters, a band secured to the casing and extending over the parts of the rings having the numbers or characters thereon, the said band being provided with apertures therein through which certain numbers or characters on the rings are visible, and means engageable with the rings for normally maintaining the rings in fixed positions.



1,781,056. INDIVIDUAL-PAN-SUPPORTING DEVICE. JULES H. ELDER, Memphis, Tenn. Filed Mar. 6, 1930. Serial No. 433,770. 1 Claim. (Cl. 53—1.)

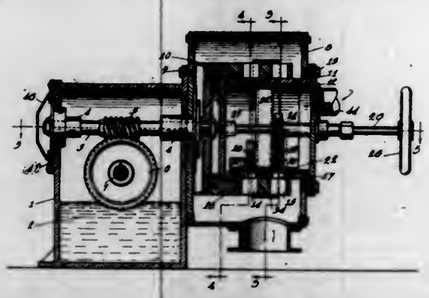
A device for supporting a plurality of individual cooking receptacles, comprising a pair of annular frames disposed in superposed relation, a handle projecting from the upper one of said frames and forming an integral



continuation thereof, a lattice like frame structure disposed vertically between and secured to said frames to maintain the same in spaced relation, and a plurality of connected annular frames disposed in the same plane as and within the upper one of the first mentioned frames, each of said last mentioned frames being designed to support a pan.

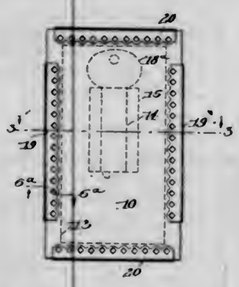
1,781,057. STEAM BOILER. GUSTAVE WALFRID ELMWALL, New York, N. Y. Filed Mar. 7, 1927. Serial No. 173,362. 6 Claims. (Cl. 122—32.)

2. In a steam generator, a casing, superposed partitions in the casing dividing the interior of the same into a heater chamber, a liquid chamber, an intermediate chamber and a superheater chamber, tubes extending through the liquid chamber, connecting a pair of said partitions and placing the heater chamber in communication with said intermediate chamber, a heater base arranged in the heater chamber and provided with heating projections which extend into said tubes, a pipe connecting the upper portion of the liquid chamber to the super-heater chamber, a steam outlet for the super-heater chamber, a conduit extending through the superheater chamber and connected to the upper one of said partitions, said conduit communicating with the intermediate chamber, a coil arranged exteriorly of the casing and communicating with said conduit, a feed water drum enclosing the coil, means for introducing feed water into the drum, feed water transfer means placing the drum in communication with the liquid chamber, and means including a pump for feeding fluid from the coil into said heater chamber.



1,781,058. MOVABLE BLEACHER. FRANK B. FITZPATRICK, Holyoke, Mass., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed July 20, 1929. Serial No. 379,791. 5 Claims. (Cl. 189—1.)

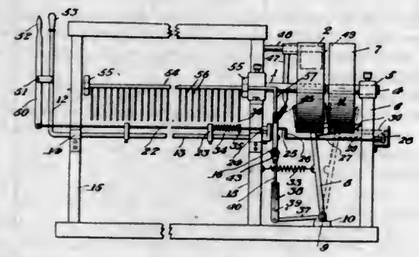
1. Folding bleachers comprising vertical guides, a bleacher frame comprising rigidly connected stringers,



seat members carried by said stringers arranged in stepped relation thereon, means slidably connecting one end of said frame to said guides, and means for rigidly supporting said slidably connected end at a distance from the floor to cause said seat members to lie in substantially horizontal position.

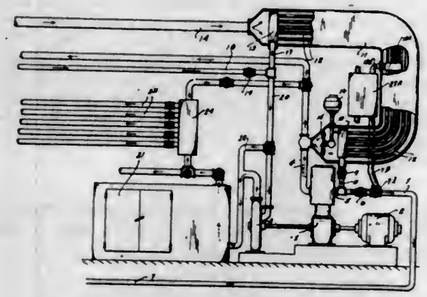
1,781,059. TURBINE. STANISLAV HACKENBERG, San Francisco, Calif., assignor of one-half to Nafanaiel Hackenberg, San Francisco, Calif. Filed June 14, 1929. Serial No. 371,037. 5 Claims. (Cl. 253—81.)

1. In a turbine engine, a revolvably mounted drum slotted to present two parallel series of blades inclined in opposite directions, a fixed cylinder serving as bearing for the drum and having two series of perforations registering with said blades, means for discharging a pressure medium through said perforations against the blades and means for rendering either series of perforations and blades inactive, including means for adjusting the port area of each series of perforations.



1,781,060. SAFETY RECEPTACLE FOR SMALL ARTICLES. WILLIAM R. HILL and WILLIAM F. DIESEL, Rochester, N. Y., assignors to Sargent & Greenleaf, Inc., Rochester, N. Y., a Corporation of New York. Filed Apr. 4, 1928. Serial No. 267,406. 10 Claims. (Cl. 229—68.)

1. An article holding receptacle of the class described comprising oppositely disposed walls having means binding their edges together in a manner to prevent opening and resealing of the receptacle without indication thereof, holding means within the receptacle for the article and a wrapper for the article supported by the holding means, said wrapper being constructed of material impervious to the rays of an X-ray machine.

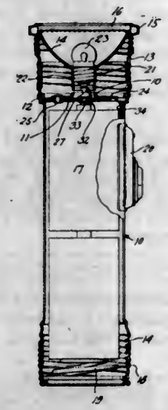


1,781,061. SAFETY ATTACHMENT FOR COTTONSEED LINTERS. PAUL HONEYCUTT, Mooresville, N. C. Filed Nov. 22, 1929. Serial No. 409,131. 5 Claims. (Cl. 19—164.)

1. In a cotton linter, the combination with the saw cylinder drive shaft, a fixed and a loose pulley thereon, a lever for adjusting the breast of the linter, and a belt shifting lever for shifting the drive belt from one to the other of said pulleys, a disk rotatable with the rocking movement of the breast adjusting lever, having an opening therein, a hand lever mounted for rocking movement upon and relatively close to the breast adjusting lever, a rod slidably mounted and pivotally connected to the second mentioned lever, the rod having a portion engageable in said opening, and means urging the rod in the direction of the disk whereby to be engageable at its said portion

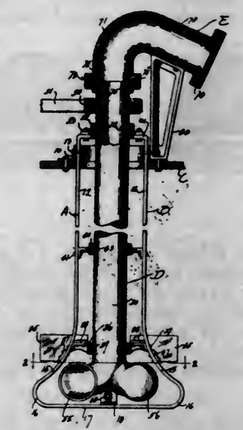
in the opening in the disk, whereby to hold the head against rotation, and operative connection between the disk and the belt shifting lever for effecting movement of the lever to shift the belt upon the rotation of the disk, whereby, when the hand grips of the first and second mentioned levers are both grasped, and both levers are swung in unison, the said portion of the said rod will be disengaged from the said opening and the disk will be permitted to rotate to effect coaction of the lever to shift the belt to release the pulley.

1,781,062. THERMAL PLANT. JOHN D. HOUSTON, Prineville, Oreg. Filed Nov. 15, 1926. Serial No. 148,562. 1 Claim. (Cl. 257—9.)



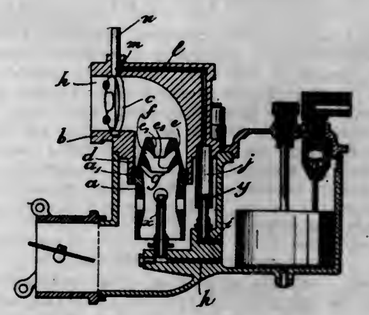
In thermal plants, means for compressing the air for raising the temperature thereof, means for utilizing the heated compressed air for heating normal air a portion of which is to be subsequently compressed, thereby causing the temperature of the thereafter compressed air to constantly rise, means for supplying the normal air and for forcing the heated normal air into the compressor, means for expanding the compressed air after providing heat to return a portion of the power required for compression thereof, means for utilizing the expanded air for refrigeration, means for variably mixing the expanded air, after its having been used for refrigerating purposes, with a portion of the normal air warmed by the heated compressed air, for heating and ventilating purposes; and means for utilizing another portion of the normal air heated by the compressed air for heating and ventilating purposes other than heretofore set forth.

1,781,063. ADJUSTABLE SHORE. HANS P. JESSEN, Omaha, Nebr. Filed Nov. 5, 1927. Serial No. 231,295. 1 Claim. (Cl. 248—2.)



An adjustable shore, comprising a post section, adjustable strip supporting means mounted on said post section, a foot plate for supporting the post section and comprising a relatively flat sheet metal body portion of substantially rectangular configuration and having a pair of its oppositely disposed corners upturned for engagement against the opposite sides of the post, a bolt detachably engaging through said upturned corners of the foot plate and through the post for anchoring the latter to the foot plate, the intermediate corners of the foot plate having apertures therethrough adapted to receive nails and the like, and a base section for engagement beneath said foot plate and comprising a pair of oppositely inclined contacting members adapted for overlapping engagement to support the foot plate and the post section, said base section adapted to be moved into superposed relation to raise the foot plate and the post section, and said nails in the opening of the foot plate adapted to engage said base section for holding the same when adjusted.

1,781,064. ADJUSTABLE LAMP SOCKET. HOMER W. JONES, Newark, N. J., assignor to National Carbon Company, Inc., a Corporation of New York. Filed May 22, 1928. Serial No. 279,761. 7 Claims. (Cl. 240—10.5.)

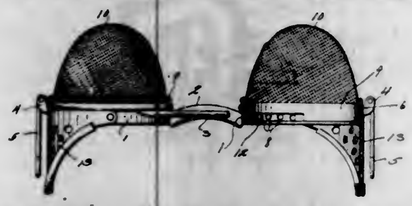


2. In a flashlight, a lamp holder comprising a socket and a base joined by a plurality of pliable portions adapted for being bent in pairs to provide relative movement between said base and said socket, one pair of said pliable portions being adapted for providing movement in different directions from those provided by the other pair.

1,781,065. ROTARY PUMP. HERMAN P. LEWIS, Tarentum, and EMERSON S. PETERS, New Sheffield, Pa. Filed Nov. 28, 1928. Serial No. 322,423. 2 Claims. (Cl. 103—100.)

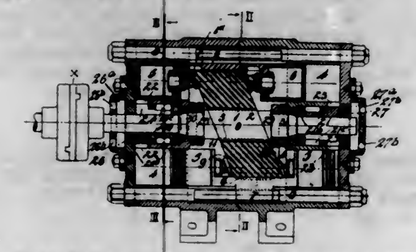
1. A rotary pump, comprising a vertical open framework enlarged at its lower end to provide a base portion, a vertically disposed pipe mounted in bearings in the framework to turn therein, means for rotating the pipe, a stationary take-off connection coupled to the upper end of the pipe, a step bearing in the base portion of the framework for supporting the pipe, and a pair of intake extensions flaring radially from the lower end of the pipe in said base portion of the framework and being turned and opening in the direction of rotation of the pipe.

1,781,066. CARBURETOR. PAUL MEUNIER, Fleurus, Belgium. Filed May 19, 1927, Serial No. 192,715, and in France and Luxemburg Dec. 13, 1926. 1 Claim. (Cl. 261—75.)



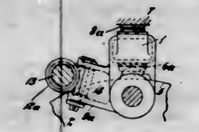
In a carburetor for internal combustion engines, a diffuser formed by a Venturi tube, a cross head of exterior truncated form surmounting this tube, and having a central, widened opening in the top, said head also having its wall thickened and overhanging on the inner side and provided with annular passages, one above another, said bent passages extending upwardly and outwardly and narrowing from the interior toward the conical surface of the said head.

1,781,067. GOGGLES. JOSEPH MICHELI, Berwind, Colo. Filed Jan. 19, 1929. Serial No. 333,632. 2 Claims. (Cl. 2—14.)



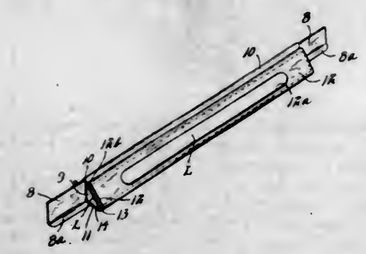
1. Goggles comprising a pair of rims each of substantial width and each having an air vent aperture formed there-

through, means for maintaining said rims in position before the eyes of a wearer, said rims each having a groove about the inner face and adjacent the forward edge thereof and a notch opening from the forward edge into said grove, a frame insertable into each rim from the front, a pin carried by each frame adapted to pass through said



notch into the holding rim groove, and a substantially parabolic foraminous screen carried by and extending forwardly of each frame, each of said screen carrying frames having an opening formed therethrough conforming to the aperture in the adjacent rim and aligning therewith when the frame is rotated to a predetermined position, to permit the ventilating of the interior of the screen.

1,781,068. FLUID MOTOR AND PUMP. ANTHONY GEORGE MALDON MICHELL, Melbourne, Victoria, Australia, assignor, by mesne assignments, to Michell-Crankless Engines Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 20, 1922, Serial No. 545,193, and in Australia Apr. 29, 1921. 4 Claims. (Cl. 121—119.)



1. In a device of the character described, a shaft, a swash plate thereon, a plurality of angularly spaced cylinders parallel to said shaft and having suitable ports, pistons in the cylinders coacting with opposite sides of the shaft through said swash plate, and valves on the shaft controlling the distribution of fluid to and from the cylinders through the ports, said ports being dimensioned to obtain fluid pressure on said shaft through said valves substantially compensating the tilting moment exerted by the pistons on the swash plate and therethrough on the shaft and valves.

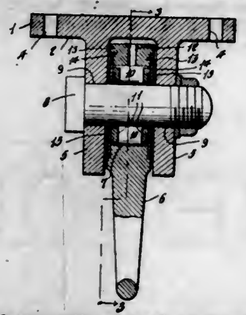
1,781,069. MECHANISM FOR THE INTERCONVERSION OF RECIPROCATING AND ROTARY MOTION. ANTHONY GEORGE MALDON MICHELL, Melbourne, Victoria, Australia, and JOSEPH PEARSON POSTLETHWAITE and THOMAS SMITH, London, England, assignors, by mesne assignments, to Michell-Crankless Engines Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 17, 1927, Serial No. 176,146, and in Great Britain Mar. 18, 1926. 14 Claims. (Cl. 74—14.)

1. In mechanism for the interconversion of reciprocating and rotary motion, an oblique swash plate, a reciprocating member having engagement with said swash plate, bearing surfaces on the reciprocating member, a fixed guide surface co-acting with one of said bearing surfaces and the other of said surfaces engaging the periphery of the swash plate, said surfaces resisting inward and outward radial forces imposed on the reciprocating member by the swash plate, a link pivotally connected to the reciprocating member, and a fixed guide member with which said link slidably engages said guide member resisting tangential forces imposed upon the reciprocating member by the swash plate.

1,781,070. INDEX DEVICE. HARRY VERLIN MITCHELL, Danville, Ill., assignor of one-half to Robert C. Dennett, Freeport, N. Y. Filed July 26, 1929. Serial No. 381,350. 3 Claims. (Cl. 40—23.)

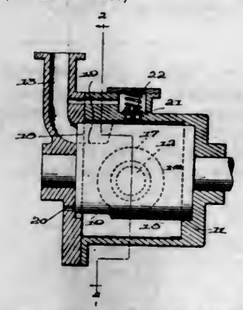
1. An index device constructed from a single piece of sheet material comprising a clip element of substantially inverted U-shape cross section and adapted to engage the edge of a wall, a connecting element extending outwardly from said clip element and a label holding element extending upwardly from said connecting portion and inclined relatively thereto, the upper edge of said label holding member being disposed in juxtaposition to the upper edge if said clip element, and comprising inner and outer plates spaced apart to receive a label.

1,781,071. TYPEWRITER. EDWARD H. MOYLE, Los Angeles, Calif. Filed Mar. 30, 1925. Serial No. 19,433. 1 Claim. (Cl. 197—103.)



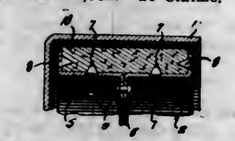
A resilient keyhead rigidly formed by casting to a slotted fastening means for fastening to a key bar of a key operating machine, means in the resilient keyhead at its operating end for inserting a rubber plate having character marks, said plate arranged so that the air can be impounded underneath.

1,781,072. SUSPENDING HOOK. CLYDE NEIDHAMMER, Lemoyne, Pa., assignor of one-half to David A. Grissinger, Lemoyne, Pa. Filed Aug. 2, 1928. Serial No. 297,027. 1 Claim. (Cl. 248—64.)



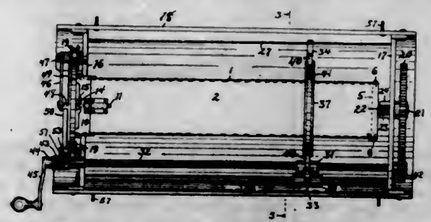
A suspending device, comprising an attaching plate, spaced ears on said plate, a pivot pin engaging said ears, a hook member having an opening to receive said pin, roller bearing members engaging the pin and the wall of the opening, said hook member having recesses on the opposite sides thereof surrounding said opening, washer plates engaging in said recesses and having openings to receive the pin, and the wall of said opening having a lubricating opening therein communicating with the first

mentioned opening normally protected by the plate, and washers in contact with the first mentioned washers and



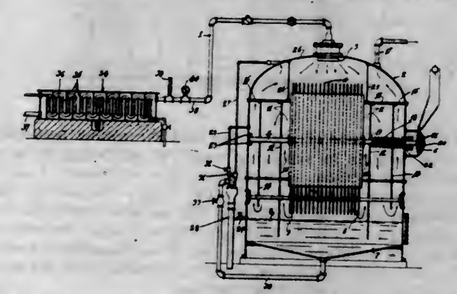
said ears, the last mentioned washers functioning dually to maintain the first mentioned washers seated and to absorb leaking lubricant.

1,781,073. ROTARY COMPRESSOR. HOLGER NIELSEN, Beaver Falls, Pa., assignor to Keystone Refrigerating Corporation, Beaver Falls, Pa., a Corporation of Pennsylvania. Filed June 16, 1928. Serial No. 286,035. 15 Claims. (Cl. 230—153.)



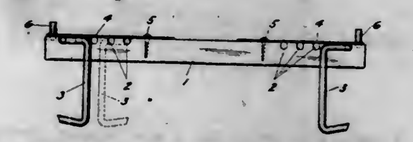
3. A rotary compressor having a chamber provided with inlet and outlet passages and ports spaced angularly with respect to each other, the outlet port being disposed in an end wall of said chamber, a rotor eccentrically mounted within said chamber to close said outlet port and contacting with its side wall between said inlet and outlet ports to prevent passage of fluid therebetween, said rotor having blade means adapted to contact with the side wall of the chamber throughout the compression period, said rotor closing said outlet port while the pressure within the chamber is being built up to substantially the pressure in the discharge passage, to prevent back flow of fluid into said chamber from the discharge passage, said rotor being provided with a groove positioned to uncover said outlet port when the pressure within the chamber reaches substantially the pressure in the discharge passage, for discharging the compressed fluid.

1,781,074. BRAKE MEMBER. RAYMOND J. NORTON, Washington, D. C., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 7, 1928. Serial No. 324,362. 10 Claims. (Cl. 188—259.)



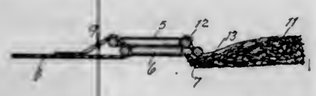
1. A friction facing comprising zones of fibrous material some of which are impregnated with an infusible and others with a fusible synthetic resin.

1,781,075. BUTTER-CUTTING MACHINE. HENRY J. OUTCELT, Warsaw, Ind. Filed Aug. 19, 1929. Serial No. 386,746. 5 Claims. (Cl. 31—20.)



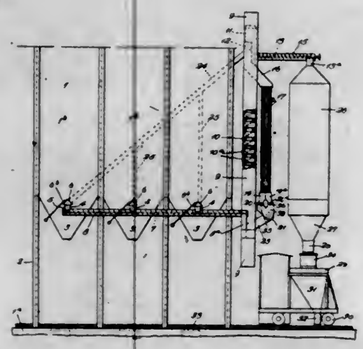
1. In a butter cutting machine, a support having parallel guides; a butter bar container one end of which is open, rotatably and removably mounted in said support, and having opposite longitudinal slots; a bracket slidably mounted on said guides; a feed-screw with which said bracket is detachably engaged and actuated thereby; a plunger longitudinally movable in said container; a ring encompassing the container, connected through the slots therein with said plunger, and detachably engaged by said bracket; means within the open end of said container to cause a butter bar when extruded through its open end to become sliced longitudinally; a stationary wire disposed adjacent the open end of the container to cause the extruded parts of said bar to be sliced transversely to form pats; a stripper for deflecting said pats as formed; and driving means relating the stripper, the feed-screw and the container, to effect operation thereof concurrently.

1,781,076. METHOD AND MEANS OF DEHYDRATING OIL. WILLIAM L. PALMER, Long Beach, Calif., assignor, by mesne assignments, to National Dehydrator Corporation, a Corporation of Nevada. Filed Apr. 4, 1927. Serial No. 180,713. 13 Claims. (Cl. 196—3.)



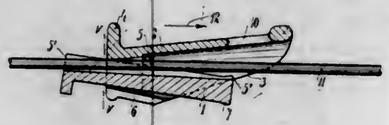
6. In a method of dehydrating hydrocarbon oils, the step imparting a relatively rapid short oscillatory motion to a flowing stream of oil-containing water.

1,781,077. BATTERY LIFTER. JOHN PETERSEN, Durant, Iowa. Filed Nov. 29, 1929. Serial No. 410,339. 5 Claims. (Cl. 294—26.)



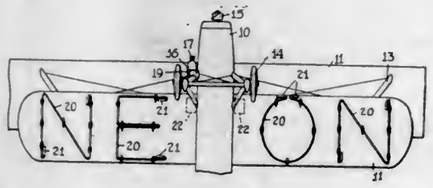
1. A battery lifter comprising a bar having notches in one face thereof, resilient means secured to said bar and lying along said face over said notches, U-shaped supporting members having their bent portions supported in selected ones of said notches and held against rotation in said notches by the resilient means pressing thereagainst.

1,781,078. FASTENING DEVICE. MARGUERITE H. PLACE, San Francisco, Calif. Filed May 27, 1929. Serial No. 366,503. 1 Claim. (Cl. 24—197.)



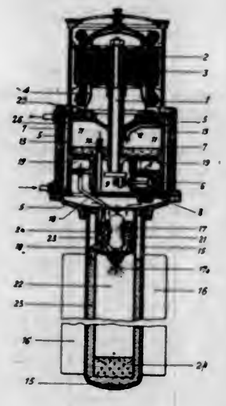
In a device of the character described, a ring, a second ring superimposed on said first mentioned ring, means for maintaining said rings in superimposed position but slidable upon the other, a button formed on said first mentioned ring, said button extending away from said superimposed ring whereby material encircling said superimposed ring and underlying said first mentioned ring will be engaged by said button.

1,781,079. METHOD FOR HEATING COAL OR THE LIKE. FRANZ PUENING, Pittsburgh, Pa., assignor to The Koppers Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Sept. 3, 1927. Serial No. 217,488. 10 Claims. (Cl. 34—24.)



1. The process of preheating coal for coking purposes, which consists in supplying coal and subjecting it to a preheating medium at a temperature in excess of 212° and ranging to substantially 600° Fahr., discharging the preheated coal, and utilizing the sensible heat of the preheated coal within said temperature range for evaporating the moisture from wet coal being supplied for subjection to said preheating medium in advance of its subjection to said preheating medium.

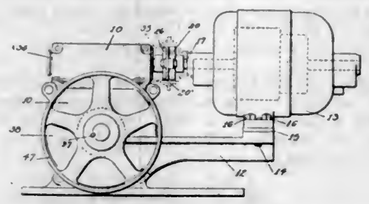
1,781,080. CABLE GRIP. JOSEF RING, Polerady, Czechoslovakia. Filed Mar. 27, 1930, Serial No. 439,422, and in Czechoslovakia Feb. 26, 1930. 6 Claims. (Cl. 24—136.)



2. A cable grip comprising a core member having a longitudinal tapered V-groove, and a sleeve member arranged rotatably and slidably upon said core member and formed with a longitudinal slit adapted to admit the cable into the groove, the two members being adapted, on longitudinal relative displacement, to clamp the cable in the groove.

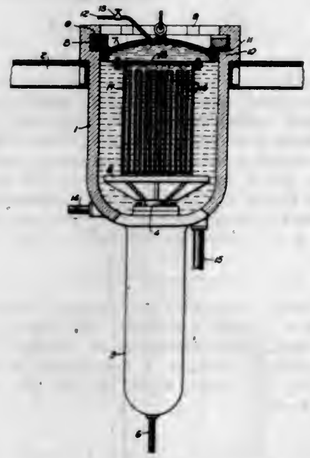
1,781,081. ELECTRICAL AERIAL ADVERTISING SIGN. ROLAND ROHLFS, Forest Hills, N. Y., assignor, by direct and mesne assignments, to Aerial Advertising, Inc., New York, N. Y., a Corporation of New Jersey. Filed Aug. 8, 1925. Serial No. 48,933. 3 Claims. (Cl. 40—127.)

2. The combination, with a power driven aeroplane, of an electrical aerial advertising sign or the like comprising one or more luminous tube lights, each consisting of a single length of translucent tubing shaped to conform either in whole or in part to the outline of the letter or other character desired to be shown, vibration shock absorbing means for fastening said tube lights on the under side of the wings of said aeroplane, and an electrical generator mounted on said aeroplane and electrically connected with said light or lights for generating sufficient current to operate it or them.



1,781,082. ELECTRICALLY-ACTUATED REFRIGERATING MACHINE. EDUARD RÜEGGER, Zurich, Switzerland, assignor to the Firm Aktiengesellschaft der Maschinenfabriken Escher Wyss & Cie., Zurich, Switzerland. Filed May 19, 1927, Serial No. 192,648, and in Switzerland May 28, 1926. 2 Claims. (Cl. 172—36.)

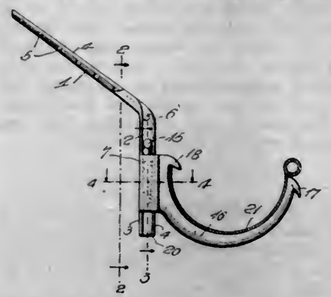
1. An electric motor having a rotor and a stator, a metal capsule, having a portion of reduced thickness in the air gap between the rotor and stator, said metal being a steel alloy containing 9% to 22% chromium, 33% to 5% nickel and less than 1% carbon and annealed after manufacture, of low magnetic properties, high specific strength, ductile, resistant to molecular disintegration and highly resistant to corrosion and acid attack.



1,781,083. POWR-DRIVING UNIT. HENRY J. SCHMICK, Louisville, Ky. Filed Oct. 5, 1929. Serial No. 397,652 2 Claims. (Cl. 74—36.)

1. A portable reduction unit for use in combination with a source of power comprising a two-part housing having bearings for a driving shaft, a bracket integrally secured to each said housing part for supporting the source of power with its axis in alinement with the axis of said driving shaft, a driven shaft mounted in bearings in said housing parts and supporting a power take off

device, mating low loss reduction gearing elements secured on said driving and driven shafts in cooperative relationship, and a flexible coupling on said driving shaft adapted to make an axially loose and angularly restrained nonrigid connection with said source of power.

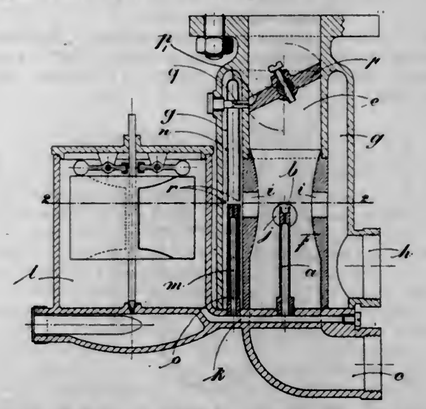


1,781,084. PROCESS FOR MAKING LAMINATED GLASS. JAMES H. SHERTS, Brackenridge, and ROBERT E. HAMILL, Tarentum, Pa., assignors to Duplate Corporation, a Corporation of Delaware. Filed Oct. 18, 1929. Serial No. 400,682. 8 Claims. (Cl. 49—81.5.)

3. A process of treating a laminated plate made up of alternating sheets of glass and cellulose plastic having their opposing surfaces secured rigidly and solidly together, which consists in submerging the plate in a bath of pyroxylin plastic solvent in direct contact with said plate throughout, raising the temperature of the bath to a point at which the plastic is softened and applying pressure to the bath.

1,781,085. GUTTER SUPPORT. DUDLEY N. SKINNER, Linwood, Pa. Filed June 22, 1929. Serial No. 372,967. 1 Claim. (Cl. 108—29.)

A gutter support comprising a bracket having a portion thereof arranged to be secured to the overhanging edge of a roof and a depending portion thereof extending in a substantially vertical plane, said depending portion having rack teeth formed on one face thereof and a groove disposed in the opposite face thereof, a semi-circular member providing a gutter support, said semi-circular member terminating in a pair of parallel extending walls at one end thereof providing a vertically disposed gap therebetween, the interior surface of one of said walls having rack teeth formed thereon and the interior surface of the other of said walls having a longitudinal groove formed therein, and a tapered pin member insertable between the grooves on the surface of said depending member and on the interior face of one of the walls carried by said



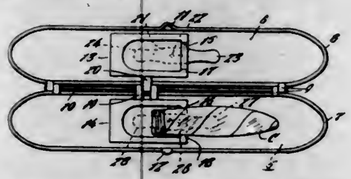
semi-circular member for selectively securing said semi-circular member in position with respect to said bracket when said member is moved laterally toward said depending portion with the walls of said member embracing opposite sides of the depending portion of said bracket.

1,781,086. METHOD OF CONSTRUCTING FURNITURE. FRANK L. SMITH, Columbiana, Ohio. Filed Mar. 29, 1928. Serial No. 265,711. 8 Claims. (Cl. 155—181.)

3. In the method of upholstering furniture the steps which consist in stitching an edging strip along a longitudinal edge thereof to a seat cover in spaced relation from the edge of the seat cover, overturning the edging with stitching acting as a hinge into overlying relation upon the margin of the seat, and transversely stitching the edging to the cover.

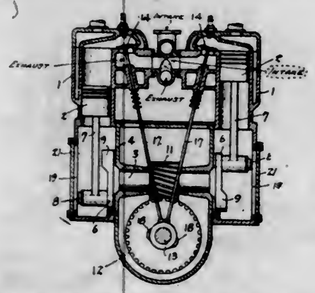
1,781,087. CARBURETOR. JOSEPH STAPELLE, Brussels, Belgium, assignor to Paul Meunier, Fleurus, Belgium. Filed June 20, 1924, Serial No. 721,254, and in Belgium June 26, 1923. 2 Claims. (Cl. 261—41.)

1. A carburetor comprising a body having an outer wall and an inner wall spaced from the outer wall to



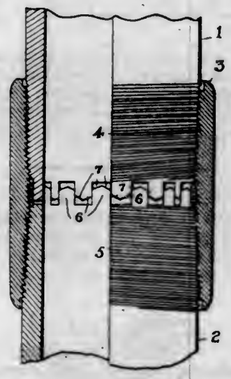
form an auxiliary air chamber therebetween and also having a main air inlet opening communicating with the lower end of the mixing chamber formed by said inner wall, and an air inlet opening communicating with the said auxiliary air chamber, a fuel supply nozzle arranged in said mixing chamber, the wall of said mixing chamber having air inlet openings leading from the auxiliary air chamber, an idling fuel supply nozzle arranged in said auxiliary mixing chamber, a tube in said auxiliary mixing chamber communicating at its upper end with the mixing chamber and having its lower end arranged around and spaced from said idling fuel supply nozzle and provided with air intake openings.

1,781,088. RADIODETECTOR. CHARLES K. STROBEL, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 27, 1928. Serial No. 308,689. 5 Claims. (Cl. 250—31.)



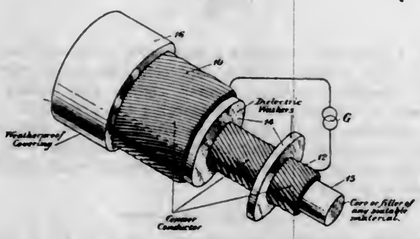
1. A radio detector comprising a bar of cuprous oxide having copper films formed on two separate portions of the bar having different areas.

1,781,089. CIGAR CASE. TETSUO TOMONAGA, Deal, N. J. Filed Sept. 19, 1929. Serial No. 393,733. 5 Claims. (Cl. 206—41.)



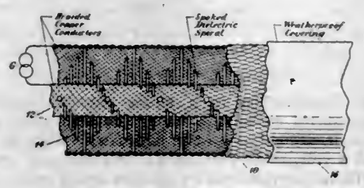
1. In a device of the class described, the combination of an outer casing and an inner receptacle, said outer casing comprising a cup-shaped bottom section and a cup-shaped top section, said inner receptacle comprising a pair of complemental semi-cylindrical sections, one section of said inner receptacle adapted for position in the bottom section of the outer casing, and the other section of said inner receptacle adapted for position in the top section of said outer casing, hinge means for securing the sections of said outer casing, said hinge means including means for slidably mounting the sections of the inner receptacle in their respective sections of said outer casing.

1,781,090. INTERNAL-COMBUSTION ENGINE. ELMER E. WICKERSHAM, San Leandro, Calif. Filed Aug. 8, 1928. Serial No. 298,323. 5 Claims. (Cl. 123—52.)



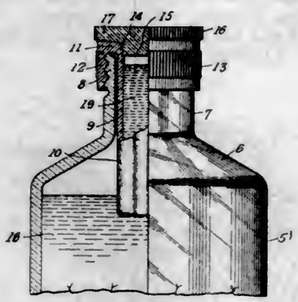
1. An engine comprising a pair of parallel cylinders having valve chambers pointing toward one another and intake and exhaust manifolds passing therebetween, pistons reciprocable in the cylinders, a crank shaft in the plane of the cylinders, connecting rods for the pistons engaged with opposite ends of the crank shaft, a drive shaft arranged transversely to the crank shaft, a driving connection between the two shafts, valves in the chambers and a direct driving connection between the drive shaft and the valves.

1,781,091. PIPE JOINT. JOHN M. WILSON, Pittsburgh, Pa., assignor to The National Supply Company, Toledo, Ohio, a Corporation of Ohio. Filed July 19, 1924, Serial No. 726,952. Renewed Jan. 24, 1928. 4 Claims. (Cl. 58—146.)



1. In a rotary stem for drilling wells, two axially alined pipes having externally tapered and oppositely threaded ends provided with terminal interlocking teeth, whose interlocking sides are substantially parallel with the pipes, and a coupling screwed on the ends of the pipes and having its ends internally oppositely tapered and threaded to correspond to the tapers and threads on the ends of the pipes, the free ends of the teeth being beveled.

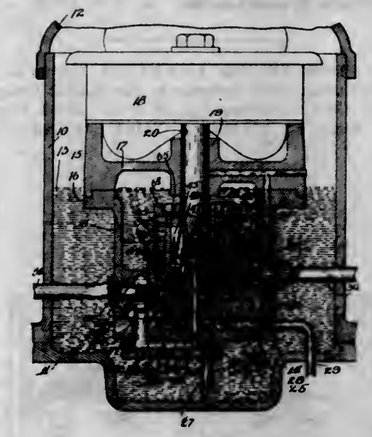
1,781,092. CONCENTRIC CONDUCTING SYSTEM. HERMAN A. AFFEL, Ridgewood, and ESTILL I. GREEN, East Orange, N. J., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed May 23, 1929. Serial No. 365,522. 4 Claims. (Cl. 173—13.)



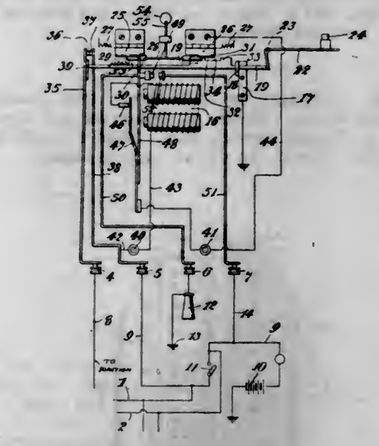
1. In a conducting system for the communication of intelligence, two conductors connected one as a return for the other, each conductor being in the form of a shell of conductive material and the two conductors being arranged concentrically one inside the other, means to prevent moisture from entering the interior of the outer conductor, the inner conductor being formed by winding a plurality of conducting filamentary structures about a core, and insulating means for separating the conductors electrically and for maintaining them in concentric relation, said insulating means being so formed that the dielectric between adjacent surfaces of the conductors will be principally gaseous, and said outer conductor being formed of a plurality of conducting filamentary structures wound about said insulating means.

1,781,093. CONCENTRIC CONDUCTOR SYSTEM. HERMAN A. AFFEL, Ridgewood, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 23, 1929. Serial No. 365,523. 6 Claims. (Cl. 173—13.)

1. In a conductive system for the communication of intelligence, two concentric conductors of cylindrical form, and insulating means for separating the conductors electrically and maintaining them in concentric relation, said means comprising spoke-like members of dielectric material passing transversely through the inner conductor so that successive spoke-like members are arranged spirally along the conductor.



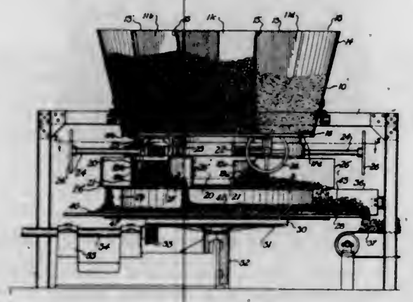
1,781,094. BOTTLE STRUCTURE. ARTHUR S. ALLEN, New York, and RUDOLPH RUZICKA, Dobbs Ferry, N. Y., assignors to The Packer Manufacturing Co., Inc., New York, N. Y., a Corporation of New York. Filed Dec. 12, 1928. Serial No. 325,502. 3 Claims. (Cl. 215—6.)



2. A container having a tubular neck, a tubular chamber suspended therein, a flanged annulus integral with said chamber having threaded connections with the exterior of said neck to make liquid tight contact with its rim, said chamber having a concavely bevelled upper surface and being internally threaded, a plug cap engageable in the threads of said chamber and a flange fitted to engage the bevelled upper surface thereof.

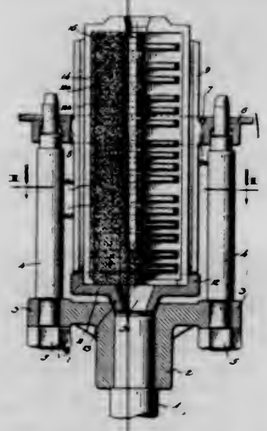
1,781,095. ROTARY COMPRESSOR. HOWARD E. BLOOD, Detroit, Mich., assignor to Norge Corporation, a Corporation of Michigan. Filed Nov. 26, 1928. Serial No. 321,778. 8 Claims. (Cl. 230—140.)

6. A compressor comprising a shaft, an eccentric cylindrical rotor formed thereon, an annular cylinder enclosing said rotor and having an internal diameter greater than the diameter of the rotor, said cylinder having an inturned flange closing one end of the space between the rotor and the cylinder, an outturned flange on the other end of said cylinder, a cover making sealing contact with the rotor and said out-turned flange to complete the enclosure of the space between the rotor and the cylinder, a partition blade carried by said rotor and making contact with the cylinder, and a body having a journal for said shaft, there being a recess in said body adapted to maintain said cylinder concentric to the shaft.



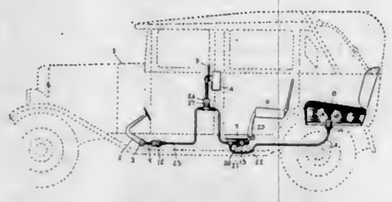
1,781,096. ALARM APPARATUS. JOSEPH ARTHUR BOLDUC, Montreal, Quebec, Canada, assignor to Automobile "Lock-Alarm" Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 11, 1926. Serial No. 80,403. 4 Claims. (Cl. 177—314.)

1. An alarm device for motor vehicles comprising a circuit including a source of current, a normally open manually operable switch, a normally closed switch carrying an armature, a magnet adjacent the last-named switch to be energized upon closing the circuit to attract said armature and open the latter switch, a second normally open switch in the circuit connected with the first-named switch and including a part supported for rectilinear sliding movement, a second circuit including an alarm and the source of current and a circuit closer engageable by the armature to be moved to closed position upon energization of the magnet, an ignition circuit including the source of current, the first-named switch, and a second normally closed switch having a member to be engaged by said slidable part and actuated to open position by movement of said slidable part in the first circuit to its closed position, manually operable means co-acting with said slid-



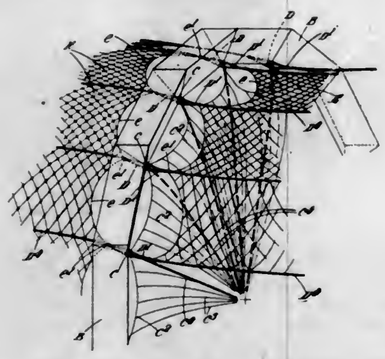
able part to move the same to circuit closing position, locking parts to hold said slidable part, and means to withdraw the locking parts to release said slidable part for movement back to open position.

1,781,097. DISK FEEDER AND MIXER. LOUIS C. BONNOT, Louisville, Ohio, assignor to The Bonnot Company, Canton, Ohio, a Corporation of Ohio. Filed July 22, 1929. Serial No. 379,963. 5 Claims. (Cl. 83—73.)



1. A disk feeder and mixer including a plurality of bins each adapted for containing a different material, a feeding disk mounted for rotation a substantial distance below the bins, a mixing disk mounted for rotation below the feeding disk, a spout extending between each bin and the feeding disk for discharging material from the bin onto the feeding disk, a scraper associated with each spout for scraping material discharged therefrom onto the mixing disk, and a scraper for mixing and scraping the material from the mixing disk.

1,781,098. METHOD OF AND MOLD FOR CASTING PISTON RINGS. ERNEST N. BRODERICK and THEOPHILES D. LUCIER, Detroit, Mich. Filed Dec. 20, 1926. Serial No. 155,845. 15 Claims. (Cl. 22—200.)

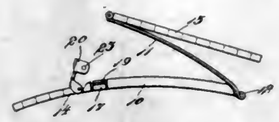


1. A mold for casting piston rings comprising a core having an annular channel formed therein and a pouring orifice formed within said channel, said channel having marginal extensions, and gates connecting said orifice exclusively with said marginal extensions.

1,781,099. MOTOR-VEHICLE-CONTROL APPARATUS. JAMES L. BROWNELL, Kalamazoo, Mich., assignor to Checker Cab Manufacturing Corporation, Kalamazoo, Mich. Filed Oct. 5, 1929. Serial No. 397,722. 7 Claims. (Cl. 180—82.)

1. The combination in a motor vehicle including a movable control element, a meter provided with a movable control element, a seat provided with a spring cushion, and a collapsible seat, of an actuated unit comprising a cylinder provided with a plunger and a return spring therefor, a locking pin carried by said plunger coacting with said control element for locking it in operative position, actuating units comprising cylinders provided with plungers, the plunger of one cylinder being operatively associated with said spring seat cushion and the other with said collapsible seat, a hydraulic connection for said actuating unit cylinders to said actuated unit cylinder, a control unit cylinder interposed in said connection between said actuating unit and actuated unit cylinders and provided with a plunger, and operating connections for said control unit cylinder plunger and said signal element of said meter.

1,781,100. RIGID AIRSHIP. CHARLES DENNISTON BURNEY, BARNES NEVILLE WALLIS, NEVIL SHUTE NORWAY, and JOHN EDWIN TEMPLE, Westminster, London, England, assignors to Airship Guarantee Company, Limited, London, England, a British Company. Filed Aug. 19, 1927, Serial No. 214,036, and in Great Britain Sept. 17, 1926. 2 Claims. (Cl. 244—3.)



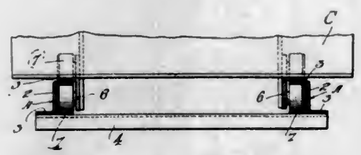
1. A rigid airship comprising in combination longitudinal girders and transverse frame members, bulkhead wiring connected to the said members, circumferential mesh wiring and strops connecting said circumferential mesh wiring to said members at each point of attachment of said bulkhead wiring.

1,781,101. EXTENSION DEVICE. EDWIN G. CARLSON, Riverside, R. I., assignor to Speidel Chain Co., Providence, R. I., a Firm composed of Frederic Speidel and Eugen Speidel. Filed Jan. 21, 1930. Serial No. 422,320. 7 Claims. (Cl. 24—71.)

1. In a bracelet extension device, end members hingedly connected together to permit nesting, strap securing

means at the free ends of said end members, one end member having a resilient latch, and a cover less than one-half the length of said members pivotally mounted on

said same end member extending over the free end of the other member when nested and releasably engageable with said latch to secure the members in nested relation.



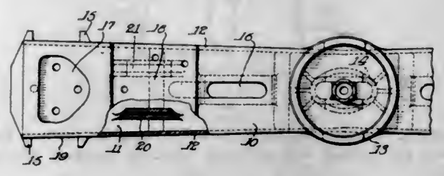
1,781,102. METHOD OF TREATING COAL. ERNEST VICTOR COLLINS, Jr., Brooklyn, N. Y., assignor to Delaware, Lackawanna & Western Coal Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 14, 1930. Serial No. 428,494. 1 Claim. (Cl. 44—6.)

The method of restoring the luster and improving the appearance of discolored coal which comprises treating it with a solution of ammonium persulphate.

1,781,103. METHOD OF TREATING COAL. ERNEST VICTOR COLLINS, Jr., Brooklyn, N. Y., assignor to Delaware, Lackawanna & Western Coal Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 14, 1930. Serial No. 428,495. 1 Claim. (Cl. 44—6.)

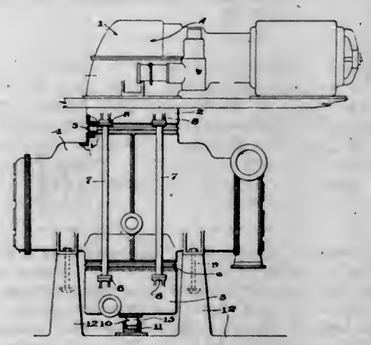
The method of restoring the luster and improving the appearance of discolored coal which comprises treating it with a solution of hydrochloric acid and titanium trichloride.

1,781,104. PORTABLE ELEVATOR. RUDOLPH DE LAMAR, New York, N. Y., assignor to Henry S. Germond, Jr., Bayonne, N. J. Filed Apr. 10, 1928. Serial No. 268,905. 3 Claims. (Cl. 187—9.)



1. An elevating apparatus comprising a vertical frame including a pair of spaced bars each having a web parallel to the web of the other and a pair of flanges extending in opposite directions at substantially right angles to said webs, a load-carrying platform having a set of rollers mounted to run on one flange of each bar, the rollers of each set being disposed at opposite sides of the respective flange, and means for raising and lowering said platform.

1,781,105. PREMIXED ASPHALT COMPOSITION AND PROCESS FOR PRODUCING THE SAME. JAMES SHELBY DOWNARD, Dallas, Tex. Filed Mar. 6, 1926. Serial No. 92,944. 8 Claims. (Cl. 106—31.)

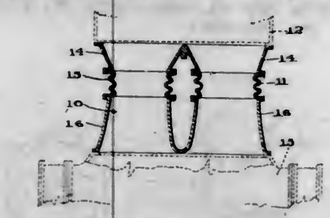


2. The process of manufacturing asphalt paving mixtures which comprises making a granulated mixture of asphalt and sand, cooling the same, treating the cooled mixture with a solution of calcium chloride in order to prevent adhesion of the granulated mixture during storage or transportation, and then changing the mixture to an adhesive mixture by reacting ammonium oxalate with the mixture before the mixture is formed into a roadbed.

1,781,106. TRUCK BOLSTER. HARRY C. DREINESS and GEORGE S. CHILES, St. Louis, Mo., assignors to Scullin Steel Company, St. Louis, Mo., a Corporation of Delaware. Filed Aug. 31, 1929. Serial No. 389,732. 6 Claims. (Cl. 105—230.)

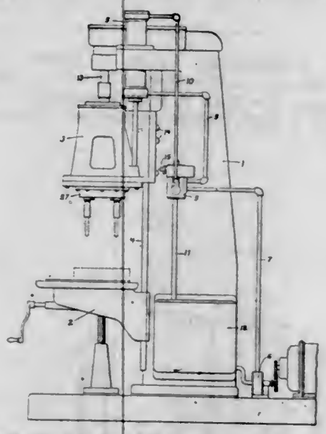
2. A bolster having a top surface and side walls, a portion for receiving side bearing stresses on said top surface, reinforcing members for said portion extending diagonally downward from said top surface towards the side walls, said reinforcing members being curved in horizontal section.

1,781,107. CONDENSER. JOHN F. GRACE, Arlington, N. J., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Mar. 8, 1928. Serial No. 260,016. 9 Claims. (Cl. 60—95.)



6. The combination with a turbine, of a condenser, an exhaust inlet member, an expansion joint connecting the inlet member to the condenser, a condensate reservoir, an expansion joint between the condenser and reservoir, the cross sectional areas of said inlet member, reservoir and expansion joints being substantially equal whereby downward atmospheric pressure on the exhaust casing of the turbine will be balanced by upward atmospheric pressure on the bottom of the condensate reservoir, rigid columns connecting the reservoir and inlet member, and a steady-bearing associated with said condensate reservoir to prevent lateral movement and permit vertical movement of the reservoir.

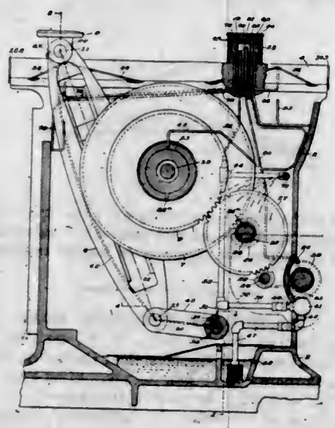
1,781,108. EXHAUST CONNECTION FOR CONDENSERS. JOHN F. GRACE, Arlington, N. J., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Dec. 12, 1928. Serial No. 325,624. 8 Claims. (Cl. 257—24.)



1. An exhaust steam inlet connection for surface condensers including a shell having its walls tapering in-

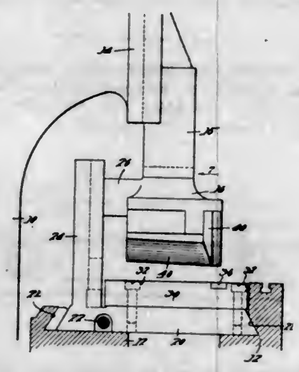
wardly for a predetermined distance from the inlet of the connection and tapering outwardly for a predetermined distance from the innermost point of the inward

tapering, and an expansion joint forming a junction between the inward and outward tapering portions of the walls.



1,781,109. SLIP SPINDLE DEVICE. ANTON A. HERZBERG, Waukesha, and HENRY O. SCHULTZ, Milwaukee, Wis., assignors to The National Automatic Tool Company, Richmond, Ind., a Corporation of Indiana. Filed Oct. 8, 1929. Serial No. 398,134. 3 Claims. (Cl. 77—24.)

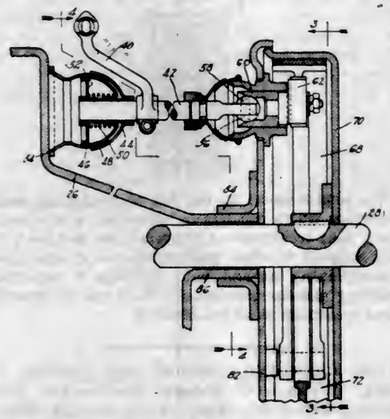
2. A multiple spindle drill head combining a frame; a plurality of spindles mounted therein; means for supporting said spindles comprising a plate secured to the lower portion of said frame and having openings therein; spindle bearing sleeves adjustable in said openings and rotatably supporting said spindles and holding them against axial movements, said bearing sleeves being removable whereby each spindle and its sleeve may be outwardly withdrawn through its respective opening; and a single screw device for each spindle having one portion engaging a portion of said sleeve and another portion threaded into said plate to adjust said sleeve, to lock said sleeve against rotation in said plate and to transmit to said plate the thrust incident to a drilling operation.



1,781,110. LUBRICATION SYSTEM FOR SHAPING MACHINES. HUGO W. JACOBSON, Arlington, N. J., assignor to Gould & Eberhardt, Newark, N. J., a Corporation of New Jersey. Filed Jan. 29, 1925. Serial No. 5,542. 18 Claims. (Cl. 184—6.)

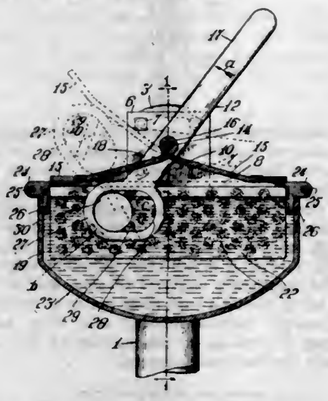
1. In a shaping machine, in combination, a frame providing spaced guideways; a ram slidingly fitted to said guideways; a crank mechanism; driving means for said crank mechanism; an oscillating lever actuated by said crank mechanism, said lever being operatively connected with said ram to reciprocate the latter; a link pivotally connected with one end of said lever; a lubricant reservoir; a pump and conduits for conveying lubricant from said reservoir to said guideways and to said driving means; and a second lubricant conduit connected with said pump and comprising sections carried by and bodily

movable with said link and lever for delivering lubricant under pressure from said pump to the pivotal connections of said lever and link.



1,781,111. CORNER-CUTTING MACHINE. GEORGE W. KLAUCKE, Worcester, Mass., assignor to Hobbs Manufacturing Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 13, 1929. Serial No. 378,017. 1 Claim. (Cl. 164—25.)

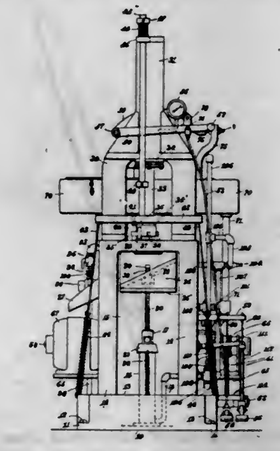
A corner cutting machine comprising a frame having a bed, and an upwardly projecting post, a base support slidably adjustable on said bed and having an upwardly projecting portion, an upper die holder having a lateral member slidable in a guideway in said upwardly projecting support portion, a die holder head slidable in a guideway in said frame post and detachably secured to said die holder, die bars for said holder, a lower die comprising a rectangular hollow base and die bars secured thereto, and means to detachably secure said rectangular hollow base to said sliding support.



1,781,112. BRAKING SYSTEM. LUDGER ELIZÉ LA BRIE, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 12, 1925. Serial No. 49,736. 2 Claims. (Cl. 188—76.)

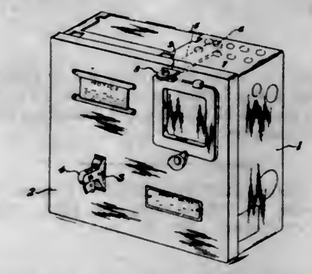
1. A vehicle having, in combination, a transmission and a power shaft extending rearwardly therefrom and driving the vehicle wheels through the differential, a drum rotating with the shaft, a pair of shoes anchored at one end of one shoe within the drum and so connected that the unanchored shoe moves with the drum to force the anchored shoe against the drum to retard movement of

the shaft in the direction it turns when the vehicle is moving forward, a third shoe anchored at the opposite end within the drum to retard movement of the shaft in the opposite direction, and means for forcing the third shoe and the unanchored shoe apart against the drum.



1,781,113. GOLF-BALL WASHER. EDWARD M. LAING, Highland Park, Ill. Filed July 13, 1928. Serial No. 292,491. 6 Claims. (Cl. 15—21.)

1. A golf ball cleaner comprising a receptacle for holding liquid, a pair of opposed brushes mounted in the receptacle, a member mounted for reciprocation between the brushes, the member being of less thickness than the diameter of a golf ball and formed with an opening of sufficient size to permit the ball to move bodily therein, and means carried by the member and extending over the opening at one side thereof for engaging the ball and causing it to rotate about an axis inclined at an angle to the path of bodily movement of the ball as the ball moves from one side of the opening to the other.

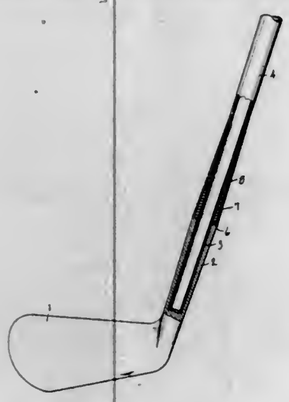


1,781,114. HYDRAULIC BROACHING MACHINE. FRANCIS J. LAPOINTE, Ann Arbor, Mich. Filed Oct. 7, 1927. Serial No. 224,632. 20 Claims. (Cl. 90—33.)

1. In a broaching machine, two alined hydraulic cylinders one above the other; a ram reciprocable in the upper cylinder; a plunger reciprocable in the lower cylinder provided with a broach receiving socket in its upper end; a work support provided with a vertical opening through which the broach extends; a treadle actuated mechanism for admitting oil to the lower cylinder be-

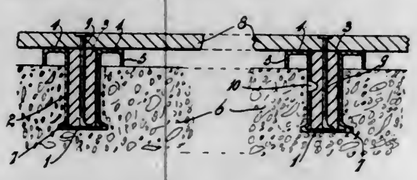
neath said plunger; means on the lower end of the ram for automatically seizing the upper end of the broach when said broach has been raised by said plunger; and treadle actuated mechanism for admitting oil to the upper cylinder to raise the ram when said broach has been gripped by said seizing means.

1,781,115. LATCH FOR SERVICE BOXES. JOSEPH C. LEWIS, Minerva, Ohio, assignor to Charles W. Keplinger, Canton, Ohio, receiver of The American Electric Switch Corporation, Minerva, Ohio, a Corporation of Delaware. Original application filed July 18, 1925, Serial No. 44,609. Divided and this application filed May 2, 1927. Serial No. 188,170. 1 Claim. (Cl. 292—202.)



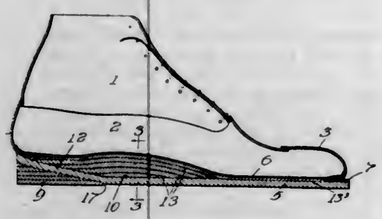
A fastener for a container closure member, comprising a flat strip latch bar adapted to be pivoted at one end to a side wall of the container and extending within the container parallel to the side wall, the other end of the latch bar being adapted to extend through a slot in a closure member of the container, and the latch bar being further adapted to be swung about its pivot parallel with said side wall to be located entirely inside of the container.

1,781,116. SHAFT FOR GOLF CLUBS AND THE LIKE. RICHARD A. LINK and CONRAD F. HARDERS, Detroit, Mich., assignors to L. A. Young Company, Detroit, Mich. Filed May 1, 1929. Serial No. 359,500. 3 Claims. (Cl. 273—80.)



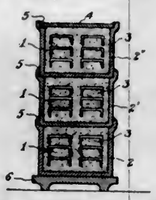
1. In a golf club, the combination of a metal head provided with a hosel having a socket therein the end of

the hosel lying in a plane at right angles to its axis, a tubular steel shaft fitting and fixedly secured within said socket metal to metal, and an upwardly tapered metal sleeve immovably fixed upon said shaft metal to metal with its lower end in spaced relation to the lower end of



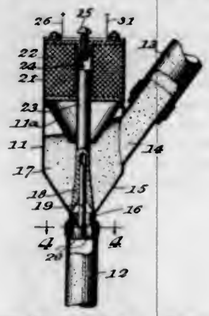
said shaft, the lower end of said sleeve lying in a plane at right angles to its axis and being in supporting abutting engagement with the end of the hosel, the abutting surfaces of the hosel and sleeve being of substantial extent radially.

1,781,117. FLOOR SLEEPER. JAMES E. MACKIE and AARON J. SMITH, Long Beach, Calif. Filed Mar. 3, 1930. Serial No. 432,732. 6 Claims. (Cl. 72—101.)



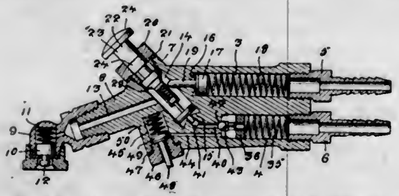
1. A sleeper or strip comprising an elongated metal case, said case being formed in the nature of a trough, a wooden strip secured in the case and depending ribs at the upper end of said case.

1,781,118. SHOE CONSTRUCTION. SAMUEL L. MARCUS, Chicago, Ill. Filed July 19, 1928. Serial No. 293,946. 12 Claims. (Cl. 36—76.)



1. In a shoe construction, an outer sole having a depressed arch portion, a series of connected layers filled into said arch portion, and a heel fitting the sole and conforming with the heel portion thereof, said depressed arch portion being flush with the bottom of the sole and heel.

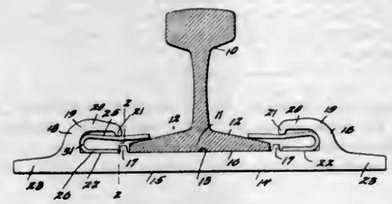
1,781,119. PROCESS OF PRODUCING MALLEABLE-IRON CASTINGS. LESLIE H. MARSHALL, Columbus, Ohio, assignor of one-half to Adin A. Grubb, Columbus, Ohio. Filed Apr. 27, 1928. Serial No. 273,208. 11 Claims. (Cl. 148—21.8.)



1. The improvement in the art of producing malleable iron castings which consists in subjecting white iron castings to a heat treatment at temperatures and for a period of time adapted to effect malleablization of said castings, and maintaining around said castings a non-oxidizing and etching gaseous atmosphere while the temperature of the heat treatment is above 1000° F.

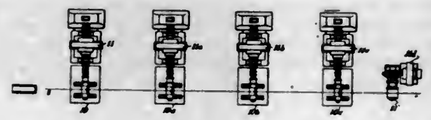
1,781,120. SANDING DEVICE FOR MOTOR VEHICLES. WILLIAM C. MARTIN, Boston, and WALLACE MARTIN, Watertown, Mass. Filed Apr. 29, 1929. Serial No. 358,835. 4 Claims. (Cl. 291—23.)

2. An attachment for vehicles to distribute skid preventing material consisting of a container for the anti-skid material having a tapered lower portion provided with a discharge outlet at its lower end, a valve which normally closes said outlet, a stem for said valve which extends upward through said container and means connected with said stem within the control of the operator to lift said valve at will and thereby permit the discharge of said skid preventing material through said outlet, said container being provided with baffle plates at its upper part and downwardly inclined toward said stem, said baffle plates being located above the portion of the container which holds the anti-skid material.



1,781,121. AIR TESTER. ERNEST H. MCFARLAND, Louisburg, N. C., assignor of one-third to James A. Hodges, Louisburg, N. C., one-sixth to Fred M. Hodges, Richmond, Va., and one-sixth to John M. Hodges, Fayetteville, N. C. Filed Oct. 2, 1928. Serial No. 309,811. 2 Claims. (Cl. 152—11.5.)

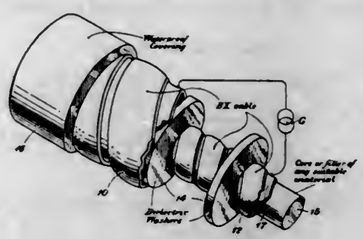
1. An air tester for tires comprising a casting having an air inlet passage normally closed by a valve, a passage



to be connected to a gage, a chamber between the passages and an air outlet passage leading from the chamber, a plunger for unseating the valve and a spring influenced valve carried by the plunger for closing the passage to the gage when the first mentioned valve is unseated, a tubular valve cage in the gage passage which has slits communicating with its bore, a ball valve in the cage movable by air pressure between the passage and gage to close the passage to the chamber, said casting having an air bleed passage communicating with the tubular valve cage and a normally closed release valve for said passage.

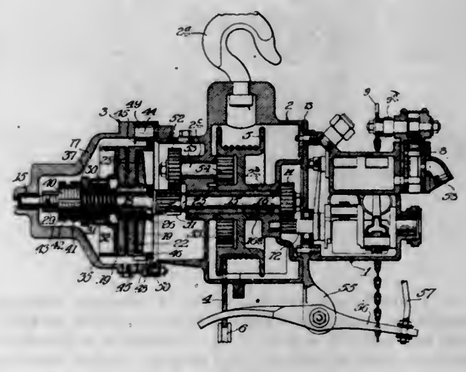
1,781,122. TIE-PLATE AND KEY. JOHN A. MCGREW, Albany, N. Y. Filed Oct. 3, 1929. Serial No. 397,116. 10 Claims. (Cl. 238—304.)

1. In a rail fastener, in combination, a tie plate, means thereon providing a fulcrum, a spring lever engaging beneath said fulcrum and having an edge bearing on the rail base and means on said lever bearing on said plate to flex the lever, said means also locking the lever between the plate and fulcrum.



1,781,123. METHOD OF COLD ROLLING AND COILING STRIPS. HARRY M. NAUGLE and ARTHUR J. TOWNSEND, Canton, Ohio, assignors, by mesne assignments, to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Continuation of application Serial No. 739,302, filed Sept. 23, 1924. This application filed Apr. 28, 1927. Serial No. 187,186. 1 Claim. (Cl. 80—60.)

The method of reducing the thickness of strips of steel and the like by tandem stands of rolls, which consists in constantly maintaining an elongating stretching tension greater than the elastic limit but less than the ultimate strength of the metal in the strip on both sides of each successive stand of rolls, to straighten and set the structure of the strip; the pull on the strip extending between the successive stands of rolls being caused by action of the succeeding stand of rolls upon the strip between it and the previous stands of rolls.

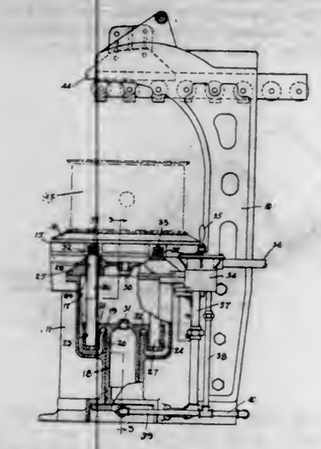


1,781,124. CONCENTRIC CONDUCTING SYSTEM. HARRY R. NEIN, Westfield, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 23, 1929. Serial No. 365,514. 5 Claims. (Cl. 173—13.)

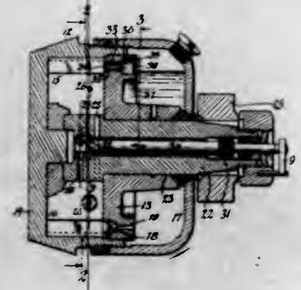
1. In a conducting system for the communication of intelligence, two conductors connected one as a return for the other, each conductor being in the form of a shell of conductive material and the two conductors being arranged concentrically one inside the other, means to prevent moisture from entering the interior of the outer conductor, the inner conductor being formed by spirally winding a thin strip of conducting material so that the edges of successive spirals overlap, and insulating means for separating the conductors electrically and for maintaining them in concentric relation, said insu-

lating means being so formed that the dielectric between adjacent surfaces of the conductors will be principally gaseous, and said outer conductor being formed by spirally winding a thin strip of conducting material over said insulating means so that the edges of successive spirals overlap.

1,781,125. CLUTCH MECHANISM FOR POWER HOISTS. REINHOLD A. NORLING, Aurora, Ill., assignor to Independent Pneumatic Tool Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 15, 1927. Serial No. 183,967. 13 Claims. (Cl. 254—168.)



1. In a power-driven hoist, the combination with a reversible motor and a hoisting drum, of a clutch mechanism for connecting the motor with the drum in raising and lowering a load, and screw actuated means operated by the motor when lowering the load for alternately engaging and disengaging the clutch to prevent the load from running ahead of the motor and thus be positively lowered thereby.

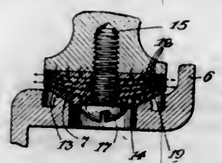


1,781,126. MECHANISM FOR MAKING MOLDS. EARL F. OYSTER, Cleveland Heights, and FRANCIS N. GILLILAND, Shaker Heights, Ohio, assignors to The Osborn Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 2, 1928. Serial No. 296,883. 13 Claims. (Cl. 22—45.)

4. In a mold making machine, a base, a mold-carrying platform reciprocably mounted in said base, and stripper

mechanism comprising a plurality of independent reciprocable units, fluid actuated means for causing reciprocation of said units, and automatic means for causing the upper ends of said units to assume a common level at the upper extremities of the strokes thereof.

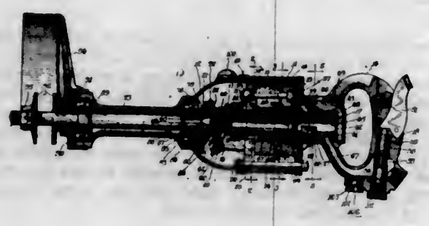
1,781,127. SHOCK ABSORBER. RALPH F. PEO, Kenmore, N. Y., assignor to Houde Engineering Corporation, Buffalo, N. Y., a Corporation of New York. Filed Mar. 10, 1930. Serial No. 434,523. 7 Claims. (Cl. 188—89.)



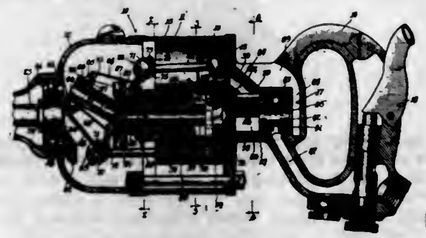
1. A shock absorber comprising a working chamber adapted to contain a resistance liquid; a piston movable back and forth in said working chamber; a replenishing chamber from which liquid is supplied to said working chamber, a partition wall between said chambers containing a vent passage leading from the upper part of said working chamber to the upper part of said replenishing chamber, and a pocket which is arranged at that end of said vent passage which opens into the replenishing chamber and which is adapted to contain a quantity of liquid covering said vent passage and forming a liquid seal for the same, said pocket receiving its sealing liquid solely from said working chamber through said vent passage.

1,781,128. PROCESS FOR CRACKING PETROLEUM OIL. ROBERT T. POLLOCK, New York, N. Y., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Mar. 9, 1927. Serial No. 173,921. 2 Claims. (Cl. 196—49.)

2. A process for cracking heavy oil to produce gasoline comprising effecting the decomposition of the oil in more than two successive stages, forming in each stage at least three products, namely, gasoline-like constituents, intermediate products heavier than gasoline and residual products, removing from each stage the gasoline-like constituents and residual products formed in said stage, and continuing the cracking in each succeeding stage of only the intermediate products of the preceding stage, whereby the desirable products and the undesirable products of the cracking reaction are removed from the zone of cracking as formed and only intermediate products of cracking subjected to prolonged cracking treatment.

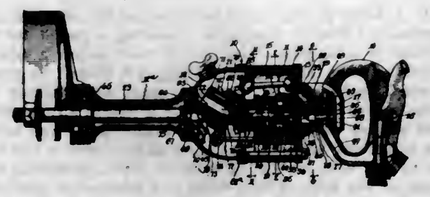


1,781,129. WASHER. JOHN A. SEXAUER, New York, N. Y. Filed June 6, 1928. Serial No. 283,346. 10 Claims. (Cl. 251—27.)



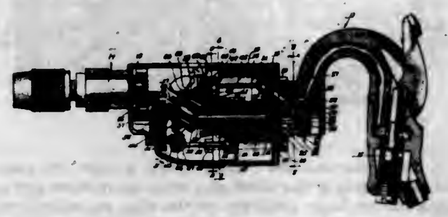
2. In a device of the class described, the combination of a valve seat, a valve stem, and a washer mounted on said valve stem, provided with a conical surface for engagement with the valve seat, said washer having fabric members embedded therein to prevent it from expanding when pressure is exerted thereon, the bottom fabric member being spaced a substantial distance from the bottom of the washer.

1,781,130. PRESSURE-FLUID MOTOR. ERNEST H. SHAFF, Grand Haven, Mich., assignor to Wm. H. Keller, Inc., Grand Haven, Mich., a Corporation of Michigan. Filed Oct. 13, 1924. Serial No. 743,205. 2 Claims. (Cl. 74—14.)



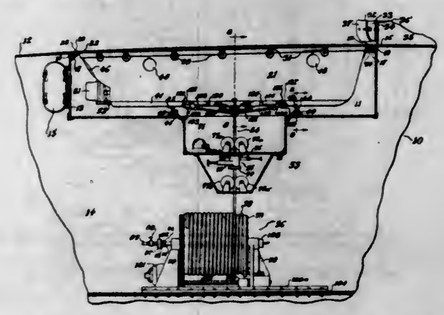
1. A pressure fluid motor of the character described comprising, in combination, a crank arm, a wobbler comprising an inclined pressure plate and an axially projecting stem, said crank arm being apertured to receive said axial stem, and two sets of antifriction elements interposed between the crank arm and said axial stem with the elements of the respective sets disposed on opposite faces of said crank arm so as to hold the wobbler and crank against relative axial movement, said stem being adjustable axially relative to the plate to permit of the insertion or removal of the anti-friction elements.

1,781,131. PRESSURE-FLUID MOTOR. ERNEST H. SHAFF, Grand Haven, Mich., assignor to Wm. H. Keller, Inc., Grand Haven, Mich., a Corporation of Michigan. Filed Feb. 16, 1925. Serial No. 9,391. 10 Claims. (Cl. 74—14.)



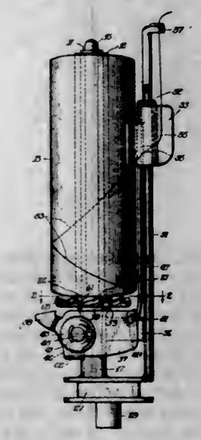
1. A pressure fluid actuated tool comprising, in combination, a spindle having a crank portion rigid therewith, a gyratory member comprising a plate mounted to turn on two axes intersecting at a point lying in the axis of said spindle and spaced from the arm of said crank, a cupped member supported upon said plate in spaced relation thereto and forming a ball-race, said crank also having a ball-race thereon in opposed relation to said member, and bearing balls entered between said races.

1,781,132. PRESSURE-FLUID MOTOR. ERNEST H. SHAFF, Grand Haven, Mich., assignor to Wm. H. Keller, Inc., Grand Haven, Mich., a Corporation of Michigan. Filed Feb. 16, 1925. Serial No. 9,392. 13 Claims. (Cl. 74—14.)



1. In a device of the character described having a gyrating series of bell cranks, a shaft having its two ends alined and having an intermediate integral section offset at an angle thereto with its axis adapted to describe a cone in the rotation of the shaft, a sleeve pivoted about said section, said sleeve constituting an arm common to each of the bell cranks of the series, and balls bearing in races formed directly in said shaft section and in said sleeve, said sleeve being adjustable to permit insertion and removal of said balls.

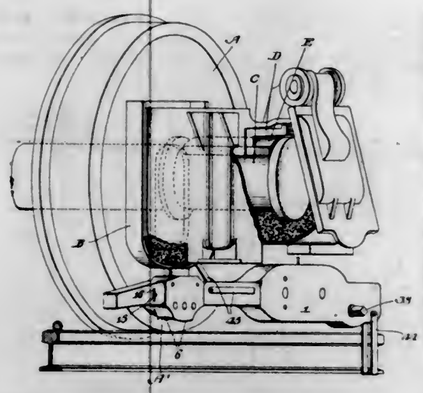
1,781,138. PRESSURE-FLUID MOTOR. ERNEST H. SHAFF, Grand Haven, Mich., assignor to William H. Keller, Inc., Grand Haven, Mich., a Corporation of Michigan. Filed Dec. 2, 1926. Serial No. 152,107. 20 Claims. (Cl. 74—14.)



1. In a device of the character described, the combination of a rotatable shaft, an arm on said shaft disposed angularly relative thereto, and means for imparting rotation to said shaft including a plurality of motor units arranged to operate successively, a crank plate rotatably mounted on said arm and operatively connected with said motor units, said plate having a central opening therein adapted to receive said arm, and bearing elements interposed between the arm and the plate at spaced points along the arm, said arm having an opening therein extending radially into one of said spaced points to permit the insertion and removal of certain of said bearing elements.

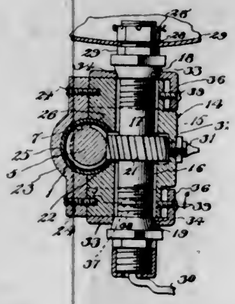
1,781,134. SUBMARINE AND AUXILIARY BOAT THEREFOR. EDWARD J. SHOEMAKER, Canton, Ohio. Filed Feb. 7, 1928. Serial No. 252,469. 8 Claims. (Cl. 114—16.7.)

1. A submarine, an auxiliary boat, an extensible and retractable connecting member between the boat and the submarine, means operable from within the boat for detaching the boat from the member, means in the submarine for extending and retracting the connecting member into and out of the submarine, and a water seal on the submarine about the connecting member, and the connecting member including an electrical conductor for connecting electrical apparatus in the boat and electrical apparatus in the submarine.



1,781,135. COP HOLDER. LOUIS J. SLADEK, Chicago, and HENRY G. ANDERSON, Sycamore, Ill. Filed Mar. 28, 1928. Serial No. 265,441. 3 Claims. (Cl. 96—15.)

1. In a cop carrier having a thread controlled detent and a thread rotated spindle, a lock member rotatable with the spindle and comprising a disc arranged approximately in a plane perpendicular to the axis of the spindle

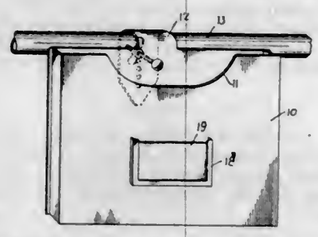


and having radial slots to provide detent engaging segments, said segments being warped, having their trailing edges offset away from the detent an amount equaling at least the thickness of the segments, to facilitate the engagement of the detent with the leading edge of the following segment.

1,781,136. JOURNAL JACK. HENRY J. SMITH, Philadelphia, Pa. Filed Mar. 16, 1925. Serial No. 15,927. 17 Claims. (Cl. 254—33.)

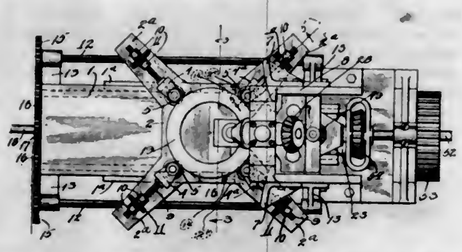
1. The combination with a wheel and a journal box, of a jack having means for engaging said wheel with either side of said jack adjacent to the wheel, a ram for engaging said box, mechanism for spreading said ram and means, and means preventing rotation of said ram during such spreading.

1,781,137. HEADLIGHT MOUNTING. GEORGE E. SNYDER, Pomona, Calif. Filed Sept. 28, 1928. Serial No. 309,046. 1 Claim. (Cl. 240—62.)



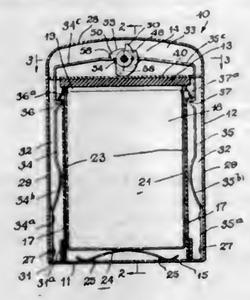
A vehicle headlight mounting including a bearing support having openings for the headlight and steering gear shafts, said openings being disposed at a right angle to one another and in communication to provide clearance for the gearing connecting the said shafts, said support having a detachable element to admit of placing the support in position or removing it from the casing of the said steering gear shaft, bearing plates at opposite ends of the support having end and side flanges, the latter contacting with the sides of the support to guide the plate and sustain lateral stresses, means between the end flanges and support for adjusting the plates, and means carried by the support and engageable through slots formed in the side flanges of the plates to secure the latter in the required adjusted position.

1,781,138. TENTER CLIP. WILLIAM A. STELLING, Providence, R. I., assignor to The Textile Finishing Machinery Company, Providence, R. I., a Corporation of Rhode Island. Filed Dec. 10, 1929. Serial No. 413,037. 9 Claims. (Cl. 26—62.)



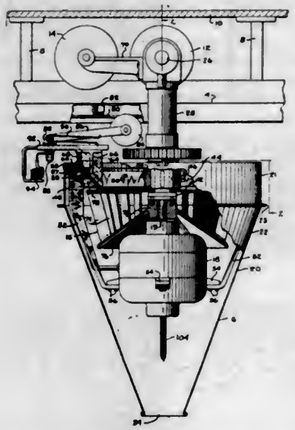
1. In a tenter clip, a body portion having a fixed jaw, a pair of spaced arms extending from the body to overlie said fixed jaw, a swinging jaw pivoted in said arms to cooperate with the fixed jaw, a pivot shaft, a plurality of laterally spaced feeling fingers separately mounted upon said pivot shaft for engaging the surface of the cloth.

1,781,139. HOSPITAL CHART AND CARD HOLDER. CHARLOTTE TALLEY, New York, N. Y. Filed Mar. 12, 1928. Serial No. 260,825. 6 Claims. (Cl. 40—10.)



1. A hospital chart and bed card holder, comprising a rectangular shaped receptacle providing a pocket for the deposit of a hospital chart therein, and having a portion cut away from the top of the front face thereof to permit a chart therein to be readily grasped to withdraw the same, means consisting of a frame to retain an identification bed on the front face of the receptacle, and means for adjustably suspending the receptacle from a bed railing of any of a number of different sizes, consisting of a hook, on the back of the holder and adapted to pass over a bed railing and down below the same, the back of said receptacle having a hole formed therein and the free end of said hook having a series of vertically aligned holes formed therein, a bolt extending through the hole in the back of the receptacle and through one of said series of holes to secure the hook upon the railing, and means on said bolt to hold the same removably but firmly in place.

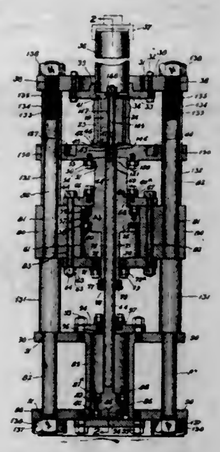
1,781,140. UNIVERSAL RING-ROLLING MACHINE. JAMES HALL TAYLOR, Chicago, Ill. Filed Dec. 10, 1923. Serial No. 679,573. 26 Claims. (Cl. 80—5.)



1. In a machine for rolling rings, a pair of tapered rolls for engaging the sides of a ring, an interior roll for engaging the inner periphery of the ring, an exterior roll for engaging the outer periphery of the ring, said rolls defining a closed way and having mutually overlapping parts when properly adjusted for the purpose set forth.

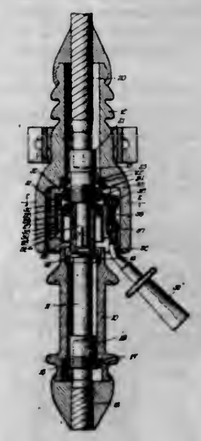
1,781,141. RECEPTACLE. ARTHUR VON FRANKENBERG, New York, N. Y. Filed Jan. 3, 1929. Serial No. 330,044. 8 Claims. (Cl. 206—41.)

1. In a water tight receptacle, in combination, a container having an open end, a cover for said container, a sealing member and means for clamping said member to said container at said open end, said means comprising means for fixing said cover to said container, a shaft rotatably mounted on said cover and means to actuate said shaft extending on the outer side of said cover.



1,781,142. APPARATUS FOR OPERATING ON SPINNING FRAMES AND OTHER MACHINES. WILLIAM B. WALKER, Roxboro, N. C. Filed June 3, 1925. Serial No. 34,572. 12 Claims. (Cl. 15—20.)

1. Apparatus for operating upon spinning frames and other machines arranged in rows with the several rows arranged side by side having, in combination, an endless track arranged above the rows of machines, a carriage mounted to travel along the track, means mounted on the carriage for creating a current of air a distance above the machines and directing the air downwardly over the machines, and means for driving the carriage along the track so as to cause each machine to be operated upon at predetermined intervals to uniformly maintain the machines and the atmosphere above the machines substantially free from dust and other fine particles.

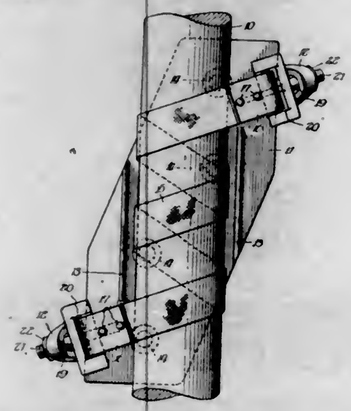


1,781,143. METHOD OF MAKING CASTINGS. JAMES H. WILLIAMS, Detroit, Mich., assignor to Detroit and Security Trust Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 7, 1927. Serial No. 173,224. 5 Claims. (Cl. 22—200.)

1. The method of forming annular or reentrant section castings which comprises pouring molten metal around a metal mold section; removing the casting and mold section from the remainder of the mold; subjecting the joint between the casting and mold section to the pressure

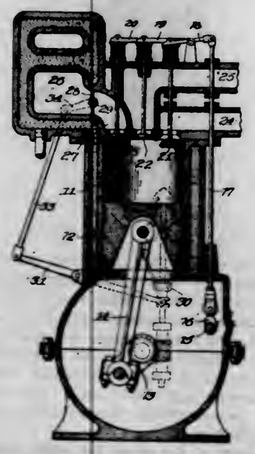
of liquid outside the joint until the liquid enters between and lubricates the abutting surfaces of the casting and mold section; and forcing the mold section out of the embracing walls of the casting.

1,781,144. CONDUCTOR DISCONNECTER. PAUL F. WILLIAMS, Chicago, Ill., assignor to G. & W. Electric Specialty Co., Chicago, Ill., a Corporation of Illinois. Filed May 20, 1925. Serial No. 31,533. 15 Claims. (Cl. 173—353.)



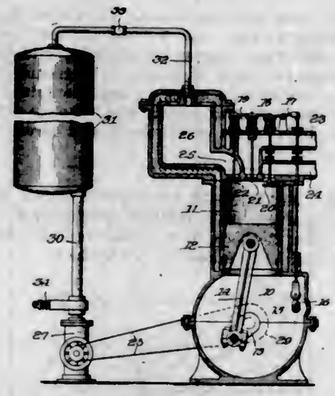
2. In a device of the class described, the combination of a cable, a contact cylinder electrically connected thereto, another cable, a contact cylinder electrically connected to said second cable, said contact cylinders being telescopically arranged, and flexible means for pressing one of said cylinders into intimate engagement with said other cylinder for making an intimate electrical contact therebetween, and means associated with said flexible means and operable to selectively release intimate contact between said cylinders.

10. In a device of the class described, the combination of a cable, a connecter connected to said cable and having a socket portion, another cable, a connecter electrically



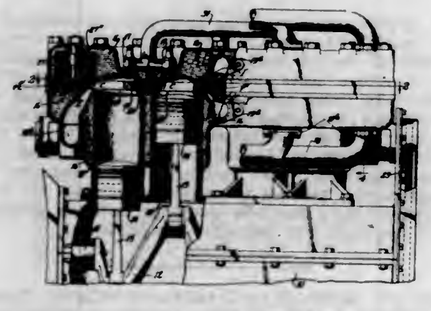
connected to said second cable and having a plug portion adapted to make electrical contact with the socket portion of said other connecter, contact cylinders electrically connected to each of said connecters and being telescopically arranged, and means for controlling the intimacy of the electrical contact between said contact cylinders.

1,781,145. CABLE HANGER. PAUL F. WILLIAMS, Chicago, Ill., assignor to G. & W. Electric Specialty Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 28, 1926. Serial No. 132,131. 3 Claims. (Cl. 248—31.)



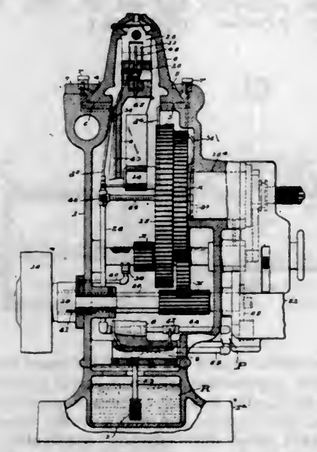
2. In a cable hanger for supporting a cable, the combination of attaching means adapted to be attached to a supporting element and having spaced lugs thereon, and a flexible flat element spirally engaging a cable, the ends of said flat element being attached to and held by said lugs to bind said flat element between and against said cable and attaching means to thereby prevent wear of said cable and to hold said cable in fixed relative position with respect to said attaching means.

1,781,146. INTERNAL-COMBUSTION ENGINE. WLADIMIR M. ZAIKOWSKY, Pasadena, Calif., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed Oct. 23, 1925. Serial No. 64,354. 4 Claims. (Cl. 123—1.)



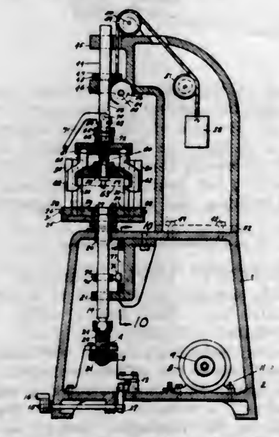
1. The combination with an internal combustion engine of the four-stroke cycle type having a cylinder and piston for compressing a combustible charge, of a compression chamber of constant volume connecting only with the cylinder above the piston, a valve controlling said connection, means for cooling the gaseous contents of said compresion chamber, means for opening the said valve during the compression stroke of the engine and for closing the said valve before ignition can spread into the compression chamber, and a governor-controlled auxiliary valve controlling the connection between the compression chamber and the cylinder.

1,781,147. SUPERCHARGER FOR INTERNAL-COMBUSTION ENGINES. WLADIMIR M. ZAIKOWSKY, Pasadena, Calif., assignor to Standard Oil Development Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 23, 1925. Serial No. 64,355. 5 Claims. (Cl. 123—1.)



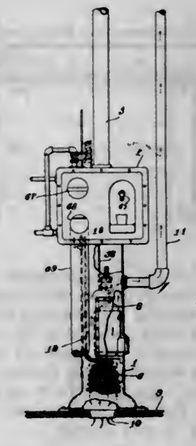
1. The method of supercharging an internal combustion engine, consisting of compressing the charge during the compresion stroke only, in a volume larger than the cylinder, mixing compressed gas with said charge, and introducing a part of said charge into said cylinder on the next compression stroke.

1,781,148. INTERNAL-COMBUSTION ENGINE. WLADIMIR M. ZAIKOWSKY, Pasadena, Calif., assignor to Standard Oil Development Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 8, 1929. Serial No. 345,477. 4 Claims. (Cl. 123—59.)



. 1. An internal combustion engine including: a cylinder with a single port in or near the head; a piston in the cylinder; a movable plate lying over the cylinder port and having a port therein; exhaust and inlet passages having ports near the cylinder port; and means for moving the plate to cause it to overlap the cylinder port and the exhaust or inlet ports with its port in accordance with the desired cycle.

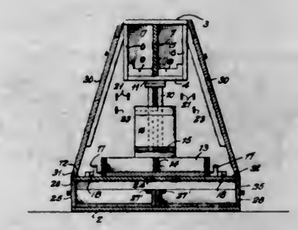
1,781,149. OILING SYSTEM FOR SHAPERS. WILLIAM F. ZIMMERMANN, Maplewood, N. J., assignor to Gould & Eberhardt, Newark, N. J., a Corporation of New Jersey. Filed Jan. 24, 1927. Serial No. 163,064. 6 Claims. (Cl. 184—6.)



1. In a shaping machine constructed with a closed frame having in its upper portion, and exteriorly thereof, pairs of transversely arranged bearing surfaces forming open-ended channels and a reciprocable ram arranged between and guided by said bearing surfaces, a lubricating system comprising a main lubricant reservoir; a pump adapted to draw lubricant from said reservoir; auxiliary reservoirs of relatively small capacity located exteriorly of said closed frame and adjacent each pair of said bearing surfaces; lubricant ducts connecting said auxiliary reservoirs with said surfaces; a lubricant conduit connecting said pump with each of said auxiliary reservoirs positively and continuously to supply lubricant thereto from said pump; and an overflow drain connected to each of said auxiliary reservoirs to return the excess lubricant to said main reservoir.

1,781,150. POWER GANG FILING DEVICE. CARL WINNER, Hamtramck, Mich. Filed Nov. 30, 1928. Serial No. 322,781. 5 Claims. (Cl. 29—16.)

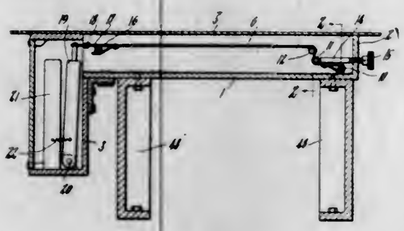
1. A gang filing device adapted for filing a series of parallel work slots simultaneously, comprising a rigid housing frame having a gang file head slidably mounted therein, power means attached to said gang file head by suitable mechanism for producing an oscillatory movement thereof, a series of parallel files mounted within said gang file head, and means mounted on said housing frame for rigidly supporting work pieces within said file-head.



1,781,151. COOLING SYSTEM FOR PASSENGER VEHICLES. CARTER F. HALL, Baltimore, Md. Filed June 11, 1929. Serial No. 370,012. 29 Claims. (Cl. 62—141.)

27. The combination in a water cooling system comprising a motor, condenser, a compressor within a hollow upright, an evaporator, a liquid container, heat insulating material above said hollow upright surrounding said evaporator and liquid container, said hollow upright having an opening at the bottom below the condenser coil, motor, and compressor for admitting air thereto to a ventilating outlet above the air inlet.

28. The combination in an apparatus for cooling air and water for passenger vehicles, comprising an air cooling compartment, an evaporator, a liquid container, a brine container, means for compressing a refrigerant, cooling the refrigerant, and forming a closed circuit for the refrigerant and for returning the refrigerant to be recompressed, and means for bringing the refrigerant, air, liquid and brine in heat exchanging relation with the evaporator.

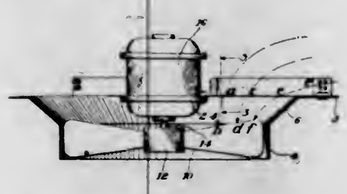


1,781,152. FLAT-TOP-DESK CABINET. BASIL NORRIS ABBOTT, Richmond, Va. Filed June 17, 1926. Serial No. 116,698. 1 Claim. (Cl. 312—189.)

In a cabinet for placement on the top of a flat top desk a partition member which divides the cabinet into an upper and a lower compartment, detachable doors for the upper compartment, drawers for the lower compartment,

said drawers having their side walls and rear walls of a less height than their front walls to provide a space for storage of said doors above the top edges of said side and rear walls.

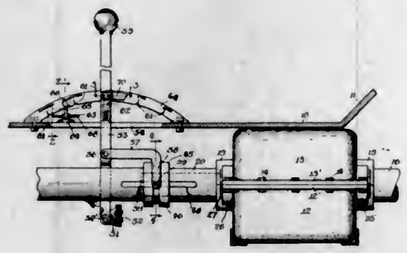
1,781,153. MEANS FOR MEASURING MOISTURE CONTENT OF SHEET MATERIAL. ALBERT ALLEN, Winchester, Mass., assignor to Atlantic Precision Instrument Company, Boston, Mass., a Corporation of Massachusetts. Filed Dec. 2, 1926. Serial No. 152,126. 6 Claims. (Cl. 177—351.)



1. In a machine of the class described, a hygrometric filament variable in length in accordance with its moisture content, means for holding said filament in extended position in proximity to sheet material so as to be responsive in its moisture content to the moisture content of said material, means for shielding said filament against moisture conditions other than those from said material, and a device having an electrical characteristic varied by the variations in length of said filament.

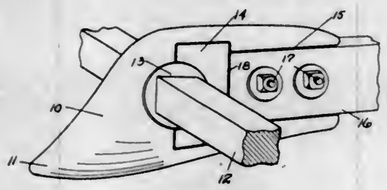
1,781,154. CONDIMENTATION OF GROUND MEATS. HUGH E. ALLEN, Chicago, Ill., assignor of one-half to Albert G. McCaleb, Evanston, Ill. Filed July 27, 1929. Serial No. 381,680. 9 Claims. (Cl. 99—11.)

1. A dry seasoning material for ground-meats comprising a minor quantity of the essential oils of spices and oleo-resins of peppers, and a major quantity of semi-pulverulent sugar intimately mixed with said oils and oleo-resins and acting as a carrier therefor.



2. The method of making a material for seasoning ground meats which consists in mixing a minor quantity of spice oils with a major quantity of initially coarse granulated sugar and grinding the mixture until the sugar has been reduced to a semi-pulverulent state.

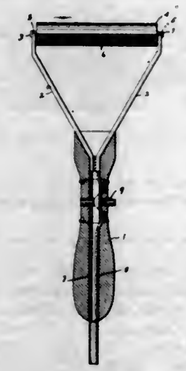
1,781,155. PROPELLER FAN. SAMUEL M. ANDERSON, Hyde Park, Mass., assignor to B. F. Sturtevant Company, Hyde Park, Mass., a Corporation of Massachusetts. Filed May 21, 1928. Serial No. 279,332. 1 Claim. (Cl. 230—117.)



A high speed propeller fan comprising fan blades, a thimble, a converging inlet chamber connected with the thimble, a flange attached to the inlet chamber and arranged in a plane perpendicular to the axis of the blades, a fan shaft, a motor, and a plurality of flat supporting arms, each connected at one end to the motor and at the other end to the flange beyond the periphery of the inlet chamber, the arms being arranged edgewise with respect to the inflow of air.

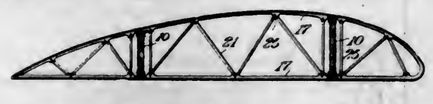
1,781,156. AUTOMOBILE REVERSE GUARD. HERBERT E. BROWN, Chicago, Ill., assignor of one-half to Maurice H. Mandelbaum, Chicago, Ill. Original application filed Aug. 18, 1927, Serial No. 213,785. Divided and this application filed Oct. 26, 1929. Serial No. 402,611. 2 Claims. (Cl. 74—39.)

1. In a reverse guard for a variable speed transmission gearing, the combination with a segment bar formed with neutral and reverse locking notches, a pivoted lever slidable along said segment bar, and a spring pressed locking dog on said lever automatically engageable with said notches, of a spring pressed stop member normally lying across the path of movement of said lever between said notches, means for retracting said stop member, and a keeper on said lever operative to hold said stop member retracted during movement of said lever between said neutral and reverse notches.



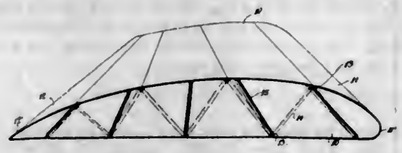
1,781,157. SHOE BEARING. CLAUDE C. CALKINS, Spokane, Wash. Filed Nov. 26, 1929. Serial No. 409,988. 5 Claims. (Cl. 97—42.)

1. A bearing of the character described comprising a shoe, a fixed bearing element, a replaceable bearing element, flanges on one side of the latter engaging recesses in the shoe, a shoulder on the replaceable bearing element, an inset extension member on said replaceable element, a supporting bar abutting said shoulder and overlapping the extension, and means for fastening the bar to said shoe.



1,781,158. ELECTRIC IRON. PHILIP S. CAMPBELL, Houston, Tex., assignor of one-half to March Culmore, Harris County, Tex. Filed Feb. 1, 1929. Serial No. 336,728. 1 Claim. (Cl. 219—37.)

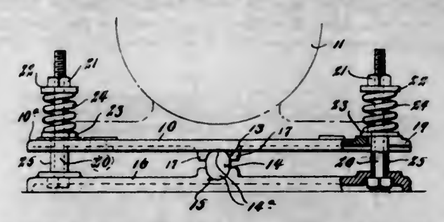
An electric iron including a handle, diverging side bars anchored, at one end, to one end of the handle and whose free ends are turned into parallel relation and provided with inside sockets, a roller having a stub shaft at each end journaled in the respective sockets, an electrical heating element within and insulated from the roller and electrically connected with said shafts, current conductors leading from a suitable source through said handle and through said side bars and electrically connected with



said shafts, said side bars being adapted to be sprung apart to permit the detachment of the roller therefrom and a circuit maker and breaker in said handle.

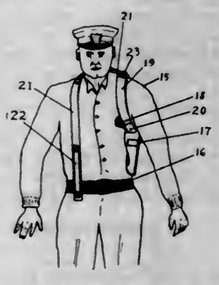
1,781,159. WING FOR AIRCRAFT. EDMUND B. CARNS, New York, N. Y., assignor to Cairns Development Company, Wilmington, Del., a Corporation of Delaware. Filed May 18, 1927. Serial No. 192,244. 4 Claims. (Cl. 244—31.)

1. A wing for air craft having spars each comprising upper and lower T's with split webs opening inwardly, and diagonally disposed struts connecting the T's, the struts being disposed alternately in pairs and singly with the single strut entering and fitting snugly between the web members of the T's and with the other struts straddling said web members.



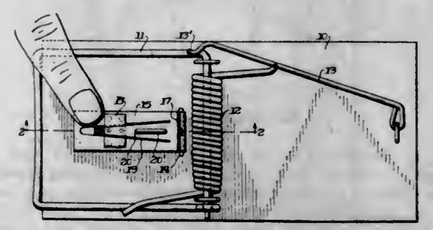
1,781,160. AEROFOIL. EDMUND B. CARNS, Naugatuck, Conn., assignor to Cairns Development Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 2, 1929. Serial No. 351,869. 9 Claims. (Cl. 244—12.)

4. An aerofoil having a surface of longitudinally tapering strips which also taper in gauge and having inwardly projecting abutting flanges with the flanges at the upper and lower parts of the aerofoil in staggered relation.



1,781,161. ADJUSTABLE MOUNTING. JOHN O. CARREY, St. Louis, Mo., assignor to Carrey-Morse Engineering Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 16, 1926. Serial No. 102,494. 5 Claims. (Cl. 248—16.)

1. A mounting for refrigerating apparatus comprising in combination a base, a strip of rubber arranged transversely thereon and extending upwardly therefrom, a rigid mounting plate resting intermediate its ends on said strip and pivotally supported thereby, devices extending from said base for interengagement with said plate, and

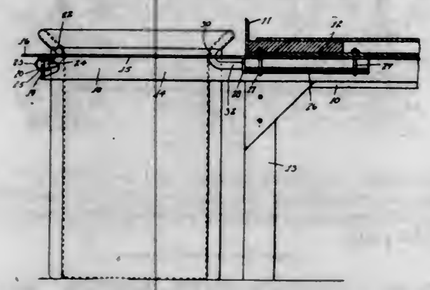


coil springs interposed between said plate and said devices for maintaining said plate in yielding engagement with said strip and permitting adjusting tilting movement of said plate.

1,781,162. SHOULDER PISTOL HOLSTER. EDWARD E. CLARK, Los Angeles, Calif. Filed June 17, 1929. Serial No. 371,529. 4 Claims. (Cl. 224—2.)

1. A shoulder holster comprising a holster adapted to receive a firearm or the like, a shoulder strap adapted to encircle the shoulder of the wearer to suspend the holster beneath his armpit, the ends of the shoulder strap being connected respectively to the inner and outer sides of the holster.

1,781,163. ANIMAL TRAP. THOMAS A. CLARKSON, Nashville, Tenn. Filed June 14, 1929. Serial No. 370,771. 9 Claims. (Cl. 43—81.)

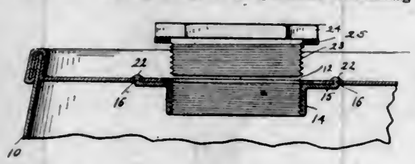


1. In an animal trap, a bait holding trigger comprising a bait plate, and a spring tongue connected at one end to said plate and having a depending tip portion extending below said plate to form a bearing portion whereby said plate may be depressed below said tongue so that bait may be clampingly engaged therebetween.

1,781,164. BAG HOLDER. CHARLES E. CONSTABLE, Cincinnati, Ohio, assignor to The National Marking Machine Company, Cincinnati, Ohio, a Corporation of Ohio. Filed July 30, 1928. Serial No. 296,270. 2 Claims. (Cl. 83—26.)

1. A bag holder comprising a horizontal open frame, a fixed bag supporting rod supported horizontally above

one side of said frame, having its ends bent inwardly and downwardly and thence horizontally and outwardly and anchored in said frame member, a second bag supporting member supported parallel with the first member having its free ends bent downwardly and toward the first bag supporting member, and then bent horizontally and away



from the fixed bag supporting rod, means for slidably mounting said horizontal portions to permit the second bag supporting member to move toward and from the first bag supporting member, a bag to be supported between the horizontal members, and means for yieldably supporting said second bag supporting member outwardly from the first bag supporting member.

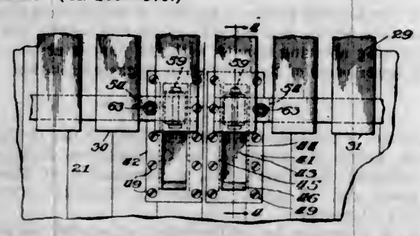
1,781,165. CENTRIFUGAL FAN. ALBERT A. CRIQUI, Buffalo, N. Y., assignor to Buffalo Forge Company, Buffalo, N. Y., a Corporation of New York. Filed Oct. 18, 1928. Serial No. 313,211. 8 Claims. (Cl. 230—134.)

1. A centrifugal fan having a wheel provided with a plurality of blades, the surfaces of each blade being formed from portions of the surfaces of two cones, the cones being so positioned that their surfaces have substantial line contact, and each blade being so inclined that a line drawn tangent to both cone surfaces and in a plane at right angles to the axis of the wheel is oblique to a plane drawn through the axis of the wheel and coincident with a point near the tip of the heel of the blade, said line intersecting said plane at a point between the axis of the wheel and the tip of the heel.

1,781,166. BUNG RING. HENRY M. DILLHOEFER, Cleveland Heights, Ohio, assignor to The Byrne Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 16, 1927. Serial No. 191,672. 6 Claims. (Cl. 220—39.)

1. A metal container having a bung hole, and a bung ring applied to the inner side of a portion of the container, one of said parts having openings spaced radially from the bung hole a distance sufficient to clear the bung and the other having integral projections extending into

and filling the openings of the first part so as to form a liquid tight closure for said openings and secure the ring in place.

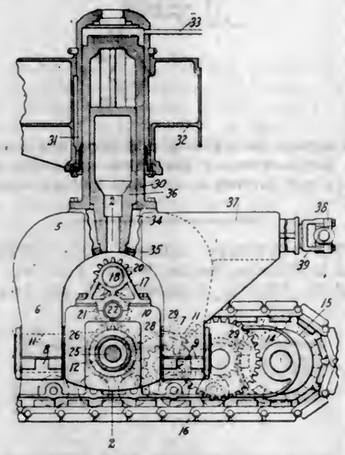


1,781,167. CHATTERLESS OIL AND PROCESS OF PRODUCING THE SAME. THEODORE W. DOELL, Berkeley, and EDWIN N. KLEMGARD, Albany, Calif., assignors to Standard Oil Company of California, San Francisco, Calif., a Corporation of Delaware. Filed Oct. 12, 1926. Serial No. 141,246. 13 Claims. (Cl. 87—9.)

11. A lubricating oil having dissolved therein a complex lead salt of unsaturated fatty acids and napthenic-like acids.

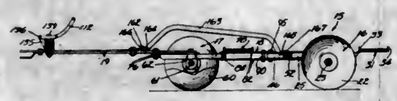
1,781,168. DIE-CASTING MACHINE. EDGAR N. DOLLIN, Malba, N. Y., and CONRAD C. JACOBSON, Glen Ridge, N. J.; said Jacobson assignor to John Robertson Co., Inc., Brooklyn, N. Y., a Corporation of New York, and said Dollin assignor to Allied Die-Casting Corporation, Long Island City, N. Y., a Corporation. Filed Feb. 23, 1928. Serial No. 256,302. 19 Claims. (Cl. 22—69.)

1. A die-casting machine having, in combination, a stationary die and a shiftable die, a ram for actuating the shiftable die, fluid actuated means operating upon said ram to cause the same to position the shiftable die accurately relatively to the stationary die, additional means acting directly upon the ram to lock the shiftable die when positioned, and a single means for controlling the action of both of the ram operating means.



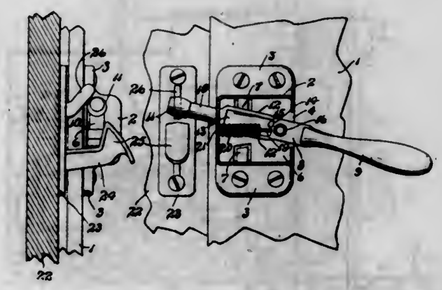
1,781,169. REFRIGERATOR CAR. KNUTE EDAHL, Chicago, Ill. Filed May 17, 1929. Serial No. 363,876. 13 Claims. (Cl. 105—375.)

1. In a refrigerator car, the combination of a car with a plurality of floor racks, means for securing said racks to the car adjacent the car walls, and anchoring means for securing the racks at points spaced from the walls comprising female anchor members carried by the floor and male anchor members carried by said racks.



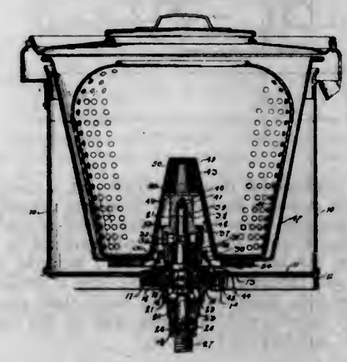
2. In a refrigerator car, the combination of a car with a plurality of floor racks, means for securing said racks to the car adjacent the car walls, and anchoring means for securing the racks at points spaced from the walls comprising female anchor members carried by the floor and male anchor members carried by said racks, said male anchor members being movably mounted to eliminate projections from the racks when the racks are folded against the car wall.

1,781,170. CRAWLING TRACTION TRUCK. BERLIN S. FERGUSON, Marion, Ohio, assignor, by mesne assignments, to The Marion Steam Shovel Company, (1927), Marion, Ohio, a Corporation of Ohio. Filed Oct. 1, 1927. Serial No. 223,416. 16 Claims. (Cl. 305—8.)



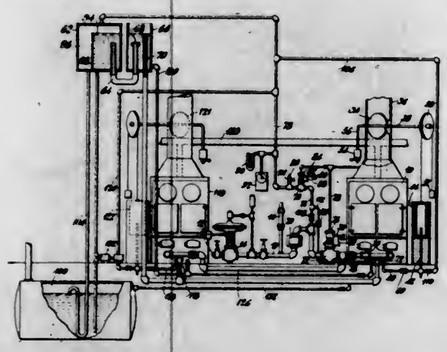
1. In a crawling traction truck, a frame extending lengthwise of said truck and having depending parts arranged near the front and rear ends thereof and spaced apart, a second frame arranged between and pivotally mounted on said depending parts for movement about an axis extending lengthwise of said truck, and projecting laterally beyond the respective sides of the first mentioned frame, and crawling traction devices comprising frames pivotally mounted on the respective laterally projecting portions of said second frame for independent movement about a common axis transverse to the first mentioned axis.

1,781,171. DISK HARROW. SAMUEL S. FURRER, Oxnard, Calif., assignor to Brennels Manufacturing Company, Oxnard, Calif., a Corporation of California. Filed Jan. 8, 1927, Serial No. 159,800. Renewed Sept. 15, 1930. 22 Claims. (Cl. 55—83.)



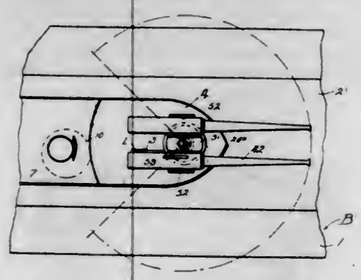
1. In a harrow, the combination of: a front gang; draft means adapted to connect said front gang to a tractor; a rear gang; a rear gang frame secured to said rear gang, said frame having a plurality of openings near the fore and aft central axis of said rear gang; an intergang yoke secured to said front gang; a pivot pin extending through said yoke and engaging one of the openings in said rear gang frame; and means connecting said rear gang frame and said draft means for pivoting said rear gang relative to said front gang.

1,781,172. LATCH. EDWARD F. GRAF, Grand Rapids, Mich., assignor to Winters & Crampton Mfg. Co., Grand Rapids, Mich., a Corporation of Michigan. Filed Apr. 15, 1929. Serial No. 355,120. 4 Claims. (Cl. 292—332.)



1. In a latch construction, a housing, a lever extending through the housing and pivotally mounted between its ends within and adjacent one end of the housing, said lever having two seats between the pivot and the opposite end of the housing, one being located at each side of the longitudinal center line of the lever, a bar having a head located in one of said seats, said head being changeable in position to seat in the other of said seats, and spring means around the bar between said head and the opposite end of the housing, for pressing the head against the seat on which it is located.

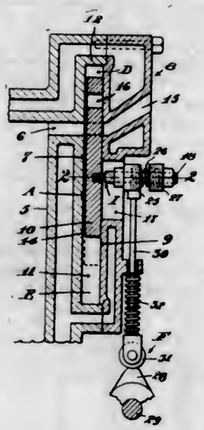
1,781,173. FRICTION CLUTCH. LEE B. GREEN, Lakewood, Ohio, assignor to The Borden Company, Warren, Ohio, a Corporation of Ohio. Original application filed Mar. 25, 1927, Serial No. 178,242, now Patent No. 1,772,863, dated Aug. 12, 1930. Divided and this application filed July 12, 1928. Serial No. 292,103. 3 Claims. (Cl. 64—99.)



1. In a clutch mechanism, a driving member, a driven member and a coupling therebetween, said coupling comprising a roller bearing, a spiral spring associated with one of said members and forming one of the races for said bearing, means associated with the other of said members and forming the other race for said bearing, and means for compressing said spring endwise to a greater or lesser extent for varying the effective diameter of the race of the bearing formed thereby and thus regulating the amount of friction in said bearing.

1,781,174. FLUID-FUEL-FIRED BOILER. BENJAMIN GREENFIELD, New York, N. Y., assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Continuation of application Serial No. 365,366, filed Mar. 12, 1920. This application filed Aug. 5, 1926. Serial No. 127,351. 50 Claims. (Cl. 236—14.)

1. In a fluid fuel fired boiler the combination of means for feeding fuel to the furnace of said boiler under a gas pressure controlled by the steam pressure in said boiler and means controlled by the pressure of said gas for controlling the draft damper of said boiler furnace.

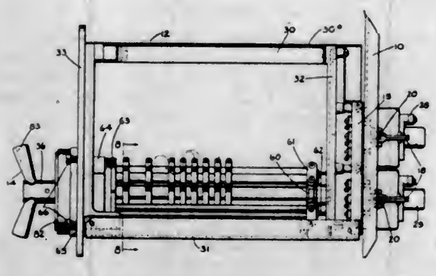


1,781,175. TWIN GUN MOUNT FOR SUBMARINES. HUGO E. GRIESHABER, New London, Conn., assignor to Electric Boat Company, Groton, Conn., a Corporation of New Jersey. Filed Sept. 4, 1928. Serial No. 303,705. 13 Claims. (Cl. 89—37.)

12. In combination in a submarine boat, a gun foundation fixedly mounted on the hull exteriorly thereof, a gun carriage mounted upon the foundation for relative turning movement, guns mounted in said carriage, a spindle secured to the carriage and rotatably mounted through the hull and extending downwardly into a compartment within the hull, means forming a water tight closure between the spindle and the outer wall of the hull, and means for rotating said spindle.

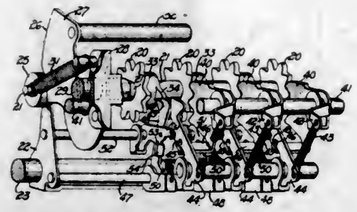
1,781,176. ENGINE VALVE. JOHN H. GRUBE, Pasadena, Calif., assignor to Grube Silent Motors Incorporated, Phoenix, Ariz., a Corporation of Arizona. Filed Mar. 29, 1927. Serial No. 179,321. 6 Claims. (Cl. 123—188.)

1. In an engine valve construction, a valve housing embodying a chamber in open communication with an engine cylinder, a slide valve in said chamber seating on a surface on the side thereof opposite said communication and the other side of which is exposed throughout to the cylinder through said communication and arranged so that pressures developed in the engine cylinder will be imposed on the valve throughout the inner face thereof and thereby act to press the valve against its



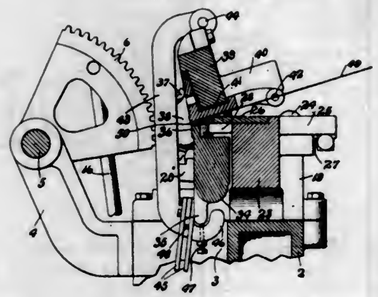
seat throughout the travel of said valve, and means for effecting reciprocation of the valve connecting therewith through a slot covered at all times by said valve.

1,781,177. CURTAIN DRIER AND STRETCHER. FREDA L. HANNUM, Seattle, Wash. Filed May 23, 1928. Serial No. 279,912. 5 Claims. (Cl. 45—24.)



1. A curtain stretcher and drier embodying a perforated shell, and strips of pliable material threaded through the perforations in said shell and forming means to which a curtain may be secured.

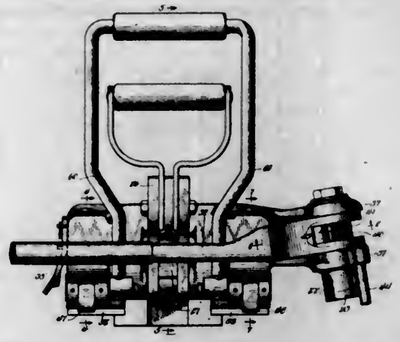
1,781,178. ELECTRIC SWITCH. EDWARD M. HEWLETT and WALDO W. WILLARD, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Mar. 23, 1926. Serial No. 96,854. 8 Claims. (Cl. 200—8.)



1. In a switching device, a rotary insulating member having a polygonal cross-section, a contact member provided with recesses arranged to fit on one side of said rotary member, and a strap passing around the opposite side of said rotary member having its ends locked in said recesses so as to secure said contact member on said rotary member.

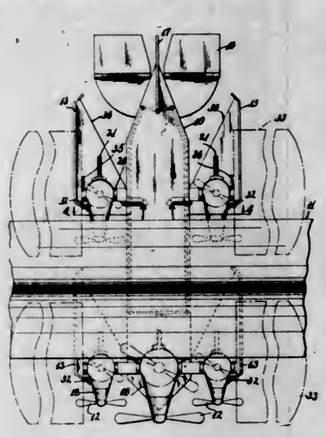
1,781,179. TRANSFER MECHANISM FOR CALCULATING MACHINES. ALLEN A. HORTON, Plymouth, Mich., assignor to Burroughs Adding Machine Company, Detroit, Mich., a Corporation of Michigan. Original application filed Jan. 29, 1926, Serial No. 84,616. Divided and this application filed Aug. 4, 1926. Serial No. 126,955. 4 Claims. (Cl. 235—134.)

1. A transfer mechanism having a tripping element movable to initial carry position by a counter pinion, a latch for holding said element in said position, a transfer element urged in a direction to effect a full carry, and a detent for normally holding said transfer element against movement, said tripping element being movable to release the detent of the transfer element and said transfer element having provisions for releasing the latch of the tripping element when the transfer element moves to effect a carry.



1,781,180. SHEET-METAL FOLDER. FRANK J. JARECKI, Grand Rapids, Mich. Filed Aug. 27, 1928. Serial No. 302,196. 7 Claims. (Cl. 153—16.)

1. In a machine of the class described, a support, a relatively fixed die mounted on said support, a movable die, means for moving the same to bend a plate of sheet metal about the edge of the fixed die, a supporting bar located underneath the edge of the said fixed die, and means actuated by movement of the movable die for exerting pressure at the under side of and at a point between the ends of said supporting bar at the time that the movable die is brought against the sheet metal and the same pressed against the fixed die.

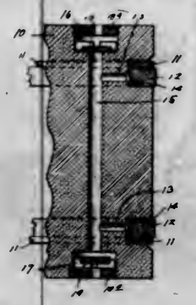


1,781,181. WIRE-TYING MACHINE. THOMAS J. KING, Jr., Chicago, Ill. Filed Nov. 23, 1927. Serial No. 235,135. 23 Claims. (Cl. 140—93.)

1. In a wire tying machine, in combination, a twisting device having a plurality of aligned slots therein for the reception of two lapped ends of a wire, and a tensioning ratchet having a slot therein for the reception of one of the ends, said ratchet being rotatable to tension the wire

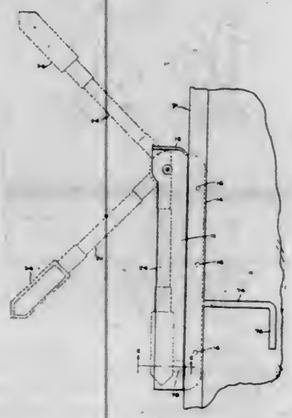
and being canted with respect to the line of slots in the twisting device whereby to cause the ends to move into the slots as far as possible upon rotation of the ratchet.

1,781,182. SAFETY AEROPLANE. JOSEPH LEOPOLD, New York, N. Y. Filed Mar. 15, 1929. Serial No. 349,722. 4 Claims. (Cl. 244—15.)



1. In combination with a safety aeroplane having a flying machine body with wings, a plurality of motor driven propellers movably mounted for action horizontally to the front or vertically upwards, means for moving said propellers from one to the other of said positions, reserve wings hingedly mounted at their front edges on the casing of said motor driven propellers so as to be capable of assuming positions in the vertical and extending rearwards in the positions of the propellers for action horizontally to the front and to be capable of assuming positions in the horizontal and extending outwards in the position of the propellers for action vertically upwards, and means for holding the reserve wings in the first positions, of means for urging the reserve wings into the second positions, and means for manually moving the reserve wings from the horizontal to the vertical while the propellers are positioned for action in the vertical.

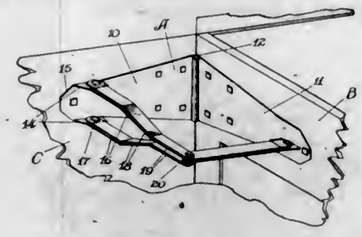
1,781,183. SEALING PISTON RING. CHESTER L. LEWIS and HARRY O. SETTERBERG, Portland, Oreg. Filed Apr. 19, 1928. Serial No. 271,231. 2 Claims. (Cl. 74—109.)



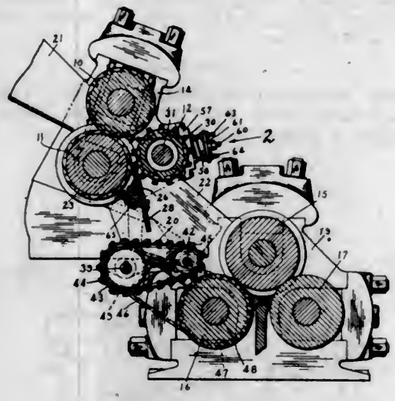
1. In combination, a cylinder and a piston therein provided with a circumferential groove, a piston ring seated

in said groove, and a sealing ring seated on the pressure side of the piston ring, the sealing ring having lesser diameter than the piston ring, the circumferential edge and the top of the sealing ring being exposed to the pressure

in the cylinder, the piston ring being provided with a scarf preventing substantially the passing of the pressure to the inner side of the piston ring, and means adapted to permit the pressure entering behind the piston ring to escape into the body of the cylinder below the piston ring.



1,781,184. SIGNAL FOR AUTOMOBILES. SEBASTIAN MACK, Minneapolis, Minn. Filed May 28, 1928, Serial No. 281,127. Renewed Apr. 18, 1930. 3 Claims. (Cl. 116—54.)

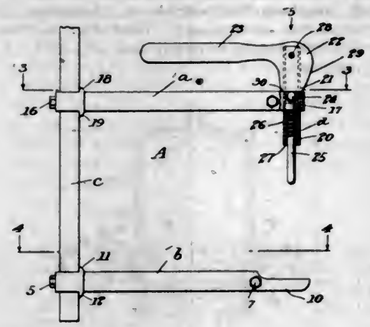


1. A signal for automobiles comprising a support adapted to be secured to a corner post of the automobile, a signal arm pivoted at one end to said support, a link attached at one end to said arm adjacent the pivoted end of the latter, a crank arm attached to the other end of said link, said crank arm having an angular opening whose margin is constituted by knife edges, and an operating rod whose outer end is shaped to fit said angular opening in engagement with said knife edges.

1,781,185. CHECK HINGE. WALLIE C. MANGEL, Fairfax, Minn. Filed Oct. 24, 1927. Serial No. 228,295. 1 Claim. (Cl. 16—128.)

A check hinge including, plate members hingedly connected together, one of said plate members having a pair of ears projecting from the free end thereof, the other of said plate members having a single ear projecting therefrom, pairs of parallelly extending brace retarding arms pivotally and frictionally connected to said pair of ears on one of said hinge plates, a pair of brace retarding arms frictionally and pivotally connected to said ear on the other of said hinge plates, all of said retarding arms being pivotally and frictionally connected together centrally with said hinge plates to provide a reinforced hinge with said brace retarding arms.

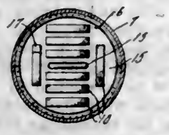
1,781,186. CANE-CRUSHING APPARATUS. FRANCIS MAXWELL, Wallington, England. Filed June 23, 1927. Serial No. 200,893. 7 Claims. (Cl. 100—47.)



1. In cane crushing apparatus, a roller having a groove extending lengthwise thereof, a series of spacing blocks slidably retained to the roller in the groove therein, teeth between said blocks, said teeth being of increased width at their bottoms in the direction of the spacing blocks, said spacing blocks being shaped to fit the lower ends of the tooth and adapted to engage said teeth to secure them to said roller.

6. A tooth for a cane working roller, said tooth having a base portion and a blade portion, said base portion having longitudinally extending straight edges and tapering sides, said blade portion having longitudinally extending cutting edges and sides, the cutting edges of said blade portion merging into the straight edges of said base portion, and the sides of said blade portion merging into the tapering sides of said base portion.

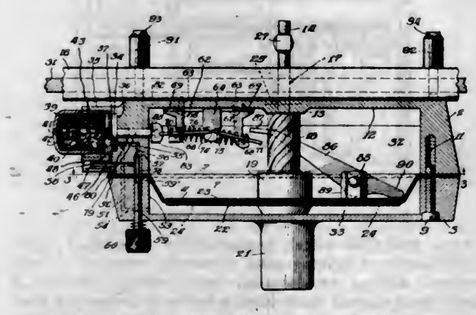
1,781,187. VALVE LIFTER. CHARLES E. NEGLEY, Los Angeles, Calif. Filed Apr. 8, 1927. Serial No. 182,009. 1 Claim. (Cl. 29—86.3.)



A valve lifter of the character disclosed including a supporting bar, a lift bar movable thereon, said lift bar comprising a pair of members adapted to separate adjacent

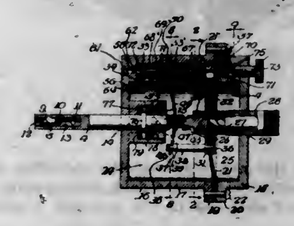
one end and formed to surround the supporting bar at the opposite end, means for regulating the degree of separa-

tion of said two members of the lift bar, and further means for guiding movement of the lift bar upon the supporting bar.



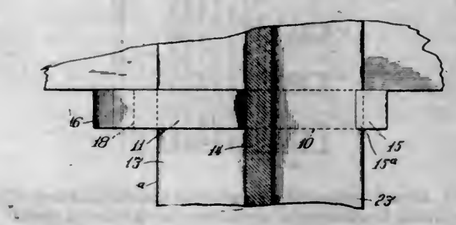
1,781,188. TREATING MATERIAL DISPERSION. JAMES R. NEILSON, Toledo, Ohio, assignor of one-half to Earl M. Morley, Delta, Ohio. Filed Aug. 1, 1929. Serial No. 382,766. 7 Claims. (Cl. 252—6.)

1. The method of dispersing sub-divided treating coating material comprising disseminating the material in a body of a surface area remaining approximately constant while dissolving away, and subjecting such area to pressure dispersing solvent attack throughout its area.



6. The method of dispersing sub-divided coating material comprising disseminating an active agent in acacia and brown sugar, molding said agent, acacia and brown sugar as a plastic mass by the addition of water to provide a definite form body of a surface area remaining approximately constant while dissolving away, and subjecting such area to pressure multiple baffle dispersing water attack throughout its area.

1,781,189. MOTOR FOR OPERATING WINDSHIELD CLEANERS. JOHN L. NILSON and JOHN F. PRINCE, Chicago, Ill. Filed June 6, 1927. Serial No. 196,700. 2 Claims. (Cl. 121—48.)

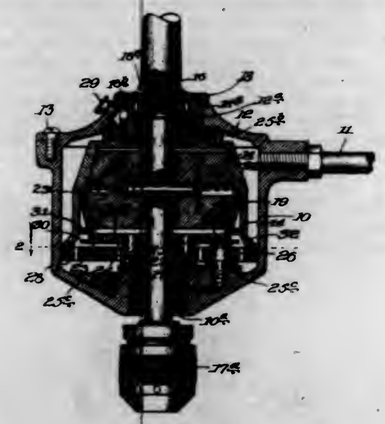


1. A windshield cleaner actuating mechanism embodying a casing, an actuator member movable therewith, a valve seat, ports leading from said seat to the opposite side of said member, a suction port, a valve operable to alternately connect the first said ports with the said suction port, a pivotally mounted member operatively connected with the valve to oscillate the valve, a lever pivotally connected intermediate its ends with said actuator member and bodily movable therewith, one end of said lever operating upon said pivotally mounted member for moving the latter about its pivot to actuate the valve in one direction, the other end of said lever contacting with said actuator member for maintaining the lever against movement about its pivot when the first said end thereof engages and actuates said pivoted member, a spring for assisting in the actuation of said pivotally mounted member, and means for actuating the valve in the other direction.

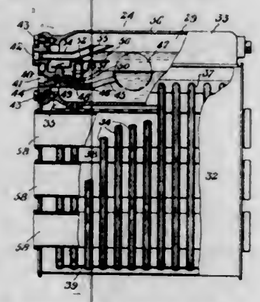
1,781,190. WINDSHIELD-CLEANER MOTOR. JOHN L. NILSON and JOHN F. PRINCE, Chicago, Ill. Filed June 6, 1927. Serial No. 196,701. 7 Claims. (Cl. 121—48.)

1. In a windshield cleaner operating mechanism, means for swinging the cleaner arm, said means embodying a casing, a screw shaft therein, a nut which co-operates with said shaft to rotate it, a valve, and a snap over mechanism for operating the valve, said snap over mechanism being operatively connected with the said nut and valve.

1,781,191. RAIL ANCHOR. FREDERICK A. PRESTON, Lake Forest, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed July 2, 1928. Serial No. 289,881. 15 Claims. (Cl. 238—330.)



1. A rail anchor comprising an under rail portion for bearing against the bottom surface of the rail, a jaw at one end resiliently bearing against the vertical web of the rail, and an inwardly projecting jaw at the other end of said under rail portion adapted to bear against the edge portion of the rail base at the opposite side of the rail.

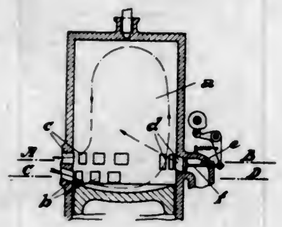


1,781,192. TAPPING ATTACHMENT. HARRY G. PROCUNIER, Chicago, Ill., assignor to Procunier Safety Chuck Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 11, 1929. Serial No. 346,137. 11 Claims. (Cl. 74—59.)

1. A tapping attachment comprising a hollow casing having means for preventing rotation thereof, a vertical spindle journalled in the upper portion of said casing and carrying a bowl having an inner conical friction surface, a double cone member lying beneath said bowl and adapted to frictionally engage the conical portion thereof, a chuck shaft journalled in the lower portion of said

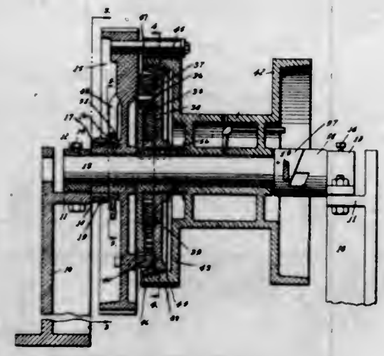
casing and secured to said cone, a conical cup beneath the cone and journalled to rotate about the axis of the chuck shaft and having an inner conical friction surface adapted to engage with said cone member, said bowl overhanging said cup and substantially enclosing the same, and means interposed between said overhanging bowl and cup for driving said cup in the opposite direction from said bowl.

1,781,193. REFRIGERATING APPARATUS. JOHN R. REPLOGLE, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Original application filed Feb. 28, 1921, Serial No. 448,331, and in Canada Feb. 11, 1922. Divided and this application filed June 10, 1927. Serial No. 197,942. 33 Claims. (Cl. 62—95.)



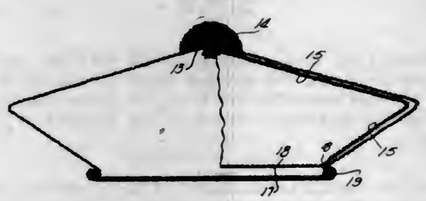
4. In a refrigerating apparatus, the combination of a vaporizer comprising an expansion chamber and a plurality of pipe loops depending therefrom each with one end opening into said expansion chamber at a higher level than its other end; and means for maintaining a level of liquid refrigerant in said expansion chamber above the uppermost ends of said pipe loops.

15. In a vaporizer for refrigeration apparatus, the combination of an expansion chamber having an inlet opening therein for the admission of liquid refrigerant thereto and an outlet opening for the passage of vaporous refrigerant therefrom; and a baffle plate located within the said expansion chamber and directly over the said inlet opening for preventing the incoming liquid refrigerant from boiling into said outlet opening.



22. In a vaporizer for refrigeration apparatus, the combination of an expansion chamber; a removable plate for closing an opening in a wall of said expansion chamber, said plate having openings therethrough for the passage of liquid refrigerant to and vaporous refrigerant from said expansion chamber; and a float valve mechanism carried by said plate for controlling the amount of liquid refrigerant entering into said expansion chamber.

1,781,194. TWO-CYCLE ENGINE WITH SLOT SCAVENGING AND AIRLESS FUEL INJECTION. WILHELM RIEHM, Augsburg, Germany, assignor to Maschinenfabrik Augsburg-Nurnberg A. G., Augsburg, Germany, a Corporation of Germany. Filed Feb. 4, 1929, Serial No. 337,255, and in Germany Feb. 17, 1928. 5 Claims. (Cl. 123—65.)

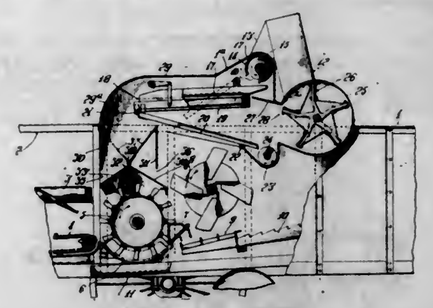


2. A two cycle engine of the class described operating with airless fuel injection, comprising a cylinder having an exhaust port, a scavenging air inlet port, and a piston reciprocable within said cylinder to control said ports, said ports being arranged on the cylinder at one side thereof in adjacent parallel planes so as to cause a flow of scavenging air across, along, and back along the combustion space, and a supplementary port in the cylinder wall arranged angularly with respect to radial directions and at a distance from said inlet and exhaust ports for admitting fluid rotatively to the combustion space to impart a whirling motion to the fluid in the cylinder, said supplementary port being positioned at such a location in the cylinder wall as to be controlled by the piston substantially simultaneously with the control of said exhaust port, and a valve for controlling the flow through said supplementary port and mechanism for operating said valve to open it after the piston has uncovered the said inlet ports.

1,781,195. REVERSIBLE CABLE DRUM. GEORGE T. RONK, Cedar Rapids, Iowa, assignor to Speeder Machinery Corporation, Cedar Rapids, Iowa, a Corporation of Iowa. Filed June 20, 1927. Serial No. 200,134. 6 Claims. (Cl. 254—187.)

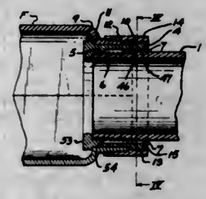
1. A reversible winch comprising a support, a shaft fixed therein, a driving gear rotatively mounted on said support, having an internal gear secured thereto, a spider fixed to said shaft having laterally projecting pins, a pinion for each of said pins in mesh with said internal gear, a clutch member rotatively mounted about said shaft and adjacent to said spider, said clutch member being provided with a spur gear also in mesh with said pinions, the clutch member being mounted adjacent to the outer ends of said pins for retaining said pinions in position thereon, said clutch member and said spur gear being slidably mounted on said shaft, a second clutch member designed to engage the first said clutch member upon being moved inwardly, yieldable means between said clutch members for throwing them out of engagement, and means for imparting inward movement to said second clutch member to cause engagement between said clutch members, the clutches being adapted to permit outward movement to cause said spur gear to disengage said pinions, and to provide clearance between the pinion retaining member of said clutch member and said pinion pins for the removal of said pinions.

1,781,196. KNITTED CAP AND PROCESS OF MAKING SAME. ARMIN ROSENBERG, Milwaukee, Wis., assignor to Reliable Knitting Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 13, 1930. Serial No. 428,025. 7 Claims. (Cl. 66—172.)



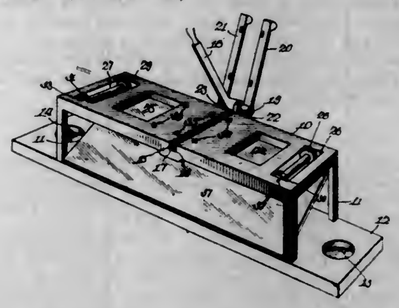
1. The process of forming knitted caps, consisting in knitting a tube in sections, each of sufficient length to form a cap, placing the threads under increased tension near the lower end of each section, knitting a few courses under reduced tension, severing the tube transversely and allowing the lower portion of the section to roll up cylindrically, and then gathering and stitching the other end of the section to form the top of the cap.

1,781,197. SHOE CONSTRUCTION. GEORGE A. SCHROETER, Brooklyn, N. Y., assignor of one-half to Charles E. Heckel, Cincinnati, Ohio. Filed Dec. 4, 1928. Serial No. 323,749. 1 Claim. (Cl. 36—58.5.)



A self-adjusting counter for a shoe, comprising a rigid heel portion, sole and upstanding side portions, the mid portion of the heel having spaced upright slots and each side portion adjacent its free end being provided with an upright slot and a strip of elastic webbing having its mid portion disposed through said slots in the heel and the ends projecting under tension towards the opposite side walls through the slots therein, back again on the inner side of the counter, and fixed to the opposite side walls.

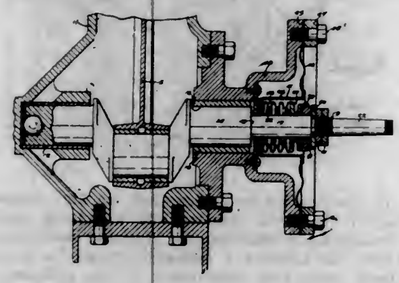
1,781,198. RECLEANER. CHARLES J. SCRANTON, Jr., Peoria, Ill., assignor to Avery Power Machinery Co., Peoria, Ill., a Corporation of Illinois. Filed May 25, 1928. Serial No. 280,438. 15 Claims. (Cl. 130—27.)



1. In combination in a threshing machine comprising an initial threshing cylinder and associated agitating and separating mechanisms for receiving material delivered from the cylinder, a recleaner, means for delivering the grain from said mechanisms to the recleaner, and shiftable means for delivering the tailings from the recleaner either to the cylinder or in rear thereof to the separating and agitating mechanisms, optionally.

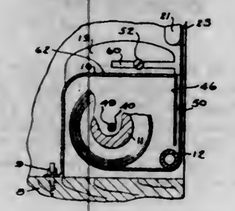
1,781,199. FITTING FOR ELECTRICAL CONDUITS. KLAAS SIXMA, Montclair, N. J. Filed May 7, 1926. Serial No. 107,314. 2 Claims. (Cl. 247—25.)

1. A bushing of general annular shape formed internally with a thread and having cut away portions transverse to the thread for receiving chips and a centering surface at the outer end thereof for bearing on a conduit and externally with means for receiving and positioning a fitting and a centering surface for an annulus adapted to extend over said fitting.



1,781,200. TRIMMER FOR FILMS. SAM SPIROS, Chicago, Ill. Filed Nov. 20, 1926. Serial No. 149,753. 4 Claims. (Cl. 154—42.)

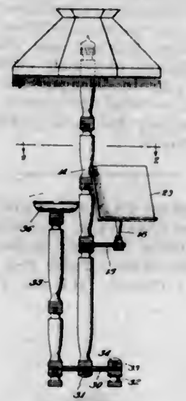
4. In a device of the class described, the combination with a table having a pair of aligned openings therein, a reflector mounted to direct the rays of light through



said openings, pins interposed between said openings to receive a film, and a cutting member mounted centrally of said table to cooperate with a groove provided in said table, whereby said cutting member may cut the film transversely of its length.

1,781,201. JOURNAL-BEARING SEAL. CHARLES C. SPREEN, Detroit, Mich. Filed Dec. 6, 1926. Serial No. 152,844. 1 Claim. (Cl. 286—11.)

The combination with a casing having a shaft rotatably mounted in a journal formed therein, an annular extension disposed in spaced relation surrounding the shaft beyond the journal, a flexible annular diaphragm secured to an outer extremity of the extension, an elongated sleeve secured at one end to an interior portion of the diaphragm, a flexible bellows disposed within the sleeve and secured to the opposite end thereof, and means at the opposite end of the bellows for rotatably associating the latter with a portion of the shaft.

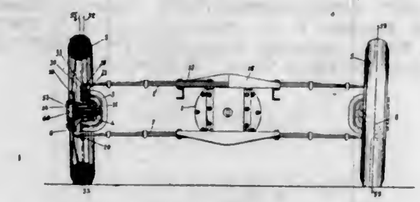


1,781,202. WINDOW SCREEN. MOSES E. STERN, New York, N. Y. Filed Nov. 2, 1927. Serial No. 230,463. 4 Claims. (Cl. 156—39.)

1. A window screen comprising end plates for fitting a window frame with upper and lower sills and having rollers positioned between said end plates; in which, the end plates have straight edges positioned against one of the sills and attached to said frame by means of a screw passing through a horizontal open ended slot in each of said plates for adjusting said plates toward and away from the window.

1,781,203. COMPOSITE STRUCTURE. BENJAMIN TELEKI, Chicago, Ill., assignor of one-half to Leslie L. O'Bryan, Chicago, Ill. Filed Apr. 12, 1926. Serial No. 101,461. 2 Claims. (Cl. 211—148.)

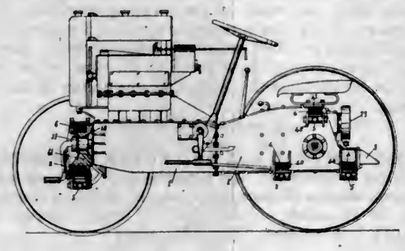
1. A structural assembly of the class described comprising a main supporting standard constructed of a plurality of individual sections joined end to end, a base upon which said standard is mounted, said sections being joined together by co-operating threaded means at the ends thereof comprising a threaded pin on the end of one of each pair of adjoining sections, and a threaded socket on the adjacent end of the other of each pair of adjoining sections, a plurality of arm units each having toward one end thereof an extension unit secured thereto and each of said arm units having an opening at its other end positioned to receive therethrough the threaded pin



connecting the section having the pin with the section having the socket, and threaded means co-operating with the threaded element on the lower end of the lowermost section for detachably connecting said standard to said base.

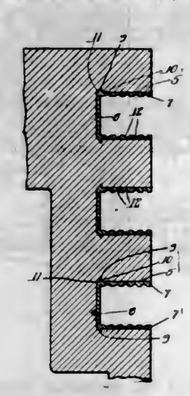
1,781,204. MOLDABLE PRODUCT AND METHOD OF PRODUCING THE SAME. SAMUEL F. WALTON, Hamburg, N. Y., assignor to The Exolon Company, Blasdell, N. Y., a Corporation of Massachusetts. Filed Apr. 23, 1928. Serial No. 272,349. 7 Claims. (Cl. 106—22.)

1. A moldable product, comprising a mixture of particles of finely divided slag, having a siliceous glaze, including a metallic oxide of definite color, and a phenol resin in bonding proportion thereto.



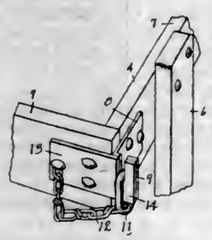
1,781,205. FRONT-AXLE ASSEMBLY. JAMES A. WRIGHT, Montreal, Quebec, Canada. Filed Jan. 8, 1927. Serial No. 159,909. 1 Claim. (Cl. 280—96.3.)

In a stub axle assembly, the combination of a transverse spring suspension with a disc wheel having a sleeve hub, a wheel carrier comprising an arched frame having transverse bearings projecting outwardly from its ends to which the looped ends of the springs are journalled, and a stub axle mounted in the sleeve hub of the wheel having its inner end arched outwardly over the sleeve hub, and pivot pins on which the adjacent ends of the two arches are pivoted to provide a vertical pivot to the stub axle and wheel.



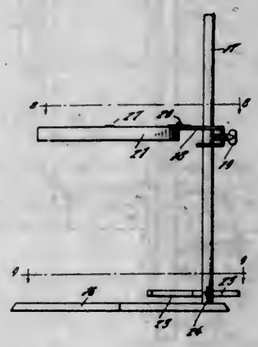
1,781,206. TRACTOR. JAMES A. WRIGHT, Montreal, Quebec, Canada. Filed Dec. 7, 1927. Serial No. 238,398. 3 Claims. (Cl. 280—112.)

3. In a vehicle having transverse spring suspension a frame, a trunnion centrally mounted at its front end, a spring bearing yoke block pivotally mounted on the trunnion, having transverse seats above and below, springs seated therein, side lugs to the yoke block adjacent the



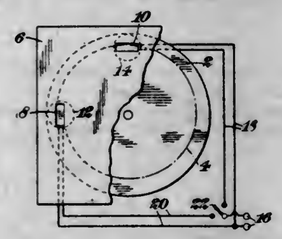
spring seats, radius rods pivoted thereto, the outer ends of the springs and radius rods being coupled to wheel carriers and wheels journalled on the wheel carriers.

1,781,207. PISTON. ANSEL S. WYSONG, Chicago, Ill., assignor of one-half to Harry L. Wells, Chicago, Ill. Filed Oct. 2, 1929. Serial No. 396,810. 2 Claims. (Cl. 74—108.)



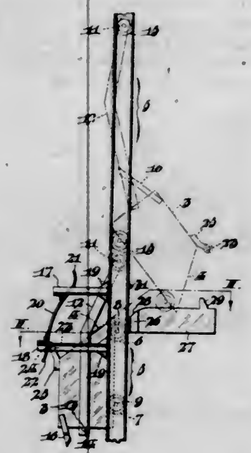
1. A liner for a ring groove of a piston comprising a channel-shaped member adapted to fit within the groove, the side walls of the channel being flared so that they will be compressed when fitted in the groove to make close contact with the side walls of the groove.

1,781,208. TRUCK BODY. DANIEL B. YOUNGBLOOD, Caledonia, Mich. Filed Dec. 3, 1928. Serial No. 323,242. 5 Claims. (Cl. 296—36.)



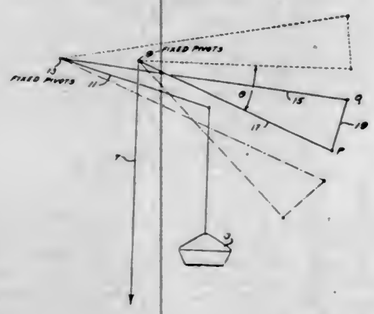
1. In a structure of the class described, the combination with a truck bed provided with stake pockets, of a plurality of wall sections provided with stakes engageable in said pockets with the wall sections in end to end relation, coacting pairs of fastener members mounted on the ends of adjacent side sections and provided with outwardly projecting arms lying side by side and having upwardly facing registering slots therein, and a coupling link engageable with said slots and adapted to swing over the bottom edges of the arms, said link being of such length as to be retained in said slots by its engagement with the bottom edges of the arms.

1,781,209. DEVICE FOR MAKING DESIGNS ON CAKES AND THE LIKE. TONY BARBERA, Trinidad, Colo., assignor to Designograph Company, Trinidad, Colo., a Corporation of Colorado. Filed Mar. 11, 1929. Serial No. 346,048. 2 Claims. (Cl. 101—126.)



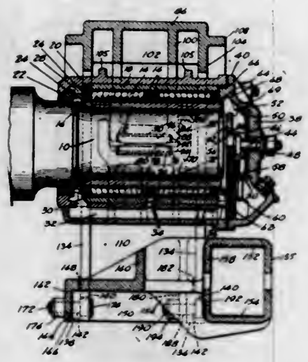
1. A device for ornamenting confections, comprising a support adapted to receive the confections, a frame, means for mounting the frame and support for movement toward and away from each other, a second frame removably mounted in the first mentioned frame, screen stretched across the opening in said second frame, said screen having portions thereof covered to leave designs, said support having a graduated scale on the top supporting surface thereof, and a confection engaging member mounted above said support for movement thereacross and cooperating with said graduated scale for centering the confection with respect to the design in said screen, said first mentioned means including means for movably mounting said confection engaging member above said support, and for retaining said confection engaging member in a predetermined position.

1,781,210. TELEVISION OR LIKE SYSTEM AND APPARATUS. JOHN LOGIE BAIRD, London, England, assignor to Television Limited, London, England, a British Company. Filed Apr. 8, 1929, Serial No. 353,636, and in Great Britain May 15, 1928. 3 Claims. (Cl. 178—6.)



1. In apparatus for use in transmitting light images, the combination with an exploring device, of an opaque screen disposed adjacent said device, spaced portions of said screen being constructed to permit passage of light through the same and through said exploring device to frame the image, means for associating electrical and light impulses, and means for rendering said last named means operative adjacent one only of said spaced portions on the screen.

1,781,211. SKIP-BUCKET DISCHARGE MECHANISM. ROBERT H. BEAUMONT, Radnor, Pa., assignor to R. H. Beaumont Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 6, 1928. Serial No. 267,871. 2 Claims. (Cl. 214—120.)

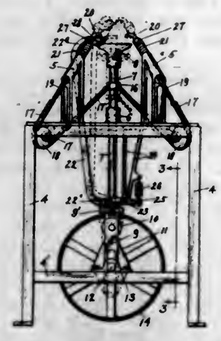


1. In skip-bucket discharge mechanism of the type described, a skip-bucket with upper and lower pairs of wheels on common axes, a suspension bail pivoted to the bucket bottom intermediate the front and rear walls thereof and having a pair of similar wheels at its suspension end, a track with which all of said wheels normally engage in guiding travel of the bucket, said track having co-planar cut-outs affording entry to and exit from offset discharge rails each of which embodies a vertical abutment, a stationary offset arcuate cam path supported by the track, and a roller on the bucket co-operative with the cam path serving to move the bucket upper wheels from the track onto the discharge rails for impact with and retraction from the abutments aforesaid in effecting automatic inversion of the bucket incident to outward lateral displacement of its mouth relative to the track and limited turning movement about the axis of the lower pair of wheels thereon.

1,781,212. MEASURING INSTRUMENT. EDGAR H. BRISTOL, Foxboro, Mass., assignor to The Foxboro Company, Foxboro, Mass., a Corporation of Massachusetts. Filed Sept. 10, 1927. Serial No. 218,603. 8 Claims. (Cl. 74—5.)

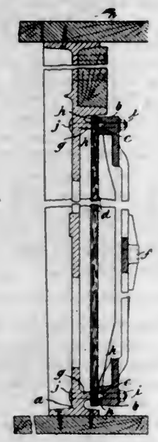
1. In an instrument of the class described a responsive device having a linear movement, a shaft crank driven thereby, a swinging arm the movement of which renders available the action of said device, and a linkwork connection for moving the arm on rotation of said shaft the joints of which are solely of the rotating or pivotal type, the elements of the linkwork being correlated and relatively proportioned to effect an angular displacement of such arm in approximately fixed ratio to the sine of the displacement of such crank throughout the range of the instrument.

1,781,213. JOURNAL BOX AND FRAME CONNECTION. RICHARD J. BRITTAIN, Jr., Bloomfield, N. J., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 2, 1929. Serial No. 411,011. 19 Claims. (Cl. 105—223.)



11. In a device of the character described, a journal box, an axle journalled in the box, the opposite sides of the box having supporting surfaces projecting outwardly near axle level, said surfaces being crowned longitudinally of the box, a saddle extending over the box and having depending legs at opposite sides of the box, and the legs having outwardly extending frame engaging members and supporting surfaces extending inwardly near axle level and supported on the crowned surfaces of the box; substantially as described.

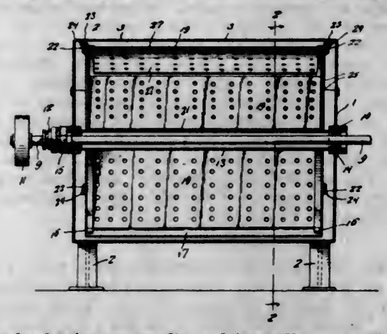
1,781,214. METHODS OF PREPARING ABSORBENTS FOR LIQUID-OXYGEN EXPLOSIVES AND RESULTING ABSORBENTS AND EXPLOSIVES. HERBERT C. BUGBIRD, Richmond, N. Y. Filed Sept. 28, 1925. Serial No. 59,042. 9 Claims. (Cl. 52—1.)



1. The method of preparing a liquid oxygen absorbent, which comprises filling the external voids between the relatively coarse particles of a mass of liquid oxygen absorbent material, comprising leached carbonized lignin residues, with relatively fine particles of a liquid oxygen absorbent material to form a complex liquid oxygen absorbent material.

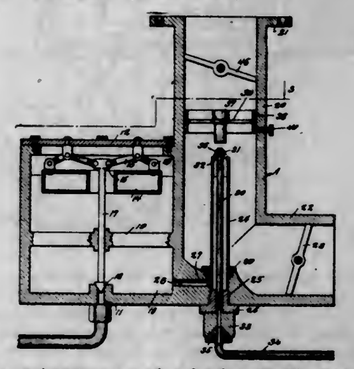
1,781,215. MACHINE FOR HUSKING COCONUTS. GENARO CELAYA, Los Angeles, Calif. Filed Dec. 17, 1929. Serial No. 414,772. 9 Claims. (Cl. 146—7.)

1. In a machine of the character referred to, a supporting structure, a receiving cup for the article, means for moving said receiving cup in one direction, knives positioned to slash said article in said cup as said article is moved along said knives, hook members movably mounted to catch into said article between the slashes made by said knives, and operating connections for moving said hook members in the opposite direction to that of said article, whereby to pull from said article the slashed outside thereof.



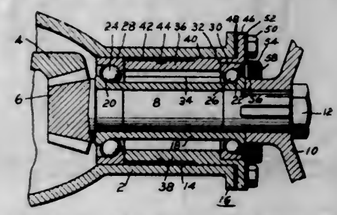
1,781,216. PIANO. JOHN HENRY CLARK, Whetstone, England. Filed July 15, 1929, Serial No. 378,348, and in Great Britain Sept. 18, 1928. 3 Claims. (Cl. 84—184.)

1. In a piano, a metal soundboard frame comprising front and rear frame members, a rib projecting laterally from one of said frame members, a rim projecting laterally from the other of said frame members, said rim being of greater width than said rib and having a groove therein adapted to aline with said rib, a soundboard having its marginal portion disposed between the rib and the rim of the respective frame members, and means for drawing the frame members together to clamp the soundboard therebetween.



1,781,217. CYLINDER WASHING MACHINE. JOHN R. CLOVER, Enid, Okla. Filed Apr. 3, 1929. Serial No. 352,130. 1 Claim. (Cl. 68—18.)

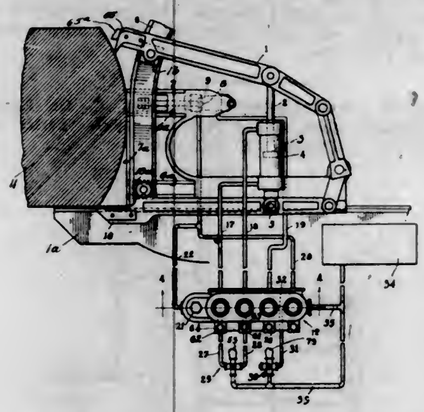
In a washing machine, a casing, a frame mounted for rotation within the casing and including a driven hub portion that extends axially through the casing, angle iron arms extending radially from the hub adjacent the respective ends thereof, rings each encircling the outer ends of one of the arm flanges, said arms being arranged in pairs, a plurality of perforated clothes receiving receptacles, means for detachably securing each of said receptacles between a pair of arms and the opposed rings, there being a space between the adjacent receptacles to provide pockets, and a pair of scoops for each pocket for directing washing fluid thereinto, each comprising a pair



of blades having outwardly and inwardly converging portions, said last named portions being each connected at the opposite ends to the outer ends of the other flanges of the radial arms.

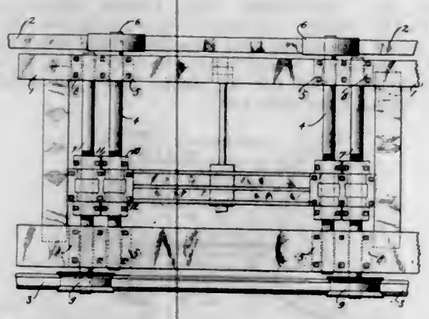
1,781,218. CARBURETOR. AMBROSE C. DE LANGE, Kalispell, Mont. Filed Mar. 10, 1927. Serial No. 174,377. 2 Claims. (Cl. 261—62.)

1. In a carburetor, a casing having an air way therethrough, a compressed air feed pipe leading into said airway, a nozzle on said pipe disposed axially within said way, a plurality of fuel tubes grouped about said nozzle, the tubes being of different points relative to the outlet of the nozzle, the tube having the smallest diameter terminating nearest the outlet of the nozzle and the tube having the greatest diameter terminating furthest from the outlet of the nozzle.



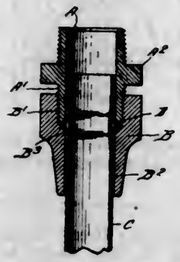
1,781,219. MOUNTING FOR PINION SHAFT OF REAR AXLE. THOMAS C. DELAVAL-CROW, Bristol Conn., assignor to The New Departure Manufacturing Company, Bristol, Conn., a Corporation of Connecticut. Filed Dec. 14, 1928. Serial No. 326,049. 6 Claims. (Cl. 308—189.)

1. In an axle construction having a pinion shaft subject to end thrust, a tubular carrier projecting from



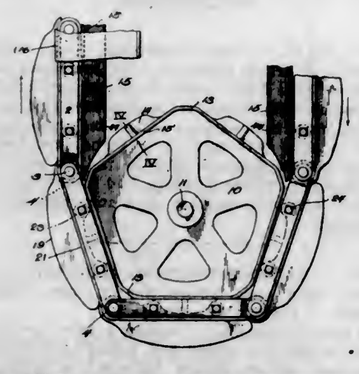
the axle and having a smooth unbroken bore extending to its open end, a pinion at one end of the shaft and a driving member at the other, a long sleeve fixed on the shaft and extending from the pinion to the driving member, an angular contact raceway at the end of the sleeve adjacent to the pinion and an angular contact raceway at the end of the sleeve adjacent to the driving member, rolling elements running on the raceways, a pair of outer race rings mounted to slide axially as a unit along the bore wall, means for holding the outer race rings in a constant spaced relation with an initial thrust load on the rolling elements, and means for axially adjusting the assembled bearing structure within the bore of the carrier; substantially as described.

1,781,220. DEVICE FOR CONTROLLING THE TRAVEL OF TONG DOGS FOR SAWMILL CARRIAGES. ERVIN A. FERRIS, Westwood, Calif. Filed June 18, 1928. Serial No. 286,399. 7 Claims. (Cl. 143—125.)



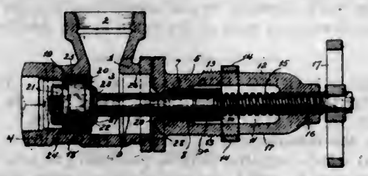
1. The combination with a saw mill carriage having a log or cant receiving knee, of a dog, means for moving the dog in a vertical plane in either direction and for holding it in adjusted position, a stanchion slidable toward and from the face of the knee, and carrying the dog therewith, means for moving said stanchion in either of said directions, said means cooperating with said first named means for retarding the downward movement of said dog when said stanchion is in a retracted position.

1,781,221. DIFFERENTIAL TRUCK FOR SAWMILL CARRIAGES. ERVIN A. FERRIS, Westwood, Calif. Filed Oct. 15, 1928. Serial No. 312,651. 1 Claim. (Cl. 143—105.)



A differential truck comprising a frame, bearings carried by said frame, axles rotatably and slidably mounted in said bearings, wheels having V-shaped grooves, and being mounted on certain of said axles, flat rimmed wheels mounted on the other axles and being disposed on the opposite side of the frame, a casting, means for rigidly positioning said casting with reference to said frame, and means for adjusting the axles relative to said casting.

1,781,222. PIPE JOINT OR CONNECTION. ARTHUR I. FISCHER, Cleveland Heights, Ohio, assignor to The Republic Brass Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 9, 1928. Serial No. 268,529. 1 Claim. (Cl. 285—123.)

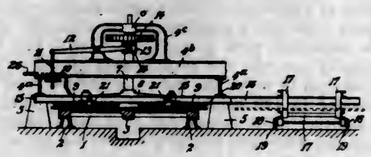


In a pipe joint the combination of a pipe, a coupling member slidably receiving said pipe, said coupling member having a counterbore providing a shoulder, a non-divided metallic clamping and sealing ring channel shaped in cross section with both edges projecting inwardly closely fitting about said pipe and seated in said counter-bore, said ring being of a metal materially harder than said pipe, a gland member about said pipe extending into said counterbore, and means of said coupling member and gland member whereby they may be forced together to compress said metallic ring and force both edges of the same into said pipe, said pipe when in sealed condition having a depressed band portion extending inwardly and receiving said ring, said band being of a width as great as the width of said ring and receiving the same in tight sealing relation.

1,781,223. ENDLESS SECTIONAL WATER SCREEN. FRANCIS P. GARY, Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 12, 1928. Serial No. 318,964. 12 Claims. (Cl. 210—175.)

1. An endless sectional water screen comprising parallel chains and screen baskets secured to the chains, characterized by such baskets having projecting flanges adapted to form trash seals at the sides of the screen, and means carried by said flanges for connecting them with the chains.

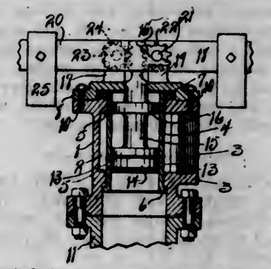
1,781,224. VALVE. HENRY F. GILG, Pittsburgh, Pa. Filed Feb. 2, 1929. Serial No. 336,997. 7 Claims. (Cl. 251—27.)



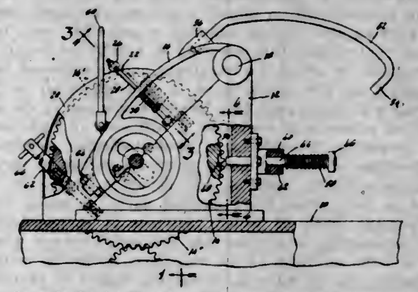
2. In a piston type valve, a casing having an inlet, an outlet, a bore, and a valve seat in the bore between the inlet and the outlet, a valve stem extending into the bore, and a valve head mounted on the stem and including compression members and an expansible packing ring arranged between the same, one of said compression members being engageable with the seat, and the other being slidable on the stem and adapted under fluid pressure within the bore, to move toward the seat engaging member when the latter is in engagement with its seat, and to thereby expand the packing ring radially into snug engagement with the bore of the casing.

1,781,225. PROCESS FOR THE PURIFICATION OF TRIARYL PHOSPHATES. WILFRID GIBSON and CHARLES ROYSTON HENSHAW, Blackley, Manchester, England, assignors to Imperial Chemical Industries Limited, Westminster, England. Filed Oct. 23, 1929, Serial No. 401,976, and in Great Britain Oct. 24, 1928. 3 Claims. (Cl. 260—98.)

1. A process for the manufacture of a purified triaryl phosphate which comprises treating a crude triaryl phosphate with oleum of about 20% free sulphur trioxide content.



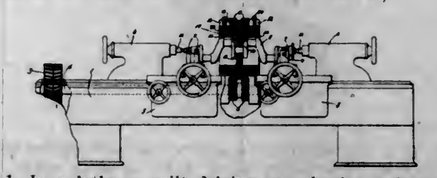
1,781,226. PROCESS OF AND APPARATUS FOR WASHING OFF THE FELTS OF POLISHER RUNNERS IN GLASS-POLISHING APPARATUS. JAMES HARRIS GRIFFIN, St. Helens, England, assignor to Pilkington Brothers Limited, Liverpool, England. Filed June 17, 1926, Serial No. 116,524, and in Great Britain July 7, 1925. 1 Claim. (Cl. 51—109.)



The combination with a plurality of successively mounted polishing heads and a plurality of traveling polishing tables movable beneath said heads, of tracks disposed parallel to the path of movement of said tables, a pair of tracks disposed adjacent to each head and in a plane above the surface of the tables, a truck on the first named tracks, a wheeled table on said truck and movable to the second-named tracks into position between the polishing head and the first-named tables when the former is moved vertically upward clear of the table, and means on said wheeled table for cleansing the polishing heads.

1,781,227. PRESSURE-RELIEF DEVICE. CLYDE D. HELM, Fort Worth, Tex. Filed Sept. 15, 1928. Serial No. 306,254. 6 Claims. (Cl. 137—53.)

1. A pressure relief device comprising a casing having intake and discharge ports, a cylinder mounted in said casing, said casing having an annular cavity therein communicating with said discharge port, means for locking said cylinder in said casing including an interior flange in said casing and an exterior flange on said cylinder and a nut screwed on said cylinder and clamping said flanges together, said cylinder having ports communicating with said cavity, a piston mounted in said cylinder and adapted to open and close said cylinder ports automatically for relieving excessive pressure in a supply line and conserving the liquid, and means for regulating the movement of said piston.

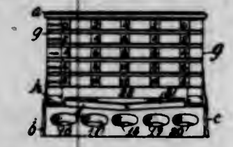


1,781,228. LATHE FOR TURNING CRANK SHAFTS. HERMAN O. HESS, Saginaw, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed July 14, 1927. Serial No. 205,747. 26 Claims. (Cl. 82—9.)

1. In a lathe having a split gear, means for separating one half of the gear from the other, and means for preventing the nonseparable gear half from rotating comprising a plunger extending through the frame of the lathe, resilient means tending to urge said plunger away from said non-separable gear half, and an arm attached to said first named means and adapted to force said plunger into engagement with said nonseparable gear half when said removable half is separated from said stationary half.

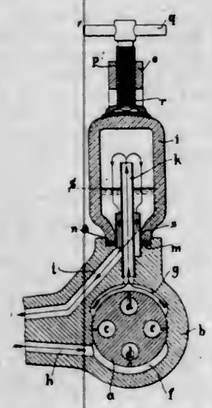
26. In a lathe having a gear comprising a plurality of sectors, means for separating one sector from the other, a bar adapted to engage said separable sector, resilient means acting on said bar to cause it to engage said separable sector when moved to prevent its rotation, a plunger adapted to engage said non-separable sector to prevent its rotation when said separable sector is moved, and resilient means urging said plunger away from said stationary sector.

1,781,229. LATHE FOR TURNING CRANK SHAFTS. HERMAN O. HESS, Saginaw, Mich. Filed Sept. 18, 1929. Serial No. 393,778. 22 Claims. (Cl. 82—9.)



1. In a lathe, a split driving gear having a laterally extending rim, flanges projecting from either side of said

gear, and hinged split steady-rests serving as bearings for said flanges and extending under and contacting with the rim of the gear.

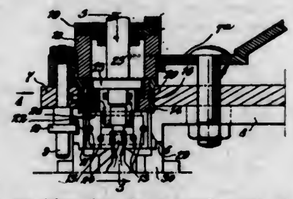


14. In a crankshaft lathe of the center drive type, a split gear member comprising gear sectors, bearing portions at both sides of said sectors, and a split bearing member including sets of bearing sectors conforming to the bearing portions on said gear sectors, said bearing sectors adapted to be positioned on said gear sector bearing surfaces and provided with annular means which laterally interfit with said gear sectors.

1,781,230. APPARATUS FOR PLAYING GOLF IN RESTRICTED SPACES OR INDOORS. HENRY HILL, Paignton, England. Filed Feb. 27, 1929, Serial No. 348,042, and in Great Britain Nov. 13, 1928. 6 Claims. (Cl. 273—87.)

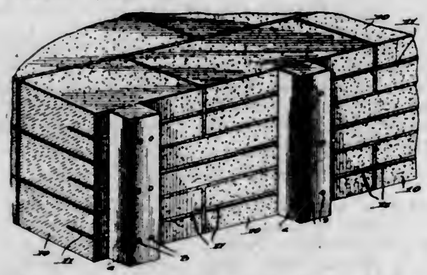
6. In apparatus for playing golf in a restricted space, the combination with a substantially horizontally disposed course-board, a substantially vertically disposed score-board provided with a plurality of rows of spaced numerals forming also vertical columns of numerals, each horizontal row of numerals referring to a different imaginary instrument by which the imaginary ball is supposed to be propelled on the course-board, a slope provided with a plurality of holes, each hole located below one of the said vertical columns of numerals, a ball and an instrument for propelling the ball, of a stroke-indicator comprising a plurality of lever-members pivoted together to form a lazy-tongs device, some of said members which are parallel to each other being marked with the name of an instrument, each of which instruments corresponds to that designating one of the said horizontal rows of numerals and the members of the lazy-tongs device, so marked, indicating the position in which the ball is to be placed prior to being struck by the said instrument substantially as described.

1,781,231. ARTIFICIAL-SILK-SPINNING MACHINE. PAUL HILLEBRAND, Werdohl, Germany, assignor to Firm Werdohler Pumpenfabrik Paul Hillebrand, G. m. b. H., Werdohl, Germany. Filed Jan. 28, 1926, Serial No. 84,407, and in Germany Mar. 4, 1925. 3 Claims. (Cl. 18—8.)



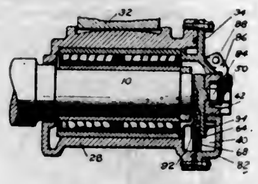
1. In a silk spinning apparatus, the combination with a spinning liquid supply pump, and a spinning nozzle, of a pressure equalizing chamber disposed between the pump and nozzle, said chamber having an inlet communicating with the pump and serving to deliver the liquid into the chamber at or above the normal working level of the liquid in the chamber, and said chamber having a liquid discharge outlet leading to the nozzle from a point below the normal working level of the liquid in the chamber.

1,781,232. MAKING PORTLAND CEMENT. FREDERICK W. HUSER, Riverside, Calif. Filed Mar. 19, 1930. Serial No. 437,277. 5 Claims. (Cl. 106—25.)



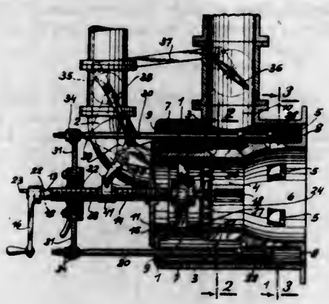
1. In the manufacture of Portland cement from a raw material which contains calcium phosphate in substantial amounts and in which the mineralizing components are in too small amount to give a good cement by burning with argillaceous material at usual cement burning temperature and pulverizing, the herein described improvement which comprises adding argillaceous material to the said material, and adding an iron oxide material in such amount as to bring the total iron content up to substantially above the chemical equivalent of the phosphate radical content, then burning the mix at the usual cement burning temperature and under conditions capable of converting substantially the entire amount of phosphate radical into iron phosphate while leaving a substantial amount of iron oxide to act as a mineralizing agent for the cement, and thereafter reducing the burned material to a fine powder.

1,781,233. MANUFACTURE OF BLOWN-GLASS ARTICLES. SYDNEY HUNT, Birmingham, England, assignor to John Walker & Sons Limited, London, England, a British Company. Filed Sept. 3, 1927, Serial No. 217,444, and in Great Britain June 22, 1927. 10 Claims. (Cl. 49—18.)



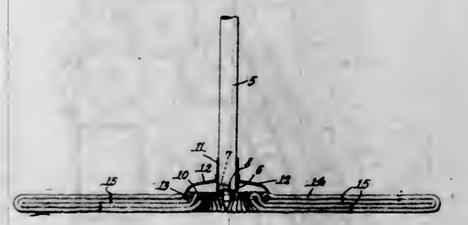
1. In a machine for the manufacture of blown glass articles having a blowing head and a sectional neck mould, the halves of which are pivoted so that they can be opened and closed together; a construction in which the blowing head is furnished with a depending dowel pin located diametrically opposite the pivotal axis of the halves of the mould, and in which the halves of the sectional mould are provided in the neighbourhood of their joint when closed together with means for engaging corresponding means on the dowel pin for the purposes set forth.

1,781,234. CONSTRUCTION UNIT. CHARLES E. JONES, Griffin, Ga. Filed Apr. 18, 1929. Serial No. 356,170. 9 Claims. (Cl. 72—37.)



1. A construction unit formed of an ordinarily impenetrable material and having a wedged shaped opening therein for the frictional engagement therein of fastenings of other building units to be attached thereto.

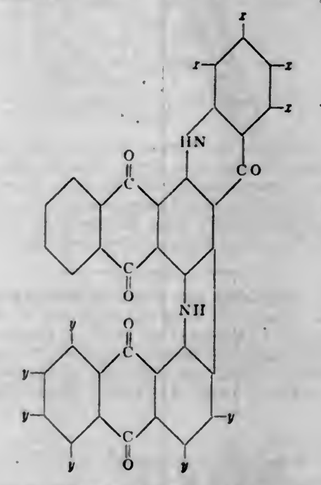
1,781,235. JOURNAL BOX. PAUL B. LIEBERMANN, New York, N. Y., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 22, 1925. Serial No. 24,961. 15 Claims. (Cl. 308—41.)



1. In a device of the character described, a journal box, a shaft journalled therein, a cap for the end of the box, said cap having an opening opposite the end of the shaft, a detachable closure member for the opening, a thrust plate having on one side a holding stud extending through the closure member and on the other side a thrust face with a recessed portion, a wick supported within the recessed portion of the thrust face and extending into the lower part of the journal box, said plate and wick being removable as a unit through said opening; substantially as described.

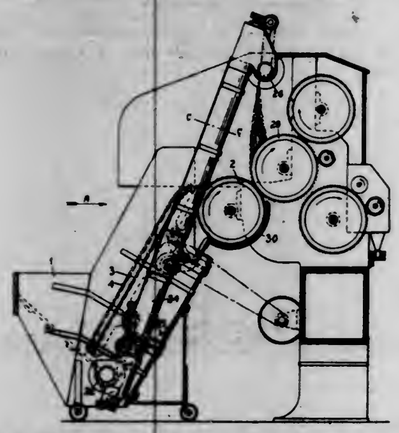
1,781,236. WHIRL BURNER. FRIEDRICH LILGE, Oberhausen, Germany. Filed July 25, 1928, Serial No. 295,237, and in Czechoslovakia Apr. 23, 1928. 17 Claims. (Cl. 158—109.)

12. In a burner in combination, an interior chamber, a spacedly disposed jacket around the chamber, communicating means between the jacket and the chamber, admission conduits for the jacket and the chamber, outer and inner regulating means for said communicating means, and additional regulating means for the conduits, and axially movable regulatable admission means within the chamber, a support outside of the chamber and of the jacket, a hollow operating shaft in the support connected to the inner regulating means, an interiorly threaded sleeve within said hollow shaft and secured against longitudinal displacement, means to detachably connect the sleeve to the shaft, an interior shaft within the hollow shaft and screw-threadedly engageable with the sleeve and connected to the regulatable admission means, means to detachably connect the hollow shaft to the support, operating shafts for the outer regulating means, journalled in the support, and means to detachably connect said last mentioned operating shafts to the support, and operating means for the conduit regulating means, axially displaceable upon the hollow shaft.



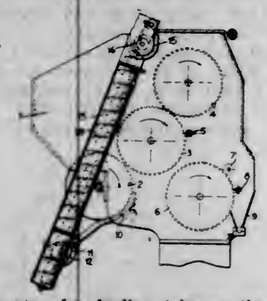
1,781,237. MOP. MOLLIE K. MERKLE, Paris, Ill. Filed Oct. 10, 1929. Serial No. 398,690. 1 Claim. (Cl. 15—120.)

In a mop, a head embodying a frame, said frame including a collar to be secured to one end of a mop stick, arms extending from the collar, said arms having downwardly extended outer ends, a ring secured to the downwardly extended outer ends, a collar slidably mounted on the mop stick, arms extending from the last mentioned collar and having downwardly extended ends, a ring secured to the downwardly extended ends of the last mentioned arms, and lengths of yarn looped around the rings.



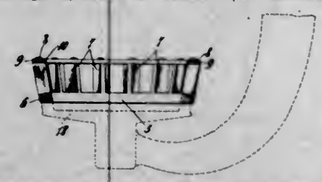
1,781,238. NEW VALUABLE VAT DYESTUFFS OF THE ANTHRAQUINONE SERIES. WALTER MIEG, Opladen, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed July 8, 1929, Serial No. 376,862, and in Germany July 9, 1928. 2 Claims. (Cl. 260—37.)

1. As new products the compounds of the probable general formula:



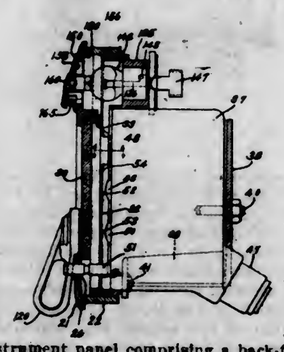
wherein one x stands for halogen and the other x's for hydrogen atoms which may be substituted by halogen and one y stands for an acylamino group and the other y's for hydrogen atoms which may be substituted by acylamino groups, being in the dry state dark powders dissolving in concentrated sulfuric acid with an intense coloration and dyeing cotton from an alkaline hydrosulfite vat reddish-grey to olive-brown shades of excellent fastness properties.

1,781,239. CIGARETTE-MAKING MACHINERY. WALTER EVERETT MOLINS, Deptford, London, England. Filed Aug. 19, 1927, Serial No. 214,203, and in Great Britain Aug. 27, 1926. 14 Claims. (Cl. 131—39.)



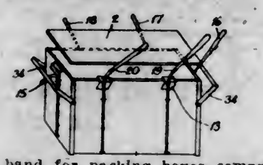
1. In a tobacco feeding apparatus for a cigarette making machine, a hopper, and means for feeding tobacco to said hopper and simultaneously effecting separation of the short and long shreds of tobacco.

1,781,240. CIGARETTE-MAKING MACHINERY. WALTER EVERETT MOLINS, Deptford, London, England. Filed Feb. 10, 1928, Serial No. 253,425, and in Great Britain Feb. 19, 1927. 8 Claims. (Cl. 131—39.)



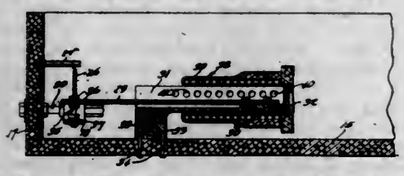
1. In apparatus for feeding tobacco, the combination with a combing roller, of a carded feeding roller for feeding tobacco thereto and spaced therefrom to permit short shreds of tobacco to fall, means for receiving the falling shreds and distributing them uniformly on the combing roller and over the tobacco carried thereby.

1,781,241. METHOD OF MAKING ROLLER-BEARING CAGES. HAROLD J. NESS and CLARENCE H. ROTH, Jersey City, N. J., assignors to The New Departure Manufacturing Company, Bristol, Conn., a Corporation of Connecticut. Filed Apr. 25, 1928, Serial No. 272,821. Renewed Apr. 3, 1930. 2 Claims. (Cl. 29—148.4.)



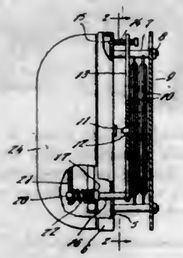
2. The method of making a two-piece cast bearing cage which comprises casting, in a metal mold, a blank consisting of one end ring and spacing members projecting therefrom, together with a gate comprising a disc extending entirely across said ring, cooling the blank, and cutting said gate away from the cage blank, and securing a second end ring to the free ends of the spacer members to complete the cage, substantially as described.

1,781,242. ILLUMINATED INSTRUMENT PANEL. HARRY E. NORVIEL, Anderson, Ind., assignor, by mesne assignments, to A C Spark Plug Company, Flint, Mich., a Corporation of Michigan. Filed June 12, 1923, Serial No. 645,007. Renewed May 12, 1930. 21 Claims. (Cl. 240—8.16.)



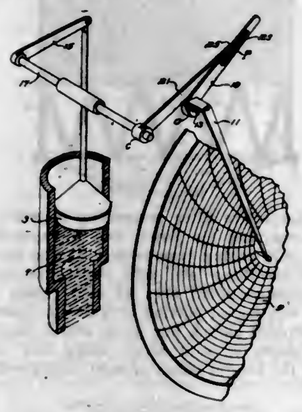
21. An instrument panel comprising a back-frame member provided with a plurality of apertures, instruments secured to the back-frame member with their dials exposed at said apertures, said back-frame member being provided with a lamp socket adjacent one margin and a lamp in the socket positioned to illuminate the dials of the instruments, a dial cover overlying said back-frame member provided with apertures to display said dials, a front frame member, transparent means between the front frame member and the back frame member for protecting the dials, said front frame member being apertured in line with said socket, and a cover for said aperture readily removable from the front of the panel to permit access to the bulb.

1,781,243. CLOSURE FOR BOXES AND CASES. VITTORIO ORZOGIA, San Remo, Italy. Filed Apr. 14, 1928, Serial No. 270,002, and in Italy Apr. 15, 1927. 5 Claims. (Cl. 24—18.)



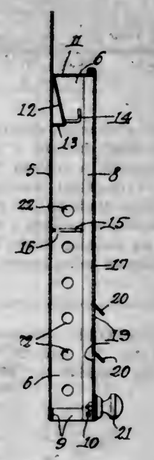
1. A tying band for packing boxes comprising an incomplete band in the direction of the length of the box, a plurality of cross bands, formed by double strings with interlocked eye-shaped ends adapted to complete the longitudinal band, a loop for connecting the free ends of said bands, and a seal for said loop.

1,781,244. HAIR-CURLING MACHINE. CLYDE D. OSWALD, San Bernardino, Calif. Filed June 27, 1928. Serial No. 288,572. 2 Claims. (Cl. 219—24.)



1. In combination, a support, a head member having an extension secured to the support and formed with a recess for the reception of a thermometer, said head member having a groove and perforated so that when the head member is extended into an electric hair curling unit heat will be readily transmitted to the groove, a switch on the support comprising a stationary contact and a movable contact yieldably urged to open position, the stationary contact being adjustable toward and away from the movable contact, and a thermostat secured within the said groove normally maintaining the movable contact in engagement with the stationary contact but permitting it to open when flexed.

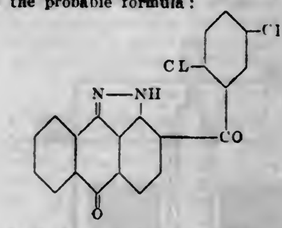
1,781,245. ALARM. JAMES B. PEGRAM, Bridgeton, N. J. Filed Apr. 13, 1929, Serial No. 354,925. Renewed Mar. 27, 1930. 3 Claims. (Cl. 116—106.)



1. An alarm comprising a bell, a thermostatic unit, a spring mechanism, a clapper for engagement with the bell and cooperation by said spring mechanism, and means engageable with said clapper and releasable by the said thermostatic unit, said means consisting of a slide rod, a leaf spring engageable by said thermostatic unit, and being connected to said slide rod, and a head on the slide rod for normal engagement with the clapper.

1,781,246. MEASURING INSTRUMENT. IRVING W. REYNOLDS, Foxboro, Mass., assignor to The Foxboro Company, Foxboro, Mass., a Corporation of Massachusetts. Filed Aug. 27, 1927. Serial No. 215,929. 8 Claims. (Cl. 74—5.)

2. An instrument of the class described, comprising a responsive device having a linear movement; an arm for rendering available the movement of said device mounted to swing about one of two mutually spaced and relatively fixed pivot points; a lever mounted to swing about the other of said pivot points; connecting means comprising a crank driven by said responsive device and in turn driving said lever; a movable connection linking said lever to said arm; the distance from the pivot point of said lever to the point of attachment to said lever of said movable connection being greater than the mutual spacing of said centers whereby to effect angular movement of said arm substantially directly proportional to the linear movement of said responsive device in the range of the instrument.

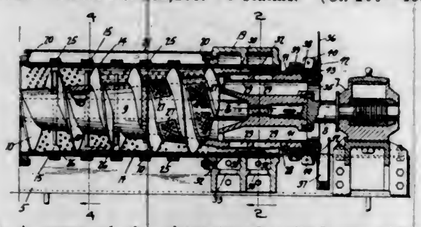


1,781,247. TOOTHBRUSH CABINET. WILLIAM HOBERT RICKLES, Marshall, Tex. Filed Nov. 17, 1928. Serial No. 320,194. 1 Claim. (Cl. 206—15.1.)

A cabinet of the class described including a box-like body portion having an open bottom, a top wall forming a part of the body portion, a portion of the top wall extending into the body portion and being inclined inwardly, the lower end of the inclined portion being disposed in spaced relation with the back of the body portion, hooks on the inclined portion, means for preventing lateral movement of the brushes held in the body portion, and a cover for the body portion.

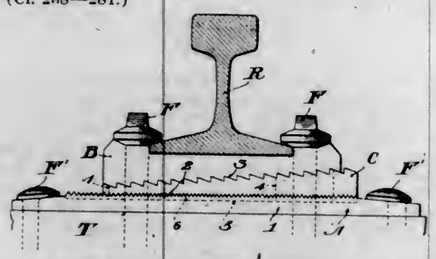
1,781,248. COMPOUND OF THE PYRAZOLANTHRONE SERIES AND PROCESS OF MAKING SAME. HEINZ SCHEYER, Rio de Janeiro, Brazil, assignor to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 11, 1929, Serial No. 354,433, and in Germany Apr. 5, 1928. 6 Claims. (Cl. 260—45.)

6. As a new compound a 2-(dichlorobenzoyl)-pyrazolanthrone of the probable formula:



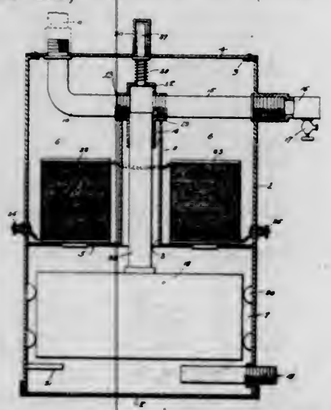
soluble in an aqueous alcoholic caustic soda solution with a bluish intense violet color, in concentrated sulfuric acid with an orange color.

1,781,249. FOOD BEVERAGE AND METHOD FOR PREPARING THE SAME. WILLARD J. SCHOLL, Jackson, Mich., assignor to Malt-O-Matic Corporation, a Corporation of Michigan. Filed Oct. 21, 1929. Serial No. 401,373. 7 Claims. (Cl. 99—11.)



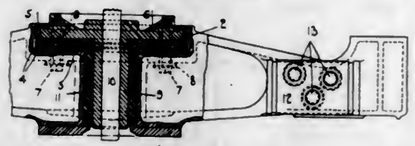
1. A chilled lactic beverage of temperature well below the freezing point of water and having uniform creamy consistency, specific gravity in the order of one-half that of water and including minute bubbles of air and minute impalpable crystals of ice, distributed throughout the volume of the product.

1,781,250. PRESS FOR EXTRACTING LIQUIDS. HENRY G. SCHWARZ, Denver, Colo. Filed Apr. 5, 1927. Serial No. 181,165. 4 Claims. (Cl. 100—48.)



1. A press of the character described comprising a cylindrical screen element having a discharge opening, a rotary element including a conical body in the screen element, a flanged cylindrical extension without the same, and a helical screw blade on the conical body, a head spaced from the extension to provide a passage for the discharge of solids, and an annular shield beyond the passage, the flange on the extension being inside the opening of the shield.

1,781,251. RAIL SUPPORT. BERNARD J. SCHWENDT, Cleveland, and CARL F. STOLTZ, Cincinnati, Ohio. Filed June 15, 1929. Serial No. 371,206. 13 Claims. (Cl. 238—281.)



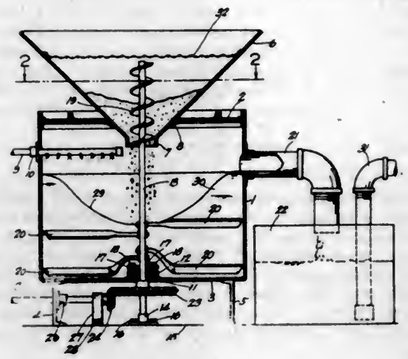
1. An adjustable rail support including a tie bearing plate, a rail supporting unit comprising vertically adjustable rail supporting members, and means for adjusting said rail supporting unit laterally of the tie bearing plate.

1,781,252. AUTOMATIC CONTROL FOR RESERVE LUBRICANTS. ALLISON SICKELS, Cape May, N. J. Filed Aug. 7, 1928. Serial No. 298,085. 1 Claim. (Cl. 184—103.)

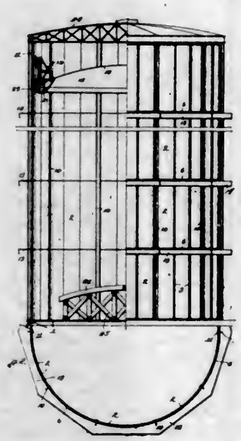
An automatic control for supplying reserve lubricant to motor crank cases, in combination, an oil supply line leading from a reserve trough to the usual crank case of an automobile, a chamber communicating with the crank case, a float operable within the chamber, a valve on the float seatable within the supply line, an electro-magnet interposed within the usual ignition system of the automobile, said float being of a material capable of being magnetically attracted by said electro-magnet, said electro-magnet being adapted for energization when the automobile engine is in operation so as to attract the float and maintain the valve in that position, said valve being suitably mounted as to return to an open position when the said magnet becomes deenergized.

1,781,253. RAILWAY AND THE LIKE VEHICLE. ALEXANDER SPENCER, London, England. Filed Oct. 22, 1929, Serial No. 401,518, and in Great Britain Oct. 4, 1929. 9 Claims. (Cl. 105—230.)

1. In a railway vehicle bogie truck, a bolster, a centre casting, and a shock absorbing pad of india-rubber on which said centre casting is seated, the said india-rubber block having an upstanding flange extending around the base of said centre casting.



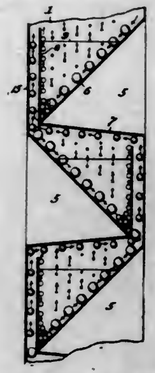
1,781,254. GAS PROTECTIVE OR BREATHING FILTER. HERMANN STELZNER, Lubeck, Germany, assignor to OTTO HEINRICH DRÄGER, Lubeck, Germany. Filed Feb. 4, 1929, Serial No. 337,419, and in Germany Feb. 9, 1928. 2 Claims. (Cl. 183—71.)



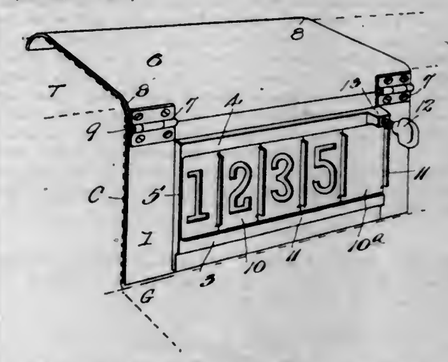
1. A gas protective filter comprising a casing through which the breathing air flows, and a vapor-filter-layer arranged in said casing transversely to the direction of flow of the breathing air, said vapor-filter-layer fully filling the cross-sectional area of said casing and consisting of a corrugated portion of uniform, readily formable filter material having fine pores, and a mantle snugly fitting the inside of said filter casing and completely surrounding the lateral edges of said corrugated portion.

1,781,255. CEMENT MIXER FOR CEMENTING OIL AND GAS WELLS. JOHN E. TROUTH, Seminole, Okla., assignor to Independent Oil Well Cementing Co., Inc., Oklahoma City, Okla. Filed Apr. 24, 1929. Serial No. 357,675. 7 Claims. (Cl. 83—73.)

1. A device, as and for the purposes described, embodying, a cement mixer having a funnel shaped bin disposed upon its top, a vertical shaft extending through said mixer and through the neck of said bin, means for rotating said shaft, means within said neck and upon said shaft for automatically controlling the feed of dry cement into said mixer from said bin, means for projecting water into said mixer, means for agitating and mixing said water and said cement and centrifugally forcing the mixture from said mixer through an overflow pipe to a cement pan.



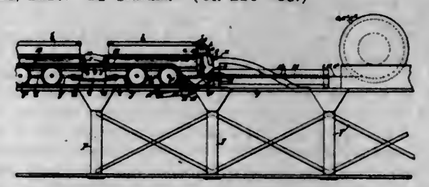
1,781,256. GAS HOLDER. FREDERICK H. WAGNER, Baltimore, Md., assignor to The Bartlett Hayward Co., Baltimore, Md., a Corporation of Maryland. Filed Aug. 6, 1926. Serial No. 127,678. 9 Claims. (Cl. 48—176.)



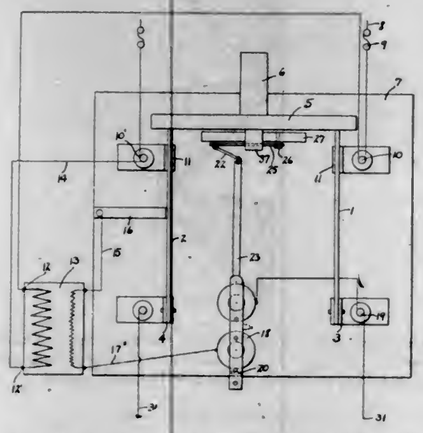
1. In a waterless gas holder, the combination of a shell; a piston mounted therein; a trough surrounding the piston and spaced away from the wall of the shell; a plurality of layers of felt the lower ends whereof extend down into the trough with the upper ends extending laterally into contact with the wall of the shell; and means urging said laterally extending portions outwardly.

1,781,257. DEEMULSIFIER. FREDERICK H. WAGNER, Baltimore, Md., assignor to The Bartlett Hayward Company, Baltimore, Md., a Corporation of Maryland. Filed Aug. 1, 1927. Serial No. 209,985. 5 Claims. (Cl. 196.5.)

2. In an apparatus of the character described, the combination of a casing; a series of downwardly inclined plates extending inwardly from two opposite sides of the casing, those on one side being staggered with relation to the other; a plate extending upwardly from the lower edge of each inclined plate, said upwardly extending plate being narrower at its lower edge than the width of the inclined plate and forming with the adjacent walls of the casing restricted passages through which the material undergoing treatment must pass; and a vertically disposed plate interposed between the upstanding and inclined plates.



1,781,258. STENCIL. ARTHUR J. WALKER, Ogden, Utah. Filed Aug. 15, 1929. Serial No. 386,032. 2 Claims. (Cl. 101—127.)

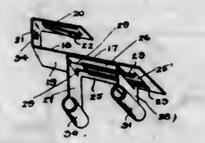


1. The combination in a stenciling device with a slotted frame having upper and lower guideways and end stops for said guideways, of a plurality of plates slidable in the guideways, said plates having edge flanges extending therefrom, a nut secured on one of the guideways, and a bolt in said nut adapted to impinge against one of the plates.

1,781,259. APPARATUS FOR CONVEYING FROM THE WORKING FACE IN MINES. ARTHUR WELSH and GEORGE RAW, New Washington, England. Filed Aug. 13, 1928, Serial No. 299,349, and in Great Britain Aug. 15, 1927. 14 Claims. (Cl. 214—58.)

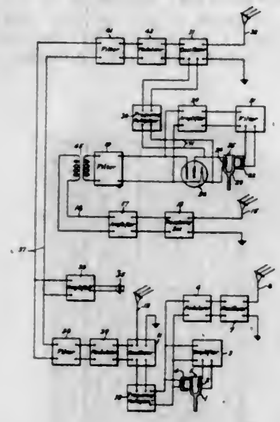
1. Mine conveyor comprising a train of tubs with slidable bottom plates, rectangular open-frame couplings secured by vertical pivots at each end to respective bottom plates, and means on the train of tubs co-operative with means at a bridge in the mine for releasing said bottom plates when the train reaches the bridge.

1,781,260. ELECTRIC SWITCH. KARL EMIL WENZLAWSKI, Galveston, Tex. Filed May 11, 1928. Serial No. 277,030. 6 Claims. (Cl. 175—294.)



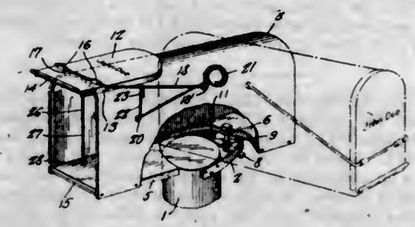
1. A safety switch comprising a two blade switch adapted to connect the two wires of a main light circuit to two terminals of a house lighting circuit, in combination with an auxiliary circuit from said light wires, a transformer in said auxiliary circuit, a resilient contact positioned in the path of movement of one of said switch blades, connected with one of the wires of said auxiliary circuit, the other of said auxiliary wires being connected through an electromagnet to the terminal of the house circuit remote from the said resilient contact member, and means actuated by said electromagnet when said switch contacts with said resilient contact to prevent the closing of said switch when there is a short circuit on the house circuit.

1,781,261. HOOD CATCH. WILLIAM R. WILEY, Detroit, Mich. Filed May 10, 1928. Serial No. 276,769. 2 Claims. (Cl. 292—215.)



1. In a hood catch, in combination with suitably positioned anchorage brackets, a plurally deformed shaft member whose end portions are adapted to be swung into operative engagement with said brackets, and whose central portion is contoured into substantially arcuate form, means for rotatably supporting said shaft on one face of a hood wall, and means for selectively effecting the rocking movement of said shaft, comprising a manually rotatable shaft member journaled in said hood wall in position of substantial perpendicularity to the general axial extent of said first named shaft, and passing through said hood at a point substantially coincident with the center about which the arcuate contouring of the central deformed portion of the first named shaft extends, the inner end of said last named shaft being formed as an angularly disposed and terminally slotted radial arm within the terminal slot of which the central arcuately deformed section of the first named shaft member slidably engages, whereby manually effected rotation of said last named shaft member is translated into positively controlled partial rotation of said first named shaft in either direction, and the resultant desired engagement or disengagement of its end portions with the anchorage brackets.

1,781,262. COMBINED VALANCE-BOARD SUPPORT AND CURTAIN-ROD BRACKET. JACOB M. WINTROP, Philadelphia, Pa. Filed Aug. 7, 1928. Serial No. 297,989. 4 Claims. (Cl. 156—13.)

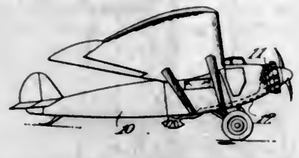


1. In a combined valance board support and curtain rod bracket, a substantially channel shaped member arranged to be secured in position above a trim with the open end thereof presenting away from the frontal face of said trim, resilient means for frictionally retaining a valance board within said channel, and means slidably associated with the bottom wall of said member for supporting one or more curtain rods in advance of the frontal face of said trim.

1,781,263. SYNCHRONIZING SYSTEM. LESTER J. WOLF, South Bend, Ind., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 9, 1927. Serial No. 238,823. 7 Claims. (Cl. 250—2.)

1. In a radio system, a broadcasting station, a second broadcasting station remote therefrom, means for maintaining said stations at the same carrier frequency comprising an oscillating system at one station and a regenerative oscillatory system stimulated thereby at the other station.

1,781,264. MAIL BOX. OLE M. AARSETH, Echo, Minn. Filed July 16, 1928. Serial No. 293,251. 1 Claim. (Cl. 232—45.)



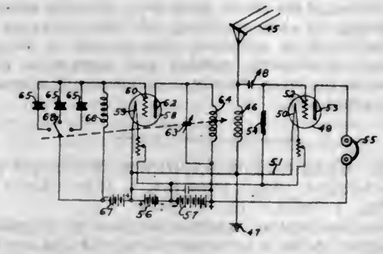
A letter box comprising an elongated receptacle having one end open to form an entrance, a door for said entrance,

flanges on the side and upper edges of the door and adapted to engage over the corresponding portions of the receptacle, a rolled flange on the lower edge of the door and projecting below the receptacle, a pair of ears on the door adjacent the lower edge thereof, and a U-shaped member having the ends of the arm portions thereof pivoted to the sides of the receptacle intermediate the ends of the latter, said U-shaped member having the web portion thereof pass through the ears to permit the door to swing upwardly and horizontally over the receptacle.

1,781,265. PROCESS OF MAKING A DECOLORIZING CLAY. WALTER S. BAYLIS, Los Angeles, Calif., assignor to Filtrol Company of California, Los Angeles, Calif., a Corporation of California. Filed May 14, 1929. Serial No. 363,049. 9 Claims. (Cl. 252—2.)

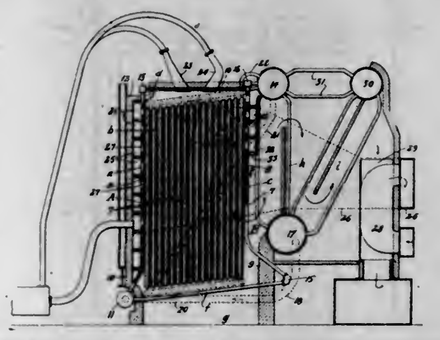
1. The process which comprises treating an initial batch of an activatable colloidal clay with a highly ionized mineral acid; adding a greater quantity of raw activatable clay; and subjecting the mixture to a temperature sufficient to eliminate substantially all water of crystallization and free acid from the clay.

1,781,266. SOUND AMPLIFIER FOR AIRPLANES. AMEDEO BRUNI, New York, N. Y. Filed Aug. 27, 1928, Serial No. 302,416. Renewed Sept. 25, 1930. 9 Claims. (Cl. 244—31.)



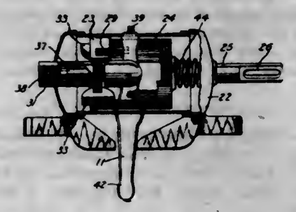
9. The improvement in the art of sound propagation from an airplane which comprises mixing the engine exhaust with the sound and projecting the mixture into the atmosphere.

1,781,267. COMPOUND FOR MIXING WITH CEMENTS AND METHOD OF MAKING THE SAME. RICHARD BUHMAN, Casper, Wyo. Filed Apr. 5, 1924. Serial No. 704,318. 1 Claim. (Cl. 106—27.)



The method of preparing a cement for use in cementing off oil wells or the like, which comprises first making a cement of usual mix, adding calcium chloride to act as a dehydrating agent and also ferric chloride which will react with the cement to result in the formation of an additional quantity of calcium chloride, and a hydroxide which acts as an initial set retarding agent.

1,781,268. RADIO SYSTEM. LEWIS W. CHUBB, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 16, 1926. Serial No. 116,281. 7 Claims. (Cl. 250—20.)

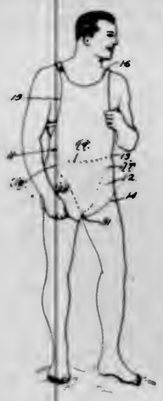


1. In combination, an untuned detecting circuit, and means whereby the effect of variable tuning is obtained by positively controlled regeneration.

1,781,269. BOILER FURNACE. HANS COERPER, Staten Island, N. Y., assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 3, 1925. Serial No. 72,871. 1 Claim. (Cl. 122—235.)

The combination with a finely divided fuel burning furnace of a boiler including two rows of substantially upright tubes defining combustion space, header means at the lower end of the tubes of each row, a row of tubes extending across the lower portion of the furnace and connecting the header means of one upright row with the header means of the other upright row, economizer means including connected upper and lower drums, the upper ends of the upright rows of tubes being connected to said upper drum and downcomer means connecting said economizer means to one of said headers.

1,781,270. GEAR-SHIFTING MECHANISM. IRVEN E. COFFEY, Hastings, Nebr. Filed Oct. 6, 1922. Serial No. 592,770. 7 Claims. (Cl. 74—58.)

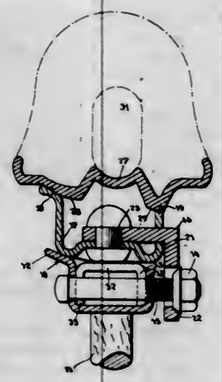


1. In a gear-shifting mechanism, the combination with a plurality of shiftable elements for securing more than two speed ratios and a member that is mounted for axial and angular movements, said member having a plurality of recesses in one face thereof, of a member pivotally supported at its mid-portion and adjacent to the axis of the recessed member for movement in the one or the other direction about its pivotal support to select any of said speed ratios when it is engaged by the recessed member according as a recess registers with the one or the other end of the second-named member.

1,781,271. BATHING SUIT. GEORGE W. COWDREY, Los Angeles, Calif. Filed Mar. 14, 1928. Serial No. 261,553. 6 Claims. (Cl. 2—67.)

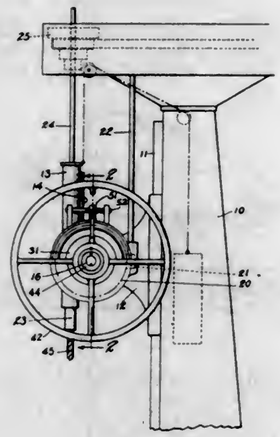
1. A bathing suit having an upper body portion having shoulder straps and an outer trunk portion formed integral therewith, an inner trunk portion secured at its upper edge to the outer trunk portion, the measurement of the inner trunk portion from such place of attachment to the crotch of the inner trunk being less than the measurement of the

outer trunk from such place of attachment to the crotch of the outer trunk, and the inner trunk being attached to the



outer trunk substantially only at the above mentioned place of attachment the shoulder straps giving a support for the inner trunk.

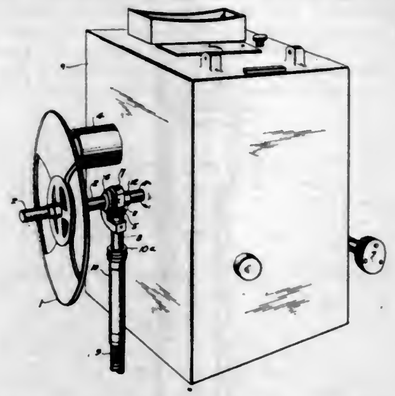
1,781,272. COMBINATION SCREEN AND SASH MOUNTING. EARLE W. CUMMINGS, Los Angeles, Calif., assignor to Watertite Casement Hardware Co., Los Angeles, Calif., a Corporation of California. Filed Feb. 6, 1929. Serial No. 337,849. 16 Claims. (Cl. 20—53.)



1. A device of the class described comprising a frame, an outer closure swingingly mounted in the frame, an inner closure swingingly mounted in the frame, and means for detachably connecting the inner and outer closure together, said means being so constructed as to automatically connect the inner closure to the outer closure when the inner closure is swung against the outer closure.

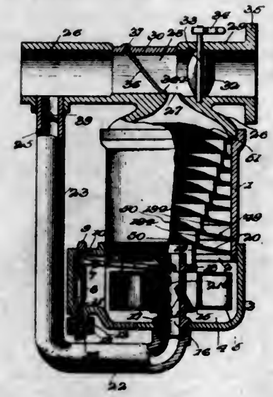
1,781,273. WHEEL ASSEMBLY. BURGESS DARROW, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 20, 1927. Serial No. 241,323. 2 Claims. (Cl. 301—10.)

2. A wheel assembly including a felloe of channel shape open to the radially outer side of the wheel, the inner leg of the felloe having a flared outer edge portion to provide an inclined seat, an adapting member of channel shape having its base seated on the flared edge of the felloe and its legs projecting radially outwardly from the base, the inner leg of the adapting member terminating in an inclined portion, a solid tire base seated on the legs of the adapting member, clamping means cooperating with the adapting member and tire base for securing the latter on the former, and clamping means cooperating with the felloe and adapting member for securing the latter on the former, said last mentioned clamping means comprising a member extending through the outer leg of the felloe and rigidly secured to the outer peripheral surface of the base of the adapting member, and also demountably secured to the felloe.



1,781,274. FEED-CONTROL MECHANISM. WILLIAM C. DE ROO, Cincinnati, Ohio, assignor to The Fosdick Machine Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 8, 1927. Serial No. 166,736. 7 Claims. (Cl. 77—33.)

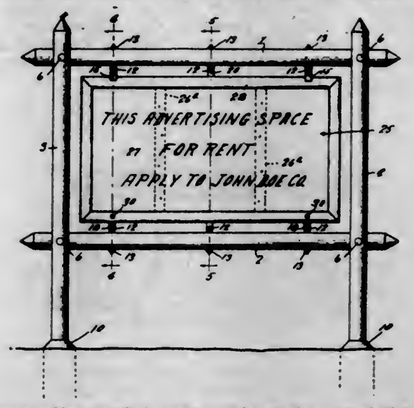
1. In a device of the class described the combination of a reciprocating member, a rack carried by said member, a head providing a bearing for the reciprocating member, a shaft journaled in said head, a pinion on the shaft meshing with the rack for reciprocating the first mentioned member, a freely rotatable power actuated clutch member on the shaft, a complementary clutch element mounted for rotation with the shaft, a hand-wheel having a groove therein, means associated with the hand-wheel whereby the shaft may be manually rotated by said hand-wheel and adapted to be moved by said hand-wheel for effecting frictional binding of the clutch members, a pivotally mounted lever having its ends extending into the groove in the hand-wheel, and an adjustable stop carried by the first mentioned reciprocating member and adapted to effect movement of the lever whereby to automatically disengage the clutch members.



1,781,275. GEARING FOR MACHINES. WILLIAM D. DOBSON, Cleveland, Ohio. Filed Oct. 1, 1929. Serial No. 396,453. 1 Claim. (Cl. 74—101.)

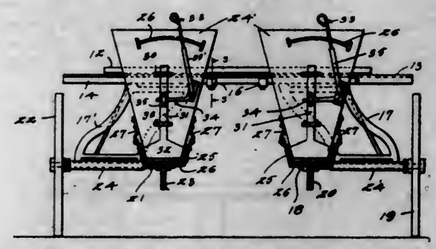
A device for coupling angularly disposed shafts comprising a pair of shafts, a U-shaped bracket through one arm of which one shaft extends and through the other arm of which the other shaft extends at an angle thereto, a pair of beveled gears one of which has a bearing sleeve extending through one arm of the bracket and fixed to one shaft, and a removable collar on the end of the sleeve opposite

said gear, and the other of which gears is fixed to the other shaft, said gears being supported by the bracket and removable therewith from the first mentioned shaft.



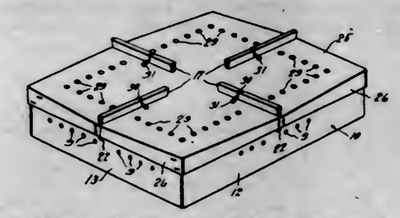
1,781,276. CARBURETOR. LAURENCE RUDOLPH EBERT, Vancouver, Wash. Filed Feb. 13, 1924. Serial No. 692,567. 3 Claims. (Cl. 261—46.)

3. A carburetor comprising a mixing chamber, a float chamber, a primary and a secondary air intake passage, a lever controlled valve within each air intake passage, connecting means for the simultaneous operation of said valves to control the flow of air through said two air intake passages, a shaft forming one extremity of said intake valve, a pendant lever attached to said shaft, a collar attached to each of said levers, a hinge joint consisting of two link members pivotally attached together and supported by a flexible member capable of manual operation, one end of said hinge joint being pivotally attached to the collar on the primary air intake valve lever, the opposite end being similarly connected to the collar on said other pendant lever, and appropriate spring means for holding said valves in their closed position and offering resistance to their opening, substantially as and for the purpose described.



1,781,277. SIGN CONSTRUCTION. HARRY C. GAMMETER, Cleveland Heights, Ohio. Filed Feb. 27, 1928. Serial No. 257,144. 7 Claims. (Cl. 40—128.)

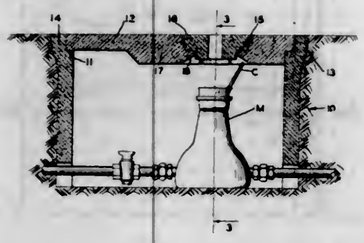
1. In a device of the character described, the combination of opposed supports arranged in vertically spaced relation, a plurality of not less than three elongated elements sustained by and tensioned between said supports, panel embracing clips immovably secured to two of said elements adjacent their upper ends, ledges having unobstructed top surfaces and likewise secured to said two



elements adjacent their lower ends, a sign panel that is adapted to be placed flatwise against said elements with its upper edge embraced by said clips and its lower edge resting upon said ledges, and means for removably securing the sign panel to the elements.

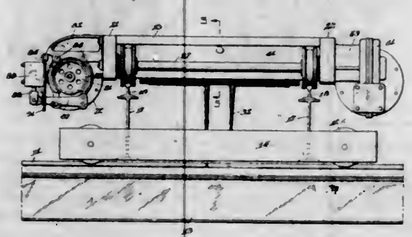
1,781,278. FERTILIZER DISTRIBUTOR. CEPHUS G. GOODRICH, Wakefield, Va. Filed Feb. 4, 1929. Serial No. 337,376. 1 Claim. (Cl. 275—2.)

In a fertilizer distributor, a pair of frames each having an axle with a ground wheel and a fertilizer containing hopper, a draft means including a transverse bar, a pair of transverse angle bars disposed below the first transverse bar with their corresponding wings in parallel relation, each of said angle bars having one of said frames secured thereto, angular U-shaped members slidably receiving the said parallel wings, and bolts disposed vertically through the first bar and through said U-shaped members, between the parallel wings, for holding the angle bars in slidably adjusted positions.



1,781,279. SHIPPING BOX FOR CHICKS. ROBERT A. GORSUCH, Gambier, Ohio. Filed Jan. 7, 1929. Serial No. 330,772. 12 Claims. (Cl. 229—15.)

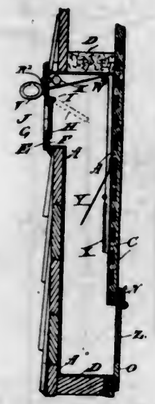
11. A shipping box for chicks including top, bottom and side walls, and partitions in said box having portions



extending through said box and bent over themselves and projecting therefrom providing spacers for the purpose described.

1,781,280. WATER-METER BOX. LEO G. HAASE and FRANK M. BROOKS, Pasadena, Calif., assignors to Art Concrete Works, Pasadena, Calif., a Corporation of California. Filed Jan. 30, 1929. Serial No. 336,220. 3 Claims. (Cl. 137—13.)

3. A water meter box having a cover in which there is an aperture adapted to receive a closure or lid, the cover adjacent the aperture being materially thickened which is apparent on its under side, the under side of the cover having at least one recess adjacent the aperture through which the top of the cover on a water meter may swing to expose the meter to view.



1,781,281. CRANE TROLLEY. ARTHUR E. HOGREBE, Philadelphia, Pa., assignor to Box Crane & Hoist Corporation, Philadelphia, Pa., a Corporation of Delaware. Filed July 6, 1928. Serial No. 290,776. 2 Claims. (Cl. 212—131.)

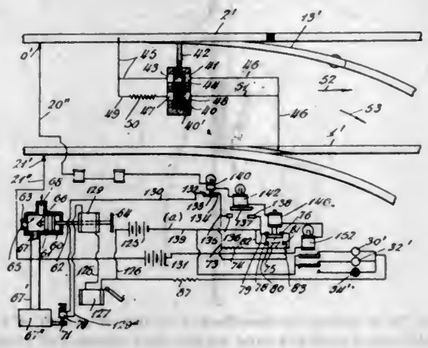
1. A crane trolley having side frames, means on one of said frames for supporting a traverse motor longitudinally parallel thereto and below the top of said frames, bearing housings on said frames for supporting a hoist drum shaft, means for supporting a hoist motor on the other frame and longitudinally parallel to said frames, and a housing on said last frame for housing gear means and mechanism for connecting said means to said hoist motor, the mechanism between the means and motor being so arranged that the motor may be mounted below the top of the side frames.

1,781,282. MAIL CHUTE. RALPH M. HULETT, Cleveland, Ohio. Filed Sept. 5, 1928. Serial No. 304,145. 5 Claims. (Cl. 40—132.)

1. In a mail chute, a hollow body having oppositely directed upper and lower openings, a plate covering the upper opening, a swinging door in said plate, said door having a transparent portion for the reception of the house number, an external plate detachably secured to said covering plate, an electric lamp secured to said detachable plate and extending into said chute, a suitable source of power providing a circuit for said lamp, and a switch

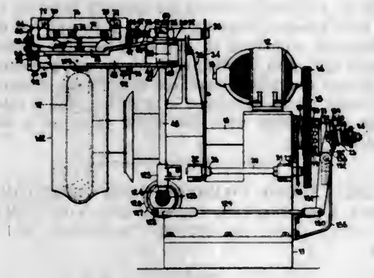
for said circuit adjacent to said lower opening, said switch being accessible only to the occupant of the building in which said chute is situated.

1,781,283. ADVERTISING SIGN. WILLIAM INTEMANN, Brooklyn, N. Y., assignor to American Lithographic Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 5, 1929. Serial No. 352,728. 2 Claims. (Cl. 40—135.)



1. An advertising sign comprising a body portion of translucent material, display material on opposite sides of said body portion in reverse and in registration whereby to produce the same display from opposite sides of the body portion, a sheet of opaque material superimposed on one side of said body portion to prevent the diffusion of light therethrough and thereby render a portion of the display matter thereof visible but from one side of said body portion, said superimposed opaque material being cut out to permit of the diffusion of light through that portion of said translucent body portion upon which the display material is in reverse registration, and display material carried by said sheet of opaque material, and visible only from that side of the sign to which the opaque material is attached.

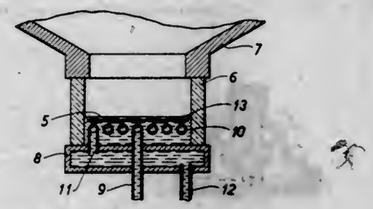
1,781,284. METHOD FOR AUTOMATICALLY SIGNALING AND CONTROLLING TRAINS ACCORDING TO THE POSITION OF TRACK SWITCHES. HEINRICH KARL, Jersey City, N. J. Filed Feb. 15, 1928. Serial No. 254,502. 3 Claims. (Cl. 246—176.)



1. In an automatic signal and control system, a switch tongue of a track switch adapted to resume a completely normal open and a completely normal closed position, movable contacts adapted to make electric connection

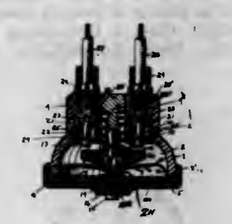
when the switch tongue is in normal closed position and when in completely normal open position but interrupting the electric connection when the switch tongue is in a position midway between these positions, a signaling device adapted to indicate said three positions of the track switch tongue, a relay including a relatively heavy armature and a light armature, a circuit including said relay and said movable contacts, a resistance included in said

circuit when the track switch resumes one of said normal positions whereby only the light armature will be attracted, and no resistance included in said circuit when the switch tongue resumes the other of said normal positions whereby both armatures will be attracted by said relay, and the signal device indicating "danger" when the switch tongue resumes said position midway between said two normal positions whereby none of said armatures will be attracted by said relay.



1,781,285. TREAD APPLIER. HERMAN T. KRAFT, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 24, 1927. Serial No. 242,500. 14 Claims. (Cl. 154—10.)

1. A tire tread shaping device comprising a pair of parallel rollers, a third roller juxtapositioned thereto with its surface adapted to engage the surfaces of the first mentioned rollers and means for driving the first mentioned rollers at differential rates of speed, whereby tread bands which pass between the two sets of rollers will be stretched in their mid portions so that they will conform to the contour of a tire.



1,781,286. MERCURY-VAPOR RECTIFIER. JOHANNES KUBLER, Baden, and ERNST KOBEL, Ennetbaden, Switzerland. Filed Feb. 16, 1929, Serial No. 340,443, and in Germany Jan. 30, 1928. 4 Claims. (Cl. 250—27.5.)

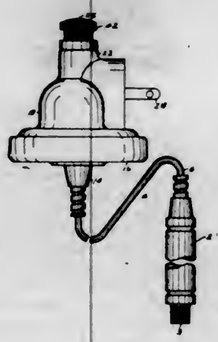
1. In an electric current rectifier of the metallic vapor type, a liquid metallic cathode, a coil of tubing arranged within said cathode to provide a path for the circulation of a cooling medium therethrough, and a shielding plate

of difficultly fusible material arranged intermediate the upper surface of said cathode and said cooling means to prevent attachment of the electric arc thereon.

1,781,287. THERMOSTAT. EDWARD J. LEVY (now by judicial change of name Edward Levy Mayo), Cleveland, Ohio, assignor to The Bishop & Babcock Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 26, 1927. Serial No. 194,275. 7 Claims. (Cl. 200—140.)

1. In a fluid pressure-operated switch mechanism a cell having a substantially rigid end wall and a disk of substantially saucer-form joined by its rim to the border of the said rigid wall, said saucer-form disk having a reentrant end wall joined to its rim by a gradually radially curvilinear annular portion, means to introduce a fluid under pressure between the walls of the cell, and an electrical switch operable by snapping movements of the reentrant portion of the disk end wall responsive to variations in fluid pressure between the walls, and spring means tending to restore the switch after an actuation effected by the expansive effect of fluid pressure in the chamber, said electrical switch comprising a plunger mounted for movement axially to the disk reentrant portion and having an end engageable therewith, said spring means comprising a spring disposed to press the plunger against reentrant wall portion, an electrical switch blade supported on the plunger, and electrical contact means engageable by the switch blade upon a predetermined reciprocatory movement of the plunger responsive to a snap movement of the reentrant portion of the disk.

1,781,288. THERMOSTATIC SWITCH. EDWARD J. LEVY, (now by judicial change of name Edward Levy Mayo), Cleveland, Ohio, assignor to The Bishop & Babcock Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 31, 1928. Serial No. 303,195. 14 Claims. (Cl. 200—140.)

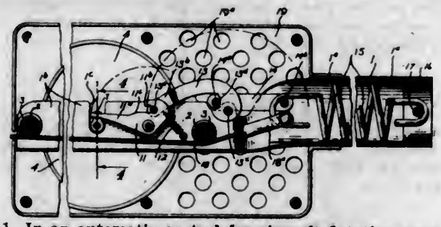


1. In a fluid pressure operated electrical switch, in combination with a casing, a fluid pressure cell disposed with-

in the casing comprising a concavo-convex wall and a holder therefor, the wall being adapted to reverse the direction of its concavo convexity upon predetermined variations in fluid pressure in a wall of the cell, a pair of electrical contact elements supported in the casing, a block adapted to be reciprocated toward and from the con-

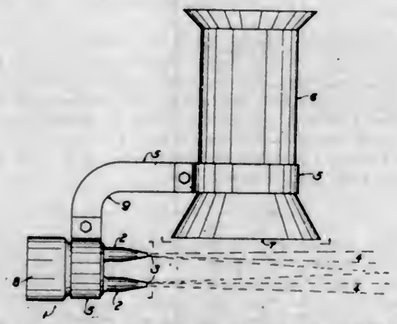
tact elements, a switch blade supported on that side of the block disposed toward the contact elements, said block comprising a portion relatively telescopable with a portion of the casing to loosely guide the reciprocable block, and a spring effecting pressure to press the block towards the cell.

1,781,289. THERMOSTATICALLY-OPERATED ELECTRICAL SWITCH. EDWARD J. LEVY (now by judicial change of name Edward Levy Mayo,) Cleveland, Ohio, assignor to The Bishop & Babcock Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 1, 1929. Serial No. 339,762. 5 Claims. (Cl. 200—83.)



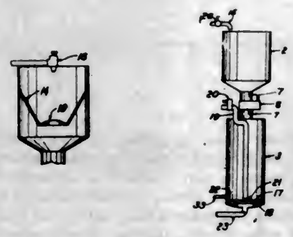
1. In a fluid pressure operated switch mechanism, the combination with a fluid pressure cell comprising a pair of discs, means securing the discs together in fluid tight engagement at their edges, one of said discs being constrained by said means to a concavo-convex form, a casing within which the disc is secured, an electrical switch mechanism disposed within the casing, said mechanism comprising a switch operating element longitudinally reciprocable relative to the axis of the cell, and a spring pressing said element against the central portion of the concavo-convex disc, said cell being adapted to contain a fluid under varying conditions of pressure thereof, and to change the direction of its concavo-convexity responsive to pressure above a predetermined value, and means to vary the said predetermined value, said means comprising an annulus engageable with the exterior surface of the concavo-convex disc, intra-peripherally thereof, a pair of thrust elements diametrically engaging the annulus, and means or exerting thrust on the elements axially of the annulus.

1,781,290. GOLF CLUB GRIP. CHARLES BEEL MARGHAVE, Los Angeles, Calif. Filed Dec. 3, 1928. Serial No. 323,344. 4 Claims. (Cl. 273—81.)



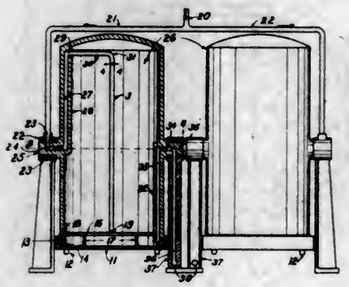
1. In a device as described, a shank of a club, a helically coiled spring wound on the said shank and secured thereto forming a hand grip.

1,781,291. AUTOMATIC CONTROL FOR AIRPLANE FLOTATION APPARATUS. EDWIN MAYMAN, San Diego, Calif. Filed Jan. 7, 1930. Serial No. 419,172. 8 Claims. (Cl. 244—2.)



1. In an automatic control for aircraft flotation apparatus, a body member, a spring secured at its one end thereby, a mechanism supported by said body member arranged to hold said spring in its distorted position, a pressure actuating means and means operated thereby for releasing the hold of said mechanism upon said spring, and a cable connecting said spring with the draw cable of a flotation apparatus.

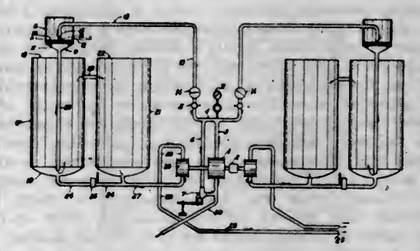
1,781,292. HAND FOAMITE FIRE EXTINGUISHER. JAMES A. MCCRACKEN, Los Angeles, Calif. Filed Sept. 28, 1927. Serial No. 222,634. 5 Claims. (Cl. 169—15.)



1. A device for extinguishing fires by means of fire foam, comprising: a nozzle for attachment to a source of water under pressure and adapted to deliver said water in a plurality of superposed streams of high velocity, and a hopper suspended over said streams, said hopper having an opening at its lower end positioned to deliver a stream of foam producing powder into said water streams.

1,781,293. PORTABLE FOAM-PRODUCING APPARATUS. JAMES A. MCCRACKEN, Los Angeles, Calif. Filed Sept. 28, 1927. Serial No. 222,635. 2 Claims. (Cl. 169—15.)

1. An apparatus for producing a fire-foam solution, comprising: a hopper for receiving a supply of a soluble powder; a substantially closed vessel in fixed position beneath said hopper; means for downwardly directing a jet of water into said hopper and for intermixing said water with said powder to the consistency of a fluent mass; a means of communication between said hopper and said vessel; a controllable closure within said communication means for permitting said fluent mass to pass at will into said vessel; means for admitting water into said vessel under pressure in a flow-stream; means for intermixing said fluent mass with said flow-stream and for producing aqueous solution of the powder therein contained, and means for conveying said solution to a point of use thereof, the conveyance of said solution to said point of use being brought about solely by the pressure of the entering water.

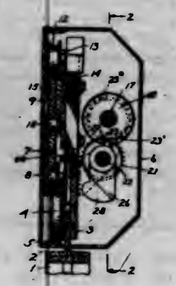


1,781,294. METHOD OF AND APPARATUS FOR PRODUCTION OF FOAM SOLUTIONS. JAMES A. MCCRACKEN, Los Angeles, Calif. Filed Sept. 28, 1927. Serial No. 222,637. 10 Claims. (Cl. 169—15.)

1. The method of bringing a foam producing agent into solution, which comprises: producing a flow stream of water under pressure; converting said flow stream into a sheet of flowing water under pressure; superposing on said water sheet a body of foam producing agent; forcing said superposed body into continued contact with said water sheet by admitting water under pressure on top of said body; producing a solution of said agent substantially on the plane of contact between said body and said water sheet, and collecting said solution into a flow-stream.

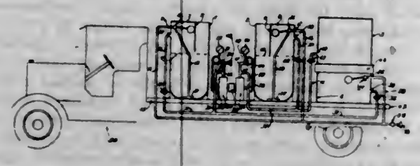
3. An apparatus for dissolving a foam producing agent comprising: a vessel with vertical cylindrical walls and with one end permanently closed, said vessel being supported on trunnions so as to render it readily reversible end for end; a readily detachable closure for the end opposite the fixed end; a plate attached to said closure, inside said vessel, in a position close to said closure and at a right angle to the vertical axis of said vessel; said plate being of such size as to leave a narrow annular opening between said plate and said cylindrical walls; a pipe for admitting water under pressure into said vessel, said pipe terminating at such distance from said plate as to leave a relatively narrow gap therebetween, said pipe being further provided with a means for the escape of water inside said vessel and close to the fixed end thereof; a means for conducting water into said pipe, and a conductor for discharging solution communicating with the interior of said vessel.

1,781,295. METHOD AND MEANS OF CONTINUOUS PRODUCTION OF FIRE FOAM. JAMES A. MCCRACKEN, Los Angeles, Calif. Filed Sept. 28, 1927. Serial No. 222,638. 4 Claims. (Cl. 169—14.)



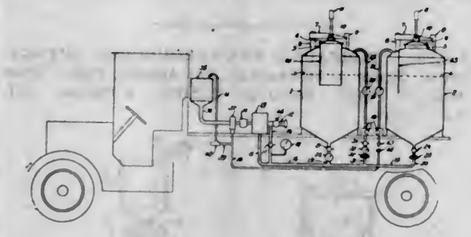
1. The continuous method of producing a foam for extinguishing fires which comprises: producing a flow stream of water under pressure; dividing said stream into two streams of substantially equal volume; continuously metering said streams and maintaining each at a substantially constant volume; converting said streams into flowing water sheets; introducing onto each of said sheets at atmospheric pressure a body of comminuted foam producing agent contacting said sheet, one such body being of acid, the other of alkaline agent; continuously washing away portions of each of said bodies by the contact of each with its appropriate water sheet; replenishing each of said bodies without interrupting said water streams as the material of said bodies is washed away; collecting each said sheet and the agent contained therein in a retarded flowing mass under atmospheric pressure to permit complete solution of the agent and to provide a reservoir of solution; creating a flow stream under superatmospheric pressure of each of said solutions, and separately conducting each of said streams to a point of intermixture thereof, for the production of foam at said point of intermixture.

1,781,296. METHOD OF TREATING TEXTILE FABRICS. ALEXANDER MILHOMME, Ridgefield Park, N. J., assignor to Progressive Silk Finishing Co., Hoboken, N. J., a Corporation of New Jersey. Filed Apr. 13, 1920. Serial No. 354,989. 3 Claims. (Cl. 18—51.)



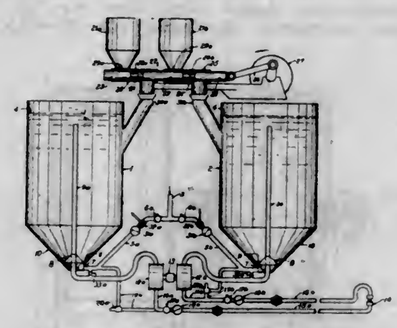
1. The method of producing moiré scratch patterns in fabrics made from cellulose acetate fibres, which comprises moistening the fabric while in folded condition, scratching a pattern thereon while folded and moistened, drying the fabric, and thereafter subjecting the same to heat and pressure.

1,781,297. DOOR OPERATING AND LOCKING MECHANISM. ABRAHAM PERLMAN, New York, N. Y. Filed Apr. 10, 1930. Serial No. 443,057. 7 Claims. (Cl. 189—8.)



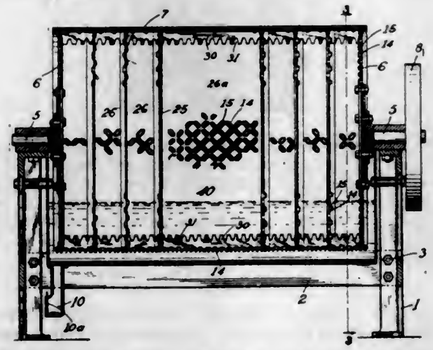
6. In a device of the class described, the combination with a number of cell doors individually mounted and adapted to be moved to open and closed position, an actuating member common to a group of said doors, separate connecting devices for each of said doors adapted to connect said actuating member with a predetermined number of said doors, separate locking devices for each of said doors adapted to lock the same in open or closed position, the operation of said locking device controlling the operation of said connecting device by means of a member moved into and out of operative engagement with the door structure engaging a connecting member of the said connecting device and respectively moving the same out of engagement or permitting the engagement thereof with the door structure, a shaft for operating said locking devices, a second shaft operating a selective control device for each of said locking devices, a selective control device operative in connection with each of said locking devices causing the selected devices to be operatively connected with said first shaft, and manually operated means for operating said shafts from a distant point.

1,781,298. CONTINUOUS FOAM-PRODUCING METHOD AND APPARATUS. PAUL W. PRUTZMAN, Los Angeles, Calif. Filed Sept. 28, 1927. Serial No. 222,567. 5 Claims. (Cl. 169—14.)



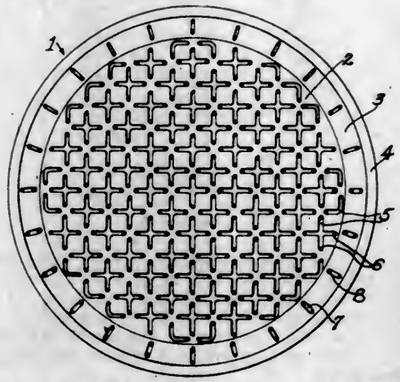
3. A method of simultaneously and continuously producing two dissimilar fire-foam solutions and leading them to a point of intermixture, comprising: placing in a vessel substantially open at its top a mass of powdered alum; placing in a similar vessel a mass of powdered soda; feeding water upwardly through each said mass to produce a substantially saturated solution of the powder contained in said vessel; maintaining a quantity of undissolved powder underlying a layer of said saturated solution in each said vessel; separately and continuously drawing stream of said solutions by suction from said layers of solution through orifices adjusted to pass said solutions in predetermined proportions, and separately forcing said solutions to a point of intermixture thereof.

1,781,299. CONTINUOUS PRODUCTION OF FOAM SOLUTIONS. PAUL W. PRUTZMAN, Los Angeles, Calif. Filed Sept. 28, 1927. Serial No. 222,568. 1 Claim. (Cl. 169—14.)



A continuous foam producer in combination with a vehicle including closed vessels, a main water line having a pressure pump, a water feed line disposed below said vessels, branch lines having predetermined pressure controllable means communicating with said feed line and vessels, an open supply licorice vessel above the main line, a licorice pressure pump having a depending discharge pipe including a relief valve operatively associated with said licorice pressure pump, a delivery pipe joining said relief valve and in open communication with said licorice vessel, a by-pass having predetermined pressure controllable means interposed between the main water and feed lines, outlet lines including meters communicating with the upper portion of said closed vessels, a diluting branch pipe including predetermined pressure controllable means in communication with one of the outlets, a licorice feed supply line co-acting with said licorice pump and connecting with the other of said outlet lines, said closed vessels including a barrier precluding cloggage of said lines, locking means whereby said vessels are closed seal tight and means for actuating said pumps.

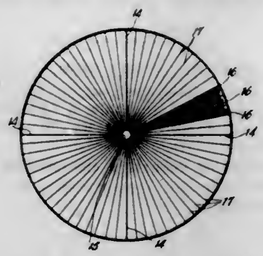
1,781,300. APPARATUS FOR FIRE-FOAM PRODUCTION. PAUL W. PRUTZMAN, Los Angeles, Calif. Filed Sept. 28, 1927. Serial No. 222,569. 2 Claims. (Cl. 169—14.)



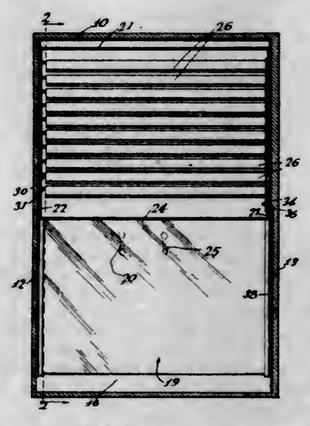
1. An apparatus for continuously and simultaneously producing dissimilar solutions of foam producing chemicals comprising: tanks for maintaining separate bodies of solution of said chemicals; means for separately feeding predetermined proportions of said chemicals in the form of dry powders continuously into said tanks; means for agitating the contents of said tanks to facilitate solution of said powders; means for admitting water into said tanks in predetermined proportion; pumping means for separately and continuously withdrawing said solutions from said tanks and for separately forcing said solutions to a point of intermixture thereof, and means for proportioning the quantities of said solutions delivered by said pumping means, each said proportioning means comprising a bypass communicating between the discharge side and the suction side of said pumping means, a release valve in said bypass for maintaining a predetermined pressure on said discharge side, and an orifice in said discharge between said pump and said point of intermixture for discharging a predetermined flow of liquid at said predetermined pressure.

1,781,301. APPARATUS FOR CLEANING EDIBLE ANIMAL TISSUES. JOHN RANDALL, Cleveland, Ohio. Filed Oct. 7, 1927. Serial No. 224,548. 7 Claims. (Cl. 17—43.)

5. An apparatus for cleansing elongated articles comprising a rotatable container for the articles and means to rotate the container in a body of cleaning fluid, the inner walls of the container having roughened surfaces for subjecting the elongated articles to a scrubbing action, and a plurality of walls within the container dividing the same into a number of article receiving compartments, the surfaces of the walls having portions extending substantially longitudinally of the container for engagement with the articles in the compartments.



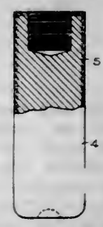
1,781,302. VENTILATING BAKING PAN. CLARENCE P. ROBERTS, Los Angeles, Calif. Filed Feb. 27, 1928. Serial No. 257,134. 2 Claims. (Cl. 53—6.)



1. A pan provided with depressions, and having a plurality of spaced openings at the bottom of each depression so as to provide air circulation in the depressions.

1,781,303. AIR-PREHEATING DEVICE. JOSEF RYDMARK, New Rochelle, N. Y., assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 1, 1926. Serial No. 85,076. 1 Claim. (Cl. 257—6.)

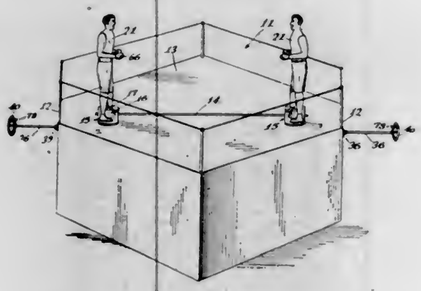
In an air heater of the regenerative type, a tubular casing, a plurality of fixed plates dividing said casing into segmental compartments, a plurality of radially disposed loose heating elements in each compartment and loosely positioned nests of plates between adjacent elements, said nests each including a plurality of spaced plates increasing in width from the center to the periphery of the casing.



1,781,304. VENETIAN BLIND FOR MOTOR VEHICLES. LAWRENCE G. SHOOK, Los Angeles, Calif. Filed Oct. 1, 1927. Serial No. 223,333. 14 Claims. (Cl. 296—44.)

1. In combination with a vehicle having a window opening and a window adapted to occupy the window opening or a concealed position therebelow, means providing a Venetian blind adapted to occupy the window opening or a concealed position therebelow adjacent the window when the window is in concealed position, and means operable upon shifting the blind from one position to another for causing the slats of the blind to be turned.

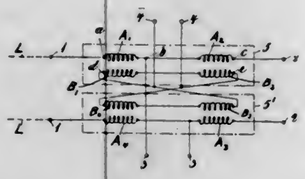
1,781,305. ANODE OF CARBONIZED IRON OR THE LIKE. LLOYD SMEDE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 11, 1927. Serial No. 225,460. 9 Claims. (Cl. 250—27.5.)



1. A mercury-vapor rectifier having one or more anodes made of a non-Noble metal which is not readily attacked

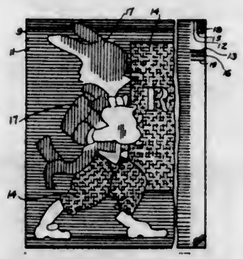
by mercury vapor, said metal having inclusions of materials having relatively great electron-emissivity, as compared to iron, at the working temperatures, in the interior of the anodes, and carbides of said inclusions at the surface.

1,781,306. METHOD OF PRESERVING RUBBER. JAN TEPPEMA, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 30, 1926. Serial No. 151,825. 11 Claims. (Cl. 18—50.)



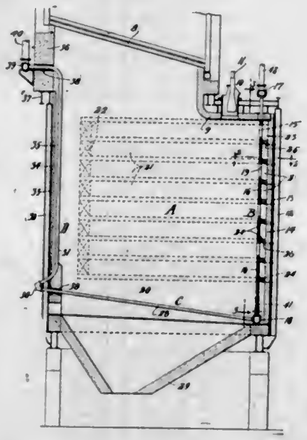
4. The method of imparting age-resisting properties to rubber which comprises incorporating therewith phenyl-alpha-naphthylamine.

1,781,307. BOXING AMUSEMENT DEVICE. WILLIAM J. VERONDA, San Marino, Calif. Filed Nov. 14, 1927. Serial No. 233,146. 7 Claims. (Cl. 46—40.)



1. An amusement device comprising in combination a pair of figures simulating boxers, means to move said figures at the will of operators relative to each other, means to operate the arms of such figures to simulate boxing, an electrically controlled sustaining means to hold said figures erect, a plurality of electric switches disposed about the surface of said figures, and circuits associated with said switches to operate said electrically controlled means after certain of said switches have been actuated by blows thereupon.

1,781,308. HIGH-FREQUENCY DIFFERENTIAL TRANSFORMER. MAURITZ VOS, Stockholm, Sweden, assignor to Telefonaktiebolaget L. M. Ericsson, Stockholm, Sweden, a Company of Sweden. Filed May 29, 1929, Serial No. 367,093, and in Sweden May 30, 1928. 4 Claims. (Cl. 175—356.)

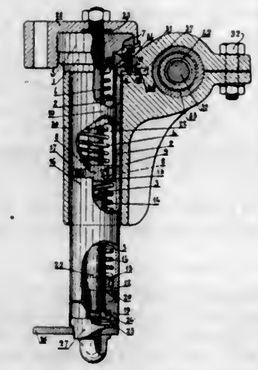


1. A transformer for high frequency oscillations comprising in combination two separate coils adapted to be connected to each one of the branches of a line circuit, each of said coils consisting of two series connected primary partial windings and two secondary partial windings which four partial windings are formed by parallel conductors of a twisted quad of a four-core cable, and means protecting each of the coils against capacitive influence of the other coil.

1,781,309. PRINTED-MATTER INDICATOR. WILLIAM FREDERICK WEIKEL, Baltimore, Md., assignor to United States Printing & Lithograph Company, Baltimore, Md., a Corporation of Ohio. Filed Oct. 3, 1929. Serial No. 397,136. 3 Claims. (Cl. 283—1.)

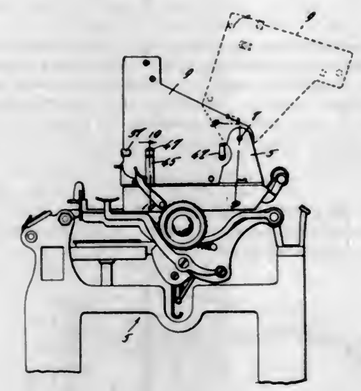
3. A sheet of material adapted to receive printed matter, and having a plurality of interposed images printed on said sheet, each of said images having a fixed indicium adjacent an edge of the sheet, one for each of said images, each bearing a fixed predetermined position with respect to the image corresponding thereto and to the edge of the sheet.

1,781,310. FINELY-DIVIDED-FUEL-BURNING FURNACE CONSTRUCTION. WILFRED R. WOOD, London, England, assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed June 16, 1925. Serial No. 37,425. 2 Claims. (Cl. 122—235.)



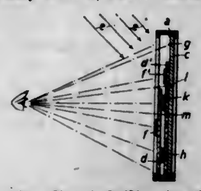
1. In a combustion chamber for burning finely divided fuel, a hollow wall comprising an outer wall portion, and an inner wall portion spaced away therefrom and comprising evaporating means, means for dividing the space therebetween into compartments and means independent of one of said walls providing a support for said space dividing means.

1,781,311. DEVICE FOR AUTOMATIC ADJUSTMENT OF LIGHT PROJECTORS. AUGUSTE EDMOND ADAM, Houilles, France. Filed Oct. 11, 1927, Serial No. 225,587, and in France Oct. 21, 1926. 6 Claims. (Cl. 240—61.)



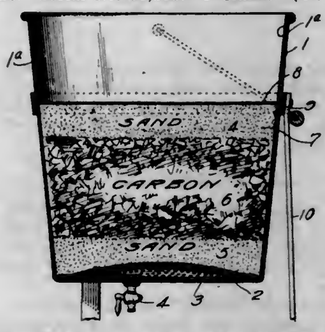
1. Dirigible headlight apparatus comprising steering rod actuated mechanism including a movable element, a headlight support having a shaft, a spring connected to said support, a second spring arranged reversely to the first named spring, a member mounted for rotation and

to which one end of the second spring is attached, a member mounted for limited rotation independently of the first named member and of the headlight support and to which both of said springs are attached, a manually operable member 26 arranged to normally hold the first named spring in tensioned condition and connecting means be-



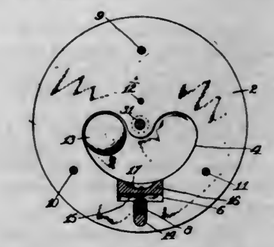
tween the movable element of the steering rod actuated mechanism and the second named revoluble member, said connecting means providing idle movement of said movable element in one direction under the tension of the second spring and turning said second named revoluble member and hence tensioning said second spring when said movable element moves in the reverse direction.

1,781,312. TYPEWRITER ATTACHMENT. JOHN HENRY BARTON, Miami, Fla., assignor to The Florida Copy-Writing Corporation, Miami, Fla., a Corporation of Florida. Filed July 11, 1929. Serial No. 377,437. 2 Claims. (Cl. 197—156.)



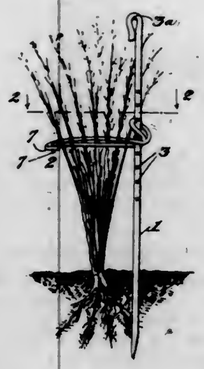
1. A typewriter attachment comprising a supplemental copy ribbon, a pair of members, said members being movable and having the ends of the ribbon attached thereto, springs for maintaining the members in ribbon retracted position and rack and detent means for maintaining the members in operated position, and connecting means between the members so that the same will be operated simultaneously, and eccentric means for limiting the operating movement of the members so that a predetermined half portion of the ribbon may be utilized.

1,781,313. PICTURE. FRITZ BLAU, Berlin-Charlottenburg, Germany. Filed Oct. 22, 1928, Serial No. 314,102, and in Germany Nov. 3, 1927. 5 Claims. (Cl. 41—22.)



1. A picture for directed illumination, portions of the pigment of this picture being covered by a plurality of clear gray sheets, and a portion of the picture included between the sheets.

1,781,314. WATER PURIFICATION. MILLARD BRANDT, Tamaqua, Pa., assignor to Darco Corporation, Wilmington, Del., a Corporation of Delaware. Filed Mar. 29, 1926. Serial No. 98,385. 1 Claim. (Cl. 210—62.)



In the purification of water by activated carbon in a metal container, the improvement which comprises disposing the carbon in a pervious bed of highly activated, firm, electrically-conductive, oxygen-absorbing particles in said container and electrically insulating said container from said bed in such a way as to prevent the carbon from forming galvanic couples with oxidizable metals when the apparatus is in use and thus to make oxygen adsorbed by the carbon available for reaction with impurities in the water.

1,781,315. AUTOMATIC GRAVITY CUT-OFF-CONTROLLING APPARATUS. MARTIN C. BRIGHT, Indianapolis, Ind. Filed Aug. 22, 1925. Serial No. 51,790. 9 Claims. (Cl. 200—52.)

1. A cut-off controlling apparatus including a normally vertical base, a movable gravity-weight element, means co-operating with the base to support and guide the weight element for movement in either one of opposite directions on an arc, a switch lever pivoted on the base an electrical switch supported by the base, means on the base enabling the lever to operate the switch, and means on the base enabling the weight element upon movement in either one of the opposite directions to operate the switch.

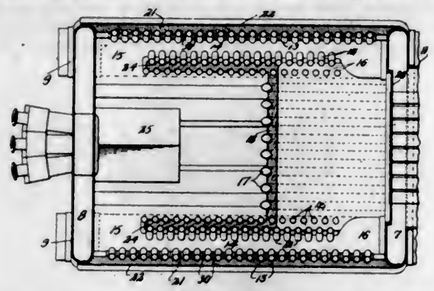
1,781,316. PLANT SUPPORT. WILLIAM V. BROOKS, Des Moines, Iowa. Filed May 24, 1929. Serial No. 365,728. 4 Claims. (Cl. 47—47.)

1. A plant support, comprising a standard, and a plant-enclosing device upon said standard, said device comprising an expansible and contractible tiered double loop surrounding said standard, and plant surrounding jaws extending from one of said loops.

1,781,317. TREATMENT OF WASTE SPUN OR WOVEN TEXTILE MATERIAL. ADOLPH LIONEL BURLIN, London, England. Filed Oct. 26, 1929, Serial No. 402,810, and in Great Britain Nov. 2, 1928. 12 Claims. (Cl. 19—66.)

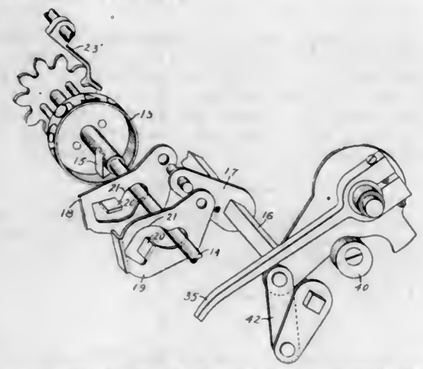
1. The process of treating waste spun or woven material containing artificial silk which comprises subjecting the material to the action of aqueous detergents and thereafter treating the same with an acid body including boric acid, and a carbohydrate.

1,781,318. BOX-CAR BRACE. JAMES AUGUSTUS BYINGTON, Orlando, Fla. Filed Apr. 29, 1929. Serial No. 358,973. 8 Claims. (Cl. 105—369.)



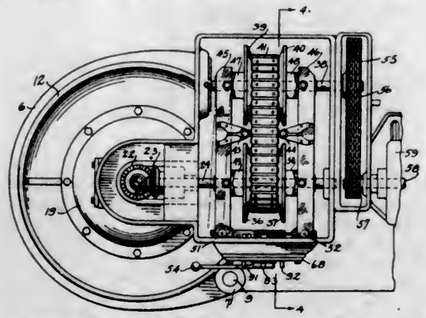
1. The combination with spaced walls of a load brace, said brace comprising hingedly engaged members adapted to engage the walls at obtuse angles to each other and to be moved into parallel relation and means for holding said members in parallel relation.

7. A load brace comprising a main bar, an extension bar, hinged connection between said main bar and extension bar, said hinged connection between the bars being variable in position, whereby the bars may be extended at different distances in relation to each other.



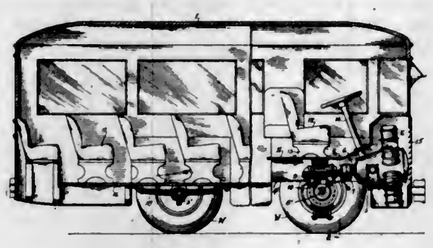
1,781,319. FINELY-DIVIDED-FUEL-BURNING LOCOMOTIVE. GEORGE W. CLENDON, Piermont, N. Y., assignor to International Combustion Engineering Corporation, a Corporation of Delaware. Filed Aug. 15, 1925. Serial No. 50,352. 6 Claims. (Cl. 122—9.9)

1. In a locomotive boiler, a fire box comprising front and rear water legs, upper and lower drums connecting the legs at opposite sides, sets of tubes spaced inwardly from the sides of the box connecting the respective upper and lower drums on each side, a water tube supported arch between said sets of tubes and extending substantially from the lower forward corner of the fire box diagonally toward the upper rear corner but terminating short there-



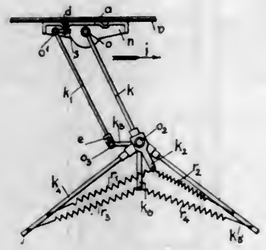
of together with a baffle supported by each of said sets of tubes and extending downwardly from the side edges of said arch.

1,781,320. ZERO-SETTING DEVICE. LORING P. CROSMAN, Maplewood, N. J., assignor to Monroe Calculating Machine Company, Orange, N. J., a Corporation of Delaware. Filed Apr. 10, 1929. Serial No. 354,082. 8 Claims. (Cl. 235—144.)



1. In a register having a shaft and a numeral wheel mounted thereon and provided with a projection; a clearing device including a pair of relatively movable projection-engaging members operating upon opposite sides of said shaft and collectively acting to bring a given character on said wheel from any radial position into registering position.

1,781,321. MIXING MACHINE. WALTER F. DEHUFF, Glen Rock, Pa. Filed May 4, 1929. Serial No. 360,577. 3 Claims. (Cl. 64—8.)

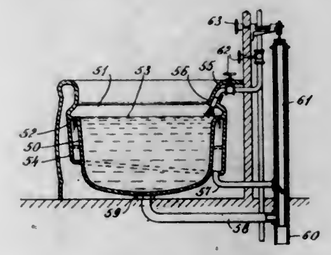


1. In a variable speed gear, the combination with a casing, two parallel shafts mounted therein, a spline on each shaft, a pair of cone-shaped driving elements held on each shaft by the spline and adated to slide toward and away from each other, a belt operably passing between the driving elements of said pairs, levers pivoted between said parallel shafts and operably connected each to one driving element of each pair, means for simultaneously oscillating both of said levers to cause the driving elements of one pair to approach while the driving elements of the other pair recede from one another, said means comprising a stub shaft, an operating handle at one end for rotating said shaft, a gear at the other end, fixed slides extending radially of the axis of said shaft, at diametrically opposite points, guides slidable on said slides, and rack bars engaging said gear and connected to said slides.

1,781,322. AUTOMOTIVE VEHICLE. ERIK H. DELLING, Snyder, N. Y., assignor to Supersteam Products, Inc., a Corporation of Delaware. Filed Jan. 17, 1929. Serial No. 333,143. 1 Claim. (Cl. 180—42.)

In a motor vehicle, in combination with front wheel driving mechanism including an axle, an engine having its crank shaft arranged substantially in the median longitudinal vertical plane of said vehicle and having a bank of cylinders of that type in which the cylinders all are intersected by a single plane perpendicular to the axis of rotation of the engine crank shaft, means supporting said engine with its cylinders forwardly of said axle, a cab forming an enclosing structure defining a driver's compartment and an engine housing, the foremost wall of which enclosing structure is directly forward of said engine, said enclosing structure including a floor positioned in a plane above said axle and intersecting said engine, and a driver's seat above said floor and rearwardly of said bank of cylinders.

1,781,323. CURRENT COLLECTOR FOR ELECTRIC RAILWAYS. JULIUS FISCHER DE TOVÁROS, Budapest, Hungary. Original application filed July 17, 1925, Serial No. 44,298, now Patent No. 1,744,622, dated Jan. 21, 1930, and in Hungary July 23, 1924. Divided and this application filed Oct. 29, 1929. Serial No. 403,268. 2 Claims. (Cl. 191—55.)

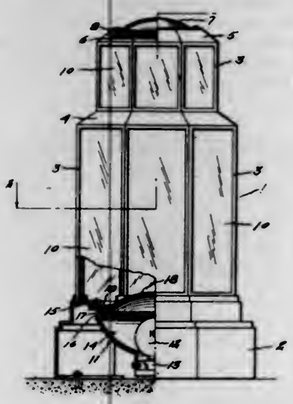


1. A current collector for electric railways embodying a sliding shoe provided with flat wide contact surfaces and mounted to oscillate on a frame adjusted at an acute angle to the trolley wire, which frame can be reversed on changing the direction of travel, characterized by a link parallelogram provided on one side of the frame or sliding loop capable of oscillation, two adjacent sides of which are formed by the shoe and the frame, and the other adjacent sides of which are formed by a tension or compression member and a controlling lever for the shoe, on which engages the return force.

1,781,324. HAIRPIN. CHARLES A. DIES, Chicago, Ill. Filed Feb. 26, 1929. Serial No. 342,764. 7 Claims. (Cl. 132—50.)

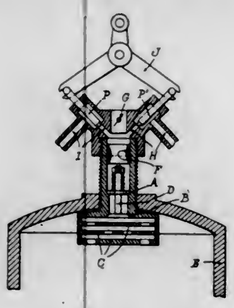
3. A hairpin the prongs of which are provided with pairs of oppositely disposed humps separated by openings through the prongs, an inwardly turned end on one of the prongs, and means on said inturned end with which the outer plain end of the other prong engages in closed position of the hairpin.

1,781,325. BATHTUB. ROBERT W. DOWLING, New York, N. Y. Filed Sept. 15, 1928. Serial No. 306,216. 3 Claims. (Cl. 4—173.)



1. A bath tub provided with an inwardly opening substantially horizontally extending overflow channel having a plurality of discharge openings in its lowermost wall, and a drain conduit disposed below said overflow channel and adapted to receive liquid passing through said discharge openings.

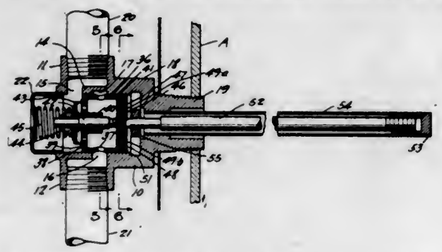
1,781,326. COMBINED BEACON AND LANTERN. ISADORE FRIEDMAN, Roxbury, Mass. Filed Feb. 12, 1930. Serial No. 427,811. 3 Claims. (Cl. 240—1.)



3. A combined beacon and lantern especially adapted for the illumination of gasoline stations and the like including a housing, said housing comprising a base and a metallic framework thereon, said framework having an opening in the top thereof, a reflector unit in said housing, the said base constituting a supporting means for said reflector unit; said reflector unit being adapted to project a concentrated vertical beam of light upwardly through the said top, and comprising a casing, a reflector mounted in said casing, and a floodlight lamp adjustably

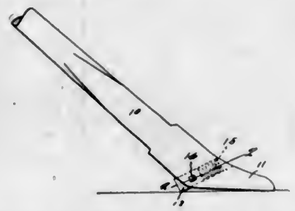
mounted in said casing; means supported in the sides of said framework comprising glass panels adapted to diffuse that portion of the light flux from said lamp which is not con-

trolled by said reflector, whereby to provide for the general illumination of the surroundings of said housing, a cover glass for said opening, and a weatherproofing lens in said housing above said reflector unit.



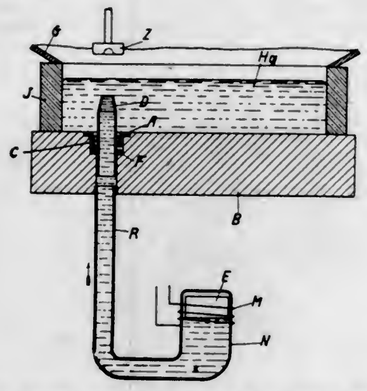
1,781,327. CARBURETOR FOR INTERNAL-COMBUSTION ENGINES SUPPLIED WITH HEAVY OIL. JOSEPH MARIE ARSENE GOINARD, St.-Nazaire, France. Filed Nov. 11, 1925, Serial No. 68,397, and in France Nov. 16, 1924. 8 Claims. (Cl. 123—31.)

1. A vaporizing carburetor for an internal combustion engine having an inlet tube for lighter fuel, a chamber surrounding said inlet tube for receiving heavier fuel, a passage common to both fuels in the bottom of said chamber, means whereby communication is afforded between the end of said passage opposite the end adjacent said chamber and the cylinder, the inlet tube being adapted to abut against the inlet end of said passage to close the admission of heavier fuel and means whereby said tube is moved axially.



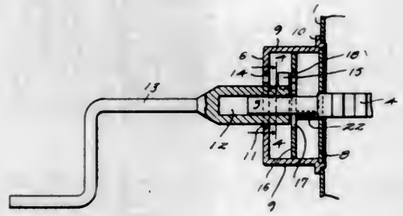
1,781,328. THERMOSTAT VALVE STRUCTURE. JOHN H. GRAYSON, Lynwood, Calif. Filed June 28, 1929. Serial No. 374,525. 9 Claims. (Cl. 236—48.)

1. A thermostat valve control structure comprising a casing having an inlet for supply of gas, an outlet for a main burner, a bore extending through said casing connecting said inlet and outlet, a bushing inserted in said bore dividing said casing into an inlet chamber and an outlet chamber connected respectively to said inlet and said outlet, a valve seat provided in said bushing for communication of said inlet and outlet chambers, a gas



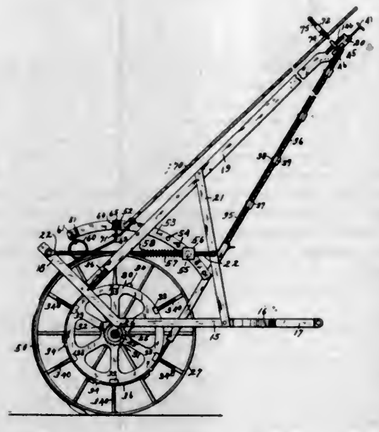
valve controlling the ports in said seat, said bushing having a ledge at its outer end adapted for seating thereon of a valve actuator.

1,781,329. PINCH BAR. HARRISON M. HOWE, Bradford, Pa. Filed Mar. 21, 1928. Serial No. 263,508. 2 Claims. (Cl. 254—36.)



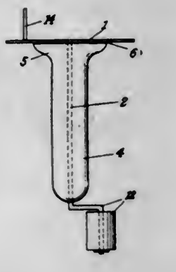
1. In a device of the class described, a shank portion a foot member carried thereby and having a bore extending therethrough, the bore being at an angle with the bottom of the foot member, a spur mounted in the bore, clamping means for retaining the spur, and independent means for determining the position of the spur with reference to the lower end of the bore, said means last named including a threaded device within the upper end of the bore, said clamping means and independent means respectively engaging the spur by movement laterally thereof and lengthwise thereof.

1,781,330. IGNITION DEVICE FOR MERCURY-ARC RECTIFIERS. JULIUS JONAS, Baden, Switzerland, assignor to Aktiengesellschaft Brown, Boveri and Cie., Baden, Switzerland. Filed Mar. 18, 1929, Serial No. 348,029, and in Germany Mar. 19, 1928. 7 Claims. (Cl. 250—27.5.)



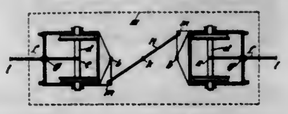
1. An ignition device for mercury arc rectifiers by means of which mercury is forced from a compression cylinder through an arrangement of piping against a rigidly fixed ignition anode placed above the surface of the cathode mercury, characterized by the formation of the nozzle forming the end of the system of piping which is such that the nozzle is free to move in the direction of the ignition anode under the influence of the mercury forced through it.

1,781,331. GRATE. AUGUST J. KOEPSELL, Mayville, Wis. Filed June 1, 1929. Serial No. 367,718. 5 Claims. (Cl. 126—181.)



1. The combination with a grate having oscillatory bars each having an extension for engagement with a shaker handle, of a chambered casing inclosing each grate extension, a shaker handle formed to receive any one of said extensions and having a stop formed thereon, and means within the chambers of the casing for limiting the oscillatory motion of the handle and grate when the handle is in different positions upon the grate extension through engagement of said stop therewith, said means permitting more motion with the handle in one position than in another position.

1,781,332. HAY LOADER. MATTHEW G. KURTH, Madison, Wis., assignor, by direct and mesne assignments, to Master Machinery and Implement Company, Madison, Wis., a Corporation of Wisconsin. Filed Dec. 1, 1927. Serial No. 236,934. 16 Claims. (Cl. 56—359.)

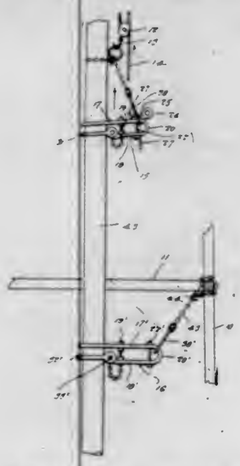


1. In a device of the character described, the combination with a set of wheels, of a reel mounted therebetween and operatively connected to be driven therefrom, a belt conveyor having an end encircling said reel, and a rake complementary to said reel and conveyor and provided with a mounting to which said rake is fulcrumed ahead of a vertical plane through the axis of said wheel and above a horizontal plane therethrough.

1,781,333. TOY. ERNST PAUL LEHMANN and KARL RUPPIN, Brandenburg-on-the-Havel, Germany, assignors to said Lehmann. Filed Feb. 7, 1928, Serial No. 252,619, and in Germany Jan. 23, 1926. 2 Claims. (Cl. 46—37.)

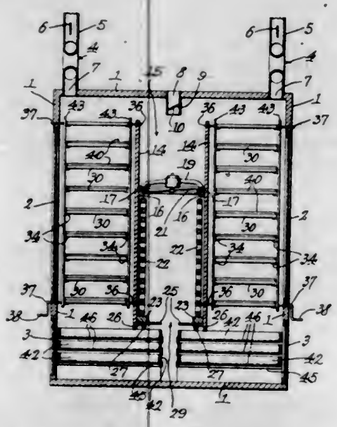
1. A toy for playing a game of skill, comprising in combination a vertical handle, having its upper end of greater diameter than the handle, a shaft extending axially through said handle and capable of rotating loosely therein, means carried by said shaft capable of being actuated by one hand for rotating the shaft continuously in the same direction while the handle is held substantially stationary with the other hand, and a rotatable disc or plate mounted on the top end of the shaft, on which articles capable of rolling can be placed when the disc is rotating, for imparting a continuous rotary motion to them, the top surface of the enlargement at the upper end of the handle being almost but not quite in contact with the under surface of the rotatable disc all round a circumference equal to at least half that of the said disc, as set forth.

1,781,334. TRACK VEHICLE. HERMANN LIECHTY, Bern, Switzerland, assignor to Wilhelm Kaufmann, Bern, Switzerland. Filed Sept. 15, 1927, Serial No. 219,736, and in Switzerland Sept. 25, 1926. 4 Claims. (Cl. 105—168.)



1. In a track vehicle, a vehicle frame, trucks pivoted at their inner ends to the vehicle frame, each truck being provided with a wheel axle, and a draw bar for each truck pivoted to the vehicle frame above the corresponding truck and pivotally connected with the latter whereby to effect swinging out of the vehicle frame towards the outer edge of track curves and adjustment of the trucks to dispose the wheel axles radially with respect to said curves.

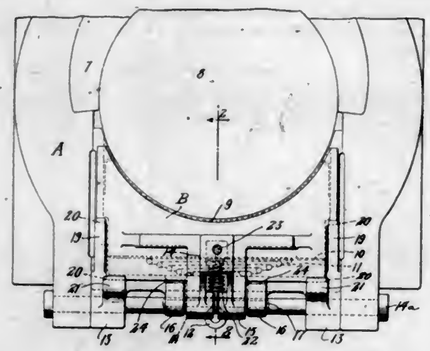
1,781,335. PIPE GRAB. JOHN E. LYONS, Texhoma, Okla. Filed Aug. 23, 1929. Serial No. 387,923. 4 Claims. (Cl. 294—104.)



1. A pipe clamp comprising a U-shaped body portion having legs of unequal length, a cable slidably connected in the bight portion of the body portion, a clevis detach-

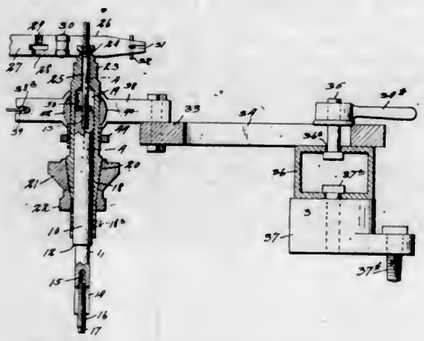
ably and pivotally engaged with the free end of the shorter leg, said longer leg having an arcuate concavity

on the free end, said concavity having a knife edge on its upper edge adapted to grip the pipe when the body is rocked on the clevis by the power applied to the cable.



1,781,336. EGG HATCHER. LUTHER A. MARSHALL, Floydada, Tex. Filed Jan. 28, 1927. Serial No. 164,308. 3 Claims. (Cl. 119—35.)

1. In a device of the class described, a casing having longitudinally extended partitions defining an air passage spaced from the sides of the casing, means for creating a down-draft through the passage, baffles in the passage and defining a reduced throat through which the draft is discharged, egg holders located below the baffles and having a space between their inner edges, below the throat, and means for mounting the baffles, for adjustment, thereby to vary the width of the throat considered relatively to the space between the inner edges of the egg holders.

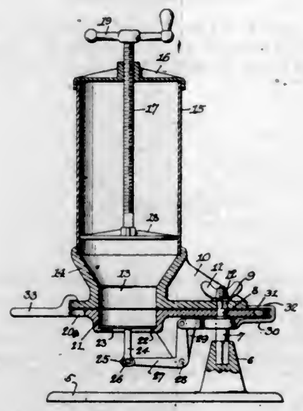


1,781,337. DRIVING-BOX LUBRICATOR. FREDERICK W. MARTIN, Brooklyn, N. Y., assignor to Franklin Railway Supply Company, a Corporation of Delaware. Filed Nov. 17, 1923. Serial No. 675,248. 8 Claims. (Cl. 308—88.)

8. In combination, a driving box lubricating cellar having cover plate engaging means thereon and a snap cover plate therefor displaceably secured thereto, said plate engaging said means when in closed position and being

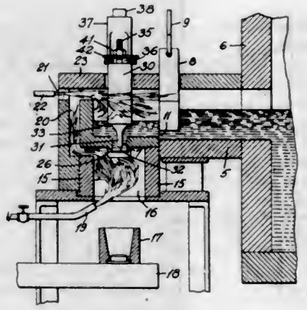
adapted to be opened on displacement, and said cellar and plate being constructed to provide opposing surfaces spaced apart to permit insertion of a displacing tool.

1,781,338. VALVE-REAMING TOOL. GEORGE E. MOEN, Kelso, Wash. Filed Jan. 27, 1927. Serial No. 164,041. 13 Claims. (Cl. 90—12.5.)



13. An implement of the character described including an arm having opposed relatively movable jaws hinged to the arm whereby said jaws may be shifted into an angular relation to each other which will permit the insert or removal of a tool carrier laterally between the jaws and said jaws having confronting seats, a tool carrier rotatably disposed between the jaws and in said seats means for shifting the tool carrier axially within the seats, and means for relatively adjusting the jaws toward or from each other, said means being releasable from one of said jaws to permit the jaws to be swung into a fully opened position.

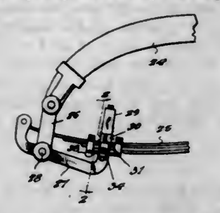
1,781,339. HAMBURGER-CAKE-PRESSING MACHINE. WILLIAM H. OLIVER, Abilene, and OTTO L. PETERS and ALOYS A. STRUCKHOFF, Grinnell, Kans. Filed Feb. 24, 1930. Serial No. 430,838. 3 Claims. (Cl. 107—8.)



1. A machine of the class described comprising a base, a cylindrical container mounted on the base, said cylindrical container including a lower casting having a funnel-shaped contour, a pivoted member disposed under the cylindrical container and having an opening normally lying under the casting to receive material from the cylindrical container, a sliding pusher within the opening, a

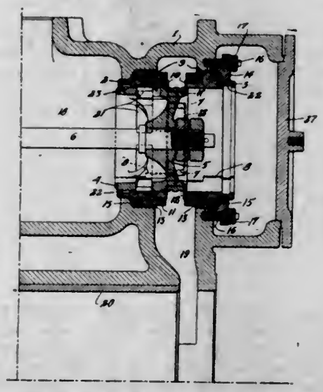
bell crank lever connected with the sliding pusher, an arm connected with the bell crank lever, one end of the arm

engaging the casting to cause the arm to move when the pivoted member is rotated, and said pusher adapted to force material from the opening in the pivoted member.



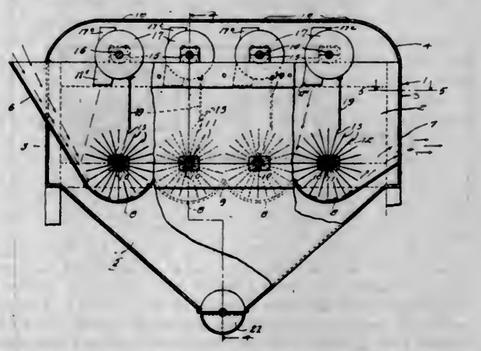
1,781,340. FEEDING MOLTEN GLASS. KARL E. PEILER, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Nov. 3, 1924. Serial No. 747,503. 18 Claims. (Cl. 49—55.)

18. Apparatus for feeding molten glass comprising a container for the glass having a downwardly-opening discharge outlet, means for externally heating said outlet, a normally stationary vertical flow-regulating member having a lower end of relatively small cross-sectional area adjustably positioned in said outlet and having, above said lower end, an enlarged portion adapted to throttle said outlet and to seat in said outlet on downward movement of the throttling member to stop the flow of the glass therethrough, and means for severing mold charges from the glass below said outlet.



1,781,341. SHOCK ABSORBER. CYRIL F. REAGAN, Altoona, Pa. Original application filed June 14, 1928, Serial No. 285,492. Divided and this application filed June 11, 1929. Serial No. 370,118. 2 Claims. (Cl. 267—16.)

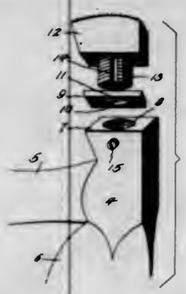
1. The combination with the side frame and spring of a vehicle, of an arm pivotally connected with the spring, means pivotally connecting the arm intermediate its ends with the frame, a loop carried by the free end of the arm and confining the spring, said loop having beveled faces



upon its sides, plates slidably engaged with said faces, a bolt connecting the plates, and means securing the bolt to the plates.

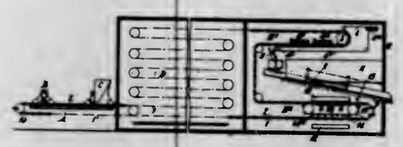
1,781,342. PISTON-VALVE AND BUSHING CONSTRUCTION. SAMUEL S. RIEGEL, Scranton, Pa. Filed May 25, 1927. Serial No. 194,152. 1 Claim. (Cl. 121—193.)

The combination of a valve chamber, a piston valve, a pair of split bushing members with opposed tapering surfaces on the exterior, a spacing member surrounding the bushing members between the opposed surfaces, said spacing member having tapered surfaces with which the tapered surfaces on the bushing members are adapted to co-operate, and means for applying endwise pressure to the bushing members to cause inward collapse thereof through the interaction of said tapered surfaces.



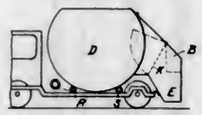
1,781,343. COTTON CLEANER. FLOYD D. ROAN, Newlin, Tex., assignor to F. D. Roan Machine Company, Newlin, Tex., a Corporation of Texas. Filed Apr. 23, 1929, Serial No. 357,550. Renewed Sept. 23, 1930. 4 Claims. (Cl. 19—72.)

1. In a cotton cleaning machine, a closed casing, a plurality of concave screens extending transversely of the



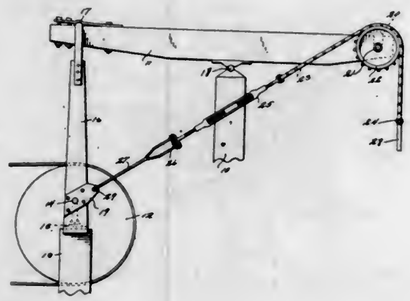
casing, beater cylinders operating in each of said screens to move the cotton from one end of the casing to the other over the screens, a dirt receiver beneath said screens, fans in the upper portion of the machine for delivering air downwardly against each of said cylinders for blowing the dirt from the cotton, and a curtain depending from each of said fans to a point in close proximity to the beater lying therebeneath and extending transversely of the casing whereby to divide the casing into a series of compartments.

1,781,344. RENEWABLE HEAD TOOL. JESS G. SALAZAR, Atwater, Calif. Filed July 18, 1929. Serial No. 379,229. 2 Claims. (Cl. 306—43.)



1. A nail driving tool comprising a handle-carried body projecting laterally from the handle axis and having a socket opening through its outer end, a compressible washer lying against said outer end of said body and having an opening alined with said socket, a nail driving head lying against the outer side of said washer and having an integral threaded stud passing through said opening and removably received in said socket, means for preventing relative turning of said washer and head, and means for locking said stud against accidental turning.

1,781,345. PLANT FOR MOLDING CREAMS AND THE LIKE. ROBERT SAVY, Courbevoie, France, and GEORGE RALPH BAKER and WILLIAM EDWARD PRESCOTT, London, England, assignors to Baker Perkins Company, Inc., Saginaw, Mich. Filed May 29, 1928, Serial No. 281,476, and in Great Britain July 1, 1927. 12 Claims. (Cl. 107—3.)

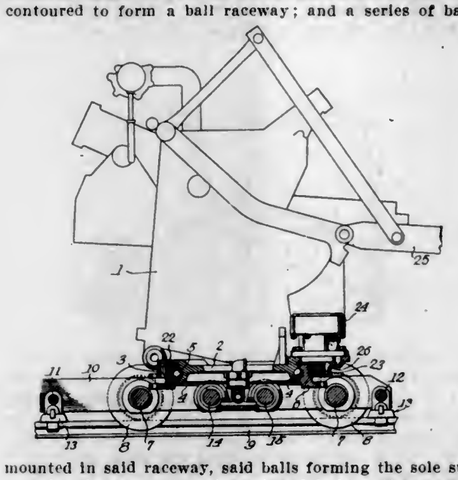


4. A plant for manufacturing creams by the aid of starch moulds into which the cream is deposited, comprising an endless conveyor adapted for continuous travel, a plurality of mould trays secured to the conveyor, a starch printing device comprising dies beneath which the mould trays travel, means for imparting transitional movement to the dies at the same speed as that of the moulds during the printing operation, a tray inverting device for inverting the trays to deliver the starch and creams to a separating device, and tray filling means whereat passing trays are continuously recharged with starch.

1,781,346. DUST CART. KARL SCHMIDT, Nuremburg, Germany. Filed Oct. 16, 1928, Serial No. 312,896, and in Germany Nov. 8, 1927. 5 Claims. (Cl. 214—67.)

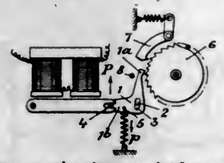
1. Vehicle for the conveyance of dust and refuse, comprising a portable frame, a drum-shaped superstructure rotatably mounted in the frame with its axis arranged transversely to the longitudinal axis of the vehicle, a single filling opening at the rear part of the drum-shaped superstructure, a filling box at the rear part of the drum-shaped superstructure substantially extending over the entire width of the superstructure and forming during the filling operation a part together with the superstructure, the opening of the filling box registering with the opening of the superstructure and means for rotating the drum-shaped superstructure together with the filling box and automatically discharging the contents of the filling box into the superstructure.

1,781,347. LONG-STROKE PUMPING OUTFIT. ELIJAH D. SMITH and CHARLES S. MCINTYRE, Drumright, Okla. Filed Jan. 16, 1930. Serial No. 421,212. 8 Claims. (Cl. 74—14.)



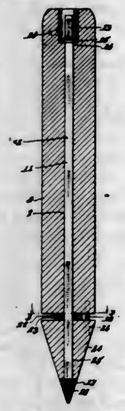
1. In combination with an oscillating beam having power means, flexible means secured at one end to said power means and at the opposite end to a pump rod, said flexible means being adapted to reciprocally engage said oscillating beam whereby to increase the stroke thereof imparted to said pumping rod, and means carried by said beam and engaging said flexible means whereby to permit reciprocation of said flexible means coactively with the oscillation of the beam.

1,781,348. TURNTABLE SUPPORT. HENRY H. TALBOYS, Milwaukee, Wis., assignor to Nordberg Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 31, 1928. Serial No. 266,323. 4 Claims. (Cl. 212—69.)



1. In combination a truck frame having a circular opening formed therein; a supporting element for a shovel or similar instrumentality, said support having a depending portion extending into the frame opening the opposing

vertically disposed faces of said frame and element being contoured to form a ball raceway; and a series of balls

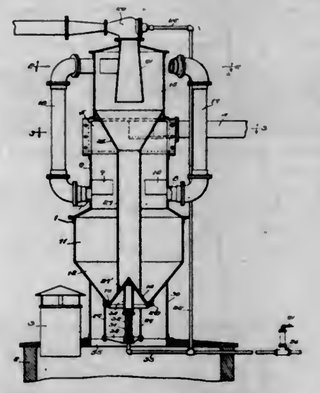


mounted in said raceway, said balls forming the sole support for the supporting element and locking the same to the truck.

1,781,349. PAWL. GUSTAV TAUSCHEK, Vienna, Austria. Filed July 13, 1928, Serial No. 292,425, and in Austria July 25, 1927. 4 Claims. (Cl. 74—54.)

1. In a feeding mechanism, a feed pawl formed as a pivoted angle lever which is shiftable relatively to its pivot for a distance corresponding to the feed movement, one arm of the angle lever transmitting its feed movement to the body which is to be fed, and means acting upon its other arm, for shifting and returning said pawl, the shifting and returning means being arranged in such a manner that the line in which the return force acts lies nearer to the pivot than the line in which the transmitting force acts.

1,781,350. TENT STAKE. ROSCOE AARON TAYLOR, Carbondale, Ill. Filed Apr. 26, 1929. Serial No. 358,257. 11 Claims. (Cl. 135—15.)

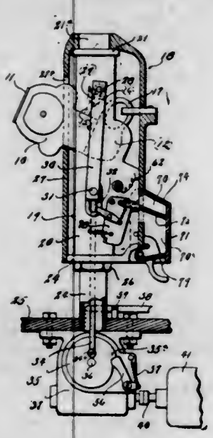


1. In a device of the kind described, in combination a sleeve, a rod within said sleeve, means to turn said rod relatively to the sleeve to present an additional element on said rod increasing resistance of said device to removal from the ground, and means to limit the turning of said rod relatively to said sleeve.

1,781,351. VIBRATORY SYSTEM. ALBERT L. THURAS, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 26, 1926. Serial No. 97,608. 11 Claims. (Cl. 274—35.)

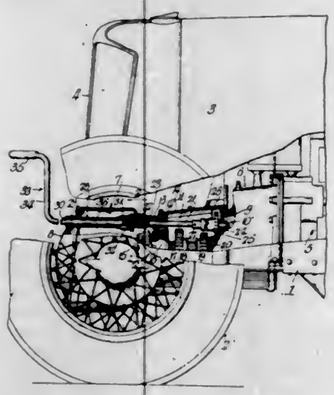
1. A mounting for a vibratory element comprising a torsion member and tension members extending from opposite sides of said torsion member to prevent lateral deflection thereof and means for rigidly supporting one end of each tension member.

1,781,352. PNEUMATIC CONVEYER APPARATUS. EDGAR B. TOLMAN, Jr., and HANS BRUECKLER, Chicago, Ill., assignors to United Conveyer Corporation, Chicago, Ill., a Corporation of Illinois. Filed Dec. 19, 1927. Serial No. 241,153. 1 Claim. (Cl. 183—42.)



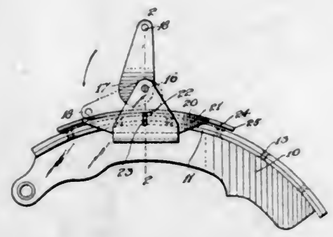
1. In a device of the kind described, a compartment for receiving and storing material conveyed by a fluid, said compartment having an outlet opening through which stored material discharges by gravity, fluid actuated means operable to separate the conveying fluid from the material conveyed, a closure member for said outlet opening, said closure member comprising a vertically movable valve having a downwardly projecting cylinder, a pipe line having one end forming a piston fitting within said cylinder and the other end connected with a supply of fluid under pressure, and valve means operable to control the flow of pressure fluid through said pipe line whereby said closure member opens by gravity when said valve means is closed and is lifted to seated position when said valve means is open.

1,781,353. COIN-CONTROLLED DRIVE FOR FARE REGISTERS. HERMAN E. TROJAHN, St. Louis, Mo. Filed Apr. 19, 1927. Serial No. 184,880. 16 Claims. (Cl. 194—6.)



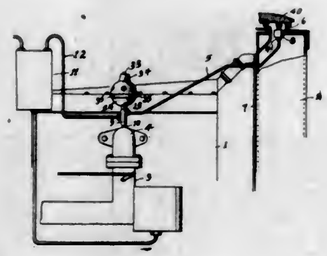
1. A coin controlled fare registering device comprising in combination with a register, means for resetting the

same, a prime mover for said resetting means, a clutching mechanism interposed between said resetting means and said prime mover, means for normally disengaging said clutching mechanism, an electro-responsive means for actuating, when energized, said disengaging means to release said clutching means, an electric circuit for energizing



said electro-responsive means, a pair of spaced terminal contacts interposed in said circuit, said contacts being insulated from each other and adapted to be interconnected by a coin discharged by said register to cause the completion of said circuit, whereby said register is operated by said actuating means upon discharge of said coin.

1,781,354. STARTING-CRANK ARRANGEMENT FOR FRONT-DRIVE AUTOMOBILES. CORNELIUS W. VAN RANST, Auburn, Ind., assignor, by mesne assignments, to Manning & Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 9, 1929. Serial No. 345,796. 8 Claims. (Cl. 180—54.)

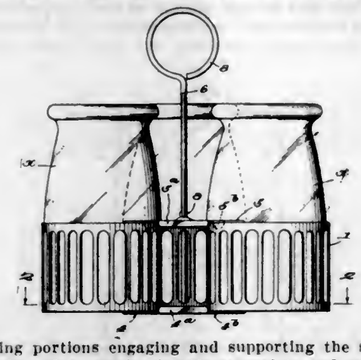


1. An automobile of the front wheel drive type embodying therein an engine and transmission and differential casings at the front end thereof in the order named, a shaft journalled in the transmission casing and capable of a limited longitudinal movement with respect thereto, a gear loose on one end of the shaft and operatively connected to the engine, the other end of said shaft being disposed in the differential casing and formed for engagement by a hand crank and means fixed on said shaft and adapted in one endwise movement of the shaft to engage said gear to rotatively lock the same thereto.

1,781,355. CLAMP FOR SEATING BRAKE LININGS. ALBERT H. WADELL, Newark, N. J. Filed Dec. 18, 1928. Serial No. 326,762. 4 Claims. (Cl. 29—84.)

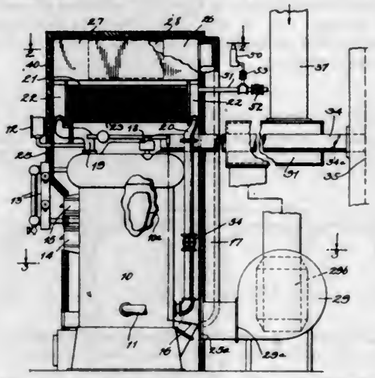
1. A clamp for seating brake linings comprising a pair of members one of which is arcuate, means for moving the members toward each other to clamp lining to a brake shoe, one of said members being cut away to expose a brake lining for riveting.

1,781,356. VAPOR-SUPPLYING ATTACHMENT. PAUL F. WEST, Detroit, Mich. Filed Mar. 7, 1929. Serial No. 345,196. 18 Claims. (Cl. 123—25.)



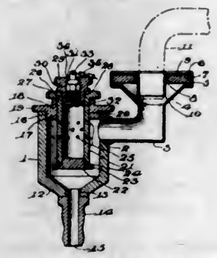
1. A vapor supplying attachment for internal combustion engines comprising, in combination, a conduit connected to a source of water vapor, and to the intake passage of the engine; and a sleeve with the upper end closed and having vents in side of said sleeve, and a metal lined float adapted to slide up and down on said sleeve to close or open said vents in said sleeve, and said sleeve adapted to be slipped over the upper end of said conduit to prevent liquid or water from entering said conduit, which leads from said source of moisture to a valve casing; said sleeve having an upper and a lower stop for said metal-lined float, and also a projection on the inner wall of said sleeve to prevent said sleeve from being slipped far enough over said conduit to close said ports in the side of said sleeve, and a suction operated valve interposed in said conduit, said valve being constructed and arranged to admit moisture to the intake passage only when the engine is operating at all speeds other than idling speed.

1,781,357. BOTTLE CARRIER. ROBESON B. WOLCOTT, Watertown, Conn., assignor to The Waterbury Button Company, Waterbury, Conn., a Corporation of Connecticut. Filed Sept. 18, 1929. Serial No. 393,416. 5 Claims. (Cl. 224—48.)



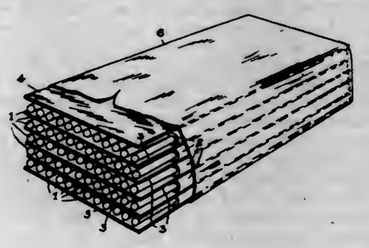
1. A bottle basket comprising a continuous strip having its ends secured together and bent to form a plurality of open ended loops symmetrically grouped around a common

center, a bottom plate engaging the lower edge of said strip at a plurality of points, said plate having upwardly



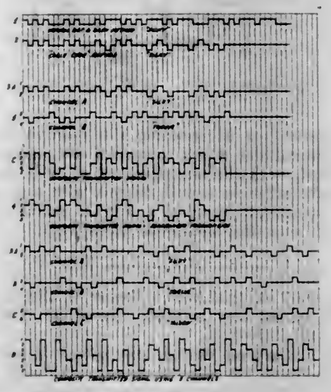
extending portions engaging and supporting the sides of said strip and a carrying handle secured to and extending upwardly from said bottom plate.

1,781,358. INSTALLATION FOR SUPPLYING AND CIRCULATING HEATED OR COOLED AIR. HARRY ZWERLING, Brooklyn, N. Y. Filed Apr. 21, 1926. Serial No. 103,599. 7 Claims. (Cl. 257—8.)



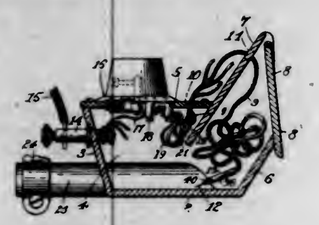
1. An apparatus of the character described including a steam generating means, spaced means for radiating the heat in the steam generated, a casing for enclosing said generating and radiating means, means for supplying air to said casing, the walls of said casing being spaced from the generating means to provide a passage for the air about the latter, said casing walls being fitted closely about the radiating means to direct all the air from said passage through said radiating means, and an air supply junction duct having a plurality of branches connected to said passage.

1,781,359. MIXING DEVICE. MAURICE ALLAND, Atlantic City, N. J. Filed Sept. 8, 1928. Serial No. 304,740. 3 Claims. (Cl. 299—84.)



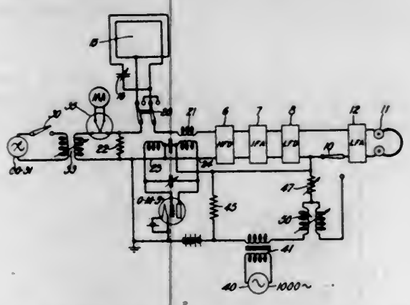
1. A mixing device, comprising a casing having an inlet, an outlet and an aperture, a closure for said aperture also provided with an aperture, a cylindrical container longitudinally reciprocable in said closure aperture, and provided with perforations to permit fluid entering said inlet to pass into said cylinder from within said casing and thence again into said casing and through said outlet, means to positively maintain said container in operative position until removed therefrom, means to limit the outward movement of said container, said container being automatically moved into and maintained in inoperative extended position, upon the release of said first means, by fluid pressure within said casing, and means to seal the connection between said casing and said container while in inoperative position.

1,781,360. METHOD OF PACKING WELDING RODS AND A BUNDLE FOR THE SAME. JAMES C. ARMOR, West View, Pa. Filed Feb. 1, 1928. Serial No. 251,201. 2 Claims. (Cl. 206—46.)



1. The method of forming welding rods, which are coated with flux and a binder, into packages for storage and shipment, which comprises arranging the rods together in layers while the flux and binder are still plastic and allowing the flux and binder to dry so that the rods are cemented together, and forming a bundle of said layers by stacking the same with strips of protective material interposed between the layers to secure the stacked layers together.

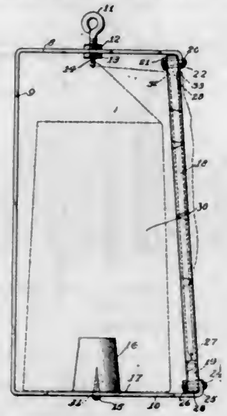
1,781,361. METHOD OF SIGNALING. LOYD A. BRIGGS, Cranford, N. J., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Aug. 13, 1928. Serial No. 299,219. 9 Claims. (Cl. 178—51.)



1. The method of increasing the speed of signaling which includes signaling simultaneously on a plurality of channels and utilizing the spacing time of one channel as the marking time of another channel.

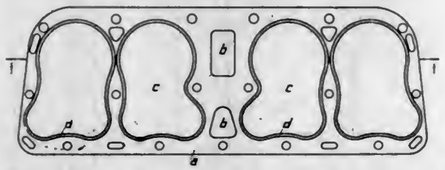
1,781,362. ELECTROLYSIS DEVICE. JOSEPH BRIGIDA, New York, N. Y. Filed Feb. 12, 1930. Serial No. 427,718. 1 Claim. (Cl. 174—89.)

In a device of the character set forth, the combination of a casing composed of a bottom and sides and an apertured flat top wall, an apertured wall at one side of the casing inclined upwardly from the adjacent flat top wall, a lid hinged to the upper part of said inclined wall and normally extending downward to engage the end walls and a short lower side wall to thereby close the casing, a set of cables inside of the casing, an electrolytic needle on the free end of each cable, a binding post in the rear wall of the casing to carry one conductor into the cables, said cables passing upwardly through the flat top at openings therein and thence through openings in the said inclined wall to bring the cables back into the casing, whereby upon raising the hinged lid the cables can be withdrawn from the casing for use and the available length of the cables can be adjusted by drawing them forward and back through the said inclined wall.



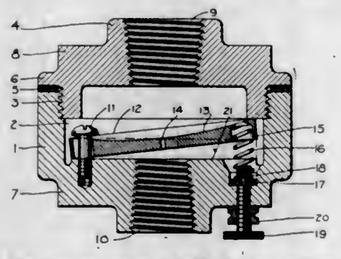
1,781,363. ELECTRICAL TESTING SYSTEM. EDMOND BRUCE, Red Bank, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed July 6, 1927. Serial No. 203,744. 14 Claims. (Cl. 250—20.)

1. The method of determining the relative values of two wave magnitudes which comprises comparing one, by a null method, with the magnitude of a given wave, and comparing the other, by a null method, with a given wave having a magnitude bearing a known relation to the magnitude of said first mentioned given wave.



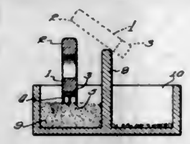
1,781,364. TWINE HOLDER. HENRY P. BULKLEY, Oak Park, Ill. Filed May 3, 1928. Serial No. 274,773. 1 Claim. (Cl. 242—143.)

A twine dispensing device, comprising a supporting frame, said frame including a sheet metal strip of substantially U-shape having oppositely extending attaching flanges, a non-circular tubular member forming one of the sides of said frame, said tubular member being secured to said attaching flanges, a supporting disc and a core for receiving and supporting a cop of twine, a threaded supporting member carried by said frame and a nut having an eyelet attached thereto carried by said threaded supporting member, a weight having an eyelet, said weight being slidably mounted in said tubular member and said weight having a cross-section complementary to the interior section of said tubular member, and said tubular member



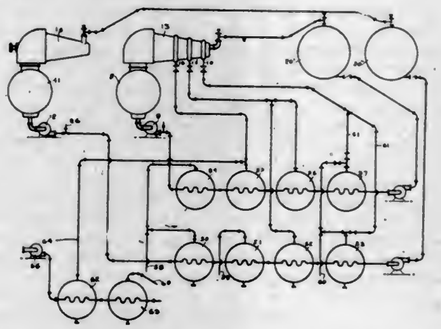
having a pair of substantially aligned holes whereby the twine may be looped about the eyelet carried by said nut, passed through one of said holes, through the eyelet of said weight, and through the other of said holes to dispense said twine uniformly.

1,781,365. PACKING OR TIGHTENING PLATE. ROBERT BURGMANN, Dresden, Germany. Filed Oct. 23, 1928, Serial No. 314,522, and in Germany Apr. 12, 1928. 1 Claim. (Cl. 288—1.)



For use in internal combustion engines having gas and water passages wherein it is desirable to have the gas passages sealed against high pressures and the water passages sealed against leakage, a gasket comprising an asbestos plate having both gas and water passages therein, and metallic flange members lining the rims of the gas passages in said plate to resist gas pressure, the water passages of said plate being free from any lining member to provide a packed joint.

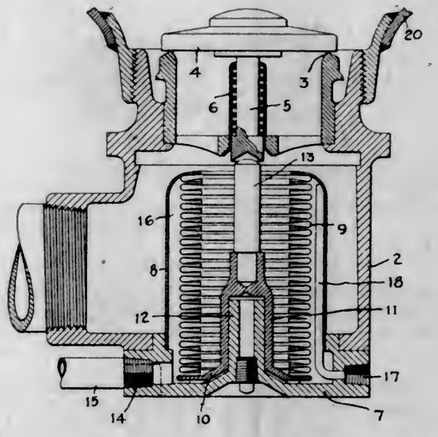
1,781,366. PRESSURE-ACTUATED VALVE. ANTON CAMPULA, Garfield Heights, Ohio. Filed Dec. 9, 1929. Serial No. 412,810. 2 Claims. (Cl. 251—123.)



1. A valve comprising a casing, a disk therein loosely connected to the casing near one edge and opening toward the inlet to the casing and adapted to close under abnormal flow, and a spring between the disk and the casing, tending to hold the disk in open position, the disk having a port permitting a restricted flow under all conditions.

1,781,367. PORK-LOIN BRANDER. CALVIN P. COOK, Arlington, Mass., assignor to Swift and Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 19, 1930. Serial No. 429,646. 5 Claims. (Cl. 101—32.)

1. The method of branding meat which consists in cutting the identification marks into the surface of the meat and simultaneously applying a powdered pigment to the cuts.

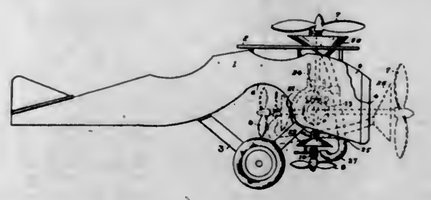


1,781,368. POWER PLANT. ARCHER DAVIDSON, Brighton, Mass., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 23, 1925. Serial No. 17,702. 15 Claims. (Cl. 60—67.)

15. In a power plant, the combination of a first turbine installation comprising a turbine, a boiler supplying motive fluid thereto, a series of heaters for heating motive fluid supplied to the boiler and a condenser for the turbine, a second turbine installation including a turbine, a boiler supplying motive fluid thereto at a pressure higher than in the first turbine installation, a series of heaters for heating the feed water supplied to the second-mentioned boiler, and a condenser for the second-mentioned turbine, means for extracting partially expanded motive fluid from the turbine of the second installation and supplying the same to at least one heater in each series as heating fluid, the condenser of the second turbine condensing the motive fluid discharged therefrom and not utilized as heating fluid, and means for utilizing the available heat from a power plant auxiliary in another heater of the second installation.

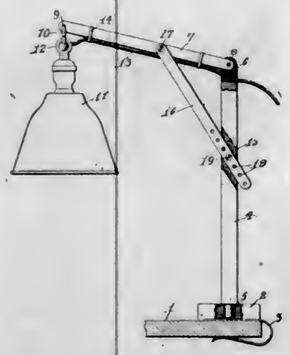
1,781,369. HYDRAULICALLY-OPERATED TANK VALVE. AUGUSTINE DAVIS, Jr., Cincinnati, Ohio. Filed Jan. 3, 1929. Serial No. 330,125. 1 Claim. (Cl. 137—156.5.)

A hydraulically operated tank valve comprising the combination of an external body applied to an an outlet from the tank, a spring-seated valve member normally closing the entrance to said body, a detachable plate closing the bottom of said body, a casing carried by said plate inside the body, a tubular metal bellows inside said casing and secured thereto at the upper end, a head secured to the lower end of said bellows, a thrust member connected with said head for unseating said valve member, said plate having two openings through it, an operating



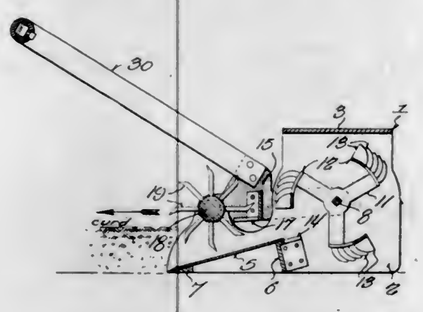
line connected to one of said openings, a closure for the other of said openings, and a vent tube extending upward from the latter opening to the top of the space between said bellows and said casing.

1,781,370. PROCESS FOR MANUFACTURING RAW-CAOUTCHOUC PLATES. HERMANN DEBOR, Munich, Germany. Filed Feb. 11, 1927, Serial No. 167,569, and in Germany Jan. 26, 1925. 4 Claims. (Cl. 154—2.)



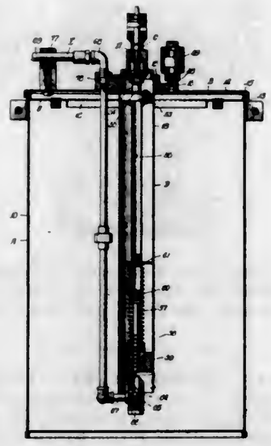
1. The herein described process of manufacturing reenforced rubber plates, consisting in applying substantially uniform pressure about the entire periphery of each cord to reduce the diameter of said cords to less than their normal diameter and embedding such cords of reduced diameter in a rubber plate.

1,781,371. AEROPLANE. CHARLES P. DELO, Knox, Pa. Filed Sept. 10, 1928. Serial No. 304,857. 4 Claims. (Cl. 244—15.)



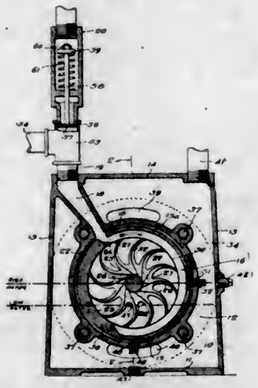
1. In an aeroplane of the character described, the combination with an aircraft structure of suitable form, of a propeller operatively mounted in said aircraft structure, said propeller being adjustable to dispose same approximately perpendicularly at the forward end of said aircraft structure or approximately horizontally above the top of the latter or at any angle between said perpendicular and horizontal positions, and means adjustable with said propeller for conveying and directing air currents generated by the operation of the latter to impinge against said aircraft structure at a point remote from said propeller.

1,781,372. LIGHT SUPPORT. GEORGE DENECKE, Milwaukee, Wis. Filed June 5, 1929. Serial No. 368,583. 1 Claim. (Cl. 240—81.)



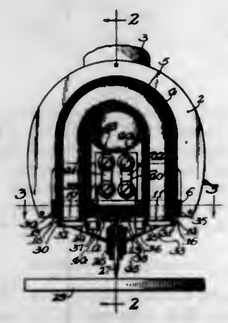
A light support including an upright standard having a diagonal cut away portion adjacent its upper end, spaced ears at the upper end of the standard, an arm having one end pivotally mounted between the ears and adapted to project laterally from the standard, a brace member having one end pivotally connected to the arm and the other end movable through the diagonal cutout portion and provided with a plurality of spaced openings, a removable pivot pin carried by the standard and adapted to be positioned in any one of said openings for maintaining the arm in various positions relative to the standard, spaced guide loops carried by the arm and a light suspended from the outer end of the arm and having a cord projecting therefrom adapted to be passed out through the guide loops and between the spaced ears on the standard for maintaining the cord in position above the light and to prevent the same from dropping down onto the work beneath the light.

1,781,373. CURD-WORKING MACHINE. JOHN J. DERFUS, Appleton, Wis. Filed Mar. 26, 1930. Serial No. 439,104. 12 Claims. (Cl. 31—48.)



11. A curd working machine comprising a portable frame for support upon the bottom of a cheese vat, means for manually guiding and propelling the frame along the bottom of the vat, a cutter or mixer carried by said frame and provided with radial fins, means for stripping said fins, an inclined plate for elevating and directing curd to said cutter or mixer, a pair of spaced arms pivotally mounted upon said frame, a driven toothed drum carried by said arms and positioned above said inclined plate, and means carried by said arms for cleaning the teeth of said drum.

1,781,374. HIGH-PRESSURE GREASE GUN. LEO DEUTSCH, Beaver, Pa., assignor, by mesne assignments, to The Wayne Pump Company, Baltimore, Md., a Corporation of Maryland. Filed July 18, 1927. Serial No. 206,574. 7 Claims. (Cl. 221—47.1.)



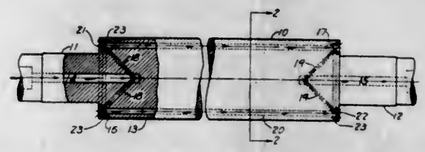
2. A dispensing unit for lubricant containers including a top adapted to be secured to said container, said top supporting cylinders extending into said container, a low pressure piston and a high pressure piston controlled by said low pressure piston, said pistons being operatively associated with said cylinders, means cooperating with said high pressure piston whereby lubricant may be forced out of said container, fluid operating means for said low pressure piston comprising a fluid connection, an operating valve movable by a movement of translation, means for operating said operating valve, said last named means including a pivotally mounted cam engaging said valve for controlling operation thereof, said cam having an elongated member for remotely operating said cam from any of a plurality of directions.

1,781,375. ROTARY AIR PUMP. LUCIAN F. EASTON, La Crosse, Wis. Filed Sept. 3, 1929. Serial No. 390,158. 10 Claims. (Cl. 230—75.)

1. In a rotary pump of the class described, the combination of a casing providing an inner rotor chamber and an outer chamber, means for affording a discharge of liquid from the rotor chamber into the outer chamber, means for affording a duct for liquid from the lower portion of the outer chamber to the rotor chamber, a rotor within the rotor chamber adapted to draw in air or gas to the rotor chamber and expel the same therefrom through the action of the liquid associated with the rotor in the normal operation of the device, and to maintain lower pressure conditions within the rotor chamber during normal operation than in the outer chamber, and means for admitting excess of air or gas to the system to substantially equalize pressure conditions within the rotor chamber and the outer chamber, with a resultant discharge of liquid from the rotor chamber into the outer chamber to lower the liquid level in the rotor chamber below that required for effective operation, the liquid duct affording a passage for the return of liquid from the outer chamber to the rotor chamber after admission of extraneous air or gas is cut off.

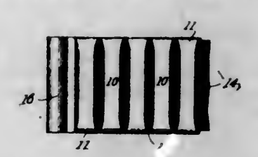
1,781,376. ELECTRODYNAMIC SOUND RECORDER AND REPRODUCER. BERT E. EISENHOUR, Aurora, Ill., assignor, by mesne assignments, to United Reproducers Corporation, St. Charles, Ill., a Corporation of New Jersey. Filed Sept. 24, 1928. Serial No. 307,949. 10 Claims. (Cl. 179—100.41.)

5. An electrical recorder and reproducer, comprising magnetic poles having air gaps, coils in said gaps, a support for the coils, and means for oscillatably supporting the support whereby the coils may move in said gaps, and a stylus associated with said support.



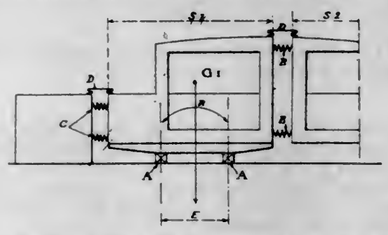
1,781,377. NECKTIE. WILLIAM EYERNSCHMALZ, Milwaukee, Wis. Filed May 3, 1929, Serial No. 360,182, and in Germany May 3, 1928. 4 Claims. (Cl. 2—153.)

1. A necktie comprising a body portion having a recess in its inner side, said recess having ribbed yielding side walls, and a collar button having a ribbed head which is adapted to enter said recess, said recess permitting vertical adjustment of the necktie on said collar button, and said ribbed yielding side walls of the recess being adapted to grip the collar button to securely hold the necktie in any adjusted position.



1,781,378. CALENDER ROLL. JOSEPH P. FEENEY, Kearny, N. J., assignor to Congoleum-Nairn, Inc., a Corporation of New York. Filed Apr. 23, 1928. Serial No. 272,019. 1 Claim. (Cl. 154—20.)

A linoleum calender roll formed of a single solid casting having a chill hardened surface, inlet and outlet openings concentric with the axis thereof, annular grooves formed at the respective ends of the roll, openings communicating between the inlet and outlet and each respectively adjacent annular groove, a plurality of small diameter passages

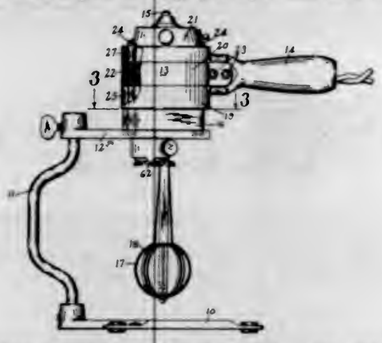


communicating between the annular grooves and positioned parallel to the axis of the roll and adjacent to the periphery thereof, and means for closing the open sides of the annular grooves to form annular chambers.

1,781,379. FLEXIBLE METALLIC STRAP. WILLIAM FORSTNER, Irvington, N. J., assignor to Forstner Chain Corporation, Irvington, N. J. Filed Dec. 20, 1928. Serial No. 327,305. 1 Claim. (Cl. 63—11.)

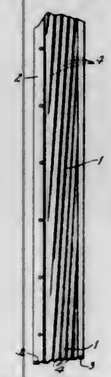
An ornamental metallic strap comprising a band of wire mesh in combination with a plurality of panel-forming substantially flat plates, the opposite ends of the plates being bent over and around both edges of the wire mesh band, while the intermediate portions of the plates are cut away so that successive pairs of adjacent cut-away portions form a row of windows through which the mesh of the band is visible, for producing a contrasting effect with the panel-forming plates.

1,781,380. VEHICLE BODY. ELLERY IRVING GARFIELD, Paris, France. Filed June 21, 1928, Serial No. 287,188, and in France July 19, 1927. 2 Claims. (Cl. 296—35.)



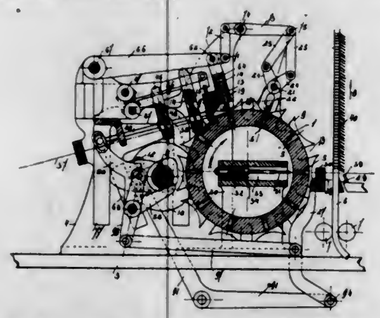
1. The combination with a vehicle chassis, of a vehicle body comprising a main body section and a dash or hood section, the main body section comprising a plurality of individual sections, said sections being individually mounted on the vehicle chassis and resilient connections between said sections to permit relative lateral and longitudinal displacement thereof.

1,781,381. MIXING APPARATUS. ALFRED C. GILBERT, North Haven, Conn., assignor to The A. C. Gilbert Company, New Haven, Conn., a Corporation of Maryland. Filed Feb. 20, 1929. Serial No. 341,411. 24 Claims. (Cl. 259—131.)



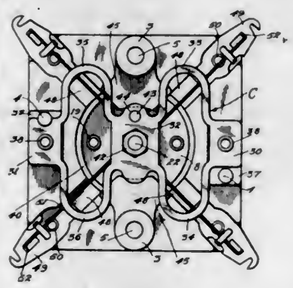
1. In apparatus for mixing and heating an electric motor having a casing and an armature shaft extending from said casing, gear housing secured to one end of said motor casing and having a bearing member in which said arma-

ture shaft is journaled, a beating element detachably secured to said gear housing, gearing within said housing



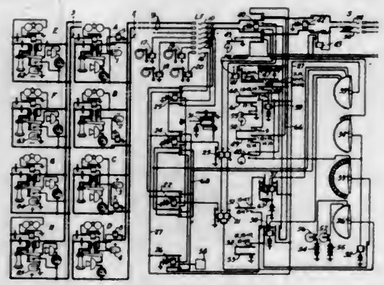
in engagement with said armature shaft, and means between said gearing and said beating element to drivingly connect the same.

1,781,382. WEATHER STRIP. JOHN A. GOELLNER, St. Louis, Mo., assignor to Monarch Metal Weatherstrip Corporation, St. Louis, Mo., a Corporation of Missouri. Filed July 31, 1929. Serial No. 382,326. 5 Claims. (Cl. 20—69.)



1. A metal weatherstrip comprising a body portion having oblique longitudinal corrugations therein.

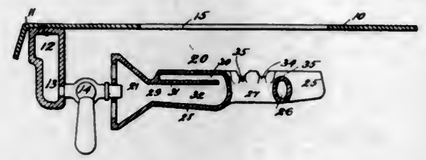
1,781,383. MACHINE FOR THE MANUFACTURE OF CARD CLOTHING. JEAN GOHY, Spa, Belgium, assignor to Despa & Fils (Société en Commandite Par Actions), Verviers, Belgium, a Company. Filed Sept. 7, 1929, Serial No. 390,898, and in Belgium Sept. 7, 1928. 12 Claims. (Cl. 140—98.)



1. In an insertion machine for manufacture of card clothing in combination, a rotary drum pierced along generatrices with rows of holes the number of which in each row corresponds to the number of pairs of teeth which should be arranged on the card clothing, a feeding device for the wires, a cutting device for the latter and means whereby all the teeth in one row in the width of the foundation are inserted simultaneously.

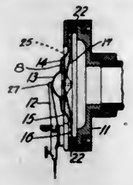
1,781,384. SOCKET. MARTIN B. GROUT, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 27, 1926. Serial No. 137,911. 11 Claims. (Cl. 173—328.)

1. A device of the character described comprising a base, means for holding an audion tube, a resilient member secured at its respective ends to said base, comprising double loop portions connecting said respective ends, means for securing the said holding means to said resilient member intermediate of the ends of said resilient means whereby said holding means is resiliently supported from said base.



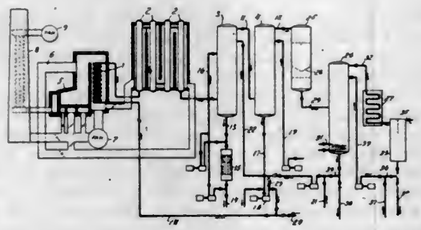
1,781,385. TELEPHONE-EXCHANGE SYSTEM. ALFRED E. HAGUE, West Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 30, 1929. Serial No. 351,203. 7 Claims. (Cl. 179—9.)

1. In a telephone system, a line having a plurality of subscribers' stations, one of which is a calling station, means at each of said stations for creating an unbalanced condition of the two sides of the line, and means including differentially-wound polarized relays for testing the line to determine the calling station.



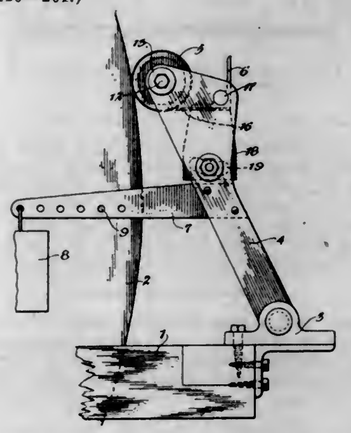
1,781,386. TOP BURNER FOR GAS STOVES. JOHN Z. HARNER and HARRISON S. SCHWEINHART, Boyertown, Pa., assignors to The Union Manufacturing Company, Boyertown, Pa., a Corporation of Pennsylvania. Filed Mar. 3, 1928. Serial No. 258,985. 4 Claims. (Cl. 158—116.)

1. An integrally formed top burner for gas stoves comprising a burner head having a central secondary-air opening and a surrounding annular mixing chamber provided with radiating burner arms, and a communicating mixer head having a neck connection to said annular chamber with a primary-mixing chamber portion thereof underlying one of said burner arms and partitioned therefrom,



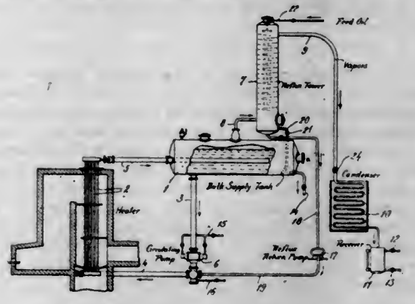
and a throat portion adjacent the end of said arm; each of said radiating arms having a burner-port wall above the level of the connecting portions of said annular chamber, and said lower-level connecting portions having burner ports directed convergingly above said central opening.

1,781,387. DIAPHRAGM. HENRY C. HARRISON, Port Washington, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed July 31, 1926. Serial No. 126,313. 17 Claims. (Cl. 181—32.)



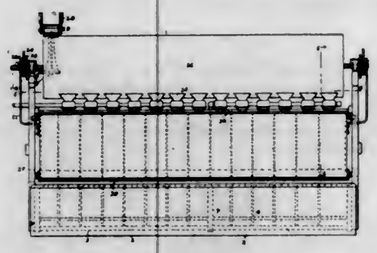
1. A diaphragm having a plurality of pyramidal elevations formed therein, and means for holding the apices of said elevations in fixed spaced relation with respect to each other.

1,781,388. ART OF REFINING HYDROCARBONS. EUGENE C. HERTHEL, Chicago, Ill., assignor to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed Feb. 29, 1928. Serial No. 257,958. 1 Claim. (Cl. 196—96.)



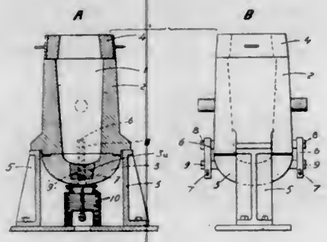
In refining cracked gasoline in vapor phase by passage of the gasoline vapors through an adsorptive catalyst where the polymers produced by the vapor-catalyst contact exceed 3% by liquid volume of the refined gasoline product after separation of such polymers, the improvement which comprises passing the raw cracked gasoline vapors in vapor phase through the adsorptive catalyst and thereby polymerizing unsaturated constituents unsuitable as components of the refined gasoline product without separation or discharge of such polymers from the operation, then passing the total resulting vapor mixture including such polymers directly to a rectifying zone condensing constituents including polymers higher boiling than suitable as components of the refined gasoline and vaporizing light components from the condensed polymer mixture in said rectifying zone, causing the vapors introduced to said rectifying zone to pass upwardly therethrough from the point of introduction in contact with the condensates formed therein, causing the condensed polymer mixture to pass downwardly through said zone from the point of introduction in contact with vaporized constituents liberated in said rectifying zone, and condensing the vapors escaping uncondensed from the rectifying zone to form the refined gasoline product.

1,781,389. FILTER DISCHARGER. CLARK C. HERITAGE, Buffalo, N. Y., assignor to National Aniline & Chemical Co., Inc., New York, N. Y., a Corporation of New York. Filed Nov. 30, 1925. Serial No. 72,160. 3 Claims. (Cl. 210—201.)



1. A method of removing a filter-cake of pasty material from a continuous drum filter which comprises contacting said cake with a moving body of said material, whereby the cake is removed by cohesion with the body of material.

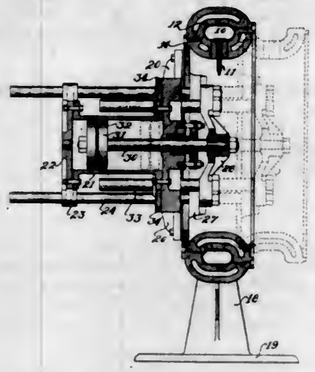
1,781,390. CRACKING OF OILS. EUGENE C. HERTHEL, Chicago, Ill., and EDWARD W. ISOM, Locust Valley, N. Y., assignors to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed Jan. 7, 1925. Serial No. 966. 4 Claims. (Cl. 196—59.)



1. The improved method of cracking hydrocarbon oils, which comprises maintaining a body of the oil in a bulk supply tank, withdrawing oil therefrom and mechanically forcing the oil so withdrawn through a heater located away from the bulk supply tank and back to the bulk supply tank, maintaining the oil at a cracking temperature throughout the cycle, passing the vapors escaping from the bulk supply tank through a reflux tower, and pumping the reflux from the reflux tower into the oil circulating from the bulk supply tank to the heater between the mechanical forcing means and the heater.

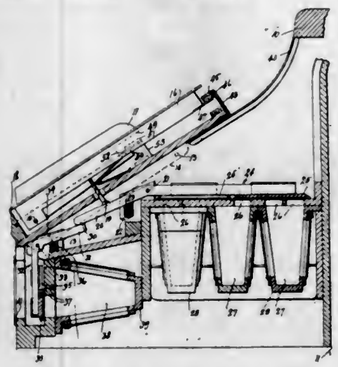
1,781,391. METHOD AND APPARATUS FOR TREATING FABRICS WITH LIQUIDS. FLORENT HINNEKENS, Paterson, N. J., assignor to Van Vlaanderen Machine Company, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 25, 1927. Serial No. 171,054. 6 Claims. (Cl. 8—19.)

1. In combination, a vat containing a liquid in which to immerse the fabric being treated, means to support and advance lengthwise of itself around a substantially horizontal axis a length of fabric having a portion thereof depending into the liquid in said vat, and means to shift back and forth in said liquid in said vat the depending portion of such length of fabric while being advanced.



1,781,392. MOLD FOR CASTING INGOTS OF STEEL OR OTHER METALS. AXEL GUSTAF EMANUEL HULTGREN, Soderfors, Sweden. Filed Feb. 11, 1929, Serial No. 339,119, and in Sweden Feb. 22, 1928. 5 Claims. (Cl. 22—139.)

1. A mold body having a downwardly tapered ingot casting cavity, a depressible bottom for said cavity adapted to allow sinking of the ingot after initial peripheral freezing has occurred, thereby maintaining contact between the mold and the ingot, releasable means for securing said bottom against the mold during said initial peripheral freezing of the ingot, and yieldable means for supporting said bottom after release of said releasable means, said yieldable means exerting an upward force greater than the downward force exerted by the weight of the bottom but materially less than the downward force exerted by the weight of the ingot.

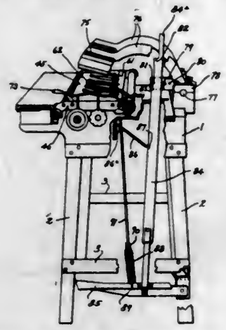


1,781,393. UPRIGHT INNER-TUBE MOLD. RALPH W. HUTCHENS and ARNOLD R. KRAUSE, Eau Claire, Wis., assignors to Gillette Rubber Co., Eau Claire, Wis., a Corporation of Wisconsin. Filed July 9, 1927. Serial No. 204,639. 15 Claims. (Cl. 18—38.)

1. A tube vulcanizer, comprising a two part casing formed as inner ring and an outer ring, having a tube cavity formed therebetween, a fluid cylinder secured to the outer ring, a piston in said cylinder with its piston rod secured to the inner ring, guide rods secured to said inner ring and slidably associated with said outer ring whereby said inner ring is adapted to be axially movable relative

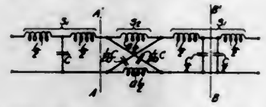
to said outer ring, locking pins having grooves therein, and means adapted to engage in said grooves when said casing parts are in closed position.

1,781,394. ACCORDION. CANDIDO IORIO and FRANK IORIO, Jamaica, N. Y. Filed Feb. 20, 1929. Serial No. 341,321. 8 Claims. (Cl. 84—376.)



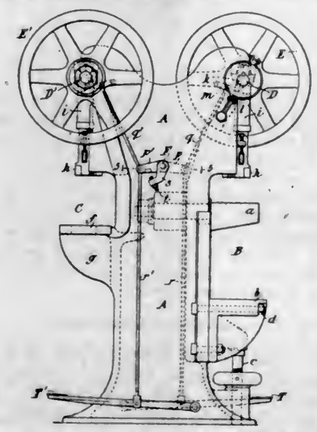
3. In an accordion, a sound chamber housing, a plurality of reed chamber units located therein and in communication with valve openings in one wall thereof, a set of pivotally mounted key levers, a cover on each of the keys to cover a predetermined number of valve openings, a reed chamber unit located at a different part of the housing in communication with openings in another wall disposed at an angle to the first mentioned wall of the housing, a second set of pivotally mounted key levers in operative engagement with the first mentioned key levers, a valve opening cover on each of the keys of the said second set, playing keys, and extensions on each of the keys in engagement with the first mentioned key levers to simultaneously operate a key lever in both sets when one of the keys is depressed.

1,781,395. PRINTING MACHINE. FRITZ JOHNSON, Racine, Wis., assignor, by mesne assignments, to Stephenson Underwear Mills, South Bend, Ind., a Corporation. Original application filed Aug. 10, 1927, Serial No. 212,026. Divided and this application filed Oct. 10, 1928. Serial No. 311,430. 8 Claims. (Cl. 101—336.)



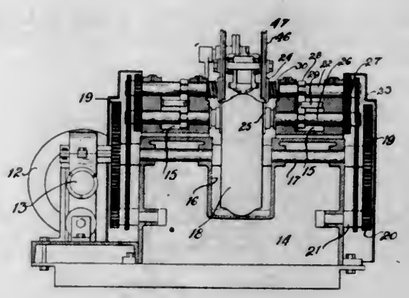
1. A printing machine having a printing bed, an inking ribbon overlying the printing bed, a frame for the inking ribbon, rolls upon which the ribbon is wound said rolls being rotatably mounted on the ribbon frame, tensioning

means associated with one roll, feeding means associated with the other roll and including a ratchet wheel connected with the axis of such roll and rotatable therewith,



a pawl cooperable with the ratchet wheel, and a shiftable guard mounted on the ribbon frame and connected with the pawl for actuating the same.

1,781,396. ELECTRICAL NETWORK. KENNETH S. JOHNSON, Jersey City, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Jan. 15, 1925. Serial No. 2,482. 5 Claims. (Cl. 178—44.)

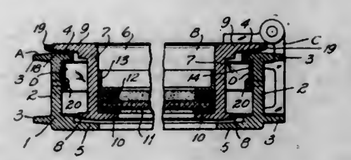


1. A wave retardation circuit comprising a plurality of four-terminal networks in sequence, one of said networks having a phase constant which increases less rapidly than the wave frequency, and the others of said networks consisting of similar ladder-type broad-band wave filter sections adapted to transmit freely wave frequencies below a critical value, the component elements of said filter sections being so proportioned that the resultant phase constant of the retardation circuit is substantially constant for a wide range of frequencies.

1,781,397. POWER PRESS. WILLIAM KLOCKE, Woodhaven, N. Y., assignor to E. W. Bliss Company, Brooklyn, N. Y., a Corporation of Delaware. Filed June 2, 1927. Serial No. 195,976. 2 Claims. (Cl. 78—13.)

1. A twin press having a single frame and the press members of two presses carried thereby, and means for preventing the simultaneous starting of both presses.

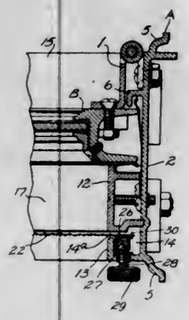
1,781,398. BICYCLE-TIRE TRIMMER. ARNOLD R. KRAUSE, Eau Claire, Wis., assignor to Gillette Rubber Company, a Corporation of Wisconsin. Filed Aug. 18, 1927. Serial No. 213,763. 10 Claims. (Cl. 164—69.)



1. A machine of the class described comprising a gap bed having opposed and aligned housings on each side of the gap, a driving shaft in said bed and spanning said gap, a core shaped to receive a tire carcas, and mounted on said shaft in position in said gap, a set of co-acting rotary trimming cutters mounted on the housing on each side of said core, and balanced pressure means equally urging the coacting trimming cutters toward each other and into cutting positions, said latter means being axially aligned with the associated cutters.

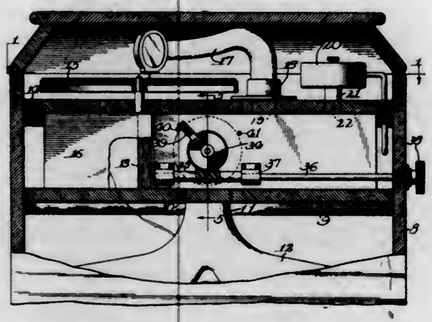
1,781,399. TRACTOR TRAILER. CHARLES H. LAND, Detroit, Mich. Filed June 21, 1929. Serial No. 372,699. 10 Claims. (Cl. 280—33.1.)

1. In combination with a tractor-trailer, a rotatable shaft journaled in the frame of the trailer and extending longitudinally thereof; a supporting element for the trailer, adapted to be moved into supporting or nonsupporting position by the rotation of said shaft; and a pin carried by the tractor adapted to cooperate directly with a helical groove in the shaft to effect its rotation through a backward or forward movement of the tractor.



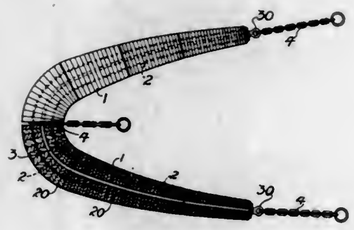
1,781,400. METAL WEATHER STRIP. ALFRED M. LANE, St. Louis, Mo. Filed Nov. 26, 1928. Serial No. 321,829. 5 Claims. (Cl. 189—65.)

1. The combination of a window frame and an outswinging sash therefor provided at its outside edge with a portion adapted to overlap the outside edge of the sash opening when the sash is closed of a metal weatherstrip mounted in said sash opening and extending around the outside corner of said sash opening and terminating in a resilient sealing flange disposed in front of the outside



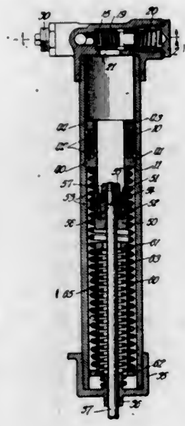
face of said window frame in a position to yieldably engage the overlapping outside portion of said sash in the closed position thereof.

1,781,401. SCREENED WINDOW. ALFRED M. LANE, St. Louis, Mo. Filed Mar. 8, 1929. Serial No. 345,523. 10 Claims. (Cl. 156—39.)



3. In a window frame comprising head and jamb members, said head member being adapted to support a roller screen adapted to be drawn across the opening in said frame, said jamb members being provided with longitudinal slots adapted to receive the side marginal portions of said screen and constitute guides therefor; clamping bars loosely mounted in said slots, and means mounted on the jamb members and co-operating with said clamping bars to shift the same laterally into engagement with said screen to clamp the margins thereof in the guides therefor.

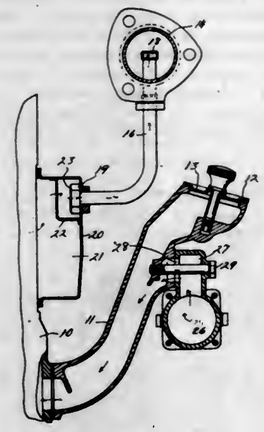
1,781,402. VALVE TONE THROAT. CARL H. LARSSON, Chicago, Ill. Filed Feb. 15, 1929. Serial No. 340,304. 5 Claims. (Cl. 274—2.)



4. In a device of the character set forth, the combination of a block having two passageways leading from separate inlets to a common outlet, said block having a cylindrical hole therethrough which intercepts said passageways, a cylindrical rotatable member mounted in said hole and extending through the block, said member having openings for establishing communication at times from the respective passageways to the outlet, sides secured to said block and covering the ends of said hole, trunnions for said rotatable member, bearings in said sides for said trunnions, a worm gear secured to one of said trunnions, a worm engaging with said gear, a rod on which said worm is mounted, bearings for said rod, a handle for turning the rod, an arm secured to said worm gear and stops adapted to be engaged by said arm to limit the movement of said rotatable member.

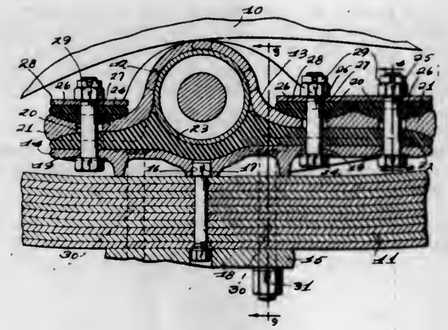
1,781,403. SHIP'S FENDER. CHARLES T. LYONS, Medina, Wash., assignor to Durable Mat Company, Seattle, Wash., a Corporation of Washington. Filed July 23, 1929. Serial No. 380,280. 4 Claims. (Cl. 114—219.)

1. A boat fender composed of disks cut from rubber tires, clamping rods passing through a series of disks to form a fender section and a holding member passing through a series of said sections to form a fender.



1,781,404. PUMP. ALEXANDER MCNAB, Bridgeport, Conn. Filed Sept. 3, 1929. Serial No. 390,187. 3 Claims. (Cl. 103—37.)

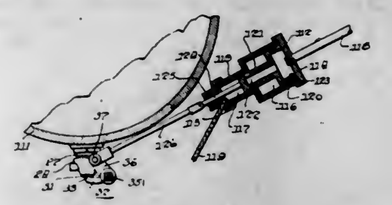
1. A pump comprising, in combination, a major cylinder; a major piston mounted for reciprocation in said cylinder; said major piston having a minor cylinder open at one end to the pumping surface thereof; a minor piston mounted for reciprocation within said minor cylinder; means for reciprocating said minor piston; resilient means urging said major piston to advanced position; and cooperative stop faces on said minor piston and major piston for limiting the advancement of said major piston and for effecting positive retraction thereof with the retraction of said minor piston.



1,781,405. CRANK-CASE VENTILATOR. EARLE S. MACPHERSON, Detroit, Mich., assignor to Hupp Motor Car Corporation, Detroit, Mich., a Corporation of Virginia. Filed Nov. 15, 1926. Serial No. 148,569. 6 Claims. (Cl. 123—119B.)

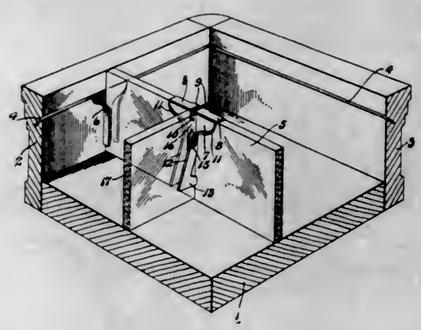
2. In combination, an exhaust manifold, a carburetor air supply conduit, a crank case provided with an oil filler spout, an ejector pipe extending into said exhaust manifold and connected to said crank case for inducing a

vacuum in the latter and means connecting said air supply conduit to said filler spout for supplying air to said crank case to dissipate said vacuum.



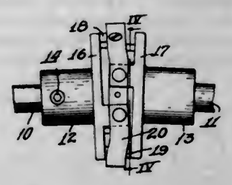
1,781,406. AXLE MOUNTING. EARLE S. MACPHERSON, Detroit, Mich., assignor to Hupp Motor Car Company, Detroit, Mich., a Corporation of Virginia. Filed July 30, 1928. Serial No. 296,283. 11 Claims. (Cl. 267—52.)

1. In combination, a vehicle frame, an axle, a member carried by the frame, a non-metallic member mounted upon the member aforesaid and having a portion intermediate the ends thereof constituting a seat for said axle, and means for securing the axle and non-metallic member to the first mentioned member, said means including a bracket having an intermediate portion secured to said axle and having end portions seated upon the end portions of said non-metallic member.



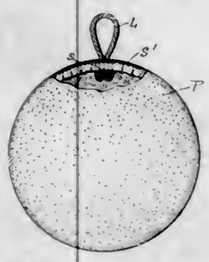
1,781,407. STEAM ENGINE. JOHN L. MOHUN, Omaha, Nebr. Filed Aug. 9, 1924. Serial No. 731,053. 13 Claims. (Cl. 121—134.)

12. In a steam engine, the combination with a main cylinder; of valve means movable in one direction to vent said cylinder and in an opposite direction to close said cylinder against venting; a steam controlled element connected with said valve means, said element having a surface of pre-determined area adapted to be acted upon by steam to urge the valve means in one direction, and having a surface of greater area adapted to be subjected to steam pressure to urge said valve means in the opposite



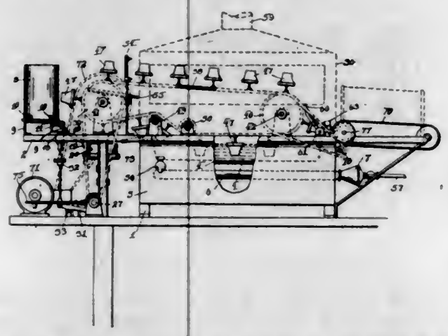
position; and independent means for controlling the admission of steam to said surfaces to regulate the position of said valve means.

1,781,408. COUNTER-PARTITION SUPPORT. EDMUND MORRIS and ANTHONY VANDERVELD, Grand Rapids, Mich., assignors to Grand Rapids Store Equipment Corporation, Grand Rapids, Mich., a Corporation of Michigan. Filed May 31, 1928. Serial No. 281,797. 6 Claims. (Cl. 312—140.)



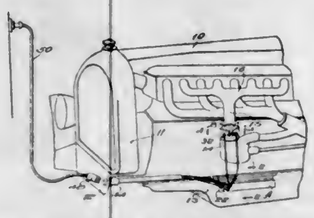
4. In combination, a vertical partition, a partition holder comprising, a vertical section adjacent said partition, hook members at an end of said section hooked over an edge of the partition, said hook members being separated by a slot, and spaced apart guide flanges projecting convergently from said vertical section.

1,781,409. COUPLING. CHARLES L. RAYFIELD, Chicago, Ill., assignor to Rayfield Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 3, 1928. Serial No. 274,695. 6 Claims. (Cl. 64—96.)



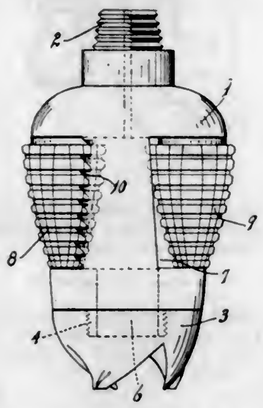
1. In a coupling, a pair of cooperable coupling members, and a plurality of separate links for connecting said coupling members, each link comprising a strip of resilient material having connected thereto a centrifugal weight effective at all times during the rotation of the coupling to counteract the effect of the centrifugal action of the weights on the other links.

1,781,410. POWDER PUFF AND METHOD OF MAKING SAME. LOUIS L. RAYNOR, New Rochelle, N. Y., assignor to The Hygienol Co. Inc., New York, N. Y., a Corporation of New York. Filed May 14, 1929. Serial No. 363,029. 2 Claims. (Cl. 132—78.5.)



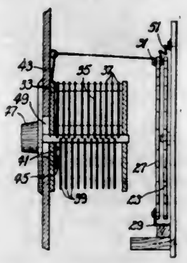
1. A powder puff having a loop connected thereto by means of retaining stitches, said loop having an enlarged inner end comprising additional layers of the loop material which are connected to the body of the loop by stitches, said enlarged inner end being inwardly located with respect to the retaining stitches.

1,781,411. AUTOMATIC PASTRY BAKING MACHINE. GEORGE REIBER, Rochester, N. Y. Filed Aug. 27, 1929. Serial No. 388,844. 15 Claims. (Cl. 53—7.)



1. An automatic pastry baking machine having a series of baking forms, a batter receptacle, means for suspending in said forms in the batter of said batter receptacle and cover said forms with the batter, means for immersing said baking forms with the batter in a hot oil bath to bake the batter onto said forms and means for stripping the baked pastry from said forms after emerging from the hot oil bath.

1,781,412. HEATING DEVICE FOR INTERNAL-COMBUSTION MOTORS. CHARLES S. SLICHTER, Madison, Wis., assignor to Motorheator Company, Madison, Wis., a Corporation of Wisconsin. Filed July 9, 1928. Serial No. 291,225. 33 Claims. (Cl. 219—38.)

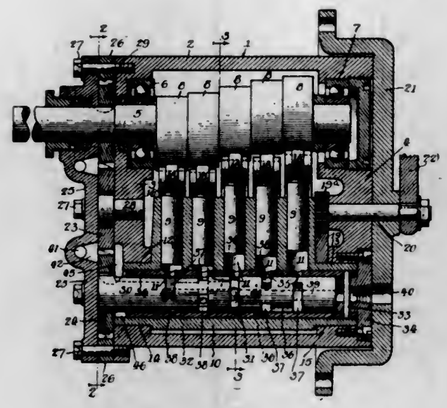


1. In an arrangement of the character described, the combination with an internal combustion motor; of a heating element associated with the fuel intake of said motor for warming the fuel prior to its inlet to the motor, and a second heating element mounted on the crank case of the motor adjacent the oil level therein for warming the oil in said motor prior to starting; and means electrically connecting said heaters for simultaneous operation, said means including a terminal member mounted in an accessible position and connected to both of said heating elements to form a common terminal therefor, and a common plug connected to a lighting circuit and adapted for detachable connection with said terminal member.

1,781,413. DRILLING BIT. GEORGE C. SLOCOMBE, Long Beach, and ALFRED J. CORMIER, Bellflower, Calif. Filed July 30, 1929. Serial No. 382,118. 4 Claims. (Cl. 255—71.)

1. A drilling bit comprising a body, a lead cutter depending from said body, said lead cutter being adapted to cut a core, said body having a transverse opening therein, reaming cutters journaled in the body, said reaming cutters being adapted to engage and break up the core.

1,781,414. RADIO RECEIVING APPARATUS. LLOYD Q. SLOCUMB, Ferguson, Mo. Filed Mar. 22, 1924. Serial No. 700,986. 2 Claims. (Cl. 250—40.)

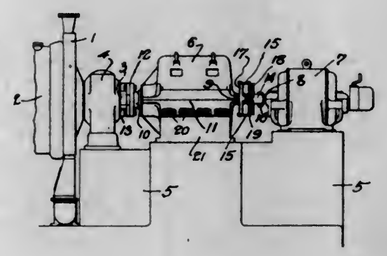


1. In a radio system, a dual tuning control comprising a rotary variable condenser, a stationary inductance, a hinged inductance in variable inductive relation with said stationary inductance, a vertical panel on which said condenser is mounted, vertical guides on said panel which permit the condenser to be integrally moved therein, a cord secured to the frame of said condenser and to the hinged inductance, a spring affixed between and to said inductances said spring pulling said inductances together as the condenser is moved upwardly and tending to counterbalance the weight of the condenser as said condenser is moved downwardly, the varying of the capacity of said condenser being controlled independently of its vertical movement.

1,781,415. PROCESS FOR THE TREATMENT OF WOOL. LEIGHTON B. SMITH, Newton, and CHARLES E. RUBY, Cambridge, Mass. Filed June 3, 1924. Serial No. 717,579. 15 Claims. (Cl. 8—2.)

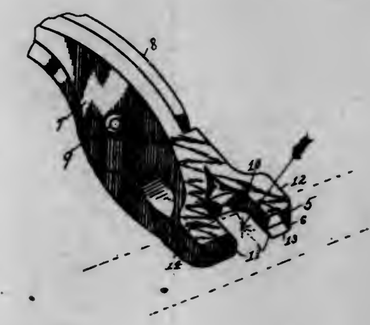
13. An alkaline solution for the treatment of wool comprising an alkali metal hypochlorite, and an electrolyte, said electrolyte being a salt of a weak acid and a strong base.

1,781,416. PUMP. GUSTAF DAVID SUNDSTRAND, Rockford, Ill., assignor to Sundstrand Machine Tool Co., Rockford, Ill., a Corporation of Illinois. Filed Mar. 22, 1928. Serial No. 263,656. 12 Claims. (Cl. 103—5.)



1. A pump comprising, in combination, a housing, a drive shaft rotatably mounted in said housing, a plurality of angularly displaced eccentrics on said shaft, a plurality of pivotally fulcrumed levers engaging said eccentrics, a cylinder block pivotally mounted on an axis parallel to said shaft, said cylinder block having inlet and outlet means, and a plurality of pistons mounted in said block arranged to be actuated by said arms to discharge liquid through said outlet means.

1,781,417. VALVE-GRINDING DEVICE. RUDOLPH TRAHAN, Rumstick Point, R. I. Filed Apr. 11, 1930. Serial No. 443,328. 4 Claims. (Cl. 51—29.)

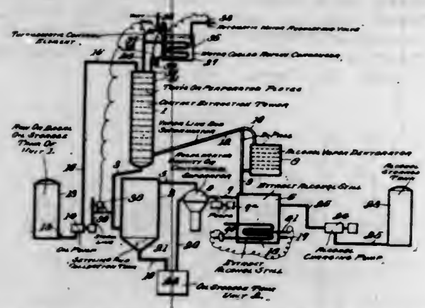


1. A valve stem guide and valve lifter for use in grinding valves comprising a body portion consisting of a plurality of separable sections through which the stem of the valve to be ground is guided, said body being insertable into the bore of the engine block, and a spring for engaging a portion of the body to hold the sections assembled and to lift the valve from its seat.

1,781,418. YIELDABLE CARRIER FOR MOTION-TRANSMITTING DEVICES. WILHELM ROBERT UGGLA, Morby, Stocksund, Sweden, assignor to Luth & Rösene Elektriska Aktiebolag, Stockholm, Sweden, a Corporation of Sweden. Filed Sept. 4, 1928, Serial No. 303,900, and in Sweden May 21, 1926. Renewed Mar. 27, 1930. 13 Claims. (Cl. 74—29.)

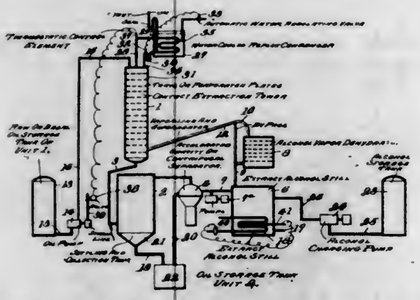
1. A prime mover, apparatus to be driven thereby, a power transmitting gear transmission for transmitting drive from said prime mover to said apparatus, means for resiliently supporting the entire transmission with respect to the driven apparatus, and a rigid coupling between the transmission and the driven apparatus.

1,781,419. PLIERS OR TONGS. RALLAND J. WALLACE, Oklahoma City, Okla. Filed Apr. 24, 1929. Serial No. 357,863. 1 Claim. (Cl. 113—99.)



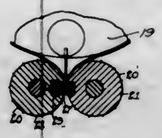
A tool comprising a pair of cooperating jaws, a lever integral with each jaw and a pivot for the levers, said jaws being bifurcated by substantially rectangular notches opening at the front end of the jaws and tapering from the gripping face of each jaw outwardly, one of said jaws being provided with a uniform groove across its entire width and parallel to the axis of the pivot and to the front end of the tool.

1,781,420. APPARATUS FOR FRACTIONALLY EXTRACTING PETROLEUM HYDROCARBONS WITH ALCOHOL. THEODORE A. WERKENTHIN, Lima, Ohio, assignor to The Solar Refining Company, Lima, Ohio, a Corporation of Ohio. Filed Dec. 30, 1927. Serial No. 243,645. 9 Claims. (Cl. 196—46.)



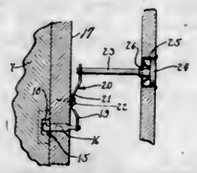
1. In apparatus for extracting hydrocarbons with alcohol, the combination of an oil storage tank, a contact-extraction tower, means for conveying oil from the former to the latter, means for introducing alcohol into the ex-

traction tower, means for removing extracted oil therefrom, an alcohol extract still in operative connection with



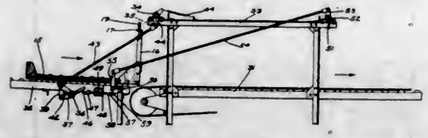
the extraction tower, an alcohol dehydrator and means for cutting the dehydrator in and out of operative connection with said alcohol extract still and tower.

1,781,421. PROCESS OF FRACTIONALLY EXTRACTING PETROLEUM HYDROCARBONS WITH ALCOHOL. THEODORE A. WERKENTHIN, Lima, Ohio, assignor to The Solar Refining Company, Lima, Ohio, a Corporation of Ohio. Filed Dec. 30, 1927. Serial No. 243,646. 6 Claims. (Cl. 196—13.)



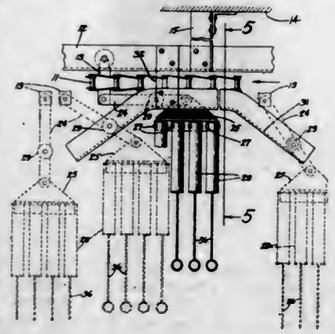
3. The process of treating heavy petroleum oils comprising passing the same into an extraction vessel, automatically controlling the quantity of oil admitted to said extraction-vessel, feeding substantially anhydrous alcohol in vaporous form to extract said oil, passing a portion of the vaporized alcohol into a condenser employing a cooling medium, automatically controlling the temperature of the cooling medium so that the alcohol vapors will be condensed only to a predetermined temperature and returning the condensed alcohol to the extraction-vessel.

1,781,422. PAPER-FOLDING DEVICE. HENRY A. WISE WOOD, New York, N. Y., assignor to Wood Newspaper Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Aug. 8, 1922, Serial No. 580,439. Renewed May 17, 1928. 9 Claims. (Cl. 101—420.)



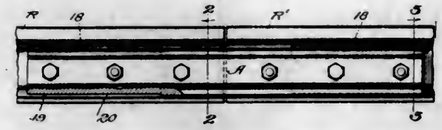
1. The combination of a pair of folding rolls for folding printed products located far enough apart to prevent contact by the rolls with the printed product, said rolls having projections spaced apart around their circumference for engaging the printed product at points on its margin and constantly and positively forwarding it between the rolls as they rotate without placing any part of the printed product in contact with the rolls and under pressure of said rolls.

1,781,423. TABLE CONSTRUCTION. JOSEPH E. WOOD, Chicago, Ill., assignor of one-half to John P. Mellis, Chicago, Ill. Filed Sept. 17, 1928. Serial No. 306,457. 3 Claims. (Cl. 45—75.)



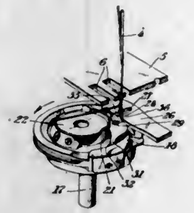
1. A table of the type described comprising a top having an opening therein, a receptacle secured to said top adjacent said opening, a cover for said receptacle disposed in said opening and pivotally secured to said receptacle, a latch for holding said cover in closed position, a rocking lever carried by said receptacle and operatively connected to said latch, and means for actuating said rocking lever for moving said latch out of engagement with said cover.

1,781,424. CONVEYING AND SPACING APPARATUS. MARTIN J. ANDERSON, Ellwood City, Pa., assignor to Mathews Conveyer Company, Ellwood City, Pa., a Corporation of Pennsylvania. Filed Apr. 9, 1927, Serial No. 182,509. Renewed Sept. 11, 1930. 12 Claims. (Cl. 186—20.)



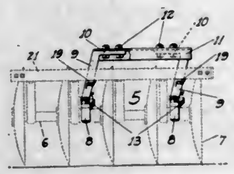
1. The combination with a conveying apparatus including a conveyer and a routing tray adapted to be sent over said conveyer to actuate certain mechanisms adapted to divert following articles from the conveyer onto a selected branch conveyer, of means adapted automatically to space the routing tray a predetermined distance from the first following article.

1,781,425. CONVEYING APPARATUS FOR DIPPING. MARTIN J. ANDERSON, Ellwood City, Pa., assignor to Mathews Conveyer Company, Ellwood City, Pa., a Corporation of Pennsylvania. Filed Apr. 9, 1927. Serial No. 182,510. 9 Claims. (Cl. 214—17.)



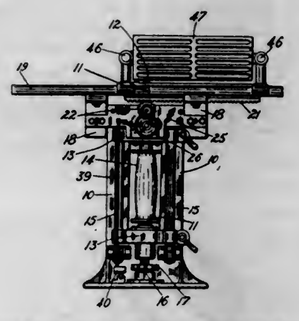
1. An apparatus of the class described, comprising a track, a carriage adapted to travel thereon, an arm pivotally connected with the carriage and normally depending therefrom, an article-holder connected with the lower end of said arm, opposed connected cam surfaces arranged beneath said track, and a roller on said arm intermediate its ends adapted to engage said cams to raise and lower said article-holder.

1,781,426. RAIL-JOINT BAR. VICTOR C. ARMSTRONG, Hackensack, N. J., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed Mar. 8, 1930. Serial No. 434,328. 2 Claims. (Cl. 238—243.)



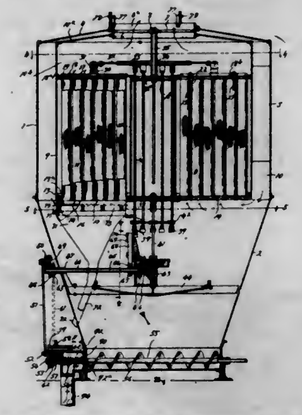
1. A rail joint including the rails, the joint bolts and a joint bar having head and foot portions formed for loading engagement throughout the medial portion of the joint only, respectively with the head fillets of the rails and with the base flanges of the rails, and means responsive to the bolting pressure for causing an automatic rotation of the bar to adapt the same to loading forces and to wear.

1,781,427. STITCH-FORMING MECHANISM FOR SEWING MACHINES. WILLIAM L. BARRON, Laurence Harbor, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Oct. 26, 1928. Serial No. 315,114. 3 claims. (Cl. 112—228.)



1. In a sewing machine, a reciprocating needle, a rotary hook having a loop-taking beak, a bobbin-case, a bobbin-case rotation-restraining element having a notch embracing the needle-path, said notch having an open mouth at one side of the needle-path and a closed-bottomed throat at the opposite side of the needle-path, at which opposite side the beak of the hook is arranged to pass in taking a needle-loop, and means on the bobbin-case entering the mouth of said notch to restrain the bobbin-case from rotatin.

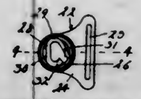
1,781,428. DISK-MOUNTING ATTACHMENT FOR HARROWS. GEORGE V. BECKMAN, Lodi, Calif. Filed Dec. 4, 1928. Serial No. 323,602. 1 Claim. (Cl. 55—83.)



In a trailing disk harrow which includes transversely spaced front disk gangs, and frame elements for said gangs; and transversely separated rear disk gangs each comprising a transverse axle, a plurality of spaced disks fixed on said axle; and bearing boxes for the axle disposed between spaced pairs of disks; a frame rigidly connecting the boxes and comprising rigid arms upstanding from the boxes and having horizontal extensions at their upper ends, and a rigid member extending transversely over the tops of the disks and engaging and rigidly connected to said arm extensions, there being draft connections from the arms of each gang to corresponding but opposed connections with the frame elements of the corresponding front gang.

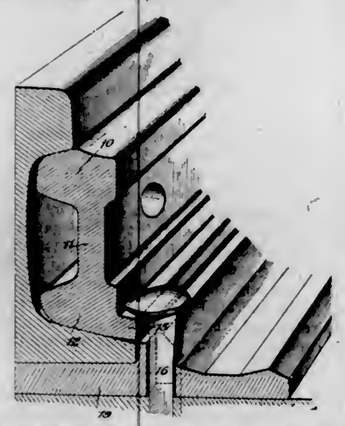
1,781,429. WOODWORKING MACHINERY. ANTONIO BENEDETTO, Annandale, near Sydney, New South Wales, Australia. Filed Oct. 30, 1929, Serial No. 403,540, and in Australia Nov. 12, 1928. 4 Claims. (Cl. 144—87.)

1. A dovetail cutting machine comprising a frame, a spindle mounted to rotate in bearings capable of vertical movement upon slide bars disposed on the said frame, a cutter carried by the spindle, a saddle or table adapted to slide longitudinally upon rails carried by the said frame, said saddle being provided with a rack engaged by a pinion which meshes with a second pinion mounted upon a shaft, said shaft being journaled in a face plate on the machine frame and having disposed thereon ratchet mechanism adapted to be operated by a pedal to advance the saddle upon its rails, and a box like chuck disposed above the saddle and capable of being moved transversely thereto.



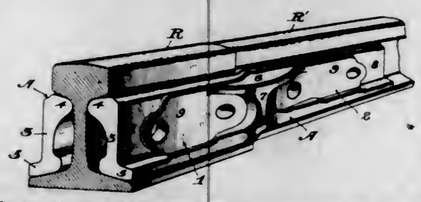
1,781,430. AIR CLEANER. WILLIAM T. BLANEY, Peterborough, Ontario, Canada. Filed June 19, 1926. Serial No. 117,087. 17 Claims. (Cl. 183—54.)

1. An air cleaner comprising a plurality of air filtering units, a rotative support for said units, means for delivering dust-laden air to said units, a plurality of ham-



mers pivoted upon said support, and adapted to respectively act upon said units, means for effecting an intermittent step-by-step rotation of said support, and a common actuating means for said hammers adapted to successively act upon said hammers through their rotation with said support.

1,781,431. GARTER GRIP. SAMSON BORGNIS, Olney, Pa. Filed May. 21, 1930. Serial No. 454,217. 3 Claims. (24—208.)

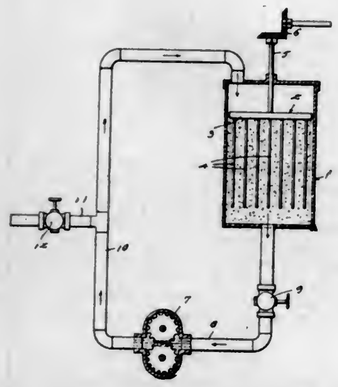


2. A garter grip comprising a stud member and a socket member, the latter including a plate, a housing thereon, said housing and plate having aligned apertures therein and a spring clamp mounted within said housing and including a bow, diverging legs projecting from said how and an arcuate portion formed with the end of one of said legs.

1,781,432. STRESS-BALANCED SPLICE BAR. BANCROFT G. BRAINE, New York, N. Y., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed Apr. 11, 1930. Serial No. 443,538. 11 Claims. (Cl. 238—188.)

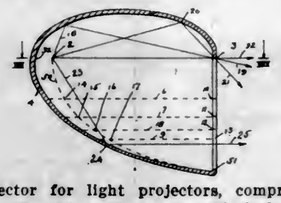
1. A rail splice bar comprising a substantially geometrically symmetrical major portion inclusive of a foot flange, and a rib forming an outward extension of said foot flange and of materially less depth than the portion of the latter included within the substantially geometrically symmetrical portion of the bar.

1,781,433. RAIL-JOINT BAR. DANIEL L. BRAINE, Brooklyn, N. Y., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed Jan. 7, 1930. Serial No. 419,076. 2 Claims. (Cl. 238—167.)



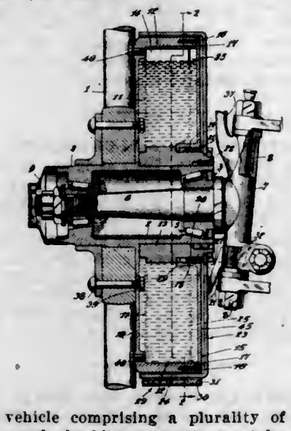
1. A rail joint bar of progressively decreasing thickness from the medial portion thereof towards its ends, said bar being inclusive of a head and a foot flange, the former being shaped for loading engagement with the head fillets of the rails and for clearance from the under aces of the heads of the rails, and the latter being formed to terminate inwardly of the edges of the rail flanges.

1,781,434. INLET MANIFOLD. HENRY LOWE BROWNBACK, Norristown, Pa. Filed July 17, 1928. Serial No. 293,454. 12 Claims. (Cl. 123—52.)



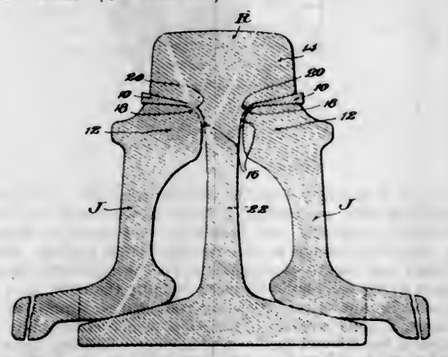
1. In a multiple cylinder internal combustion engine, an intake manifold having a plurality of fuel ducts extending from the carbureter to the inlet of each cylinder whereby each cylinder is supplied with a like volume of fuel vapors at any engine speed.

1,781,435. PROCESS FOR THE PRODUCTION OF PAINTS. JOSEPH B. CARPER, Louisville, Ky. Filed July 6, 1928. Serial No. 290,752. 1 Claim. (Cl. 134—1.)



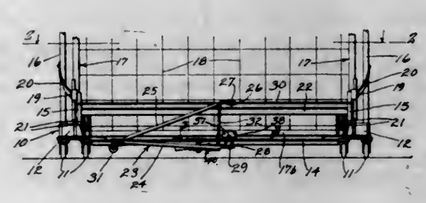
In an apparatus for the preparation of a liquid coating composition containing solid particles, a receptacle, an agitator within the receptacle, having means extending to the exterior of the receptacle for transmitting motion thereto from a source of power exteriorly of the receptacle, a rotary gear pump, a pipe line connecting the lower portion of said receptacle with the intake side of said pump, a pipe line connecting the outlet side of the pump with the upper part of the receptacle, and draw-off means leading from said last mentioned pipe line, said gear pump being designed to grind up said solid particles in addition to maintaining a circulation of the liquid.

1,781,436. COMPOUND REFLECTOR. MARTHA W. CAUGHLAN, Oakland, Calif., assignor to American Woodlite Corporation, San Francisco, Calif., a Corporation of California. Filed Jan. 19, 1925. Serial No. 3,335. 13 Claims. (Cl. 240—41.)



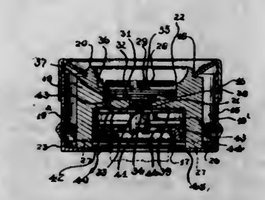
8. A reflector for light projectors, comprising walls which in horizontal sections are elliptical and whose proximate focal ponts lie along an arc of a parabola.

1,781,437. METHOD OF BRAKING AND APPARATUS THEREFOR. CHARLES F. CHISHOLM, Staten Island, N. Y., assignor of one-half to George Ramsey, Brooklyn, N. Y. Filed June 22, 1928. Serial No. 287,374. 18 Claims. (Cl. 188—10.)



18. A vehicle comprising a plurality of road wheels, means to apply braking moments to at least two of the wheels, and means to automatically reduce the value of the braking moment on at least one wheel as the speed of rotation of such wheel diminishes.

1,781,438. TEMPORARY RAIL-JOINT SHIM. GEORGE M. CLODFELTER, Yonkers, N. Y., assignor to The Rail Joint Company, New York, N. Y., a Corporation of New York. Filed Sept. 17, 1929. Serial No. 393,179. 2 Claims. (Cl. 238—244.)

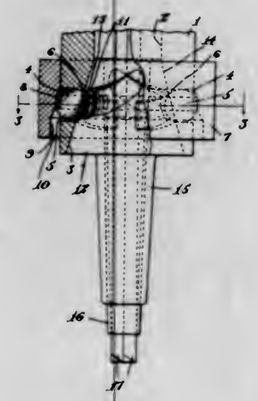


1. Means for temporarily supporting the head of a head-free rail during reconditioning of the rail head comprising a shim shaped to fit and to substantially fill the space between the underside of the rail head and the top of a related joint bar, and a tongue formation on said shim curved to fit between the head fillet of the rail and the upper inner corner of the joint bar to retain said shim in an operative position, the lower edge of said tongue terminating above the line of the joint bolts whereby the shim is insertible into and removable from the space between the rail head and the joint bar without removing the joint bolts.

1,781,439. PORTABLE FOLDING BED. EDGAR COCKS, Los Angeles, Calif., assignor to Los Angeles Wall Bed Company, Los Angeles, Calif., a Corporation of California. Filed May 22, 1926. Serial No. 110,841. 3 Claims. (Cl. 5—168.)

1. A folding bed, comprising a base, a bed frame pivotally mounted on the base to swing vertically thereon and overhang the base when in horizontal position, an auxiliary leg pivotally mounted on the base and arranged to swing horizontally thereon from folded position longitudinally of the base to extended position transversely of the base and beneath the overhanging portion of the bed frame, means to yieldingly hold the leg in folded position and catch means to hold it in extended position against the action of the yielding means, said catch means comprising a latch plate on the base, a latch bar pivotally mounted adjacent one end on the leg, the opposite end of said bar arranged to engage the plate and the bar being serrated along one edge to engage the plate and relessably hold the leg against the action of the yielding means.

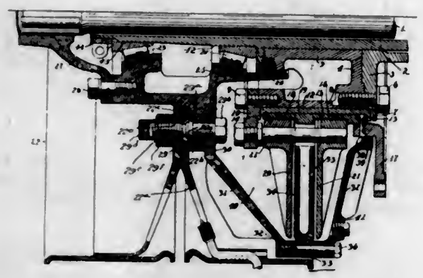
1,781,440. ELECTRICAL LIGHTING DEVICE FOR CIGARS AND THE LIKE. WILLIAM B. CONNOLLY, Rochester, N. Y., assignor to F. A. Smith Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Feb. 17, 1928. Serial No. 255,134. 10 Claims. (Cl. 219—32.)



5. In an electrical lighting device for cigars and the like, the combination with two members, one of which is in the form of a projection and the other of which has a pocket in which the projecting member is adapted to be received, of a spring clip carried by the pocketed member and formed from a single piece of stock bent between its ends to provide two opposed curved portions for engagement with opposite sides of the projection, and two pairs of arms extending outwardly from said curved portions, the members of one of said pair being connected and the members of the other pair being free of each other.

1,781,441. ELECTRIC SWITCH. JOEL R. COOK, Cleveland, Ohio, assignor to Domestic Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 18, 1922. Serial No. 588,755. 33 Claims. (Cl. 200—116.)

1. A switch comprising separable contacts, means for closing the contacts, latching mechanism for holding the contacts closed, a bimetallic thermostatic bar for releasing said latch, a manually operable member for actuating the closing means, and a separate switch actuated by said manually operable member, the manually operable member being adapted to open and close the last named switch independently of any actuation of said separable contacts.

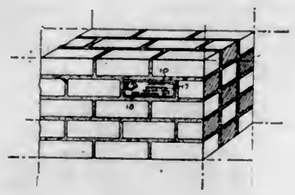


1,781,442. CHUCK. ARTHUR L. CURRIER, New Ipswich, N. H. Filed Oct. 16, 1926. Serial No. 141,952. 2 Claims. (Cl. 279—75.)

1. A chuck, comprising a rotatable spindle having a tapered opening therein, a tapered tool holding spool having spiral grooves of varying depth therein and adapted to enter said spindle, spool holding, locking and driving members in said spindle, the upper and lower walls of said grooves engaging said members when said spool is inserted in the tapered opening of said spindle and forcibly seating said spool in said spindle.

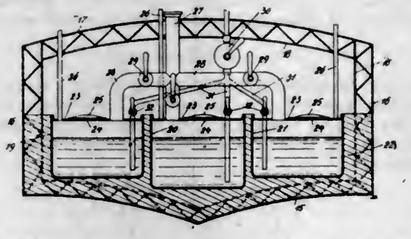
1,781,443. BRAKING MECHANISM FOR MOTOR VEHICLES. HENRY E. CURTIS, San Jose, Calif. Filed Apr. 8, 1927. Serial No. 182,119½. 2 Claims. (Cl. 188—72.)

1. The combination with a driving shaft of a motor vehicle, a wheel mounted thereon, and a housing therefor, of a drum fixedly and concentrically mounted on the housing, a sleeve mounted on the drum and provided with oppositely directed threads and means for rotating the sleeve a distance on the drum, a pair of opposed and spaced discs engaging the threaded portions of the sleeve and actuated thereby, means for preventing rotation of the discs, a double faced disc supported by the wheel between said



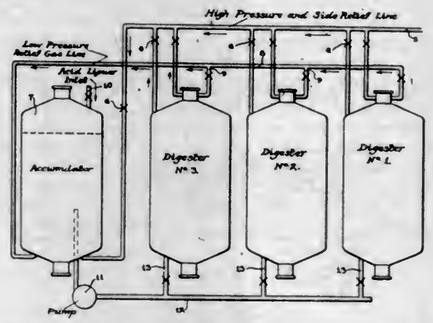
opposed discs and engageable therewith, a housing portion mounted on the wheel to cooperate with the axle housing to form a closed chamber encompassing the discs, and means inserted between the two housing portions for preventing leakage of lubricant therefrom.

1,781,444. MANUFACTURE OF LUBRICANTS. FELTON S. DENGLER, Port Neches, Tex., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 15, 1926. Serial No. 141,882. 3 Claims. (Cl. 196—142.)



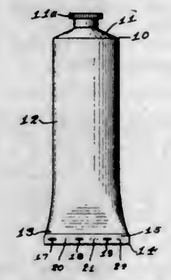
1. The process of manufacturing lubricants which comprises reducing a paraffin base crude petroleum by distillation without substantial decomposition until the residuum has a flash test within the range of 375° to 475° F., then intimately contacting the residual oil with a current of air at temperatures between 400° to 515° F.

1,781,445. METALLIC INSERT FOR BRICK OR TILE STRUCTURES. GEORGE W. DENISON, Cleveland, Ohio, assignor to Common Brick Manufacturers' Association of America, Cleveland, Ohio, a Corporation of Illinois. Filed Jan. 31, 1929. Serial No. 336,476. 2 Claims. (Cl. 40—125.)



1. In a masonry building wall construction, a metallic building unit, comprising a front member and two end members integrally cast therewith, said members having a continuous flange at the top and botom thereof; their height and length corresponding to the standard dimensions of the wall building units forming the outer part of the wall, and so placed in the wall and so formed as to have an outer exposed inscription face corresponding in area to the exposed face area of the outer building units in the wall, whereby the wall construction may carry a built in label portraying the character of the inaccessible unexposed portions of the wall structure.

1,781,446. ACCOMMODATION OF LIQUIDS IN FLYING MACHINES. CLAUDIUS DORNIER, Friedrichshafen-on-the-Bodensee, Germany, assignor to the Firm: Dornier-Metallbauten G. m. b. H., Friedrichshafen-on-the-Bodensee, Germany. Filed June 16, 1928, Serial No. 285,976, and in Germany June 21, 1927. 2 Claims. (Cl. 244—2.)

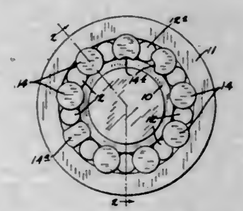


2. Flying machine comprising a flotable body, elastic material covering the bottom and side walls and filling about the lower half of the inner space of said body, a fuel tank seated in and having its bottom and side walls surrounded by said material and means for feeding fuel into and withdrawing fuel from said tank.

1,781,447. DIGESTION OF FIBROUS MATERIAL. THOMAS LEONIDAS DUNBAR, Watertown, N. Y. Filed Aug. 1, 1929. Serial No. 382,802. 9 Claims. (Cl. 92—7.)

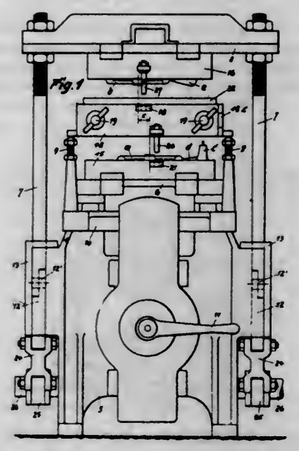
1. In the digestion of fibrous material, flowing side relief liquor from a digester undergoing cooking, directly into a digester undergoing filling, and utilizing said side relief liquor for packing chips evenly in a digester.

1,781,448. CLIP FOR COLLAPSIBLE TUBES. GEORGE WALTER DUNNICAN, Bloomfield, N. J., assignor to Weimann Bros. Manufacturing Company, Derby, Conn., a Corporation of Connecticut. Filed Aug. 24, 1929. Serial No. 388,222. 5 Claims. (Cl. 221—60.)



1. In a clip for clamping about the sides of the flat end of a collapsible tube, a strip of metal bent into U-shape forming a pair of jaws to embrace said flat end, said jaws having a plurality of alternating, elongated, staggered indentations extending longitudinally of the clip for engaging the metal of said tube and preventing lateral and longitudinal movement of said clip.

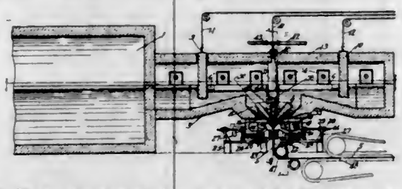
1,781,449. METHOD FOR MANUFACTURING HIGH-GRADE ALPHA CELLULOSE. LAURI I. L. DURCHMAN, Petersburg, Va. Filed May 8, 1929. Serial No. 361,545. 5 Claims. (Cl. 92—11.)



1. The process of treating chemical wood pulp to convert incrusting substances into water-soluble compounds comprising treating the pulp for a period of four to six hours at 20 to 60 pounds pressure with a solution containing 2% to 5% NaOH and 1% to 3% Na_2SO_3.

1,781,450. ROLLER BEARING. CHARLES M. EBERLING, Cleveland, Ohio. Filed Mar. 21, 1928. Serial No. 263,283. 3 Claims. (Cl. 308—206.)

1. In a roller bearing, the combination with two coaxial members having spaced cylindrical surfaces on their interior and exterior, respectively, of a plurality of plain cylindrical rollers interposed between said surfaces and a plurality of headed rollers between adjacent rollers, said headed rollers being formed integral at each end with integral heads overlapping the adjacent portions of said members and rollers and at least two of said spacers having some part of their heads now circular.

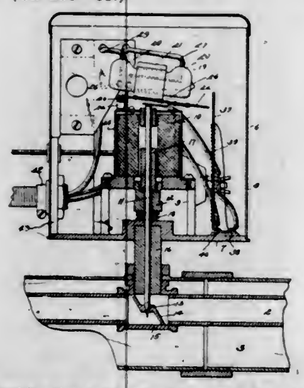


1,781,451. MEANS FOR MAKING DOUBLE-SIDED MOLDS. GUSTAV ECKSTEIN, Barmen, Germany. Filed Apr. 25, 1929, Serial No. 357,996, and in Germany Apr. 27, 1928. 3 Claims. (Cl. 22—25.)

1. A molding machine comprising two pattern plates, each having a pattern staggered with respect to the pattern in the other plate, a flask frame adapted to be inserted between said plates and to support a flask, means

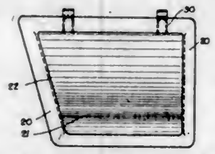
for moving said pattern plates and said flask frame so as to impress said pattern in opposite sides of the sand in said flask, and means for aligning said plates and said flask frame with respect to each other, these means being staggered in conformity with the position of said patterns in their respective plates.

1,781,452. METHOD AND APPARATUS FOR DRAWING SHEET GLASS. ENOCH T. FERNGREN, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 20, 1922. Serial No. 545,207. 20 Claims. (Cl. 49—17.)



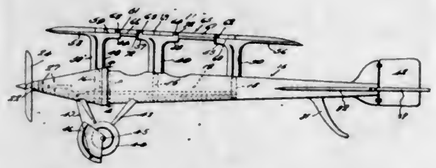
12. In an apparatus for drawing sheet glass, a source of molten glass, a receptacle for a pool of molten glass and in open communication with the source, a pair of movable bottom members for the receptacle providing a slot of variable width therebetween, a pair of refractory partition members within the pool of molten glass, the members projecting into the slot at their lower ends so as to define three separate parallel slots in the bottom of the receptacle, one between the partitions and one between each partition and the adjacent bottom member, a cooler within the molten glass between the partition members, means for applying heat to the glass passing through the two outer slots, and means for drawing away a sheet of glass from below the slots.

13. In a sheet glass forming apparatus, a cooler comprising a hollow body portion, and a series of fluid conduits or pipes within the hollow body, the pipes terminating at different points within the cooler so that the cooling fluid may be applied selectively throughout the length of the cooler.



14. In an apparatus for drawing sheet glass from a receptacle containing molten glass, a pair of heating chambers arranged at either side of the sheet near its source, each chamber comprising a transverse series of independently adjustable vanes or plates for shutting off to any desired degree the opening between the heating chamber and the sheet.

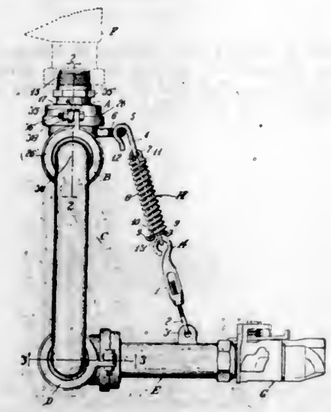
1,781,453. AUTOMATIC CONTROLLING MECHANISM. AUGUSTUS J. FRAME, Columbus, Ohio, assignor to Franklin Oil Heating, Inc., Columbus, Ohio, a Corporation of Ohio. Filed Mar. 14, 1927. Serial No. 175,293. 25 Claims. (Cl. 236—68.)



1. The combination with an oil burner, oil and air supply pipe lines entering said burner, a fan in said air line, a motor for said fan, a valve in said oil supply line, means for normally maintaining said valve in a closed position, of a controller embodying a solenoid, a thermostatic switch, means operable upon the closing of said switch to energize said solenoid and open said valve, a mercury switch operable upon the opening of said valve to energize said fan motor, and means for retaining said mercury switch for an appreciable time interval in a position of circuit closure following the de-energizing of said solenoid.

1,781,454. RAILWAY-CAR HOPPER DOOR. GARTH G. GILPIN, Riverside, Ill., assignor to Union Metal Products Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 5, 1929. Serial No. 397,590. 8 Claims. (Cl. 105—280.)

1. A hingeable door forming part of the load retaining means of a railway dump car, said door comprising marginal portions in substantially a single plane, a depressed portion formed by a straight line moving parallel to itself, said depressed portion being of varying depth from the plane of the marginal portions, and straight walls connecting the ends of said depressed portion to said marginal portions.

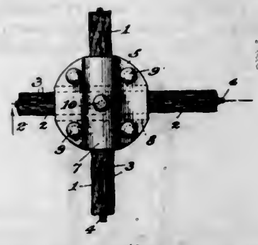


1,781,455. AEROPLANE. IGNATZ GLANSCHNIG, Gary, Ind., assignor of twenty-five per cent to John D. Meyers, Hobart, Ind. Filed Dec. 5, 1929. Serial No. 411,839. 6 Claims. (Cl. 244—14.)

1. An aeroplane comprising a substructure including a fuselage, a plurality of aligned vertically disposed longitudinally spaced rings, a shell supported on the outer periphery of the rings to form the body of the fuselage, longitudinal brace bars extending between the rings and secured to the inner peripheries of said rings, said brace bars projecting forwardly of the forward ring and converging at the nose of the fuselage to form a support for the engine, and a support for a roller bearing for the drive shaft, a superstructure including a plurality of upright supports secured at their lower ends to the rings and projecting above the fuselage along the center line thereof, a longitudinal bar support secured to the upper ends of the upright supports, and pairs of transversely curved wing supporting ribs secured at their inner ends to the aforementioned superstructure.

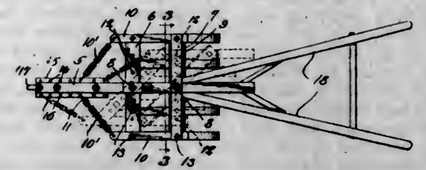
1,781,456. FLEXIBLE PIPE STRUCTURE. EGBERT H. GOLD, Evanston, and EDWARD A. RUSSELL, Chicago, Ill.; said Russell assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York; Margaret Jayne Gold and Biscayne Trust Company executors of said Egbert H. Gold, deceased. Filed Sept. 2, 1927. Serial No. 217,050. 5 Claims. (Cl. 285—9.)

1. In a flexible pipe structure, a pair of conduit members, the inner end of one being telescoped within the other whereby the members are relatively rotatable about the axis of the telescoped parts, means for sealing the joint between the members, and means for holding the members against separation without interfering with their relative rotation comprising an annular shoulder on one of the members, a pair of oppositely projecting arcuate



lugs on the other member, and a collar having a flange adapted to engage behind the annular shoulder, and a pair of inwardly projecting annular lugs adapted to engage behind the first-mentioned lugs by a partial rotation of the collar.

1,781,457. FLEXIBLE PIPE STRUCTURE. EGBERT H. GOLD, Evanston, and EDWARD A. RUSSELL, Chicago, Ill.; said Russell assignor to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York; Margaret Jayne Gold and Biscayne Trust Company executors of said Egbert H. Gold, deceased. Filed Oct. 29, 1927. Serial No. 229,755. 9 Claims. (Cl. 285—9.)



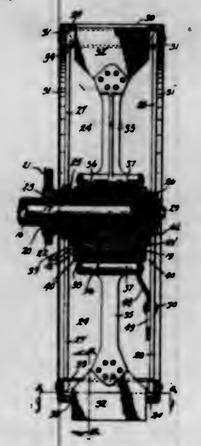
1. In a flexible conduit structure, a pair of conduit sections, one of which is formed with an elbow portion adjacent one end of the section, there being an annular bearing in this end of the section in which the end portion of the other section is rotatably engaged, there being an extension projecting inwardly from one side portion of the rotatable section adjacent one inner wall of the elbow, and a bearing formed in the wall of the elbow opposite the open end of the section for the end portion of this extension.

1,781,458. MEANS FOR SECURING TOGETHER TWO INTERSECTING STRANDS. THOMAS GORE, Brooklyn, N. Y. Filed Mar. 8, 1930. Serial No. 434,302. 1 Claim. (Cl. 24—123.)

The combination with two intersecting strands, of means to secure them together including: two members arranged in face to face contact, each member having a recess for the reception of a strand, the recesses of the two members extending at an angle to each other so that each strand is engaged by the wall of the recess of one member and by the face of the other member, means to secure the two members together independently of the strands, and means to secure the members and strands together at the point of intersection of the two strands.

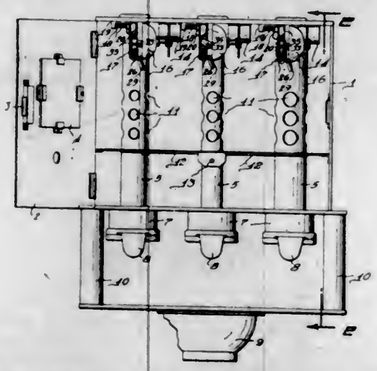
1,781,459. HARROW. HENRY HEITMUELLER, Cullman, Ala. Filed Jan. 6, 1928. Serial No. 244,920. 1 Claim. (Cl. 55—29.)

A harrow including a beam, lateral harrow sections, each section embodying spaced front and rear bars having spaced openings formed therein and having their inner ends pivotally connected with the beam, end bars connecting the front and rear bars, the forward ends of the end bars extending appreciable distances beyond the front bars, a plate secured to the beam and having openings formed therein, chains connecting the forwardly extending ends of the end bars and plate to secure the harrow sections in various positions of adjustment, spring harrow teeth and bolts extending through the openings of the front and rear bars for adjustably securing the harrow teeth to the front and rear bars.



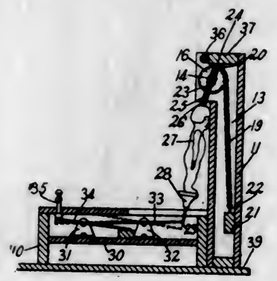
1,781,460. DUSTING MOP. HARRY HERTZBERG, Brooklyn, N. Y. Filed Feb. 6, 1929. Serial No. 337,867. 6 Claims. (Cl. 15—229.)

1. In a mop, a pair of arms joined at one end and extending at first away from and then towards each other forming a normally closed loop, the opposite free end portions of said arms overlapping longitudinally of and pressing resiliently against each other, providing means for



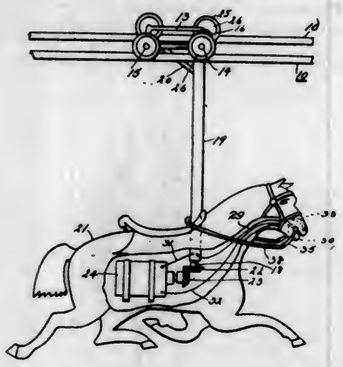
placing mop fabric between the adjacent sides of said arms by their temporary lateral separation and for clamping said fabric therebetween.

1,781,461. ADJUSTABLE DISAPPEARING-LUG TRACTION WHEEL. VICTOR C. HUENEMANN, Garner, Iowa. Filed May 20, 1929. Serial No. 364,465. 2 Claims. (Cl. 301—48.)



1. A device of the character described comprising an axle, a wheel mounted for rotation relative thereto, an eccentric sleeve on said axle, a second eccentric sleeve mounted on the first eccentric sleeve, a rim member mounted on the second eccentric sleeve, means for causing said rim member to rotate with the wheel and at the same time permitting radial movement relative thereto, traction lugs spaced circumferentially of the rim of the wheel and connected with said rim member, means for locking the eccentric sleeves together with their thick parts on the same side of the axle, whereby the rim member is held eccentrically relative to the axle and the lugs are caused to be progressively projected and withdrawn as the wheel revolves, and means for locking the eccentric sleeves together with their thick parts on opposite sides of the axle whereby the rim member is held concentrically of the axle and the sliding operation of the lugs is suspended.

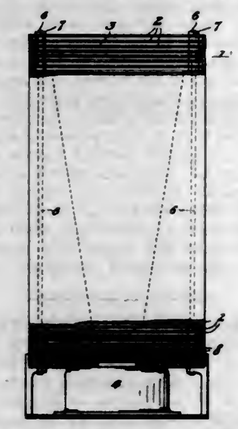
1,781,462. FARE REGISTER. DANIEL N. HYMAN, Detroit, Mich., assignor to Hyman Register Corporation, Buffalo, N. Y., a Corporation of New York. Filed Oct. 10, 1929. Serial No. 398,600. 9 Claims. (Cl. 235—32.)



1. The combination with means having a slot for receiving coins and a register for registering the coins received, of a member pivotally supported adjacent said slot to be swung by the insertion of a coin through the slot, and means carried by said member for engaging and operating said register, said means being movable by the insertion of the coin laterally of the plane of swinging movement of said member, into position to operate said register.

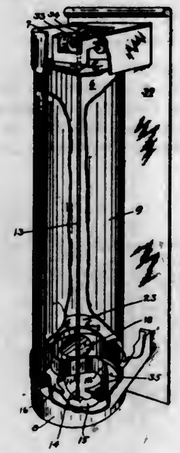
1,781,463. GAME OR TOY. GEORGE H. JOHNS, New Haven, Conn., assignor of one-half to Steve Mustakos, New Haven, Conn. Filed Nov. 27, 1929. Serial No. 410,125. 14 Claims. (Cl. 273—101.)

1. In a game or toy, a projecting device, a projectile attached thereto, actuating means for said projecting device, and a trigger device engaging said projectile to hold said actuating means under tension.



1,781,464. AMUSEMENT RIDE APPARATUS. HALLIGAN JOHNSON, San Diego, Calif. Filed June 24, 1929. Serial No. 373,304. 2 Claims. (Cl. 104—61.)

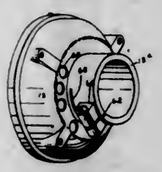
1. An amusement apparatus comprising a track adapted to convey an electric current, a truck mounted upon said track, a suspension tube depending from the truck, a figure secured to the lower portion of said tube, an electric motor mounted in the figure, a shaft journalled in said tube and geared to said motor, means for gearing said shaft to the drive axle of the truck, a rheostat mounted within the figure, a switch blade for coacting with said rheostat, and means for operating said switch blade by reins in the reach of the rider of said figure.



1,781,465. SOUND AMPLIFIER. THEODORE LINDENBERG, Columbus, Ohio. Filed Jan. 19, 1927. Serial No. 162,153. 3 Claims. (Cl. 181—27.)

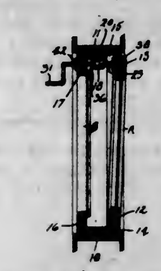
1. A sound amplifier comprising a plurality of closely spaced vibratory plates arranged transversely with respect to the longitudinal axis of the amplifier, said plates being provided with centrally disposed openings constitut-

ing jointly a sound conduit, said plates being formed from materials possessing different resonance, and securing means for clamping said plates in assembled relationship.



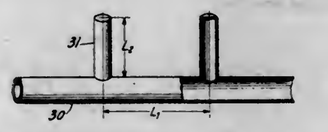
1,781,466. FLUID METER. RAY J. LYMAN, Berkley, Calif., assignor to Great Western Meter Company, Oakland, Calif., a Corporation of California. Filed July 5, 1924. Serial No. 724,251. 10 Claims. (Cl. 73—37.)

1. A fluid meter comprising a casing defining a vertically disposed cylindrical chamber and provided with an inlet passage through which fluid is adapted to flow tangentially into the chamber and an axially disposed outlet opening at an end of said cylinder, a rotatable shaft extending axially through said chamber, curved vanes mounted on said shaft and each vane having the curved portion thereof cylindrically curved about an axis parallel to said shaft, and a revolution counter arranged to be actuated by said shaft.



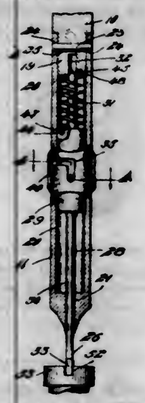
1,781,467. BEARING MOUNTING. SERN MADSEN, Clinton, Iowa, assignor to Curtis Companies, Incorporated, Clinton, Iowa. Filed Apr. 25, 1928. Serial No. 272,694. 2 Claims. (Cl. 308—189.)

1. In a motor construction, a stator, an end shield thereon having a hub, a shaft through the end shield, a rotor on the shaft within the stator, an opening through said hub large enough to allow introduction of the rotor therethrough, a bearing on said shaft within said hub, a bearing housing filling the space between said bearing and said hub and longitudinally slidable through the hub and



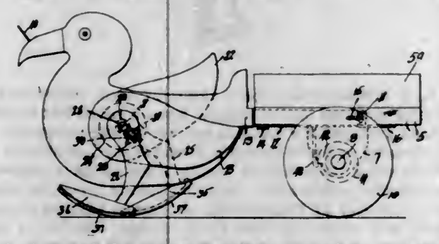
means for locking said housing in said hub, said means comprising clamping lugs and a clamping bolt, said hub being longitudinally split between said lugs and a transverse cut through a portion of the hub at a point spaced inward from the clamping bolt.

1,781,468. SASH LOCK FOR CASEMENT SASH. SERN MADSEN, Clinton, Iowa, assignor to Curtis Companies, Incorporated, Clinton, Iowa. Filed Feb. 18, 1929. Serial No. 340,967. 2 Claims. (Cl. 70—14.)



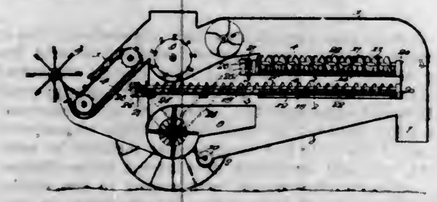
1. A locking device for a casement sash, comprising a housing mounted on the window jamb, a screw bolt having a head arranged for rotation and for sliding movement in the housing and also having a threaded portion adapted to be projected therefrom, a keeper plate confined between the housing and window jamb and having a portion overlying one end of the housing to prevent removal of the screw bolt therefrom, and a nut member carried by the sash and adapted to engage the threaded portion of the screw bolt.

1,781,469. WAVE FILTER. WARREN P. MASON, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed June 25, 1927. Serial No. 201,535. 23 Claims. (Cl. 178—44.)



1. A wave filter comprising a wave transmission line of recurrent structure, the recurrent sections of said line being composed of portions of lines having distributed impedance constants and having linear frequency-phase displacement characteristics, certain of said component lines being disposed in shunt to the main transmission channel of the filter and certain being included in series therein, and said component lines having phase displacement constants proportioned with respect to one another to provide a series of uniform transmission bands centered about a series of harmonically spaced frequencies.

1,781,470. SCREW DRIVER. EMIL MUELLER, Cranston, R. I. Filed Apr. 11, 1930. Serial No. 443,877. 5 Claims. (Cl. 145—50.)

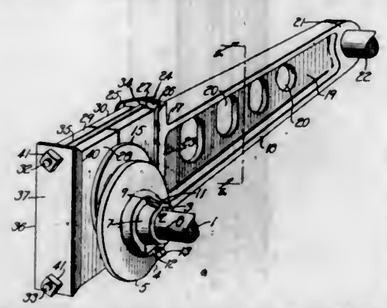


1. In a screw driver of the character described, a shaft including a broad point and provided with an axial bore bifurcating the point, and with a lateral bayonet slot, a handle upon the end of the shaft opposite the tip, an oscillatory plunger slidably mounted in the bore including a tip normally in advance of the point, a compressible torsional spring in the bore engaging and abutting the end of the plunger, and a locking pin in the plunger slidable in the slot.

1,781,471. FIGURE WHEELED TOY. FRANCIS M. MULLIGAN, Butte, Mont. Filed May 8, 1929. Serial No. 361,399. 2 Claims. (Cl. 46—45.)

1. A toy of the nature described, comprising a vehicle, a recessed base on the vehicle, a pair of depending lugs on the base, an axle rotatably mounted in the said lugs, a pair of ground engaging wheels on the axle, a grooved cam secured to the axle, a toy figure, a shaft on the figure extending into the recess, a bracket on the base extending into the recess, a screw extending through the bracket into the end of the shaft to rockingly support same, and a projection on the shaft extending into the cam groove for the purpose specified.

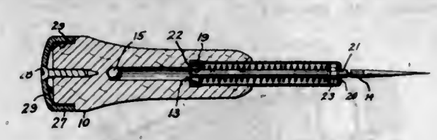
1,781,472. GRAIN SEPARATOR. OSCAR NICHOLAS NAGLE, Turpin, Okla. Filed Mar. 14, 1929. Serial No. 347,144. 4 Claims. (Cl. 130—23.)



1. In a threshing machine, a casing, an intake conveyor, a threshing cylinder, a beater, a grain shoe with grain offtake boot, and a blower fan delivering over the grain shoe rearwardly, said casing having a straw discharge throat toward which the blower is directed; combined with an upper screening unit located above the blower and grain pan levels and to the rear of and below said beater, and a lower screening unit located below the upper unit and above the blower and grain pan levels, said lower unit extending from a place adjacent the front of the machine below said cylinder to a place adjacent said discharge throat, each of said screening units comprising longitudinally corrugated bottoms having a plurality of trough-like portions, continuous spiral conveyors located in each trough-like portion, the bottom of said upper screening unit being foraminous from end to end, the bottom of that portion only of the lower screening unit where it lies below the upper unit being foraminous, and means to turn said spiral conveyors.

1,781,473. PROCESS FOR DEHYDRATING VEGETABLE SUBSTANCES AND PRODUCTS OF ORGANIC CHARACTER. BRYNAR JAMES OWEN, Oxford, England, assignor to Sugar Beet and Crop Driers Limited, London, England, a Corporation of England. Filed Nov. 27, 1926, Serial No. 151,253, and in Great Britain Dec. 7, 1925. 4 Claims. (Cl. 34—24.)

4. That improvement in the method of drying vegetable material by passing heated air of low relative humidity through a mass of such material, which consists in so coordinating the temperature pressure and rate of flow of the air with the mass of material that exothermic reactions will take place in the material and will furnish part of the latent heat of vaporization necessary for drying, and that the total heat available is sufficient to preclude recondensation within the mass of material, but insufficient to afford any substantial degree of superheat to the vapor discharging from the material.

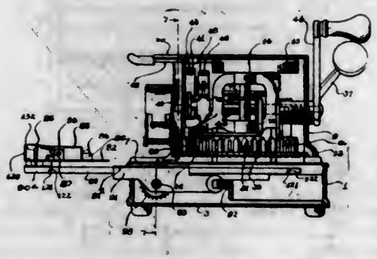


1,781,474. ECCENTRIC DRIVE. TORVALD N. PIERSON, Independence, Mo., assignor to The Gleaner Combine Harvester Corporation, Independence, Mo., a Corporation of Delaware. Filed Feb. 18, 1929. Serial No. 340,973. 4 Claims. (Cl. 74—1.)

1. In a device of the character described, an eccentric member including a journal, a pitman for the journal comprising an arm having a bearing receiving seat, a bearing for the arm comprising mated halves, grooves in opposite sides of the bearing, a keeper plate, and fastening devices extending through said keeper plate, bearing grooves, and pitman arm to retain the pitman on the journal.

1,781,475. ICE PICK. ARTHUR I. PLATT, Incompetent, by Bessie R. Platt, conservatrix, Fairfield, Conn., assignor to The Bridgeport Hardware Manufacturing Corporation, Bridgeport, Conn., a Corporation of Connecticut. Filed Aug. 19, 1929. Serial No. 386,995. 8 Claims. (Cl. 83—62.)

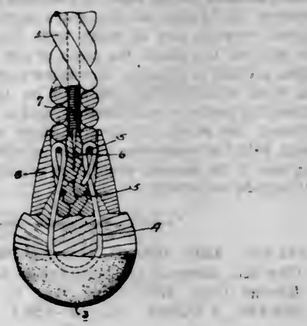
3. An ice pick comprising a handle having a passage therein, a shoulder in said passage, a cup bearing against said shoulder, a capped metallic sleeve expanded about said cup to form an anchor therefor in said handle, said cup and the capped end of said sleeve being provided with



openings, a pointed rod passing through said openings, means on said rod for retaining said rod within said sleeve, and a compression spring about said rod within said sleeve tending to urge the rod out of said handle.

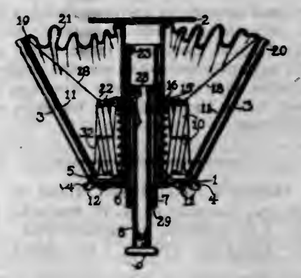
1,781,476. ARTICLE-PACKING STRIP. LACASSE ROUSSEAU, Montmagny, Quebec, Canada. Filed Sept. 5, 1929. Serial No. 390,636. 1 Claim. (Cl. 1—56.)

A packing strip for containing metal drawer stops in a stacked position, comprising a concave bottom member of elongated formation, a plurality of lugs stamped from the central portion of the member and extending at right angles therefrom, and a cover member bent longitudinally at substantially right angles having apertures to receive the ends of the lugs and to be secured in closely related position against the drawer stops resting in the bottom member by bending the end portion of the lugs against the top member.



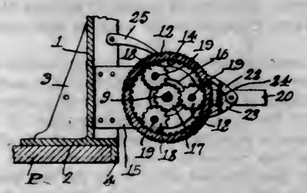
1,781,477. PRINTING MACHINE. CHARLES H. SAMPSON, Rochester, N. Y. Filed Aug. 11, 1928. Serial No. 298,982. 11 Claims. (Cl. 197—6.4.)

1. A printing machine comprising a printing mechanism, a work feeding carriage movable in the direction of the printing line, a bar supported by said carriage, inclined guides on which the bar is movable, a stop carried by said bar for stopping the movement of the carriage, spring means acting on the bar to move it on the guides in order to carry the stop away from stopping position, a manually controlled means on the carriage connected with the bar to move the latter against the spring means in order to carry the stop to stopping position.



1,781,478. GRIP STRAP OR TOGGLE. CHARLES P. SCHLEGEL, Rochester, N. Y., assignor to Schlegel Mfg. Company, Rochester, N. Y., a Corporation of New York. Filed May 13, 1929. Serial No. 362,617. 5 Claims. (Cl. 105—354.)

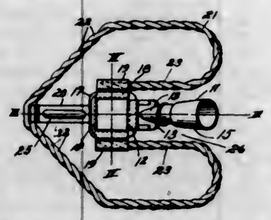
1. A grip strap or toggle having a grip portion, and a laterally bendable spring enclosed in said grip portion and having a pin at one end projecting into a part of the strap to prevent lateral shifting of such end of the spring.



2. A grip strap or toggle having a grip portion, and a helically coiled spring enclosed in said grip portion and having a pin formed from the stock of the spring and anchored in the strap to prevent lateral shifting of such end of the spring.

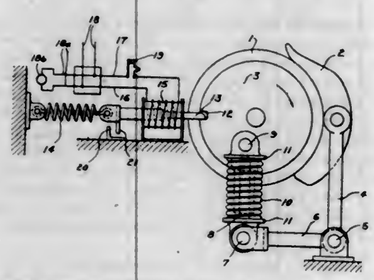
1,781,479. COLLAPSIBLE UMBRELLA. MAX SCHWARTZ, Brooklyn, N. Y. Filed Oct. 1, 1927. Serial No. 223,438. 6 Claims. (Cl. 135—26.)

2. A collapsible umbrella including a handle in combination with a ring having a plurality of swingable members pivoted thereto, each swingable member being of such relative proportions as to constitute a substantially closed casing for the rest of the umbrella when all are retracted in closed position, a cap plate associated with said handle for closing the upper end of said casing, a retaining member surrounding said swingable members in order to hold them closed as an assembled casing, and means on said ring to retain said retaining member when displaced from said swingable members in open position thereof, there being a fabric associated with said swingable members.



1,781,480. OPERATING MECHANISM FOR LOADING DEVICES. JOSEPH HARDMAN SIRMANS, Stockton, Ga. Filed May 19, 1928. Serial No. 279,095. 1 Claim. (Cl. 74—54.)

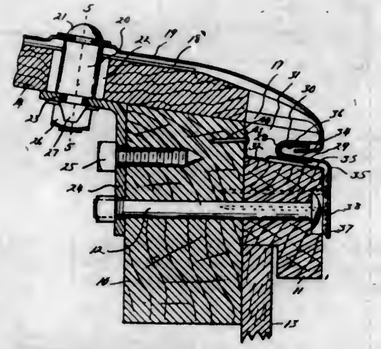
Mechanism of the class described including a shaft, a drum rotatable therewith, a ratchet wheel forming a part of the drum, a second ratchet wheel mounted for rotation



on the shaft and having a recess in one face, the wall of the recess constituting an internal gear, a gear in the recess secured to the shaft, a stationary member extending between the ratchet wheels, gears carried thereby and supported between and in mesh with the internal gear and the gear on the shaft, the teeth of the two ratchet wheels being pitched in opposite directions respectively, an actuating lever mounted for oscillation on the shaft, oppositely extending pawls carried thereby, and a resilient connection between the pawls for holding them normally in engagement with the respective ratchet wheels, and means engaging one of the ratchet wheels for holding the drum against retrograde movement.

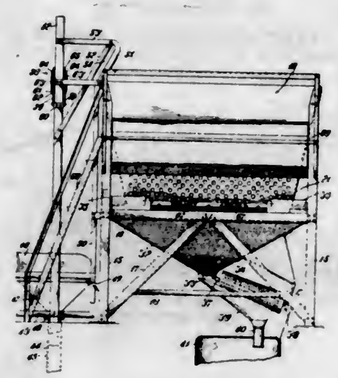
1,781,481. MOP HEAD. HERBERT M. STURGIS, Kansas City, Mo., assignor, by mesne assignments, to Leigh Hunt, Kansas City, Mo. Filed May 1, 1929. Serial No. 359,436. 4 Claims. (Cl. 15—229.)

1. A mop head comprising an inner frame, a looped wire outer frame encompassing said inner frame with its front portion spaced apart from said inner frame and having spaced apart inwardly extending parallel arms secured to said inner frame, and an outwardly extending bar carried by said inner frame and secured at its outer end to said looped wire frame.



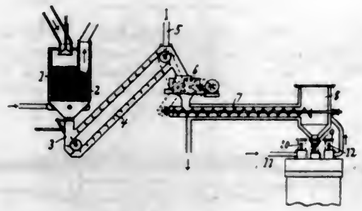
1,781,482. IRONING MACHINE. HANS O. SWOBODA, Edgewood, Pa., assignor to H. O. Swoboda, Inc., Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 31, 1927. Serial No. 179,861. 13 Claims. (Cl. 68—9.)

1. In an ironing machine having a roll element and a shoe element, one of which is movable into and out of engagement with the other, an electric motor for effecting such movement, and electrically operated means and an electric circuit therefor for normally holding the elements in cooperative engagement so long as said circuit is energized.



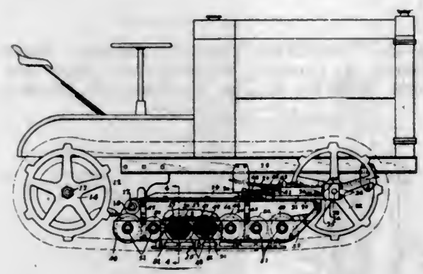
9. The combination with an ironing machine having a roll member and a shoe member, the shoe member being movable toward and away from the roll member and having a motor for operating the roll member of an electromagnetic means controlling movement of the shoe toward the roll member when the motor is energized and movement of the shoe member away from the roll member when the motor is de-energized, and a thermostat associated with the shoe in circuit with said electromagnetic means for de-energizing the same when the temperature of the shoe reaches a predetermined point.

1,781,483. CAR ROOF. WILLIAM D. THOMPSON, Detroit, Mich., assignor, by mesne assignments, to Hutchins Car Roofing Company, Detroit, Mich., a Corporation of Delaware. Filed Nov. 23, 1925. Serial No. 70,920. 12 Claims. (Cl. 108—5.)



1. In a car roof the combination with a sub-structure, of a roofing sheet having a depending returnbent flange at an eave of the roof in spaced relation to the underside of the roofing sheet, and inner and outer flashing strips co-operating to form a bearing for said flange of sufficient depth to form a non-shearing stop to limit the outward movement of said roofing sheet, said flashing strips being free to move outwardly relative to said roofing sheet.

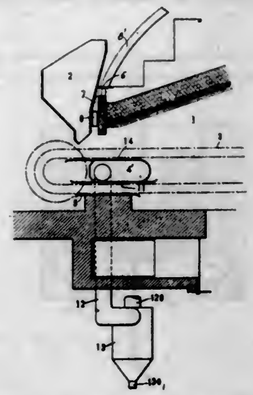
1,781,484. SAND-DRYING APPARATUS. ROSTON TUCK, Needles, Calif. Filed Mar. 17, 1930. Serial No. 436,326. 8 Claims. (Cl. 34—34.)



2. A sand drying apparatus comprising a vertically disposed receptacle having side walls converging toward the bottom and provided with holes of predetermined size and at prearranged distances apart; a perforated movable bottom for said receptacle; a plurality of steam conveying tubes arranged vertically within the receptacle adjacent to the walls and in vertical rows at intermediate points in the receptacle; top and bottom headers connected to all of said tubes; a funnel-shaped pan arranged beneath said receptacle and having a central discharge opening at bottom; a power driven screen located beneath said discharge opening; a screened sand receiving chute mounted beneath said screen and adapted to deliver the sand at a preselected point; a vertically movable power driven sand hoisting member arranged at one side of the apparatus; and means whereby said member is automatically moved into sand dumping position when it reaches a predetermined point in its upward travel.

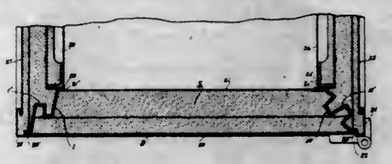
1,781,485. GENERATING POWER IN INTERNAL-COMBUSTION ENGINES. HANS WAHL and ALBERT FISCHER, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Feb. 11, 1929, Serial No. 339,203, and in Germany Feb. 29, 1928. 7 Claims. (Cl. 123—23.)

1. A process for generating power which comprises operating internal combustion engines with still hot pulverized coking products.



1,781,486. TRACKLAYING TRACTOR. ROLLIN H. WHITE, Cleveland Heights, Ohio. Filed Aug. 6, 1925. Serial No. 48,552. 2 Claims. (Cl. 305—9.)

1. In a supporting and propelling mechanism for track laying tractors, a rigid track frame, a plurality of roller bearing members journalled to said frame, said members having spaced bearing surfaces arranged in the same horizontal plane, an endless track formed of pivotally connected links encircling said frame and roller members, and providing an inner endless track upon which the bearing surfaces of said roller members rests, the distance between the journals of said rollers being greater than one-half the length of one of said links to prevent buckling of the ground run of said track, so that along the entire length of the ground run there is a roller engaging a link of the track member and each alternate link has at least two rollers in contact therewith.

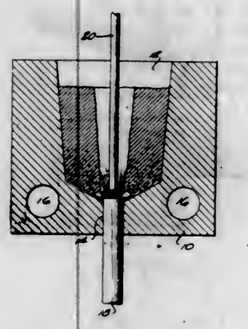


1,781,487. MECHANICAL STOKER FOR FORCED-DRAFT FURNACES. HENRI EMIL WITZ, Oberhausen, Germany, assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed June 21, 1923, Serial No. 646,735, and in Germany Aug. 3, 1922. 5 Claims. (Cl. 110—40.)

2. In combination, a forced draft furnace having a chain grate stocker, means for supplying forced draft to the rear part of the stoker, a member sealing the upper and lower runs of the stoker at the forward end thereof, said member having an aperture opposite a run of the

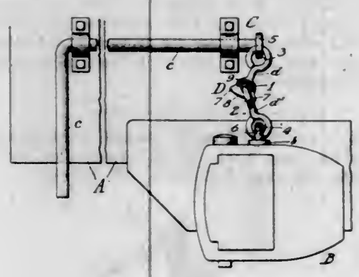
stoker, and means for creating a draft from said stoker through said aperture whereby dust is drawn from the stoker into said member.

1,781,488. JAMB SECTION. ALBERT L. ABBOTT, Canton, Ohio, assignor to The Diebold Safe & Lock Company, Canton, Ohio, a Corporation of Ohio. Filed Dec. 14, 1925. Serial No. 75,223. 4 Claims. (Cl. 109—2.)



1. A safe including a door frame and a door, the door frame including a jamb member and the door including another jamb member, the jamb members interfitting and interlocking with each other for preventing lateral deflection of the door frame, and each jamb member having identical cross-sections.

1,781,489. LOUD-SPEAKER HORN. ALEXANDER I. ABRAHAMS, New York, N. Y. Filed Jan. 22, 1929. Serial No. 334,144. 5 Claims. (Cl. 181—27.)

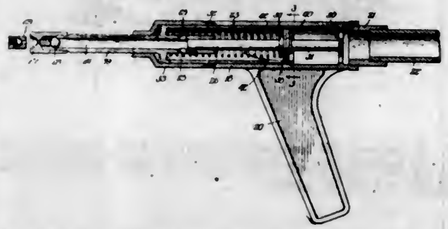


5. In combination, a tapered loud speaker horn having its narrow inlet end passing through the wider portion thereof and a supporting frame connected to said wider portion, said supporting frame being spaced from the narrow inlet end of the horn.

1,781,490. METHOD OF FORMING ALLOYS. PERCY A. E. ARMSTRONG, New York, N. Y. Filed May 8, 1928. Serial No. 276,012. 6 Claims. (Cl. 75—22.5.)

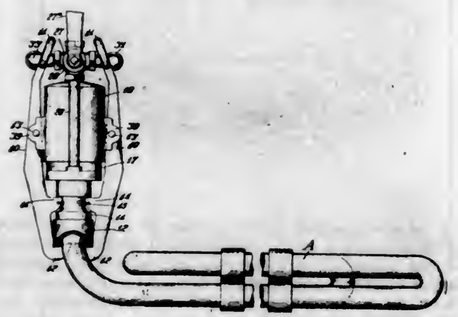
1. The method of melting metals in a metallic crucible having a lower melting point than that to which the melted metal is raised, which comprises the steps of exposing metallic ingredients intermixed with slag forming ingredients to the heat of an electric arc initiated near the bottom of a metallic crucible, while permitting heat to dissipate from the walls of the crucible, whereby a protective slag lining for the crucible is formed progressively as the volume of molten metal increases.

1,781,491. UNCOUPLING DEVICE. CHARLES W. BOOTH, Chicago, Ill. Filed Dec. 4, 1926. Serial No. 152,570. 3 Claims. (Cl. 213—166.)



1. A link adapted for connecting the uncoupling lever of a car coupler with the coupling pin thereof, consisting of two members only, each consisting of a shank and an eye at each end thereof shaped and proportioned to form rounded shoulders adjacent their juncture with said shank, eyes on different members interlocking to connect said link members end-to-end and the eyes in the remote ends of said link members being adapted to interlock with eyes formed, respectively, in the uncoupling lever and in the coupling pin, all of said eyes being proportioned and arranged to permit said link to flex freely in operation, and a pair of lugs formed at that end of one link member which is connected to the second link member and which project at opposite sides of the eye formed therein in position to contact with the eye of said second link member when said link is flexed to its contemplated limit at an angle to the plane of the eye of said second link member.

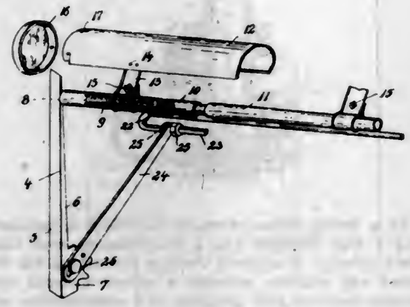
1,781,492. MANUFACTURE OF RUBBER. WILLIS A. BOUGHTON, Cambridge, Mass. Filed July 28, 1923. Serial No. 654,465. 6 Claims. (Cl. 18—53.)



4. In the art of vulcanizing, the step of passing into an ammoniacal suspension of rubber a gas comprising the hydride of an element of the sulphur family the atomic weight of which is at least as great as that of sulphur, said gas being in excess of the amount required to react with the ammonia.

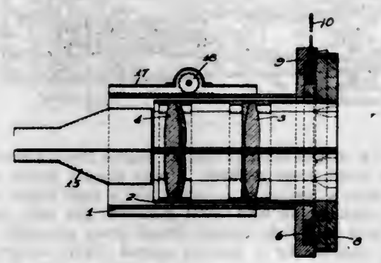
1,781,493. LUBRICATING MEANS. CHARLES L. BYRON, Chicago, Ill., assignor, by mesne assignments, to The Wayne Pump Company, Baltimore, Md., a Corporation of Maryland. Filed Mar. 25, 1926. Serial No. 97,167. 13 Claims. (Cl. 221—47.4.)

6. In a lubricant dispensing nozzle, the combination with adjacent cooperating relatively movable operating members, one of said members being provided with fixed and rotatively movable means, said movable means being controlled by the other of said members for controlling the flow of grease into said other member.



1,781,494. SUPERHEATER-UNIT-TESTING DEVICE. GEORGE W. CARRIGAN, Cleburne, Tex. Filed Dec. 9, 1929. Serial No. 412,688. 5 Claims. (Cl. 73—51.)

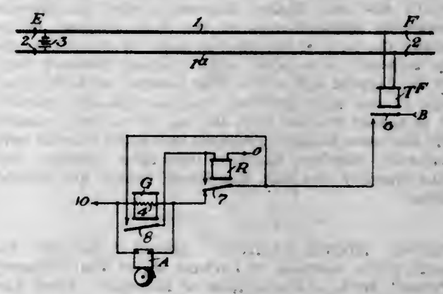
1. A device of the character described comprising ported means adapted to receive the orificed ends of a superheater unit; a pressure medium receiving conduit communicating with one port of said means; a discharge conduit communicating with the other port of said means; means, operable by a medium under pressure, whereby said ported means and the superheater unit are clamped together; and controllable means whereby a fluid under pressure and compressed air are alternately admitted to said pressure medium receiving conduit.



1,781,495. SIDE AWNING. MELVIN L. CLELAND, Hastings, Nebr., assignor to G. A. Roth Manufacturing Company, Hastings, Nebr., a Corporation. Filed Jan. 10, 1929. Serial No. 331,418. 11 Claims. (Cl. 156—44.)

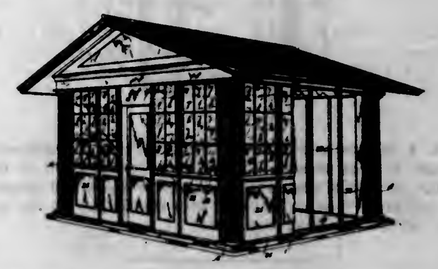
4. A side awning of the class described, comprising, in combination, side pieces adapted to be held in the grooves of a window opening by frictional engagement with the walls of said grooves, a telescopic rod extending between said side pieces, resilient means tending to expand said telescopic rod whereby the pressure holds the side pieces

in position in the grooves, arms extending from said telescopic rod, and a casing carried by said arms, the casing being adapted to hold a spring roller having a canopy mounted thereon.



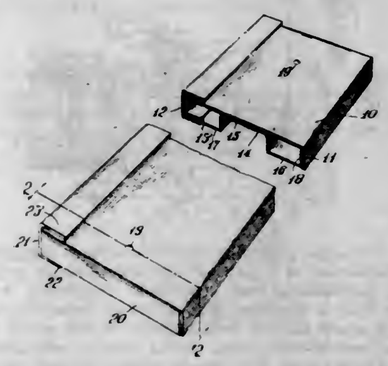
1,781,496. APPARATUS FOR COLOR PHOTOGRAPHY. HAROLD N. COX, Glen Ridge, N. J., assignor to Cox Multi-Color Photo Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Apr. 27, 1928, Serial No 273,257. Renewed Sept. 19, 1930. 2 Claims. (Cl. 88—1.)

1. In apparatus for color photography a support, a lens barrel borne by said support, means for adjusting said lens barrel in axial direction upon said support, a plurality of lenses borne each in a separate carrier and arranged within said lens barrel, with axes parallel one to another and to the axis of the barrel, the carriers being mounted upon said lens barrel, and being movable radially in such mounting, and an adjusting ring borne by and rotatable upon said lens barrel, and encircling said lens barrel, said carriers and said adjusting ring engaging one another over surfaces of spiral extent with respect to the axis of the lens barrel.



1,781,497. TRAIN-ANNUNCIATING APPARATUS. PAUL H. CRAGO, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 20, 1929. Serial No. 393,926. 2 Claims. (Cl. 246—124.)

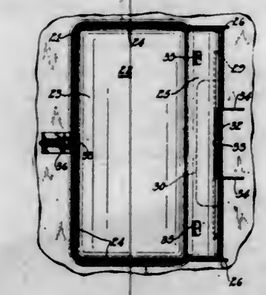
1. A system for indicating the approach of trains, comprising a section of track, a train controlled relay associated with said section and having a normally open contact which is closed when the section is occupied, an annunciator, a slow pick-up relay, a normally de-energized cut-out relay, a circuit for said annunciator including said normally open contact and a back contact of said cut-out relay as well as the winding of said slow pick-up relay, a pick-up circuit for said cut-out relay including said normally open contact and the contact of said slow pick-up



relay, and a stick circuit for said cut-out relay including said normally open contact and a front contact of the cut-out relay.

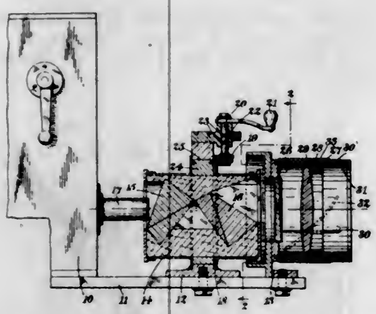
1,781,498. METAL BUILDING. HERBERT C. DRUMM and JOHN M. CALLAHAN, Canton, Ohio, assignors to The Union Metal Manufacturing Company, Canton, Ohio, a Corporation of Ohio. Filed Apr. 1, 1926. Serial No. 99,000. 6 Claims. (Cl. 189—2.)

1. A sheet metal building including uprights, and hollow metal panels, located between said uprights, said panels having flanged joints at their edges forming permanent closures for the hollow panels, and means connecting said flanges and said uprights.



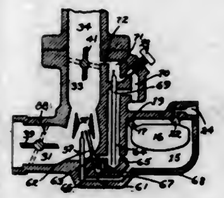
1,781,499. STRAIGHTEDGE FOR WALL-PAPER TRIMMERS. FRED E. EDGREN, Chicago, Ill. Filed Jan. 2, 1930. Serial No. 417,997. 5 Claims. (Cl. 33—107.)

3. A straightedge for wall paper trimmers comprising a metallic body member whose longitudinal sides are bent



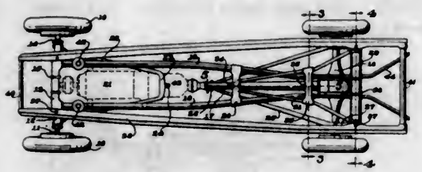
downwardly at right angles to provide supporting legs; a metallic filler member of channel formation having its base arranged flush with the lower surface of the body member, while the lower sides of the channel are flanged laterally and said flanges disposed toward the opposite downwardly disposed sides of the body member; means whereby the base of the filler member is secured to the body member; a metallic track channel disposed flush with the forward side of the body member, with the upper flange of the track channel disposed inwardly parallel and in spaced relation with the top of the body member while the lower flange is arranged in lapping relation with a laterally disposed flange of the filler member; and means whereby the last mentioned flanges are secured together.

1,781,500. MOTOR VEHICLE. HARRY C. ELLIOTT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 29, 1927. Serial No. 187,440. 10 Claims. (Cl. 180—69.)



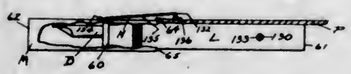
1. A closure comprising a plate having a peripheral flange, a hinge member formed by a continuation of the flange on one of the side edges of the plate and flanges on the hinge member integral with the flanges on the top and bottom edges of the plate.

1,781,501. CAMERA AND OTHER OPTICAL PROJECTION DEVICE. GEORGE WILLIAM FORD, Brighton, England, assignor to Herbert George Ponting, London, England. Filed Feb. 25, 1928, Serial No. 256,882, and in Great Britain Mar. 6, 1926. 2 Claims. (Cl. 88—16.)



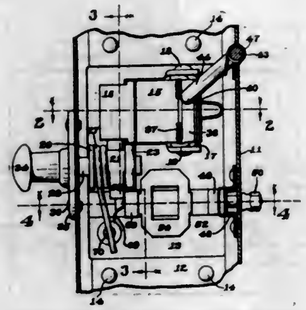
1. A device for producing distorted pictures comprising the combination of a pair of oppositely-directed prisms and a parellelizing lens attachment comprising a bi-concave lens, a bi-convex lens, a casing containing said lenses, a mount slidable longitudinally in said casing and carrying said bi-convex lens, radial pins on said mount, means guiding said pins longitudinally of said casing, and a sleeve rotatable on said casing and having inclined slots adapted to engage said pins.

1,781,502. CARBURETOR. HENRY FORD, Dearborn, Mich., assignor to Ford Motor Company, Dearborn, Mich., a Corporation of Delaware. Filed June 16, 1928. Serial No. 285,907. 6 Claims. (Cl. 261—41.)



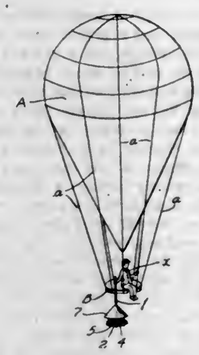
1. In a device of the character described, a carburetor having a float chamber and a compensating well and a mixture passage, a metered opening connecting the float chamber and mixture passage, a second metered opening connecting the float chamber and compensating well, an unrestricted opening connecting the compensating well and the mixture passage, and a metered opening connecting the unrestricted opening and the float chamber.

1,781,503. VEHICLE CONSTRUCTION. HENRY FORD, Dearborn, Mich., assignor to Ford Motor Company, Dearborn, Mich., a Corporation of Delaware. Filed Apr. 18, 1929. Serial No. 356,022. 5 Claims. (Cl. 180—64.)



1. In a vehicle construction, an engine frame associated with a front cross member, a rear chassis frame associated with a rear cross member, and a body frame resiliently mounted on said cross members, the said engine frame and said rear chassis frame being pivotally connected together by a pair of spaced pivots to thereby permit the said cross members to oscillate relative to each other and to the said body frame.

1,781,504. FOUNTAIN PEN. WILLIAM C. FORD, Andover, Mass. Filed Sept. 17, 1928. Serial No. 306,415. 8 Claims. (Cl. 120—46.)

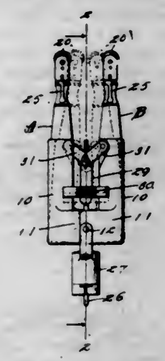


1. The combination with a fountain pen having a barrel which contains a compressible bulb adapted to feed a pen point carried at one end of the barrel; of a compressor positioned inside the barrel and adapted to compress the bulb; an operating member for the compressor movable in an opening in the side of the barrel and having its head normally positioned inside the surface of the barrel, said member being in engagement with the compressor; a cap adapted to fit either end of the barrel; a pressure control member and transmitting member consisting of an elastic shank fixed to the outside of the cap and extending beyond the open end of the cap in position to register with the opening in the side of the barrel when the cap is on that end of the barrel which is opposite the pen point.

1,781,505. DOOR LATCH. JOSEPH GALAMB, Detroit, Mich., assignor to Ford Motor Company, Dearborn, Mich., a Corporation of Delaware. Original application filed Aug. 15, 1927, Serial No. 212,909. Divided and this application filed Aug. 31, 1929. Serial No. 389,657. 6 Claims. (Cl. 292—196.)

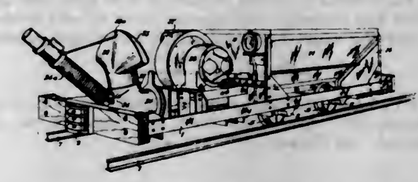
1. In a door latch, a door formed of sheet material having inside and outside panels connected at one edge by a door pillar, a latch mounted on the pillar, an outside door handle arranged to operate said latch, a bolt slidably mounted on the door pillar, and a second bolt slidably mounted on the inside panel in position so that operation thereof will operate the first mentioned bolt to position where the handle will not operate the latch.

1,781,506. SPORT JUMPING APPARATUS. ALEXANDRE F. GODEFROY, Mexico, Mexico. Filed Jan. 6, 1930, Serial No. 418,877, and in Mexico Sept. 3, 1929. 7 Claims. (Cl. 244—3.)



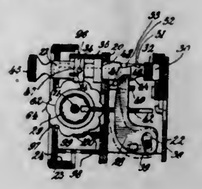
1. A sport jumping apparatus adapted to be used as a thrust device by the passenger of a balloon to assist the balloon to rise, composed of a staff or handle, and a buoyant device arranged at the lower end of said handle.

1,781,507. METHOD OF PREPARING METAL FOR PAINTING. JAMES H. GRAVELL, Elkins Park, Pa., assignor to American Chemical Paint Company, Ambler, Pa., a Corporation of Delaware. Filed Oct. 2, 1928. Serial No. 309,905. 7 Claims. (Cl. 148—6.5.)



1. The method of preparing metal for painting, consisting in coating the metal with phosphoric acid and treating the metal with a material adapted to convert phosphoric acid into a hydrogen phosphate.

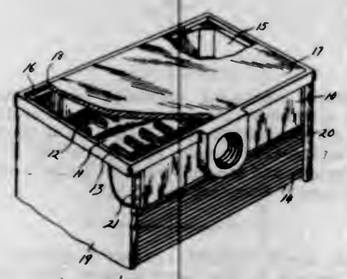
1,781,508. DENTAL HANDPIECE. JOSEPH GROSS and ISAAC HELLMAN, Bronx, N. Y. Filed Apr. 24, 1928. Serial No. 272,492. 6 Claims. (Cl. 32—10.)



6. A dental hand-piece comprising two shanks being pivotally mounted for movement into or out of divergent relation, driven shafts disposed in each shank, means common to both shafts whereby both shafts may be driven simultaneously, and manually operable means to shift the shanks toward or from each other.

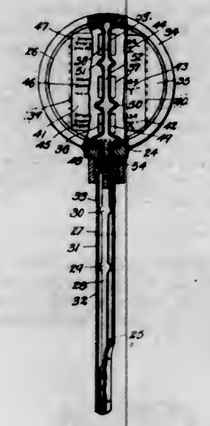
1,781,509. ROCK DUSTER. ALBERT J. GURNEY, Canton, Ohio, assignor to The American Mine Door Company, Canton, Ohio, a Corporation of Ohio. Filed Nov. 15, 1927. Serial No. 233,407. 8 Claims. (Cl. 302—37.)

1. Conveyor blower apparatus including a hopper, longitudinal troughs in the bottom of the hopper, a blower communicating with the hopper, a discharge connection communicating with the blower, conveyer screws located in said troughs for feeding material from the hopper to the blower whereby the material will be blown from the discharge connection, an agitator shaft in the hopper located in a plane between the conveyer screws, and means for continuously rotating the agitator shaft in one direction and both the conveyer screws in a direction opposite to the rotation of the agitator shaft.



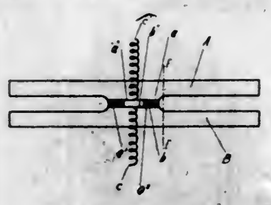
1,781,510. PERMUTATION LOCK. ALEXANDER G. HATCH, Farmington, Conn., assignor to The Sesamee Company, Hartford, Conn., a Corporation of Connecticut. Filed June 29, 1928. Serial No. 289,157. 29 Claims. (Cl. 70—53.)

1. A lock comprising a mounting member, a bar swiveled in said member so as to be rotatable from an angular



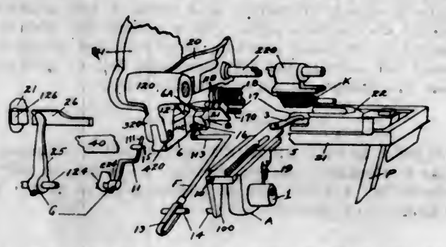
position "A" to an angular position "B," and vice versa, the bar being movable endwise when in either of said angular positions from a longitudinal position "1" to a longitudinal position "2", and vice versa, movement-obstructing means preventing rotational movement of the bar except when in position "2", a latch by which the bar may be engaged and held fast in its "A" position, and a permutation mechanism by which the release of the bar from the latch may be conditioned on the setting of the mechanism in accordance with a predetermined combination.

1,781,511. RADIATOR. RAYMOND L. HAWKINS, Detroit, Mich., assignor to Long Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 24, 1927. Serial No. 228,419. 5 Claims. (Cl. 257—154.)



1. In a radiator, spaced headers, a side plate and projections and recesses carried respectively by said headers and plate for slidably securing said plate to said headers.

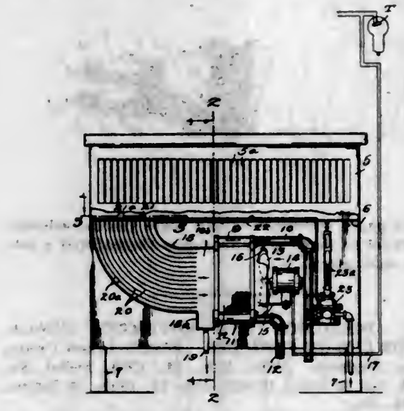
1,781,512. LUBRICATION GUIDE. CARL E. HOLT, Kansas City, Mo. Filed Nov. 26, 1928. Serial No. 322,052. 33 Claims. (Cl. 116—114.)



1. A temperature indicator applied to a machine having a plurality of heat-emitting elements, comprising a stem containing a heat responsive fluid and having a plurality of bulbous portions, each positioned in relation with a selected heat-emitting element, and means combining the responses of said responsive fluid to produce a composite result.

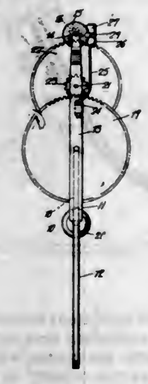
1,781,513. ELECTRICAL TUNING FORK. FERNAND HOLWECK, Paris, France, assignor to Etablissements Edouard Belin, Paris, France, a Corporation of France. Filed May 11, 1929, Serial No. 362,415, and in France May 15, 1928. 7 Claims. (Cl. 84—409.)

6. An electric tuning fork comprising in combination, a pair of spaced vibrating quartz elements, each thereof having a central projection, metallic layers superimposed on each projection, and piezo-electric means interposed between said metallic layers for setting said elements in vibration.



1,781,514. TRANSFER MECHANISM FOR LOOMS. HAROLD M. JEFFREY, Methuen, Mass., assignor to Patent Protection Corporation, Lowell, Mass., a Corporation of Massachusetts. Filed Sept. 17, 1927. Serial No. 220,143. 8 Claims. (Cl. 139—243.)

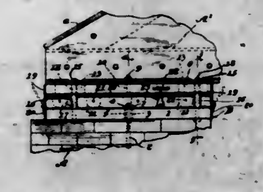
1. The combination with a loom having a lay beam which carries a dagger, and a breast beam on one end of which is a battery for bobbins and a pivoted bobbin transfer hammer operable by and to which is pivoted a dog; of a dog spring and a dog stop in position to hold the dog in a position to be struck by the dagger when the lay beam beats up; a detector bed attached to the breast beam; a detector slide slidable therein in a direction substantially the same as the movement of the lay beam and carrying a slide stud; a slide return spring; a detector finger pivoted at one end to the slide having a shoulder on the inside and having its free end curved away therefrom towards the outside of the loom, said end having on its inside a smooth rounded heel and ending in teeth beyond said heel; an adjustable detector stop so carried by the slide as to engage said shoulder and to keep the finger normally in position in which said teeth are out of a line through the finger pivot and perpendicular to the lay beam; a detector finger return spring; a connecting rod having at one end a slot through which the slide stud passes and at its other end connected to said dog below its pivot; a shuttle binder at the end of the lay beam opposite the battery and connections between said binder and dog whereby the dog is removed from position in front of said dagger when the shuttle engages said binder.



1,781,515. HUMIDIFIER AND HEATER. CARROLL E. LEWIS, St. Paul, Minn., assignor to The Lewis Corporation, Inc., Minneapolis, Minn., a Corporation of New Mexico. Filed Mar. 14, 1928. Serial No. 261,576. 5 Claims. (Cl. 261—9.)

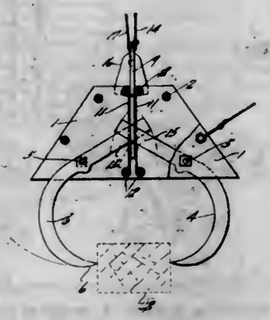
1. In air humidifying apparatus, an inclined evaporating flue having an air intake at its lower end and an air outlet at its upper end, a plurality of spaced inclined evaporating plates mounted in said flue, means for distributing liquid upon the upper portions of said evaporating plates, a fan for setting up an upward circulation of air through said flue passing over and impinged against said plates, said plates each having a series of relatively

narrow transverse grooves therein, wherein water will lodge until said grooves are filled, said grooves being successively filled by said water and spreading said water over said plates in a thin film.



1,781,516. SPARKLER TOY. JOHN E. MALKIN, New York, N. Y. Filed Aug. 20, 1929. Serial No. 387,255. 1 Claim. (Cl. 46—14.)

A sparkler toy of the character described comprising a handle member, a pair of spaced, opposed, parallel arms extending longitudinally from one end thereof, a train of meshed gears mounted for rotation at longitudinally spaced points between the arms, a steel friction wheel fixed for rotation to the gear remote from the handle, an actuating crank operatively connected to the gear adjacent the handle, a resilient arm secured to one of the first named arms and extending substantially parallel therewith in spaced relation thereto and terminating adjacent the periphery of the friction wheel, integral ears on the free end portion of the resilient arm extending inwardly over opposite sides of the friction wheel and a friction block removably mounted on the resilient arm between the ears and having a concaved face disposed in yielding engagement with the periphery of the friction wheel.

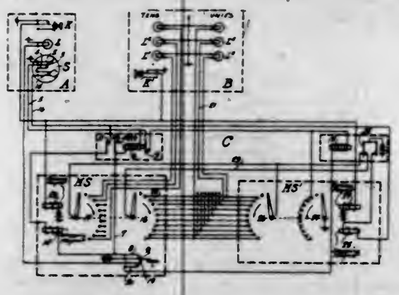


1,781,517. EXPANSION BEARING. JOHN L. MCKEOWN, Chicago, Ill. Filed July 15, 1927. Serial No. 205,945. 14 Claims. (Cl. 108—23.)

4. An expansion bearing for the purpose specified, comprising a bearing plate adapted to be anchored to a supporting structure, a second bearing plate upon which the member to be supported is adapted to rest directly, anti-friction members interposed between said bearing plates and self-releasing means movably anchoring said second bearing plate to the fixed bearing plate.

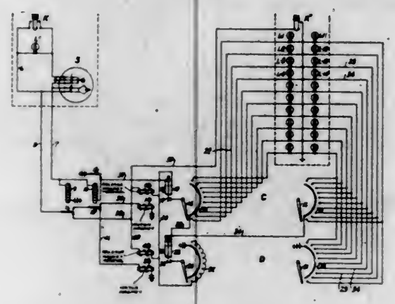
5. An expansion bearing as specified in claim 4, in which the means for forming the chamber between said plates within which the anti-friction members are enclosed, comprising shutters hinged to one bearing plate and adapted to bear against the other, and springs applied to said shutters adapted to maintain them yieldingly in contact with parts of the bearing plate other than that to which they are pivoted, thereby permitting movement of said second plate with a supported member and also providing access to the chamber defined thereby.

1,781,518. AUTOMATIC GRAPPLE. ANDREW ASA MUNN, Rapid City, S. Dak. Filed Mar. 5, 1930. Serial No. 433,199. 1 Claim. (Cl. 294—112.)



In a device of the kind described, two side plates secured together in spaced relation, an operating link slidably mounted between the said plates, one end of the said operating link projecting outwardly of the plates, a pair of grappling hooks pivotally mounted between the plates in spaced relation, the inner ends of the hooks being passed loosely through the slot of the operating link, an operating cable secured to the projecting end of the said operating link, and a release cable secured to the said plates adjacent the projecting end of the said operating link.

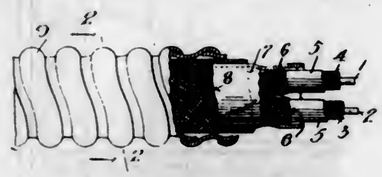
1,781,519. SIGNALING SYSTEM. CLARENCE W. NESSELL, Forest Park, Ill., assignor to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed Aug. 3, 1927. Serial No. 210,221. 4 Claims. (Cl. 177—353.)



1. In a signaling system, a plurality of rows of indicating devices, one row representing the units digit of a number and the other row representing the tens digit of a number, an impulse sender for transmitting series of impulses corresponding to digits of any desired number, a series of step by step switches one for each digit, means whereby one switch responds to the first series of impulses transmitted to light a lamp in the units row and prepare a circuit for the corresponding lamp in the tens row, means whereby another switch responds to the second series of

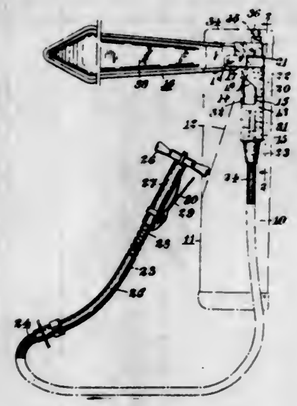
impulses to light another lamp in the units row, and means operated on the sending of the second series of impulses

to extinguish the first lighted lamp in the units row and complete the prepared circuit of the corresponding lamp in the tens row.



1,781,520. SIGNALING SYSTEM. CLARENCE W. NESSELL, Forest Park, Ill., assignor to Reserve Holding Company, Kansas City, Mo., a Corporation of Delaware. Filed Jan. 6, 1928. Serial No. 244,785. 7 Claims. (Cl. 177—353.)

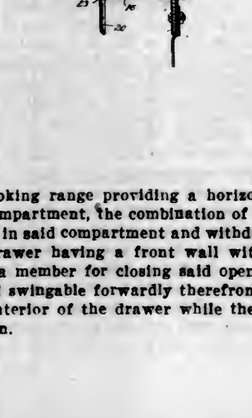
1. In a signaling system, a sending station having means for sending signals comprising numbers of one or more digits, a receiving station having a plurality of rows of lamps, one row representing the units digit of a number, another row representing the tens digit of a number, a series of step-by-step switches, one switch for each digit, off-normal springs for one of said switches operative upon the first movement of the associated switch, and means operated responsive to the transmission of the first digit of a number signal to operate another of said switches for lighting a lamp in the units row through the off-normal springs, and for preparing a circuit for the corresponding lamp in the tens row through the off-normal springs, said means operated responsive to the transmission of the second digit of the signal to operate the first mentioned switch for lighting another lamp in the units row and for operating the associated off-normal springs to extinguish the first lamp lighted in the units row and light the corresponding lamp in the tens row.



1,781,521. ELECTRICAL CONDUCTOR AND METHOD OF MAKING THE SAME. FREDERICK PALMER and JOHN E. MCAULIFFE, Brooklyn, N. Y., assignors to Triangle Conduit Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed Jan. 9, 1929. Serial No. 331,177. 4 Claims. (Cl. 173—266.)

3. A multi-element electrical conductor comprising a plurality of conducting elements each provided with an insulation, paper crushed therearound, a covering for the paper, crushed paper surrounding all of said elements,

all of said paper coverings having edges thereof substantially parallel to the longitudinal axes thereof and a covering for said paper.



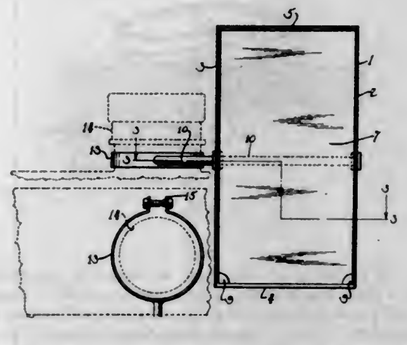
1,781,522. DIRECTION AND MOVEMENT INDICATOR FOR USE ON VEHICLES. ROBERT JAMES PATON, London, England. Filed Feb. 19, 1930, Serial No. 429,624, and in Great Britain Feb. 27, 1929. 8 Claims. (Cl. 116—52.)

1. A direction and movement indicator of the type specified comprising an indicating arm arranged to swing both about a substantially horizontal axis and about a substantially vertical axis, a support in which the indicating arm is mounted at one end to extend transversely to and to swing about one of said axes, a base part on which the support is mounted to pivot about the other of said axes, a slider which is mounted on the support so as to be fixed therein as regards rotation but to be free to slide relatively thereto in the direction of the length of the pivotal axis of the support, a single operating shaft so connected to the slider as to transmit linear and rotary movement thereto, and an operative connection between the slider and the arm such that the sliding movement of the former causes the latter to swing relatively to the support.

1,781,523. CHAMBER-FLUSHING DEVICE. LAWRENCE W. PECK, Chicago, Ill. Filed Jan. 25, 1929. Serial No. 334,952. 3 Claims. (Cl. 184—1.5.)

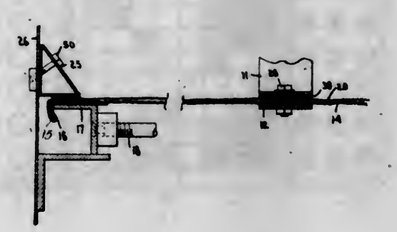
1. In a device for cleaning differential housings and the like, a reservoir for materials flushed from the housing, a block in the base of said reservoir, a receptacle for a cleaning fluid attached to said block, concentrically arranged pipes supported in said block, the inner pipe extending into said receptacle, means for delivering air under pressure to the outer pipe, a hollow casing on the outer pipe, concentrically arranged pipes secured in said

casing, and a flexible tubular member interchangeably attachable to the outer pipe of the first mentioned pair of pipes and the inner pipe of the second pair.



1,781,524. DRAWER CONSTRUCTION FOR STOVES AND THE LIKE. GEORGE E. PICKUP, Newark, Ohio, assignor to The Wehrle Company, Newark, Ohio, a Corporation of Ohio. Filed Oct. 4, 1928. Serial No. 310,277. 5 Claims. (Cl. 126—339.)

1. In a cooking range providing a horizontal forwardly opening compartment, the combination of a drawer slidably mounted in said compartment and withdrawable therefrom, said drawer having a front wall with an opening therein, and a member for closing said opening hinged to said wall and swingable forwardly therefrom to afford access to the interior of the drawer while the drawer is in closed position.

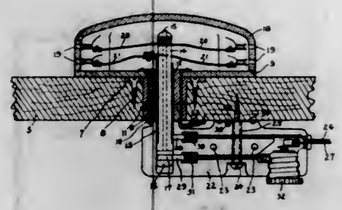


CARNEGIE LIBRARY OF ATLANTA

1,781,525. ATTACHMENT FOR AUTOMOBILE RADIATORS. FRANK POWER, Horton, Kans. Filed Oct. 19, 1928. Serial No. 313,541. 5 Claims. (Cl. 40—68.)

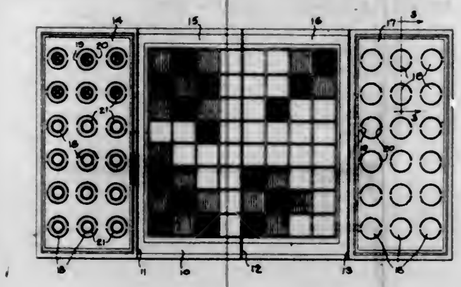
1. A device of the type described comprising a frame having openings therein, bearing members disposed in said openings, a horizontal shaft extending through said bearing members for rotatably supporting said frame, and a bracket carried by said shaft for securing said shaft to a suitable support.

1,781,526. APPARATUS FOR SCREENING MATERIALS. MORLEY PUNSHON REYNOLDS, Cleveland Heights, Ohio, assignor to The W. S. Tyler Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 28, 1926. Serial No. 105,113. 7 Claims. (Cl. 209—347.)



1. In apparatus of the character described, the combination of a stationary frame, a woven wire screen supported in an inclined position in said frame, said screen being engaged along two opposite edges in said frame and being tensioned to a uniform vibratory tension, a second woven wire screen of considerably finer mesh than said first-named screen supported upon said first-named screen in an untensioned condition, and means for rapidly vibrating said first-named screen.

1,781,527. FERROUS ALLOY. BYRAMJI D. SAKLATWALLA, Crafton, Pa. Filed Oct. 29, 1927. Serial No. 229,792. 2 Claims. (Cl. 75—1.)

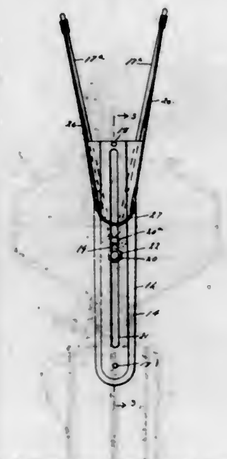


1. A ferrous alloy containing from 0.5% to 5.00% copper from 0.5% to 6.00% silicon, and from 0.1% to 2.00% aluminum, together with carbon within the range of cast iron, and characterized by its resistance to scaling and corrosion at high temperatures.

1,781,528. TABLE CONTACT. JUSTIN SCHNEEMANN, Chicago, Ill. Filed Mar. 21, 1929. Serial No. 348,748. 5 Claims. (Cl. 173—338.)

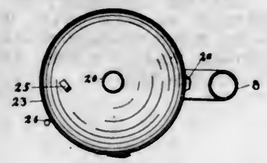
1. In a device of the class described in combination with a table board having a hole therein, a sleeve fastened to said board and extending into said hole and having a depression in its bore, a top housing, electric contacts in said housing, means on said housing adapted to extend into said sleeve and removably engaging said depression, electric conductors connected to said contacts and extending downwardly from said top housing through and beyond said hole, a lower housing and electric conductors in said lower housing to contact with said first mentioned conductors.

1,781,529. GAME. ISIDOR SHULMAN, New York, N. Y. Filed Jan. 20, 1930. Serial No. 421,946. 5 Claims. (Cl. 273—131.)



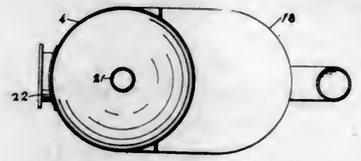
1. In a game of the character described, a sheet of relatively stiff material, one portion of which constitutes a playing area of predetermined design for movable playing pieces, said sheet including a second portion foldable over upon said first-mentioned portion, and a plurality of partially cut-out playing pieces formed in said second portion of the sheet.

3. In a game of the character employing movable playing pieces, a sheet of relatively stiff material of which both the playing area for the game and the movable pieces therefor are formed, said playing pieces being partially cut out of said material whereby to facilitate their ready removal therefrom.



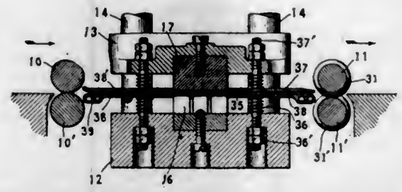
1,781,530. COMBINATION SLING SHOT AND BOW. EDWIN SCOTT SMITH, Harrisburg, Pa. Filed Apr. 13, 1929. Serial No. 354,800. 4 Claims. (Cl. 124—2.)

1. A combined sling-shot and bow comprising a hollow handle having a longitudinal slot in the face thereof, a block slidably housed within the handle, a screw projecting through said slot, a nut run upon said screw for holding



the block in any adjustment, two arms, the inner ends of which are pivoted to said block, and an elastic sling attached to the outer ends of said arms.

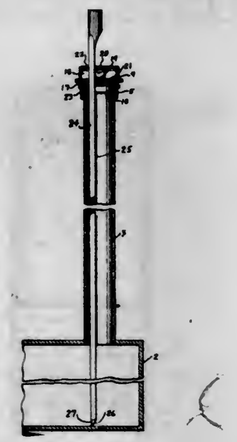
1,781,531. BOILER AND WATER HEATER. LOUIS D. SUMMERS, Decatur, Ill., assignor, by mesne assignments, to Leader Iron Works, Inc., Decatur, Ill., a Corporation of Delaware. Filed Sept. 22, 1927. Serial No. 221,368. 1 Claim. (Cl. 122—122.)



In a fire tube boiler, an outer shell, a combustion chamber in the lower portion of said shell, a horizontal tube sheet above said combustion chamber; a set of relatively small upright fire tubes connected into said tube sheet and extending through a water chamber to an upper tube sheet and affording communication between said combustion chamber and an upper gas chamber formed above said upper tube sheet, a second set of relatively large fire tubes having a combined cross sectional area in excess of that of said relatively small fire tubes and extending from said upper chamber to a third tube sheet located below the level of the first mentioned tube sheet and surrounding the said combustion chamber, a smoke box below said lowermost tube sheet, an inner upright shell surrounding said set of relatively small fire tubes and said combustion chamber and having upper and lower water passages therethrough to afford communication between the water space inclosed by said shell and the water space surrounding said shell, said upper gas chamber being slightly spaced from the top of the boiler to provide a relatively thin steam space, a plurality of steam conducting tubes extending from the upper tube sheet to said steam space communicating with said water chamber, a normally closed outlet from said upper gas chamber and an outlet for said lower smoke chamber communicating with said upper gas outlet and a gas discharge flue.

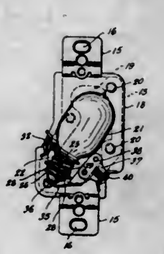
1,781,532. BOILER AND WATER HEATER. LOUIS D. SUMMERS, Decatur, Ill., assignor, by mesne assignments, to Leader Iron Works, Inc., Decatur, Ill., a corporation of Delaware. Filed Sept. 22, 1927. Serial No. 221,369. 1 Claim. (Cl. 122—182.)

A boiler and water heater comprising in cooperative combination an upright drum forming a combustion chamber, a second upright drum encompassing the first and spaced therefrom forming a relatively thin water leg about the combustion chamber drum and a relatively thin water space above the combustion chamber drum; an outer wall connected with and partially encompassing said second drum; said outer wall provided with an upper and a lower outlet on the side thereof for the hot products of combustion and a house flue connected with said outlets; spaced header plates secured to said second drum and encompassed by said outer wall so as to form an upper gas chamber above the upper plate and a lower gas chamber below the lower plate, said upper gas chamber being in communication with said combustion chamber and a water chamber between the two plates; a plurality of fire tubes connecting said plates establishing communication between said upper and said lower gas chambers; said second drum provided with an upper and a lower opening establishing water communication between said water leg and said water chamber; means for admitting cold water into said water chamber and means for releasing water from the top of said second drum over said first drum.



1,781,533. MACHINE FOR SLITTING SHEETS TO BE STRETCHED. ROBERT S. ALLYN, Brooklyn, N. Y., assignor to Robert S. Allyn, as trustee for the benefit of Dwight G. Clark, Coosada Station, Ala.; Lida C. Clark, Lakeville, Conn.; Emil H. Fickinger, Great Neck, and Robert S. Allyn, New York, N. Y. Filed Apr. 26, 1929. Serial No. 358,201. 10 Claims. (Cl. 164—6.5.)

1. Slitting mechanism comprising feed rolls, punch and die members, a spring pressed stripper plate having openings for the die members, a guide member hinged at one end to said plate and a stop holding the other end of said guide member adjacent said feed rolls.

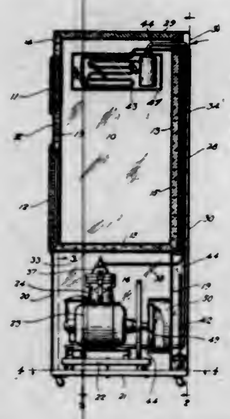


1,781,534. ANTIFRAUD MEANS FOR STORAGE TANKS. CHARLES F. BERTSCHINGER, Jamaica, N. Y., assignor of three-fourths to Tide Water Oil Company, Bayonne, N. J., a Corporation of New Jersey. Filed Aug. 26, 1927. Serial No. 215,552. 5 Claims. (Cl. 220—86.)

1. Anti-fraud means for a storage tank, comprising an enclosure guarding the entrance to the tank and containing a ball chamber with a ball therein, the upper and lower walls of said chamber having openings one above the other forming part of a through way for the insertion of a gauge rod into the interior of the tank, the lower o

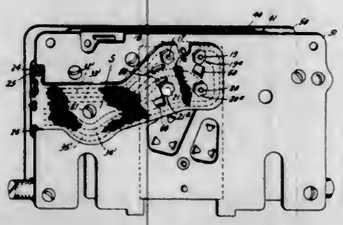
said openings presenting a circular seat in which the ball normally rests but from which it can be pushed aside by the gauge rod, and the upper of said openings being of odd shape and comparatively small area.

1,781,535. PILOT-LIGHT RECEPTACLE. TONJES A. BOTH, Stratford, Conn., assignor to The Connecticut Electric Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Oct. 3, 1925. Serial No. 60,317. 9 Claims. (Cl. 177—311.)



8. In a device of the character described, an insulating support, a lamp support mounted on the insulating support comprising an integral member having a pair of spaced substantially parallel arms having aligned openings therethrough to receive the threaded shell contact of a lamp, one of said arms having two portions thereof offset laterally from each other an amount substantially equal to the space between two threads on said shell so as to engage in the grooves on the opposite sides of a thread, and the connection between the portions having a notch for passage of said thread.

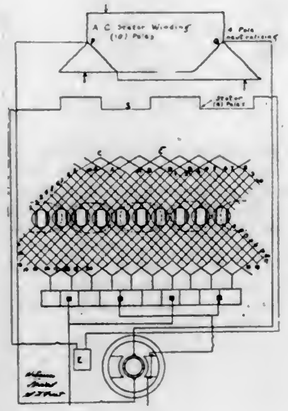
1,781,536. REFRIGERATION. JOHN JACOB BROWN, New York, N. Y., assignor, by mesne assignments, to Servel, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 22, 1926. Serial No. 156,462. 1 Claim. (Cl. 62—116.)



Refrigerating apparatus comprising a cabinet including a food space, a machine compartment and a condenser space, said machine compartment being surrounded by walls including a rear wall between the machine compart-

ment and the condenser space, said rear wall having an air passage therethrough near one end of the machine compartment and the bottom wall of the machine compartment having apertures therethrough near the other end of the compartment, the walls of the machine compartment including the front wall being otherwise unapertured, a condenser in said condenser space, a compressor

in said machine, compartment adjacent the apertures in said bottom wall, a motor in said machine compartment adjacent the air passage in said rear wall and a single fan mounted on the shaft of said motor in said air passage and arranged to cause flow of air downwardly past said condenser in said condenser space, through said air passage, past said motor and compressor and through said apertures.



1,781,537. ELECTRICAL TOY. LOUIS CARUSO, Irvington, N. J., assignor to The Lionel Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 16, 1929. Serial No. 347,557. 6 Claims. (Cl. 105—49.)

1. A motor for toy locomotives and the like, comprising a frame carrying the field and armature of the motor, a terminal assembly for the armature and field windings, a reversing switch having a terminal assembly, and a unitary conductor strip having a plurality of conductors permanently carried thereby and spaced at their ends to fit the terminal assemblies and connect predetermined terminals so that operation of the reversing switch may reverse the motor.

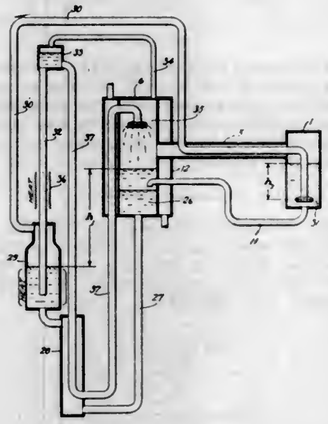
1,781,538. DYNAMO-ELECTRIC MACHINE. FREDERICK CREEDY, London, England. Filed Nov. 9, 1925, Serial No. 67,772, and in Great Britain Nov. 21, 1924. 16 Claims. (Cl. 171—123.)

1. A dynamo-electric machine comprising a stator, a winding on the stator, a rotor, a winding on the rotor in two parts, a commutator, one part of said rotor winding connected thereto, brushes on the commutator, the winding on the stator producing a field of one pole number energized from an alternating current supply and a field of a second pole number energized from a second supply, the said winding producing ampere turns substantially equal and opposite to those produced in the rotor by the current flowing through the commutator, said pole num-

bers differing by more than three, the stator field of the second pole number inducing E. M. F.'s across the brushes on the commutator, and the other part of the winding on the rotor constituted by sets of conductors spaced apart by an even number of pole pitches of the second field and connected in series in a closed circuit.

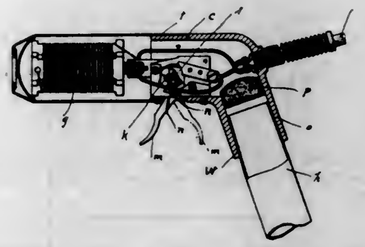
1,781,539. REGULATING VALVE FOR GREASE LUBRICATING SYSTEMS. JOHN F. CULP, Philadelphia, Pa., assignor to Ideal Lubricator Company, Philadelphia, Pa., a Corporation of Delaware. Filed Jan. 25, 1928. Serial No. 249,245. 1 Claim. (Cl. 251—77.)

A regulating valve for grease systems comprising a casing provided with an inlet and an outlet arranged substantially at right angles, a closure slidably mounted in said casing and having a portion thereof forming leakproof contact with said casing and another portion having a helical groove disposed between said inlet and said outlet, and means extending through the leakproof protected end of said casing for moving said closure to open and closed position and to change the position of said groove with respect to said inlet.



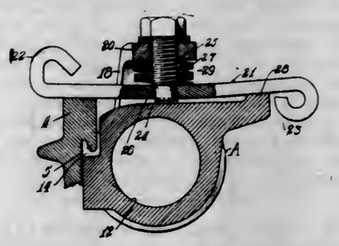
1,781,540. CAR SEAL. IVAN E. DAY, Edgerton, Ohio. Filed May 17, 1929. Serial No. 363,848. 4 Claims. (Cl. 292—322.)

1. A car seal formed of a single metallic sheet shaped with a main portion having side seam flanges and oppositely projecting lock members at its ends, and a shackle strip contiguous with one of its ends, one of said lock members having a projection formed therein, and the other lock member having divergent fingers at its free end and a series of projecting latches between its ends, the free end of said shackle strip having a slot adjacent its extreme end, and a series of projecting latches back of said slot inclined therefrom, and a deflector back of



said latches upon the side of the strip opposite thereto, said lock members being folded one over the other and inclosed by said main portion which is folded and its flanges clinched together forming a head for the seal, the free end of said shackle strip, when inserted in said head, having locking engagement with one of said members, and the deflector thereof being wedged between the other member and the adjacent wall of said head.

1,781,541. REFRIGERATION. ALBERT EINSTEIN, Berlin, and LEO SZILARD, Berlin-Wilmersdorf, Germany, assignors to Electrolux Servel Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 16, 1927, Serial No. 240,566, and in Germany Dec. 16, 1926. 5 Claims. (Cl. 62—119.5.)

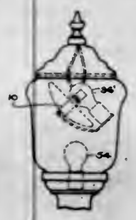


1. Refrigerating apparatus comprising a generator, a condenser arranged at a higher level than the generator, an evaporator, a container arranged at a higher level than the condenser, said generator containing an inert gas dissolved in absorption liquid and adapted to expel the inert gas from solution, a conduit for conducting the inert gas from the generator to the evaporator, a conduit for conducting liquid refrigerant from the condenser to the evaporator, a conduit for conducting mixed vapor of refrigerant and inert gas from the evaporator to the condenser in heat exchange relation with inert gas passing into the evaporator, a conduit for conducting rich absorption liquid from the condenser to the generator by gravity, a conduit for conducting weak absorption liquid from said container to said condenser by gravity, a conduit extending upwardly from said generator to said container and means to heat the last-mentioned conduit to lift liquid from the generator to the container.

1,781,542. BLOWING NOZZLE FOR SUCTION CLEANERS. AXEL OLOF ENGBERG and ANDERS ERIKSSON-JONS, Stockholm, Sweden, assignors to Inventia Patent-Verwertungs-Gesellschaft, Schaffhausen, Switzerland, a Corporation of Switzerland. Filed Oct. 24, 1928. Serial No. 314,574, and in Sweden May 19, 1928. 4 Claims. (Cl. 219—39.)

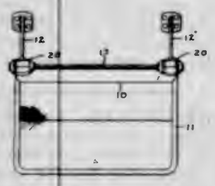
1. In a blowing nozzle for suction cleaners, a body portion containing an electrical heating resistance and a switch therefor, and a connection piece angularly disposed to said body portion for detachably receiving a hose, said connection piece and the adjacent hose portion forming a handle for said body portion.

1,781,543. HOSE COUPLER. EGBERT H. GOLD, Evanston, and THOMAS H. MANCHESTER and EDWARD A. RUSSELL, Chicago, Ill.; said Manchester and said Russell assignors to Vapor Car Heating Company, Inc., Chicago, Ill., a Corporation of New York; Margaret Jayne Gold and Biscayne Trust Company executors of said Egbert H. Gold, deceased. Filed Aug. 19, 1927. Serial No. 214,092. 6 Claims. (Cl. 285—68.)



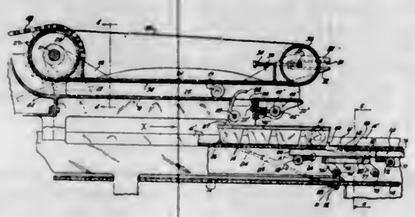
1. In combination with a hose coupler comprising a head and a projecting arm adapted to engage respectively with the arm and head of a mating coupler, a locking device supported on the head and adapted to yieldingly engage the arm of a mating coupler, said device comprising a spring locking bar, a separate spring member of greater flexibility than the locking bar and positioned to be flexed by the locking bar when moved into engagement with the arm, and means for limiting this flexure of the spring member.

1,781,544. LIGHTING UNIT. HERBERT J. GRAHAM, Philadelphia, Pa., assignor to Electric Service Supplies Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 31, 1929. Serial No. 336,382. 18 Claims. (Cl. 240—25.)



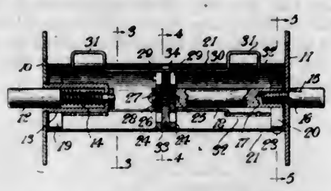
1. In a lighting unit including a glass globe, an adapter for facilitating the mounting therein of a flood-lighting

assembly, said adapter comprising a contractible member arranged to be quick-detachably secured to the upper



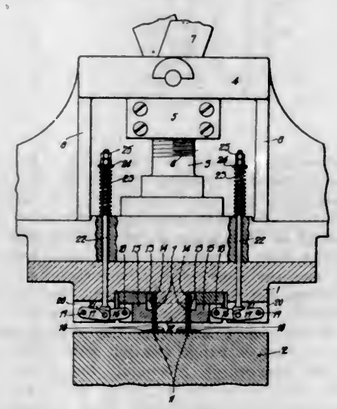
edge of said globe, and means carried by said member and constituting a lateral support for said flood-lighting assembly.

1,781,545. GLARE SHIELD. PHILIP GROENENSTEIN, Cleveland, Ohio. Filed Dec. 30, 1926. Serial No. 157,896. 1 Claim. (Cl. 296—97.)



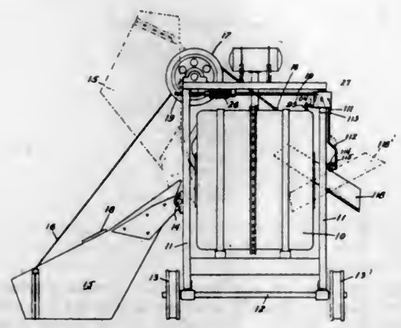
A glare shield having in combination, a pair of independent supporting arms, each arm having a passageway extending therethrough, a shaft extending between and through each of said arms and projecting beyond the end of each arm, an indexing couple between the shaft and each arm, said couple having one member rigid with the associated arm, and having the other member rigid with the shaft, a spring mounted in each passageway and operating upon the members of the couple to hold them in engagement with each other, a visor, a frame therefor, a frame extension rigidly mounted upon the shaft and means outside the frame and engaging the shaft for holding all of said members in assembled relationship.

1,781,546. DOUGH-MOLDING MACHINE. LAURENCE S. HARBER, Saginaw, Mich., assignor, by mesne assignments, to Baker Perkins Company, Inc., Saginaw, Mich., a Corporation of New York. Filed Apr. 9, 1925. Serial No. 21,763. 3 Claims. (Cl. 107—9.)



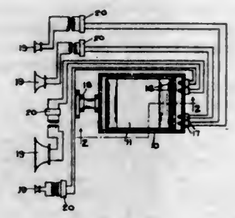
1. In a dough molding machine of the kind described, in combination a stationary table forming the bottom of a molding channel, a pressure belt forming the top of the latter and traveling from its inlet to its outlet, an opening extending near the latter across the said table, a shaft rotatably mounted underneath the latter in a stationary support, a trip fixed to said shaft, extending upwards through the said opening for its length and closing it, when pressed down by a loaf passing along the said molding channel, a pan conveyor located beneath the said table and carrying the pans to be filled underneath the discharge end thereof, a pawl adapted to arrest the pans and to keep them stationary on the said conveyor, a lever and link mechanism connected to said shaft and to said pawl, keeping by its weight the said trip and the said pawl in their upright position, and adapted when its weight is overcome by the pressure of a loaf passing over said trip and the latter is thereby lowered, to lower said panel simultaneously therewith, and thus to cause by the release of said pawl a forward movement of the pans on said pan conveyor and a turn buckle provided in a link of said lever and link mechanism for adjusting the distance at which the top of the said pawl extends above the bottom of the pans.

1,781,547. ADJUSTABLE-TENSION PAPER HOLDER. JOSEPH A. HOEGGER, Jersey City, N. J. Filed Feb. 16, 1928. Serial No. 254,672. 6 Claims. (Cl. 242—72.)



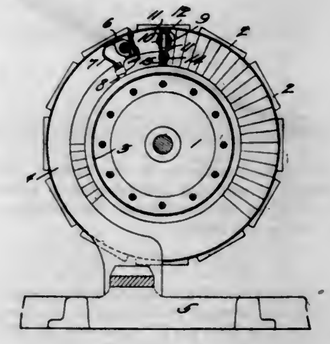
1. A structure of the kind described comprising a spool, shoes at axially spaced intervals movable in and out beyond the face of the spool body and extending through guide slots in said body, a yielding backing for the shoes, and means for adjusting the shoes in and out and thereby regulating their tension.

1,781,548. WELDING CLAMPING DEVICE. LE ROY H. HOFFER, Brooklyn, N. Y., assignor to Metropolitan Engineering Company, Brooklyn, N. Y., a Corporation of New York. Filed Sept. 26, 1929. Serial No. 395,271. 10 Claims. (Cl. 219—17.)



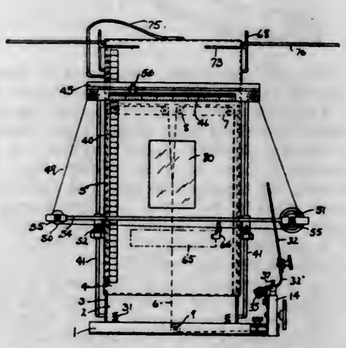
1. In a welding apparatus, a pair of electrodes, work clamping means for said electrodes and means for automatically releasing said clamping means upon the separation of said electrodes to a determined distance.

1,781,549. CONTROL MECHANISM FOR CONCRETE-MIXING APPARATUS. OLIVER JOHNSON, Hollywood, Calif., and RAYMOND G. SANDERS, Spokane, Wash. Filed Mar. 11, 1929. Serial No. 345,949. 7 Claims. (Cl. 83—73.)



4. In combination with a mixing drum and with a charging hopper and a discharge chute therefor, a control mechanism associated therewith comprising a casing and a control member slidably mounted therein, a stop carried by the casing, means tending to move said control member toward and against said stop, holding means extending from said chute and adapted to be locked by said control member, means for advancing said control member away from said stop upon each revolution of the drum, and means for releasing said holding means from the control member after the drum has made a predetermined number of revolutions.

1,781,550. METHOD OF AND APPARATUS FOR RECORDING AND REPRODUCING SOUNDS. BERNARD KWARTIN, Philadelphia, Pa. Filed Dec. 2, 1927. Serial No. 237,822. 2 Claims. (Cl. 179—100.3.)

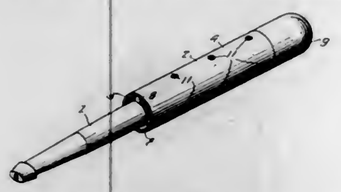


1. An apparatus for photographically producing upon a photographic film a plurality of individual records of sounds of distinctly different pitch characteristics, said apparatus comprising a casing, means for moving the film through the casing, a light enclosing chamber arranged to one side of and extending transversely of said film, said chamber being provided with a plurality of transversely spaced slots, a plurality of light sources within said chamber respectively located behind said slots for projecting light rays therethrough, said light sources being independently responsive to different electrical variations corresponding to sound vibrations of different pitch for recording the different sounds upon the film, and a plurality of sound responsive devices having diaphragms of varying mass and size each selectively responsive to sounds of different pitch for producing said different electrical variations.

1,781,551. COMMUTATOR ACCESSORY. WILLIAM MATAYA, Seattle, Wash. Filed Feb. 15, 1928. Serial No. 254,547. 2 Claims. (Cl. 171—321.)

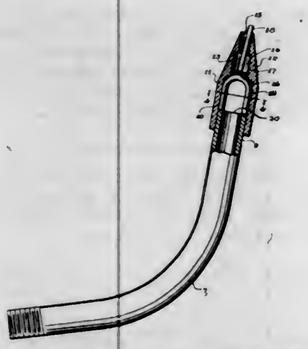
1. In combination with a commutator and a brush holding casting cooperating therewith, of a cleaning element to cooperate with the commutator and including a shaft rotatably mounted in said casting, a holder adjustable diametrically of the shaft, and a series of bristle elements secured in the holder.

1,781,552. COPYHOLDER ATTACHMENT FOR TYPEWRITERS. LOUIS T. MATHEWS, Houston, Tex. Filed Jan. 11, 1927, Serial No. 160,349. Renewed July 11, 1930. 14 Claims. (Cl. 120—29.)



1. In a typewriter copyholder, a base, an upright frame thereon, a copyholding plate slidable thereon, a flexible line secured to said plate and arranged to raise said plate on said frame a spool to which said line is attached for winding, a hand lever operatively connected with said spool, and a carriage-engaging lever extending upwardly above said hand lever and adapted to engage and move said hand lever in the manner described.

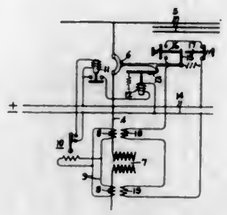
1,781,553. SMOKER'S ARTICLE. JOHN S. MCCLERS, Baltimore, Md. Filed Jan. 5, 1929. Serial No. 330,563. 3 Claims. (Cl. 131—51.)



1. A holder for cigars and cigarettes comprising a hollow mouthpiece, means at one end of said mouthpiece

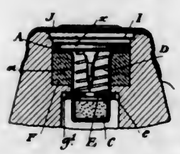
adapted to receive one end of the combustible article and to maintain said article in operative position with respect to the holder and a heat-conducting element pro-

jecting into close proximity to the surface of the combustible article at said end and adapted to create a chilling effect tending to extinguish the burning material before it reaches the holder.



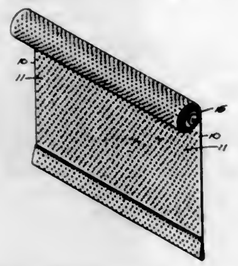
1,781,554. LUBRICATOR. ARTHUR G. NORTON, Holley, N. Y., assignor to Alert Products, Inc., Rochester, N. Y., a Corporation of New York. Filed Oct. 1, 1928. Serial No. 309,543. 3 Claims. (Cl. 221—47.)

1. A valve for lubricators comprising a nozzle having a tapered end provided with three bores of three different diameters, the smallest being at the discharge of the nozzle and the largest being at the opposite end, and two internal shoulders being provided, one between the intermediate bore and the smaller bore and the other between the intermediate bore and the larger bore, a conductor fitted in the larger bore and having its end spaced from the adjacent shoulder, a valve member freely movable in the intermediate bore to cooperate with the shoulder between the intermediate bore and the smaller bore to close the passage through the nozzle, a valve operator projecting from the valve through and from the smaller bore beyond the tapered end so that the valve member may be moved away from its seat, and a stop for the valve member held between the conductor and the shoulder between the intermediate and the larger bore, said stop extending across the passage through the nozzle to engage the valve member to confine the latter to the intermediate bore, space being provided on opposite sides of the valve member to permit a flow into the conductor from the smaller bore.



1,781,555. PROTECTIVE ARRANGEMENT. HERBERT STANLEY PETCH, London, and JOHN GOLE WELLINGS, Dunchurch, England, assignors to General Electric Company, a Corporation of New York. Filed May 1, 1928, Serial No. 274,313, and in Great Britain May 14, 1927. 6 Claims. (Cl. 175—294.)

1. In combination with an alternating current circuit and a switch adapted to be operated to control the circuit, fault responsive protective devices connected to be energized from said circuit for controlling said switch only including current transformers in series relation with said circuit and a relay connected to be energized from said current transformers and means for reducing the sen-

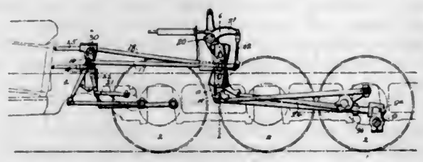


sitivity of one of the protective devices during the switch closing or opening arranged to impress an auxiliary electromotive force on a winding of the device substantially to saturate the magnetic circuit thereof during the switching operation.

1,781,556. PERCUSSION FUSE FOR ARTILLERY AND AIRCRAFT PROJECTILES. LÉON EMILE RÉMONDY, Paris, France. Filed Feb. 13, 1930, Serial No. 428,189, and in France Apr. 29, 1929. 3 Claims. (Cl. 102—39.)

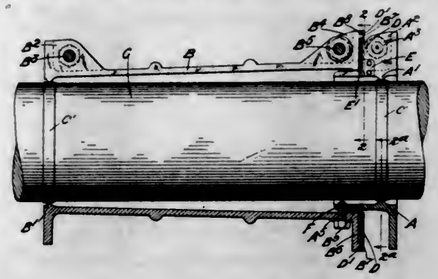
1. A supersensitive percussion fuse comprising a movable carriage (A) containing the elements of the firing mechanism (striker B and percussion cap C) with a spacing member (spring D) interposed between these members one of which, the front element (B) is virtually integral with a casing (A) of the carriage, which casing is pierced with apertures (*a*) through which the latter is guided on the lugs of a washer (E) bearing under the action of the spacing spring (D) on a shoulder (G^1) on the fuse body (G), the fuse being characterized by the feature that the rigid striker forming the front element of the mechanism comprises a wide head (*b*) bearing on a corresponding flange (a^1) on the casing of the carriage, which flange is crimped, hooked or secured on the said head, the carriage bearing by means of the head of the striker covered or lined by the flange on the carriage on a sleeve F made of a compressible material (cork, felt or other suitable material having a very small initial compression) and the carriage thus constructed and supported being set back with respect to the mouth of the fuse body in order to form between this mouth and the outer face of the head on the percussion system of a space (*x*), the mouth being however closed by a cap (H) or a diaphragm (I) of small mass preventing the direct action of the air upon the said percussion system, while being sufficiently weak to be capable of breaking upon impact against an obstacle even against one offering little resistance, the said cap also permitting a preliminary settling of loose materials such as grass, leaves or humus, to be obtained upon impact with a view to driving the carriage in more strongly in order to operate the fuse.

1,781,557. WINDOW SHADE. EDWARD REUKAUF, Jr., Philadelphia, Pa., assignor to Carey-McFall Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 22, 1929. Serial No. 372,917. 9 Claims. (Cl. 156—10.)



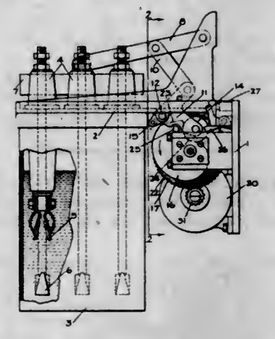
4. A window shade composed of a fibrous base coated with a non-fibrous substance and provided with a plurality of relatively small perforations distributed over its area..

1,781,558. PANEL CONSTRUCTION FOR SIGNBOARDS. JOHN P. SPECK, Tiffin, Ohio. Filed Nov. 17, 1927. Serial No. 233,998. 2 Claims. (Cl. 40—125.)



1. A panel for sign boards formed of sheet metal, reinforcing members disposed at opposite margins of the panel upon the rear face thereof, the metal of the panel being extended entirely around said reinforcing members, the sheet metal opposite one of said reinforcing members and on the exterior face thereof being formed with a V-shaped tongue and the metal on the outer face of the other reinforcing element being formed to provide a corresponding V-shaped groove, said tongue and groove acting to center the panels with relation to each other so that the outer faces of the panels are exactly flush, the reinforcing elements and the sheet metal surrounding the same being apertured for the passage of bolts extending parallel to the face of the panel.

1,781,559. LOCOMOTIVE VALVE GEAR. VICTOR R. STEWART, Glenside, Pa. Filed Nov. 30, 1926. Serial No. 151,732. 5 Claims. (Cl. 121—116.)

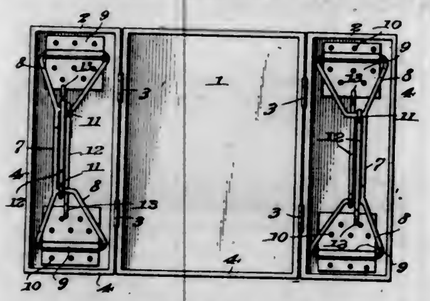


4. The combination in a valve mechanism for a three-cylinder locomotive of three valves; a rod attached to each valve; three reversing links two of said links being arranged close together on one side of the locomotive; a single link on the opposite side thereof, said links being in transverse alignment; an axle having wheels; a double crank on one end of said axle; pins on the double crank, said pins being connected to the two reversing links on that side of the locomotive and the crank at the opposite end of the axle; connections between the said crank and the single link on that side of the locomotive; rods connecting the links with the valve rods of their respective cylinders; a transverse reversing shaft having three arms; connections between the arms and their respective rods; three cross-heads; and levers connecting said rods with their respective cross-heads.

1,781,560. TORSION METER. LEONARD GODFREY PINNEY THRING, Cambridge, England. Filed Dec. 11, 1928, Serial No. 325,180, and in Great Britain Dec. 17, 1927. 11 Claims. (Cl. 265—25.)

3. A torsion meter including in combination two tubular members parts of which lie adjacent, said adjacent parts being apertured, means for fixing these members respectively on a shaft at points spaced apart along the shaft whereby torsion in the shaft will produce proportional relative displacement of said members, a series of radial wire suspension rods extending between and passing through the apertures in the adjacent parts of the two members, a head member on one end of each rod bearing against one member, and a nut member engaging the other end of each rod and bearing on the other member.

1,781,561. ELECTRIC-SWITCH-OPERATING MECHANISM. LUDWIG S. WALLE, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 14, 1928. Serial No. 306,073. 5 Claims. (Cl. 175—375.)

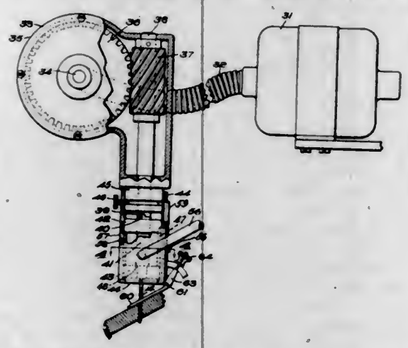


5. Actuating mechanism for a power switch comprising a cam, a spring opposing the forward rotation of the cam, a member operatively connected with the switch having one portion engaging one part of the cam to close the switch in response to forward rotation of the cam and having another portion arranged to engage another part of the cam to open the switch in response to a predetermined backward rotation of the cam, an electric motor for rotating the cam to close the switch, means for decreasing the torque of the motor to cause it to substantially balance the force of said spring when the switch is closed, and means for reversing the motor to positively open the switch.

1,781,562. PORTABLE FOLDING TABLE. THOMAS ISAAC WALLIS, Evansville, Ind. Filed July 29, 1929. Serial No. 381,841. 1 Claim. (Cl. 45—116.)

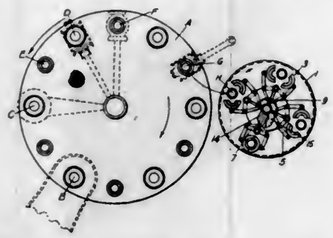
In a portable folding table, the combination with a center top section and end top sections hinged to said cen-

ter section and foldable against the same side thereof, of a pair of foldable legs hinged to, and bodily carried by, each end section, a brace hinged to each leg, and a



releasable tie rod engaged with all of the top sections and with all of the aforesaid braces to lock the top sections and the legs in extended position.

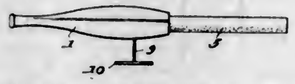
1,781,563. LOCOMOTIVE BELL RINGER. GUSTAVE WALTER, Jersey City, N. J. Filed Jan. 17, 1930. Serial No. 421,565. 4 Claims. (Cl. 121—2.)



1. An improved locomotive bell ringer comprising a cylinder having inlet and exhaust ports at one end portion and an air outlet at the other end portion, a plunger connected to the bell and fitted to reciprocate in said cylinder, a normally closed valve for controlling said inlet, and a valve rod movable with said piston and having a reduced part for controlling the opening and closing of the exhaust port and further having an end portion for acting to open said valve only after the exhaust port is closed.

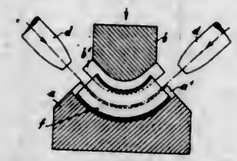
1,781,564. CUTTING DEVICE AND TOOL THEREFOR. ERNEST J. BEATTIE, Fall River, Mass. Filed Apr. 8, 1929. Serial No. 353,322. 16 Claims. (Cl. 128—317.)

1. A portable plaster cast cutting device comprising a carrier; a guide foot carried thereby; a tool holder mounted in said carrier; a remote source of power; a driving connection between the latter and said carrier, constructed to permit free movement of the latter relative to the former; and a side-cutting, spiral-toothed cutting tool mounted on and to be rotated by said tool holder.



1,781,565. METHOD AND APPARATUS FOR MAKING ARTICLES OF GLASSWARE. ROBERT J. BEATTY, Columbus, Ohio, assignor to The Federal Glass Company, Columbus, Ohio, a Corporation of Ohio. Filed Mar. 13, 1928. Serial No. 261,354. 6 Claims. (Cl. 89—9.)

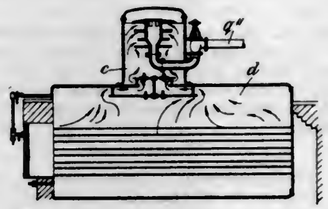
1. The method of producing glassware which comprises pressing a blank in a one-piece mold, blowing the pressed blank in another one-piece mold to a shape that will still allow its removal therefrom, and then blowing the shaped blank in a mold other than a one-piece mold to a shape which would preclude removal from a one-piece mold.



3. Apparatus for producing articles of glassware comprising a primary shaping table having both individual press and blow molds mounted thereon, said blow mold being of one-piece construction, and a secondary shaping table having multi-piece blow molds mounted thereon disposed adjacent said first-named shaping table and operating in timed relation with said primary shaping table.

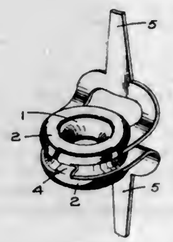
1,781,566. CIGARETTE HOLDER. JOHANN WILHELM BLESCH, Evansville, Ind. Filed Feb. 1, 1929. Serial No. 336,894. 2 Claims. (Cl. 131—10.)

1. A cigarette holder provided with an elongated chamber and a smoke duct communicating therewith and also having a longitudinally disposed slot communicating with the chamber, said chamber being adapted to receive the end of a cigarette, a pusher provided with a smoke conduit and slidably mounted in said chamber, and a combined rest and pusher-manipulator having a shank passing through said slot and engaged with the pusher and provided with a single enlarged thin piece disposed externally of the holder and lying in a plane crosswise of the length of the shank and adapted to sustain the cigarette holder in general horizontal position entirely clear of the support on which said cigarette holder is placed when not in use.



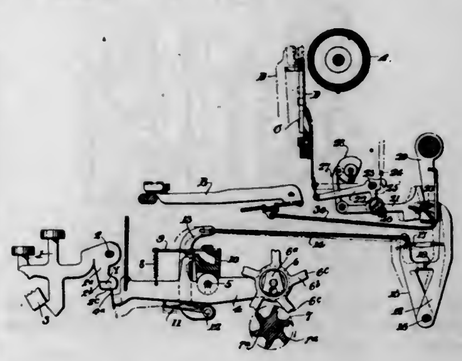
1,781,567. APPARATUS FOR PRODUCING BENT PIPES OF CORRECT PRESCRIBED LENGTHS. RUDOLF HIERONYMUS BÖHLING, Hamburg, Germany, assignor to the Firm of Rohrbogenwerk Gesellschaft mit beschrankter Haftung, Hamburg, Germany. Filed Apr. 6, 1929, Serial No. 353,103, and in Germany June 14, 1928. 4 Claims. (Cl. 153—32.)

1. An apparatus for giving bent pipes, elbows, bends, return bends or the like prescribed lengths, comprising a



two-part mold and two mandrels, all four parts embracing a hollow space corresponding to the shape of the bend to be produced, the cavity of one die corresponding to the mating half containing the outer curvature and the cavity of the other die corresponding to the mating half containing the inner curvature, means to move the dies upon one another in a direction parallel to the central plane of the bend and means to move the mandrels centrally to the open ends of the mold.

1,781,568. STEAM-DRYING OR WATER-SEPARATING APPARATUS FOR STEAM-POWER PLANTS. FRIEDRICH BROEKER, Furstenwalde, Germany. Filed May 24, 1928, Serial No. 280,364, and in Great Britain Apr. 12, 1928. 2 Claims. (Cl. 122—492.)



2. In steam drying and water separating apparatus, a steam generator having a steam dome, a manhole beneath said dome, two divided hinged plates, one located above and the other below said manhole, a ring spacing each of said divided plates, steam apertures in said rings, means for fixing said plates rigidly in their extended position and spring controlled disk valves carried by said plates constituting safety by-passes for the steam if the apertures in said spacing rings become choked.

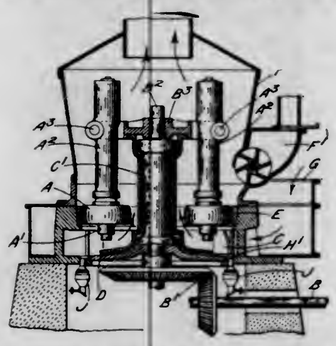
1,781,569. LINE-SUPPORTING RING FOR FISHING RODS. CHARLES ARTHUR COOK, Redditch, England, assignor to Henry Wilkes & Company, Limited. Filed Feb. 19, 1930, Serial No. 429,651, and in Great Britain Mar. 9, 1929. 5 Claims. (Cl. 43—44.)

1. Line-supporting means for fishing rods, comprising a ring of hard non-metallic material, a sheet metal shield for protecting the edges of the ring, and comprising two ring-like parts lying one upon each side of the non-metallic ring and embracing the edges thereof and an attachment portion on the protecting member for its attachment to the rod.

1,781,570. TYPEWRITING MACHINE. GUSTAVE O. DEGENER, New York, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 12, 1927. Serial No. 239,491. 6 Claims. (Cl. 197—17.)

1. In a typewriting machine, a ribbon vibrator, an actuator therefor, a power operated lever, a universal bar actuated thereby, and connections between the universal bar and the actuator which include two levers and means yieldingly connecting the same.

1,781,571. TYPEWRITING MACHINE. GUSTAVE O. DEGENER, New York, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 12, 1927. Serial No. 239,492. 7 Claims. (Cl. 197—17.)



1. In a back spacing operating mechanism for typewriting machines, the combination with a source of power, a power lever adapted to be operatively connected to the back space devices and adapted to be brought into operative relation to the source of power, a key lever having a recess in its under surface, and an extension on the front end of the power lever normally engaging the key lever adjacent the recess and held by said engagement out of operative relation to the source of power, said extension passing into said recess when the key is depressed, thereby permitting the power lever to assume operative relation to the power means.

1,781,572. APPARATUS FOR PULVERIZING COAL AND LIKE SUBSTANCES. WALTER JAMES DRUMMOND, Newcastle-upon-Tyne, England, assignor of one-half to Ashington Coal Company Limited, Newcastle-upon-Tyne, England, a Company of Great Britain. Filed Jan. 4, 1930, Serial No. 418,595, and in Great Britain Apr. 24, 1929. 5 Claims. (Cl. 83—45.)

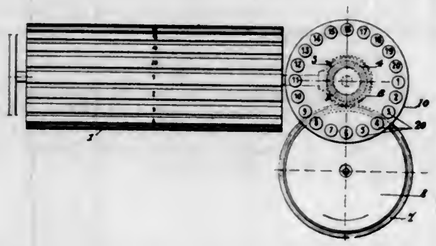
1. In apparatus for pulverizing coal and like substances the combination of a grinding chamber having an inlet for unground material and an outlet through which the fine ground particles are discharged by means of an air current, receptacles communicating with the grinding cham-

ber within which receptacles the heavier particles tend to accumulate, and means for admitting a current of air

into each receptacle and thus driving back into the grinding chamber any lighter particles which have been carried into the receptacles.

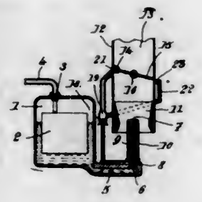
1,781,573. CLOTHESLINE FASTENER. JOHN B. ERRETT, Connellsville, Pa. Filed Nov. 30, 1929. Serial No. 410,789. 7 Claims. (Cl. 24—129.)

1. A clothes line fastener comprising a body provided at one end with a straight, tapered line-engaging projection, and provided on one side with a line-engaging projection.



1,781,574. PROTECTED ARMORED CABLE OR CONDUIT. OTTO A. FREDERICKSON, Ben Avon, Pa., assignor to National Electric Products Corporation, New York, N. Y., a Corporation of Delaware. Filed Oct. 18, 1928. Serial No. 313,204. 6 Claims. (Cl. 247—39.)

1. A flexible metallic armored cable for electrical wiring uses provided with a wrapping of transversely crumpled paper therearound disposed directly upon the flexible metallic armored conduit, an outer protecting covering disposed directly upon and about said transversely crumpled paper wrapping having impregnating compounds therein which penetrate the interstices of the covering and outer pores and outer surfaces of the transversely crumpled paper wrapping but which are prevented from access to the flexible metallic armor by said transversely crumpled paper wrapping so that the protecting covering may be removed leaving a clean surface upon the armor.

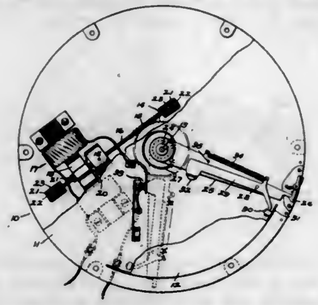


1,781,575. WEIGHING APPARATUS. LUCIEN GANDRIAUT, Nancy, France. Filed May 15, 1928, Serial No. 277,856, and in France May 31, 1927. 5 Claims. (Cl. 40—33.)

1. In a weighing apparatus of the type described comprising a casing having a sight opening, a rotatable carrier having a plurality of scales thereon each of which is adapted to be brought individualy to a position opposite said sight opening, an annular member rotatable upon its axis and longitudinally movable thereon, said member being connected for rotation with said carrier, said member having a recess therein, tappets located opposite said annular member for moving said member longitudinally, spring means urging said annular member towards said tappets and driving means for rotating said annular

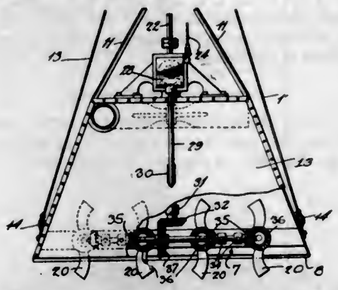
member operative when said member has been moved longitudinally by operating one of said tappets against said spring means thereby rotating said carrier, said driving means being stopped when said operated tappet encounters said recess allowing a return longitudinal movement of said member.

1,781,576. CARBURETOR. MAURICE GOUDARD, Neuilly, France, assignor to Société Anonyme Solex, Neuilly, France, a Society of France. Filed July 1, 1929, Serial No. 375,021, and in Belgium Aug. 1, 1928. 3 Claims. (Cl. 261—41.)



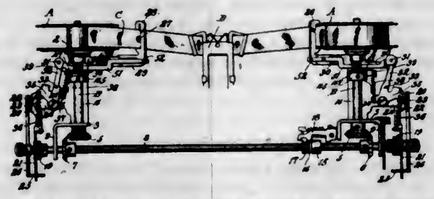
1. A carburetor comprising a main mixing chamber having a cylindrical wall portion, a main nozzle positioned to feed fuel to said main mixing chamber, a first auxiliary mixing chamber having a terminal orifice in the cylindrical portion of the main mixing chamber, a second auxiliary mixing chamber having one extremity communicating with said first auxiliary mixing chamber and having a terminal orifice in the cylindrical portion of the main mixing chamber at a point upstreamward with relation to the terminal orifice of the first auxiliary mixing chamber, an auxiliary nozzle positioned to supply fuel to said first and second auxiliary mixing chambers, means for supplying fuel to said main and auxiliary nozzles, and an elliptical valve positioned to simultaneously obstruct the main mixing chamber and the terminal orifice of the first auxiliary mixing chamber, said valve, when in closed position, sloping so that that portion thereof obstructing the terminal orifice of the first auxiliary mixing chamber lies downstreamward with relation to the rest of the valve.

1,781,577. SYNCHRONOUS-MOTOR-DRIVEN PHONOGRAPH. CHESTER I. HALL, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed Nov. 28, 1928. Serial No. 322,497. 4 Claims. (Cl. 172—275.)



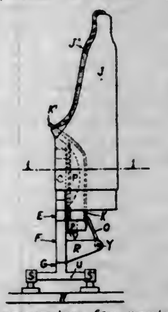
2. In a phonograph drive a turn table shaft provided with a gear, a second shaft carrying a worm meshing with said gear, a flywheel on the second mentioned shaft, a synchronous motor for driving said shaft, and a driving

connection permitting relative movement between said synchronous motor and said second shaft, said connec-



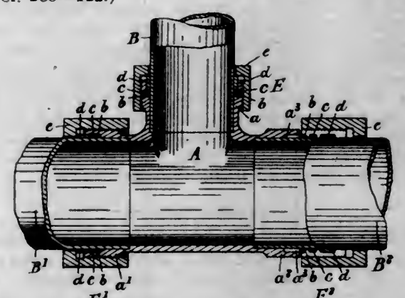
tion and flywheel serving to prevent hunting pulsations of said synchronous motor from being transmitted through said gears.

1,781,578. SNOWPLOW. JAY BENJAMIN HALL, Eugene, Oreg. Filed May 17, 1929. Serial No. 363,792. 10 Claims. (Cl. 37—43.)



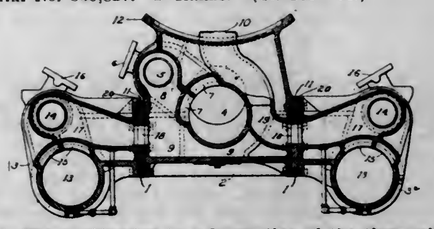
1. A snow plow adapted for mounting on the front end of propelling mechanism and comprising a shovel-like casing open at its forward side, snow gathering shovels extending across the open side of the casing including disk blocks and shovel blades pivoted at their inner ends to swing in planes perpendicular to the axes of said disk blocks, and a fan blower in the casing for conveying gathered snow to a distant point for discharge.

1,781,579. TYPEWRITING MACHINE. GEORGE F. HANDLEY, Glendale, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 15, 1928. Serial No. 326,318. 13 Claims. (Cl. 197—165.)



1. In a typewriter or the like, a ribbon feeding mechanism, a ribbon reversing mechanism, a movable ribbon-controlled means for operating said reversing mechanism, means for returning the ribbon controlled means to its initial position immediately following the operation of the reversing mechanism whereby a slack in the ribbon is formed, and means other than the ribbon feeding mechanism for automatically and substantially instantaneously taking up the slack in said ribbon immediately following the operation of the reversing mechanism.

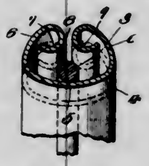
1,781,580. TAILORING. MAURICE HÉLIOT, Troyes, France. Filed Nov. 19, 1928, Serial No. 320,517, and in France Jan. 7, 1928. 5 Claims. (Cl. 223—17.)



1. In tailoring apparatus for pants and similar garments, in combination, two metal legs shaped to conform to the article under treatment, an axis, means hinging said legs to said axis, a socket mounted on said axis, a segment mounted on said socket, said segment serving to lift the seat portion and form a fold therein.

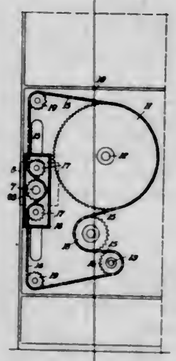
1,781,581. PIPE JOINT. REGINALD HARVEY HELLYER, London, England. Filed June 5, 1929, Serial No. 368,618, and in Great Britain Sept. 17, 1928. 1 Claim. (Cl. 285—122.)

An improved joint comprising a pipe, a socket member recessed at the outer end thereof and adapted to fit over the end of said pipe, a fixing ring made of harder metal than said pipe and having its sides inclined to the pipe axis and having one edge bearing against said pipe, a soft metal packing ring, a gland ring abutting said packing ring, all said rings fitting around said pipe within said recess, a nut engaging with the outside of said socket and adapted to press against said gland ring and cause said packing ring to spread and effect a tight joint and to cause the edge of said fixing ring to bite into said pipe to prevent longitudinal movement between the pipe and socket.



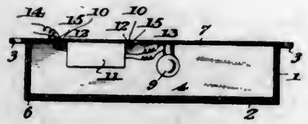
1,781,582. CYLINDER STRUCTURE. THOMAS E. HERRICK, Jr., Philadelphia, Pa. Filed Jan. 29, 1929. Serial No. 335,827. 2 Claims. (Cl. 105—44.)

1. The combination in a locomotive of the three-cylinder type, of two side frames having exhaust passages



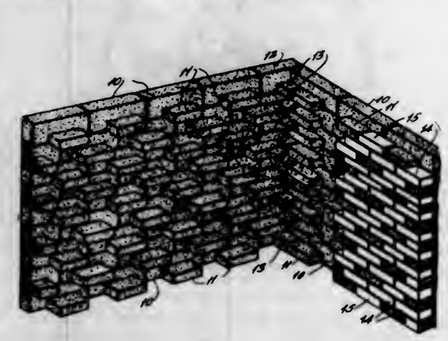
therein; a central cylinder structure mounted between the frames and having an integral cylinder; an exhaust passage formed in the central cylinder structure, said exhaust passage extending under and around one side of the central cylinder, and having openings aligning with the passages in the two frames; a side cylinder on each side of the structure, one mounted on the outside of one frame and the other mounted on the outside of the other frame, and having exhaust passages communicating with the passages in the frame of the locomotive, whereby the exhaust from the said side cylinders passes through the frames and through the central cylinder structure.

1,781,583. HANDLE GRIP FOR PAILS. WILLIAM W. HODGSON, Chicago, Ill., assignor to Continental Can Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 5, 1929. Serial No. 352,714. 1 Claim. (Cl. 220—94.)



A metal bail handle grip for wire bail pails comprising a metal blank shaped to form an integral handle portion of substantially uniform curving cross section and shaped from end to end thereof to conform to the curvature of the bail, the side edge portions of the blank being rolled inwardly from end to end thereof so as to form a strengthening rib throughout the length of the bail handle, said side edged portions being spaced from each other thereby forming a bail receiving recess so as to permit the bail to snap past said spaced edges into said recess, and a handle grip thereby attached to the bail.

1,781,584. SPINNING AND TWISTING MACHINE. JOHANN JACOB KEYSER, Aarau, Switzerland. Filed Aug. 12, 1929, Serial No. 385,335, and in Germany and Switzerland Nov. 5, 1928. 3 Claims. (Cl. 118—41.)

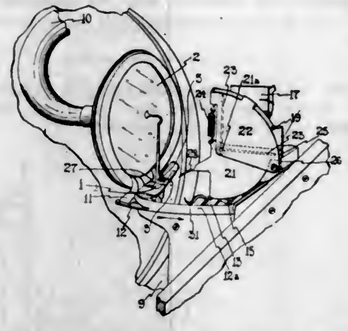


1. In a spinning and twisting machine a stationary frame, a spindle actuating shaft, a spindle carrying beam supporting said spindle actuating shaft and adapted to vertically reciprocate on the said stationary frame, an endless sprocket chain for operating the said actuating shaft, guiding sprockets carried by the said beam in fixed spaced relation with the spindle actuating shaft and adapted to reciprocate with the said beam and guiding sprockets on the said stationary frame in fixed spaced relation and not partaking in the beam reciprocation.

1,781,585. ILLUMINATED NUMBER SIGN. WILLIAM FRANK KIEFER, Evansville, Ind., assignor of one-half to Manson Louis Reichert, Vanderburgh County, Ind. Filed Aug. 19, 1929. Serial No. 386,933. 2 Claims. (Cl. 40—132.)

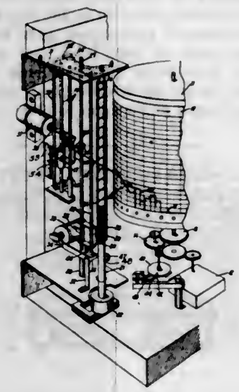
1. In an illuminated number sign, the combination with an outer box having means for its attachment to a wall or other support and provided with an open outer face surrounded by an inturned flange, of a transparent pane contained within the outer box and abutting said inturned flange, a self-contained illuminating unit comprising an inner box having a back adapted to lie flush with the back of the outer box, said inner box being contained within, and fitting, the outer box and having an open outer face and also engaging the pane and holding it against the inturned flange, and illuminating means carried by the back of the inner box, said outer box holding the inner box in position and said inner box holding the pane in place, without requiring fastening means either for the inner box or for the pane.

1,781,586. CAST-STONE TRIM BLOCK. GIUSEPPE LAUDICINA, East New Haven, Conn. Filed May 16, 1929. Serial No. 363,503. 4 Claims. (Cl. 72—39.)



1. A wall construction consisting of a tier of courses of building blocks, the blocks in each course being staggered with respect to the blocks of the preceding course, each of said blocks being provided with a projection on one face, said projections being all positioned on the same face of the tier, bricks interposed between the projections in each course, and other bricks interposed between the projections of one course and the projections of the succeeding course.

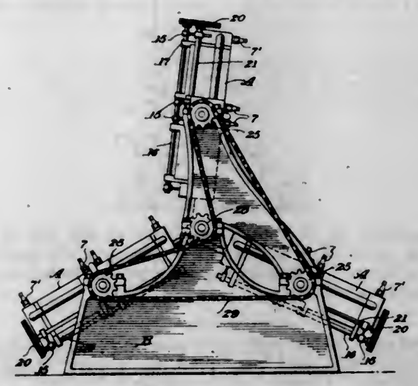
1,781,587. MEANS FOR CHANGING THE NEEDLES OF GRAMOPHONES AND LIKE MACHINES. LEONARD MANOHAM, Wellington, New Zealand, assignor to Mangham's Automatic Needle Changer Limited, Wellington, New Zealand. Filed Dec. 19, 1927, Serial No. 241,228, and in New Zealand May 30, 1927. 11 Claims. (Cl. 274—45.)



1. Means for changing the needles of phonographs comprising a needle gripping device carried by the stylus block including a release lever, a cam fixed to the casing of a machine engageable with said lever by movement of the tone arm upon which said stylus block is mounted,

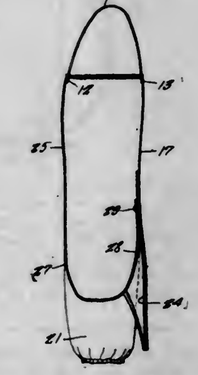
to "rest" position, toward said cam for releasing the needle, a needle magazine, and a transfer device for

receiving a needle from said magazine and delivering it to said gripping device, said transfer device also being actuated by movement of the tone arm.



1,781,588. DEMAND METER. FREDRICK S. MARCELLUS, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 7, 1926. Serial No. 114,114. 10 Claims. (Cl. 234—5.5.)

1. A demand meter comprising means actuated in accordance with the demand to be measured, a demand element adapted to be driven by said actuating means over predetermined time intervals through suitable motion transmitting means, said motion transmitting means having different motion transmitting ratios for different parts of the operating range of said apparatus and an indicator controlled by said demand element.

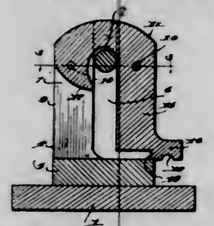


1,781,589. INTERNAL-COMBUSTION ENGINE. MYRON MARCELLUS, Liberal, Kans. Filed May 10, 1929. Serial No. 362,006. 1 Claim. (Cl. 123—42.)

An internal combustion engine comprising a base, a pair of spaced vertically disposed extensions on the base, pairs of cylinder bearings carried by the extensions and the base adjacent the ends thereof, crank shaft bearings carried by the extensions in a plane above the bearings on the base and in vertical alignment and in a plane below the bearings on the extensions, a crank shaft journaled in the crank shaft bearings, cylinders each having a pair of explosive chambers pivoted intermediate their ends in said pairs of bearings, pistons in said chambers and connected in pairs within each cylinder, means connecting the pistons of each cylinder to the crank shaft, intake exhaust valves for the chambers, valve operating mechanisms carried by each cylinder for the valves, a stub-shaft for each cylinder and extending through one

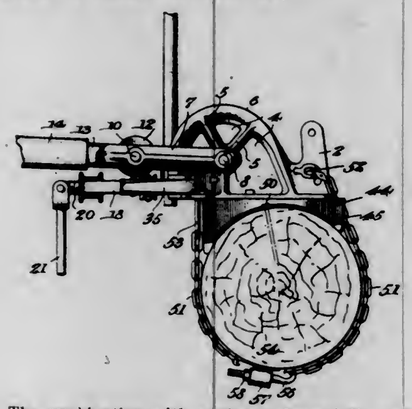
pivot of the respective cylinder, means connecting the stub-shaft of each cylinder with the respective valve operating mechanism thereof, gears secured to the stub-shafts and the crank shaft, and a sprocket chain connecting the gears.

1,781,590. COMBINATION GARMENT. MARGARET ELEANOR MCCOY, Duluth, Minn. Filed Mar. 28, 1928. Serial No. 265,506. 2 Claims. (Cl. 2—23.)



1. In a garment, a plurality of side portions and shoulder straps connected therewith, these portions constituting the sides of the body of the garment and having their lower ends formed into leg portions, a back portion connected with the edges of the upper part of the side portions, a thickness of impervious material connected with the inner side of the lower part of the back, a front portion connected with the front edges of the side portions of the garment and extending downwardly and then rearwardly and having adjustable connection with the inner side of the thickness of material secured to the back of the garment, said front portion having its lower end wider than the remaining portion of the front and having its edge portions secured between the leg portions.

1,781,591. SAFETY CATCH. WILLIAM O. MCINTYRE, Charlotte, N. C. Filed Aug. 2, 1929. Serial No. 382,967. 5 Claims. (Cl. 24—157.)

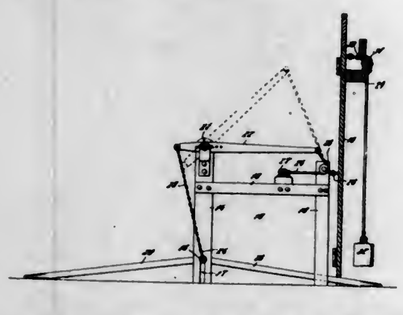


1. A safety catch comprising a base having stud members extended therefrom, certain of which define a pin-re-

ceiving slot and others of which define a hook-receiving slot, a hook swingably mounted in said last-named slot and arranged to extend across said first named slot and said hook having a shank provided with a member

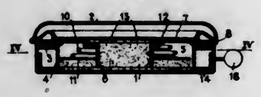
projecting in an opposite direction to the bill of the hook end serving as a means for swinging the hook and as a means for limiting the swinging movement of said hook in one direction.

1,781,592. PIPE VISE AND BENDER. ALBERT HENRY MEIER, Evansville, Ind. Filed Dec. 7, 1927. Serial No. 238,284. 6 Claims. (Cl. 153—46.)



1. The combination with a pipe, rod, conduit, or tube bender and vise having a base, of a saddle detachably connected to said base, enabling said saddle to be utilized or removed, separate chains each connected to the base and adapted to be passed around a pole or post, and an adjustable hook connector for detachably and adjustably connecting together the free parts of the chains.

1,781,593. SAFETY FUSE AND CIRCUIT TESTER. ALFRED A. MONTAPERT, Los Angeles, Calif. Filed Apr. 25, 1927. Serial No. 186,518. 4 Claims. (Cl. 175—183.)

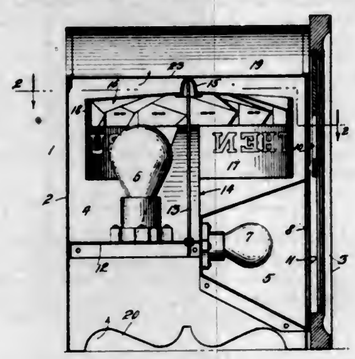


1. A device of the character described comprising a pair of similar elongated tubular members each equipped at one end with a contact, a shield member pivotally connected with and confining the other ends of the members, and a resistance coil embedded and insulated within each member and connected with the associated and adjacent contact, the resistance coils being connected in series.

1,781,594. DOOR-OPERATING DEVICE. ISAAC E. MORROW, Dallas, Tex. Filed Sept. 10, 1927. Serial No. 218,691. 2 Claims. (Cl. 268—35.)

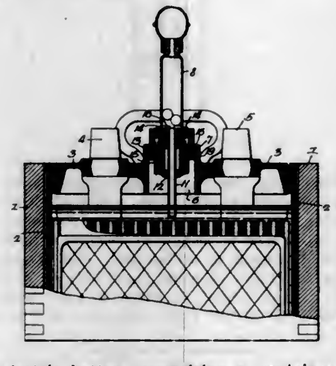
1. In combination with a pair of doors, a bar mounted for vertical sliding movement transversely of and spaced from the doors, a pair of alined treadle plates extending from the doorway at each end thereof and having their adjacent ends pivotally secured to the bar, a lever mounted for pivotal movement above each pair of plates, means connecting one end of each lever and the sliding bar, flexible means connecting the other ends of the bar and doors, whereby when the treadle plates are depressed the doors will be opened and means to close the doors.

1,781,595. POWDER-SUPPLYING DEVICE WITH ADJUSTABLE FEED. LOUIS MUTTI, Paris, France. Filed Feb. 27, 1929, Serial No. 343,188, and in France Mar. 5, 1928. 5 Claims. (Cl. 132—82.)



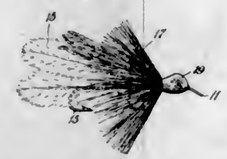
1. A powder supplying device comprising a casing, a powder storage chamber in the casing, a perforated disc supported above the chamber, a cover on the casing and spaced from the disc to provide a space to receive a powder puff, a spring pressed plunger in the casing for maintaining the powder under pressure, a discharge conduit in communication with the powder chamber and the perforations in the disc, a rotatable means in the casing adapted to force the powder from the storage chamber and through the discharge conduit and the perforations and means for rotating the last-mentioned means.

1,781,596. ADVERTISING DEVICE. MARSHALL H. PAGE, New York, N. Y., assignor, by direct and mesne assignments, to Line-O-Graph Company, Kansas City, Mo., a Corporation of Missouri. Filed Feb. 9, 1929. Serial No. 338,698. 1 Claim. (Cl. 40—40.)



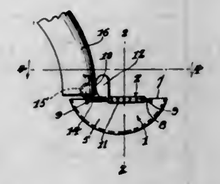
In an advertising device, two compartments, one having a horizontal portion forming a floor, said horizontal portion being secured to a vertical portion forming a wall, flaring upper and lower parts integral with said wall forming one of said compartments, a rotatable sign with means for driving the same mounted upon said floor projecting over said flaring parts, a window in front of said sign,

means for illuminating said sign so that the movable sign may be read through said window, another sign in front of said flaring parts and means enclosed in said last



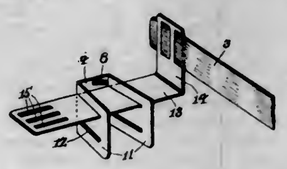
named compartment for illuminating said sign in front of the flaring parts, the two illuminating means being separated by the upper flaring part and a part of said vertical wall thereby forming a light-proof partition.

1,781,597. BATTERY TESTER. LAWRENCE J. PEARSON, Wyncote, Pa., assignor to Philadelphia, Storage Battery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 11, 1925. Serial No. 8,425. 2 Claims. (Cl. 136—182.)



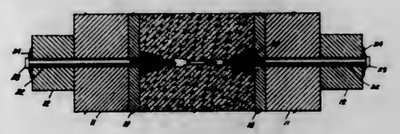
1. An electric battery comprising a container having a port, a closure for said port recessed from the outside, a density-testing device comprising a transparent hollow member seated in the recess and containing at least one detached body of predetermined density, a collar adapted to be threaded into the recess to retain the member in position, said closure having a vent independent of said testing device, and means for drawing electrolyte from the battery into said member when the closure is in position in the port.

1,781,598. FISH LURE. ERNEST H. PECKINPAUGH, Chattanooga, Tenn. Filed Sept. 9, 1929. Serial No. 391,337. 4 Claims. (Cl. 43—48.)



1. Tandem fish hooks comprising a front hook having a reversely bent shank presenting an eye at the bend and extending rearwardly to a point near the rear of the hook; an eye formed on the end of the reversely bent portion and lying in the same plane as the front hook; and a rear hook having an eye connected to said eye on the rear end of the reversely bent portion.

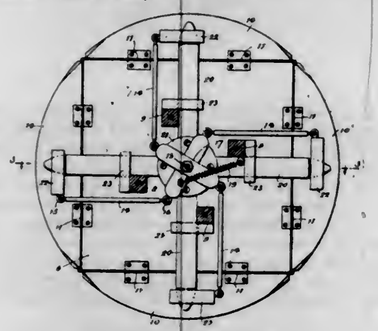
1,781,599. PORTABLE SANITARY DRINKING FOUNTAIN. SVERRE QUISLING, Madison, Wis. Filed Dec. 27, 1929. Serial No. 416,930. 10 Claims. (Cl. 299—17.)



1. A portable drinking fountain comprising a hollow, open top water directing element, and a coupling element slidably connected to said directing element at the top thereof and coacting with the directing element to provide the latter at one end of its top with a water intake and at its other end with a water outlet, said coupling element being adjustable to provide for varying the size of and the closing of the intake and for varying the size of the said outlet, said coupling element provided with means at one end for detachably securing said directing element in position to receive water at the intake thereof.

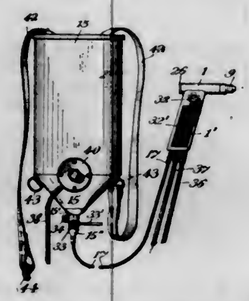
1,781,600. COMBINED AUTOMOBILE HEADREST AND STRAP HANGER. SVERRE QUISLING, Madison, Wis. Filed Mar. 19, 1930. Serial No. 437,227. 3 Claims. (Cl. 155—174.)

1. A device of the character described comprising, a pair of brackets adapted to be anchored to opposite sides of an automobile body, said brackets having inwardly extending leg portions, the leg portions of each bracket having horizontally aligned pairs of slots extending lengthwise of the leg portions, a pair of supports having angularly disposed portions of unequal length for selective insertion through selected aligned slots of the leg portions, and a flexible supporting element for selective detachable connection with the angularly disposed portions of each support.



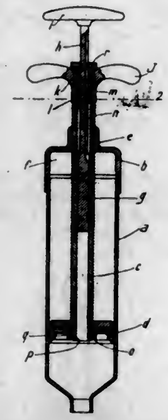
1,781,601. COMBINATION FORM HOLDER AND CONCRETE ANCHOR. CHARLES N. ROHAUT and EDGAR G. GEARHART, Astoria, Oreg. Filed July 6, 1929. Serial No. 376,305. 2 Claims. (Cl. 25—131.)

2. A combined concrete form holder and anchor comprising a tie rod having threaded extremities adapted to be arranged in the form, frusto-conical shaped anchor nuts adjustable on said extremities, spaced lugs and de-



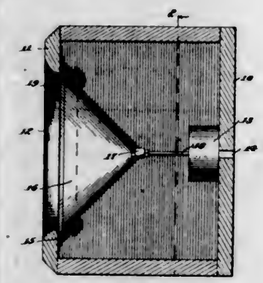
pressions arranged on the outer end of each nut to accommodate a suitable wrench for adjusting said nuts, said lugs embedding themselves in the adjacent members of the form to prevent turning of the nuts on said tie rod, bolts passed through the form and threaded into said nuts for holding the form together, and removable to permit the collapsing of said form, said nuts being subsequently removable from the concrete structure to provide depressions, and wooden nailing blocks of frusto-conical form adapted to be arranged in said depressions and threaded on the adjacent extremities of said tie rod.

1,781,602. EXTENSION TABLE TOP. FRANK RYGL, New York, N. Y. Filed Apr. 28, 1928. Serial No. 273,575. 1 Claim. (Cl. 45—9.)



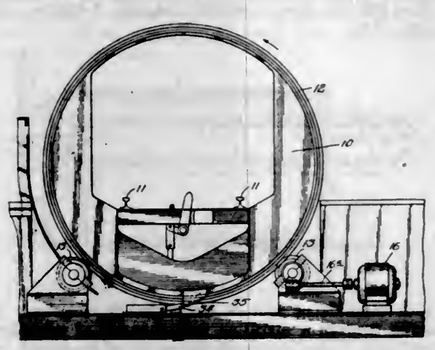
An extension table top including a main stationary top section and leaf sections connected to the marginal edges of the main section for movements respectively to an extended position in a plane parallel with said main section and to a folded out of the way position underlying the main section, a connection between said leaf sections to cause simultaneous movement thereof, means for locking and rigidly supporting said leaf sections in their extended position, said means comprising a member mounted for turning movement on the under side of the central portion of the main top section and radial arms turnable therewith from an inactive position within the confines or area of the main top section to an active position projecting beyond the marginal edges of the main top section and underlying the leaves and keepers provided respectively on the under side of the leaves and the under side of the main table top section.

1,781,603. ATOMIZER FOR MATERIALS IN POWDER FORM. FRITZ SCHORI, Wetzikon, Switzerland. Filed Jan. 6, 1927, Serial No. 159,490, and in Switzerland Oct. 5 1926. 11 Claims. (Cl. 91—12.2.)



1. An arrangement for atomizing materials and particularly materials in powder form, comprising in combination, a portable receptacle adapted to take up a stock of the material to be atomized, a hand-apparatus containing a nozzle, means to supply a medium under pressure to said nozzle of the hand-apparatus whereby a suction action is generated, and gravity supplied depending conduit means downwardly discharging and a hose connecting the lower end of said receptacle to said hand-apparatus and having atmospheric air admission means to admit air after the material has left the receptacle for conveying the material to be atomized from said receptacle to said hand-apparatus by the suction action of said nozzle by which it is atomized by the same pressure medium which generates the suction.

1,781,604. LUBRICATING GUN. JULIEN EUGÈNE MARIUS SEGUIN, Paris, France. Filed Sept. 24, 1929, Serial No. 394,911, and in France Oct. 6, 1928. 2 Claims. (Cl. 221—47.3.)

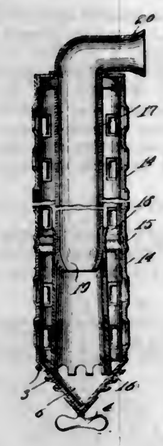


1. A lubricating gun comprising a pump body, a piston slidably mounted in said body, a hollow piston rod for said piston, a second smaller piston slidably mounted in said rod, means for manually reciprocating said smaller piston including a piston rod, and a nut screwed into said first piston rod feathered to said second piston rod and having means for abutting said smaller piston at the end of its stroke when said piston rod is rotated.

1,781,605. REPRODUCING DEVICE. EDWARD G. SEIBERT, Washington, D. C. Filed Oct. 4, 1929. Serial No. 397,346. 6 Claims. (181—31.)

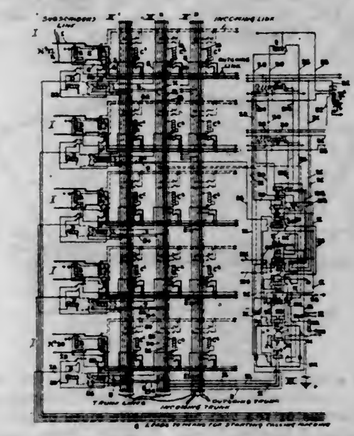
1. A reproducer comprising a cone and means connected to the apex thereof to produce vibrations thereof, and cushions to support said reproducing cone mounted in contact therewith at points removed from the free edge of said cone.

1,781,606. CAR DUMPER. GEORGE N. SIMPSON, Chicago, Ill. Filed Oct. 29, 1928. Serial No. 315,654. 5 Claims. (Cl. 214—52.)



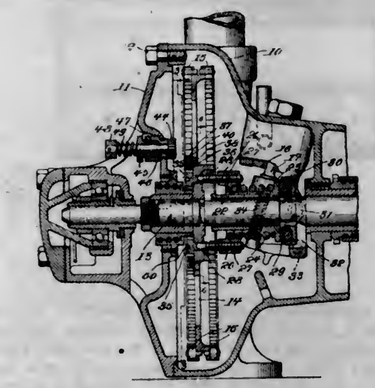
1. A car dumper of the character described comprising; a rotatably mounted cage adapted to contain a car to be dumped; an approach track leading to the cage; a receiving track leading from the cage; means for rotating the cage; a stop adapted to be engaged by a part on the cage upon completion of the dumping operation; and means operated by movement of a car for disengaging said part from said stop, said means including a trigger adapted to be engaged by a car and a connection between said trigger and said part.

1,781,607. DRAWING LUBRICANT. FRANK F. STAMBERG, Cicero, Ill., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed Aug. 13, 1927. Serial No. 212,847. 4 Claims. (Cl. 87—9.)



1. An emulsified composition comprising oil, green acid soap, colloidal clay, and water.

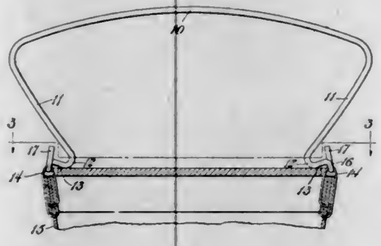
1,781,608. VENTILATOR. JOHN STROBLE, Seward, Kans.; Ella Stroble administratrix of said John Stroble, deceased. Filed Sept. 9, 1927. Serial No. 218,505. 1 Claim. (Cl. 98—57.)



In a grain ventilator a pair of foraminated casing sections having interfitting detachable connection, a cap removably received in the upper end of one of the sections and provided with a central opening, a conduit section arranged centrally in the lower casing section and having outlets at its lower end and having its upper end flared, a second conduit section arranged in the other casing section and having one end extended through the central opening in the cap and attached to the latter, the lower end of said conduit section being tapered to facilitate engagement with the flared end of the first mentioned conduit section.

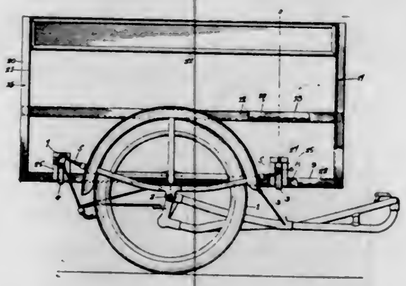
1,781,609. AUTOMATIC TELEPHONE SYSTEM. MICHEL TCHOUBRITCH, Sucy-en-Brie, France. Filed Apr. 4, 1928, Serial No. 267,396, and in France Apr. 11, 1927. 9 Claims. (Cl. 179—18.)

1. Automatic relay selector circuit for telephony, said circuit comprising in combination with a network of trunk lines (II), each terminating in a conversation line (III), marker groups (IV) cooperating with a common connecting circuit (V) and individual equipments (I) for the subscribers' lines, the individual equipment of each subscriber's line including a line-reversing relay (A) with two pairs of contacts for connecting, when the subscriber's line (1, 2) is idle, with its incoming trunk (88, 89), and when operative, that is, only when the subscriber's station is the calling party, the said subscriber's line with the outgoing trunk (4, 5), the said two links (88, 89 and 4, 5) being individual to each equipment (I) of a subscriber's station.



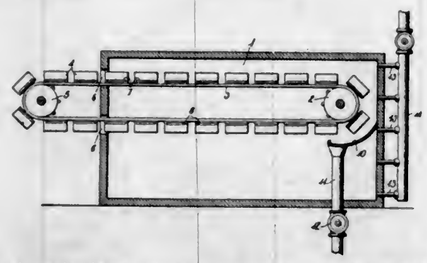
1,781,610. GOVERNOR ATTACHMENT. ATILLA S. TOROK, Cumberland, Md. Filed Oct. 31, 1928. Serial No. 316,229. 4 Claims. (Cl. 253—82.)

1. In a turbine, a housing, a turbine wheel mounted for rotation therein, a valve controlled inlet port, a centrif-



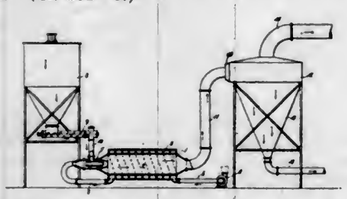
ugal governor located within the housing and operatively connected to the turbine wheel, means acted upon by the governor to operate the valve of the inlet port and control the speed of the turbine wheel, means to adjust the governor to regulate the operation of the valve, and means operable from the outside of the housing and normally disengaged from the governor adjusting means to operate the latter.

1,781,611. BASKET HANDLE. FRANK B. TOWNSEND, Penn Yan, N. Y., assignor of one-half to John E. McMath, Penn Yan, N. Y. Filed Aug. 7, 1928. Serial No. 298,065. 6 Claims. (Cl. 217—125.)



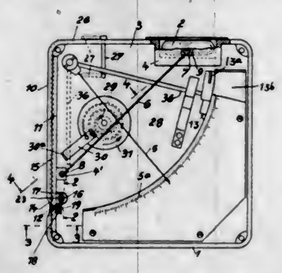
4. In combination with a fruit basket of the class described, a pair of handle receiving eyes extending above and crosswise of the rim on opposite sides of the basket; a bail-shaped handle having terminal hooks presenting upstanding and outwardly curved end portions shaped to be threaded freely into the eyes, one through one side of one eye and the other through the opposite side of the other eye while the handle is held crosswise of the basket and also shaped to interlock with the eye members and thereby prevent the handle from being accidentally displaced by pressure on the sides; and shoulders on the handle arranged to snap over the basket lid to hold it down, the lid having notches co-operating with the hooks to lock the handle on the basket and permitting the handle to be swung down over the lid.

1,781,612. CARRIER OF THE PLURAL-DECK TYPE. SIMEON E. TRAVIS, Jr., Hattiesburg, Miss. Filed Jan. 6, 1930. Serial No. 418,851. 8 Claims. (Cl. 208—45.)



1. In combination, a side car structure for a motorcycle including a pair of spaced, opposed stirrups disposed at right angles to the line of travel of the cycle and resilient supporting means for the stirrups, a plural deck carrier supported by, connected with and extending above the said stirrups and including a bottom, and filler members between the bottom of the carrier and said stirrups.

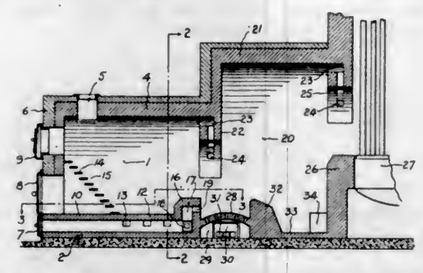
1,781,613. CARBONIZING PROCESS. WALTER EDWIN TRENT, New York, N. Y., assignor to Trent Process Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 27, 1925. Serial No. 12,128. 6 Claims. (Cl. 202—117.)



1. A carbonizing process comprising progressively advancing through a distilling zone a series of containers, introducing a predetermined charge of carbonaceous fuel matter to each container, providing for each container a removable storage element of a size sufficient to store heat units required to carbonize the fuel charge of each container, heating each element to a predetermined temperature before application to its container and moving said elements through the distilling zone with the containers to effect carbonization of fuel charges in the containers solely by the heat radiating from said heat storage elements.

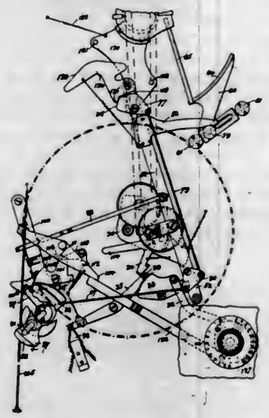
1,781,614. PROCESS FOR DISTILLING COALS. WALTER EDWIN TRENT, New York, N. Y., assignor to Trent Process Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 21, 1925. Serial No. 76,758. 6 Claims. (Cl. 202—8.)

1. In a distillation process comprising introducing finely comminuted coal to a moving stream of combustion supporting gas, in effecting a sufficient partial combustion of said coal in the gas to generate sufficient heat to remove volatiles from and carbonize the comminuted coal, in separating the carbonized coal particles by discharging a portion of the lighter carbonized particles in suspension in the gas stream and withdrawing the remaining portion of such carbonized particles substantially undiluted by gas.



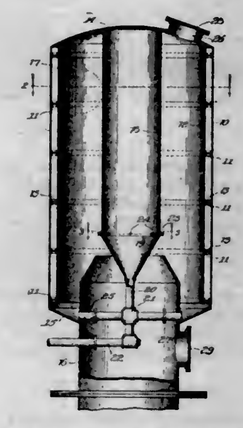
1,781,615. PENDULUM HARDNESS TESTER. EMIL VON LEESEN, Berlin-Treptow, Germany. Filed Jan. 27, 1927. Serial No. 164,112. 12 Claims. (Cl. 265—13.)

1. A pendulum hardness tester, comprising, in combination, a frame, a pendulum carried on said frame, a hammer



head carried by said pendulum, a hand oscillatorily carried on said frame, means for automatically coupling said hand to said pendulum on its rebounding stroke, means for submitting said hand to friction acting from opposite directions against said hand, and a scale arranged in conjunction with said hand.

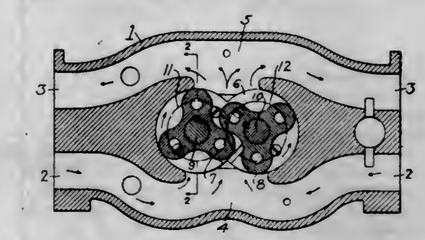
1,781,616. FURNACE. ROBERT WALKER, Vancouver, British Columbia, Canada. Filed Nov. 14, 1928. Serial No. 319,375. 2 Claims. (Cl. 110—73.)



1. A furnace comprising a combustion chamber having a hollow raised portion extending longitudinally and centrally of the forward end of the chamber floor to provide an air inlet trunk, said trunk having its side walls provided adjacent their inner ends with air vents, a hollow bridge extending transversely of the chamber floor at the inner end of the said trunk and in communication with the latter, said transverse bridge having air vents in its rear face, a perforated grate disposed against the rear face of the transverse bridge and below the air vents thereof, said grate being co-extensive with said bridge, air inlets in the walls of the chamber communicating with the said trunk, bridge and perforated grate of the combustion chamber, a retaining wall at the rear side of the said grate, and a fire arch depending from the roof of the chamber in line with the said grate, said arch having means for receiving the lighter particles of fuel rising above the normal stream of burned gases and deflecting same through the stream onto the said grate.

1,781,617. TALKING MACHINE. ERIC NEWHAM WATERWORTH, West Hobart, Australia. Filed Dec. 15, 1927, Serial No. 240,279, and in Australia Feb. 11, 1927. 3 Claims. (Cl. 274—10.)

1. In a multi-disk phonograph, an inclined rotary platform for supporting records of varying diameters, a spindle supporting said platform, a tone arm, a lever for imparting movement to the tone arm, a movable stop upon the lever at one end, a crank element at the other end of said lever, operative connection between the stop and crank element, a lever connected to the crank element, a plate upon the spindle having spaced notches in its periphery, and an element upon the lever engageable in the notches in the plate selectively in the adjustment of the plate for the purposes described.



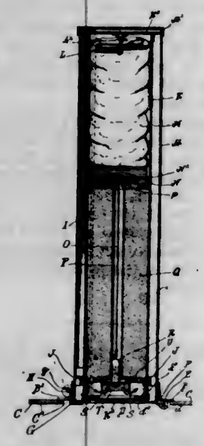
1,781,618. TAR SEPARATOR. GEORGE W. WATTS, Whiting, Ind., assignor to Standard Oil Co. of Indiana, Whiting, Ind., a Corporation of Indiana. Filed June 24, 1925. Serial No. 39,305. 6 Claims. (Cl. 183—85.)

2. A centrifugal tar separator for separating tar from a mixture of oil and steam under vacuum comprising an outer cylindrical shell, reinforcing means within said shell, an inner shell within said reinforcing means, means for introducing a mixture of oil and steam into said inner shell, said inner shell presenting substantially an unobstructed surface to said mixture, means for collecting liquid deposited on said inner shell and discharge means for the vapors and liquid.

6. A tar separator for separating a liquid from a gas, comprising a vertically disposed cylindrical shell provided with a closed bottom, a central tube forming with said shell an annular chamber, a pipe discharging tangentially into said chamber near the top thereof, a gas outlet extending upwardly through the bottom of said shell and in substantially vertical alignment with said tube, and means associated with the annular space surrounding said outlet pipe for catching and draining liquid collecting on the inner walls of said shell.

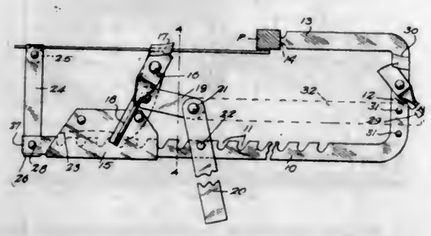
1,781,619. ROTARY PUMP. EVERT J. WENDELL, Wayne, Pa. Filed Oct. 14, 1926. Serial No. 141,596. 2 Claims. (Cl. 103—126.)

1. A liquid rotary pump comprising a casing, coacting rotors in said casing, shafts for said rotors extending



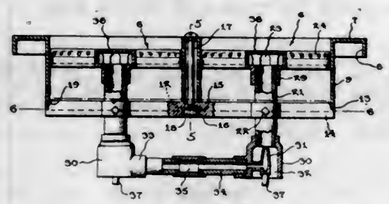
through the casing at both ends, a plurality of bearings for each shaft extremity, said bearings being spaced apart, with one bearing of each set located in sufficiently close proximity to the rotor to prevent local flexure in the intermediate rotor-carrying portions of the shafts, and said bearings cooperating to maintain all portions of the respective shafts in substantial alignment.

1,781,620. MARKING DEVICE. GEORGE S. WHITMORE, Yakima, Wash. Filed Oct. 24, 1928. Serial No. 314,777. 5 Claims. (Cl. 101—109.)



1. A marking implement including end plates, a series of partitions intermediate the end plates, a shaft on which said end plates and partitions are loosely mounted, a series of marking members loosely mounted on said shaft between the end plate and adjacent partitions and between the respective partitions, each marking member being movable independently on the shaft, means whereby each marking member may be temporarily secured with respect to the adjacent partition, and means on the shaft beyond one end plate to hold the parts in more or less rigid connection following the movement of the member.

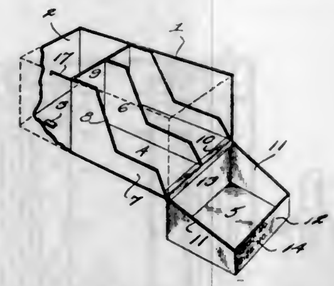
1,781,621. ILLUMINATING DEVICE FOR AIRCRAFT. SAMUEL WILEY, Metuchen, N. J. Filed Oct. 11, 1929. Serial No. 399,070. 11 Claims. (Cl. 102—24.)



1. Apparatus for use in launching and operating flares from aircraft, comprising a container open at the bottom and secured to the lower portion of the aircraft, and mounted above an opening therein, a spring actuated door mounted below said aircraft and adapted to close the lower end of said container, means for locking said door in the closed position, and for releasing same when desired, and a casing slidably mounted in said container, a parachute mounted in the upper part of said casing, flare composition and a friction primer mounted in the lower part of said casing, a plug mounted in said casing and separating said parachute from said flare composition, a removable cap normally closing the upper end of said casing, a breakable cord connecting said cap with the parachute, a wire connecting the parachute stays with the friction primer, a stop carried by said wire adapted to anchor same to the flare body, and means controlled by the falling of said casing from said container, when the door is opened for automatically removing said cap and holding it in the container after said casing with its contents have dropped through the open doorway.

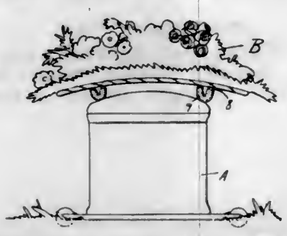
1,781,622. WIRE PULLER. LEONARD H. WILLIAMS, Freewater, Oreg. Filed June 25, 1928. Serial No. 287,929. 7 Claims. (Cl. 254—71.)

2. A wire pulling machine comprising an elongated body member having spaced holding devices therealong, a pulling carriage mounted on the body member for movement therealong, a lever having connection with the carriage and constructed to have a selective engagement with the holding devices, an extension on the body portion and having its outer end looped and pointing in the general direction of the length of the body portion, the open end of the loop being of a size to receive substantially all of the carriage when moved along the body member.



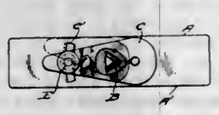
1,781,623. GAS BURNER. JOHN S. ZINK, Tulsa, Okla. Filed Aug. 11, 1928. Serial No. 299,046. 9 Claims. (Cl. 158—99.)

1. A burner, including an air passageway, a spreader located in the passageway and provided with a number of spaced radial arms, each having sets of diverging apertures arranged to cause jets of gaseous fluid from the apertures of the arms to impinge above the arms, and means for feeding a mixture of air and gas under pressure to the spreader, the spaces between the arms being unobstructed to allow secondary air to mix with the impinging jets above the spreader.



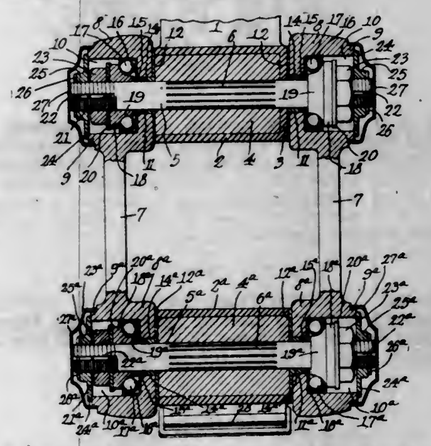
1,781,624. BOX OR CONTAINER. LELAND S. BARNES, Chattanooga, Tenn. Filed July 14, 1926. Serial No. 122,433. 1 Claim. (Cl. 206—44.)

A drop end shoe box constructed to display the shoes without removing the same from the box, said box comprising an outer case open at one end, a slidable container wholly arranged within the case and including a bottom, rear end walls, opposed side walls and a centrally located partition parallel with the side walls, said side walls and partition being materially reduced in length for the major portion of their length adjacent the open end of the case, whereby the major portion of the shoes received by the latter will be presented to view when the box is open, a tray having its inner end hingedly secured to the outer end of the slidable container, and normally arranged vertically within the case, and adapted to be swung outwardly therefrom to a horizontal position,



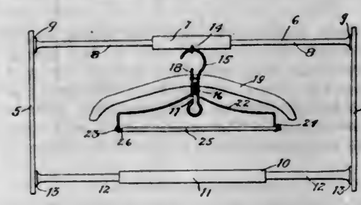
when the container is slid outwardly with relation to the case, and a flexible element terminally connected with the adjacent rear walls of the case and container to limit the movement of the container, and maintain the latter wholly within the case when the tray is swung to its horizontal position, whereupon a portion of the shoes will be projected from the case for display.

1,781,625. GRAVE COVER AND CASKET OR VAULT DECORATION. JOHN W. BLACKLOCK, Brookfield, Mo. Filed July 9, 1928. Serial No. 291,291. 3 Claims. (Cl. 27—30.)



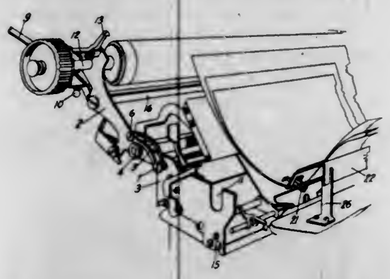
1. A flower holder and grave cover of the character described comprising a plurality of longitudinally curved rectangular sections, each section including spaced parallel longitudinal bars and transverse end bars connecting the opposite ends of the longitudinal bars, said longitudinal bars being provided, at points spaced inwardly from their opposite ends, with downturned substantially U-shaped portions constituting legs for supporting the sections in vertical spaced relation on a coffin lid and flexible elements for connecting the sections together.

1,781,626. FILE GUIDE FOR SAW SHARPENING. NICOL ALEXANDER BOOTH, Dunedin, New Zealand. Filed Sept. 4, 1928, Serial No. 303,937, and in New Zealand Jan. 4, 1928. 5 Claims. (Cl. 76—36.)



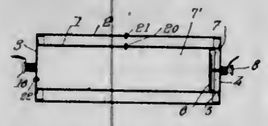
1. A file guide for use in sharpening saws, comprising a guide plate having parallel opposite faces and parallel longitudinal edges and also having an opening between its ends, a file-carrying plate pivoted adjacent one of its ends to one of said faces of said guide plate to rock in a plane parallel to said face, and a file-receiving socket carried by said file-carrying plate and aligning with said opening of said guide plate, said socket having a wall disposed at an inclination to said face of said guide plate and of which the inclination to the opposite edges of said guide plate may be varied by rocking said file-carrying plate on its pivot.

1,781,627. SHACKLE. ALBERT C. BOSCHKE and EDGAR W. BLACK, Los Angeles, Calif. Filed Feb. 13, 1928. Serial No. 253,999. 1 Claim. (Cl. 267—54.)



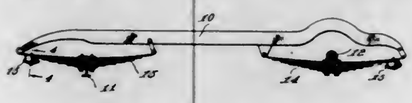
In a device of the class described, a member having a reduced neck, said member being provided in one end with a chamber, and in the opposite end with a reduced bore communicating with the chamber, a disc having a reduced hub extended into the bore, a ball cage abutting against said member at the inner end of the chamber, a washer in the bore between the ball cage and the end of the hub of disc, balls in the ball cage, a closure plate abutting against the end of the neck and having a hub, a shaft extended through the hubs, the washer, and the cage, there being a slot in that part of the shaft which is adjacent to the closure plate, a disc on the shaft and having a cross bar received in the slot, a tapered bearing on the shaft and cooperating with the balls, a nut threaded on the shaft, the disc being bound between the bearing and the nut, the bearing, the disc and the nut being located in the chamber, a securing element mounted in the shaft at the outer end of the hub of the closure plate, and a cap housing the closure plate and the corresponding end of the shaft, the cap surrounding the neck and being mounted on the neck.

1,781,628. CARRIER FOR GARMENTS. ELDRIDGE R. BOYLE, Boston, Mass. Filed Oct. 18, 1928. Serial No. 313,278. 6 Claims. (Cl. 223—61.)



1. A carrier for garments comprising a stretcher frame having sides, top and bottom members, a hook attached to the top member, a shoulder form adjustable lengthwise of the hook and means preventing the tilting of the form around the hook.

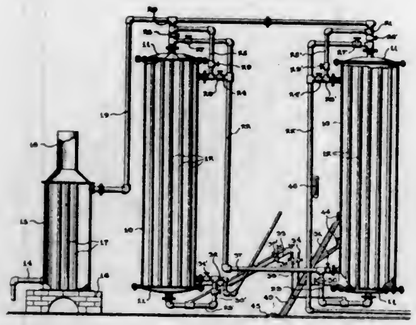
1,781,629. TYPEWRITING MACHINE. CHARLES C. BRIDWELL, Westerville, Ohio. Filed Feb. 18, 1927. Serial No. 169,167. 5 Claims. (Cl. 197—127.)



1. In a typewriting machine, a movable carriage, a platen frame carrying a rotatable platen, said frame having supporting means pivotally mounted on said carriage at a point remote from the normal operating position of the platen to permit the platen to be moved to a position such as to uncover the space normally occupied by the platen when in operative relation.

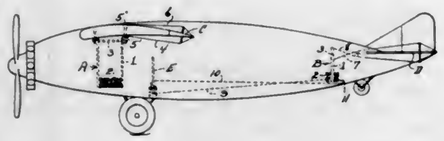
1,781,630. TEMPERATURE-RESPONSIVE DEVICE. LOUIS JOSEPH JEAN BAPTISTE CHÉNEAU, Paris, France. Filed June 27, 1927, Serial No. 201,933, and in Belgium July 3, 1926. 2 Claims. (Cl. 200—140.)

1. A device of the class described comprising a central chamber having lateral walls formed of a relatively poor conductor of heat, a second chamber external to said central chamber and enclosing the latter, said second chamber having a wall formed of a relatively good conductor of heat, a pressure responsive partition forming at least part of a common wall separating said chambers from one another, electrical contacting means associated with said partition, and an electrical terminal in conductive relation with one of the walls of one of said chambers.



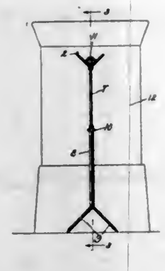
1,781,631. VEHICLE SNUBBER AND SPRING SUSPENSION. ROLLIE B. FAGEOL, Los Angeles, Calif. Filed Oct. 11, 1927. Serial No. 225,511. 10 Claims. (Cl. 267—48.)

1. A vehicle including a multi-leaf spring, a resilient block arranged adjacent each end of the spring and directly contacting with relatively movable leaves of said spring, means to secure said blocks to said spring so that said blocks are effective to yieldingly resist relative longitudinal movement of the spring leaves, and means engaging said last named means to secure said spring to the vehicle.



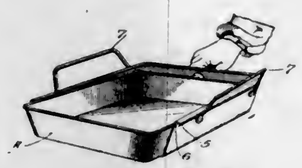
1,781,632. OIL-TREATING APPARATUS. JAMES J. FEARIS, Smackover, Ark. Filed Feb. 25, 1926. Serial No. 90,602. 14 Claims. (Cl. 196—5.)

1. Apparatus for heating oils to remove water therefrom comprising a pair of receptacles disposed in heat exchange relation both of which are designed for the reception of a substance to be treated and a heating agent, intake and discharge conductors for oil each in communication with both of said receptacles and respectively at the lower and upper ends of each, a heating agent conductor in communication with both of said receptacles at



their upper ends, and valve controlled exhaust conductors for said heating agent connecting with said receptacles at their lower ends, the intake and delivery conductors being provided with valves for selective use to direct the oil into and out of either receptacle, and the heating agent conductor having selective valves for the direction of the heating agent into either receptacle.

1,781,633. AUTOMATIC CONTROL FOR AEROPLANES. RICCARDO FEDRIZZI, Weston, Pa. Filed July 23, 1929. Serial No. 380,371. 1 Claim. (Cl. 244—29.)

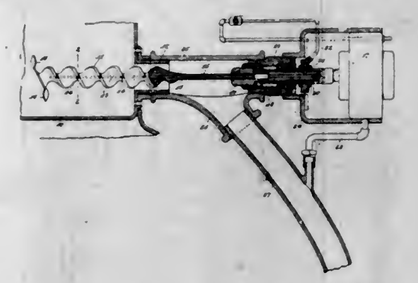


In an aeroplane embodying the usual ailerons and elevators, a pendulum including a weight suspending a frame embodying side members suspended for swinging movement about an axis extending parallel to the longitudinal axis of the aeroplane and in advance of the ailerons, arms extending from said side members, in relatively opposite directions, cables connected with the arms and leading to and connected with the under sides of respective ones of the ailerons, a cable extending between and connected at its ends to the upper sides of the ailerons, a second pendulum including a weight-supporting frame embodying side members suspended, between their upper and lower ends, for swinging movement about an axis, transverse to the longitudinal axis of the aeroplane, and in advance of the elevators, cables connected to the said frame members above their axis and leading to and connected with the respective elevators at the underside thereof, and other cables connected with the frame members below their axis and leading to and connected with the respective elevators at their upper sides.

1,781,634. BOILER-TAP GUIDE. GEORGE FENK, Brooklyn, N. Y. Filed Apr. 10, 1928. Serial No. 268,996. 2 Claims. (Cl. 33—185.)

1. A guide for the purpose set forth, comprising a yoke having a stem extending therefrom, a tubular member in which the stem is received, binding means for adjustably securing the stem in the tubular member and said tubular member having forked prongs at the outer end thereof.

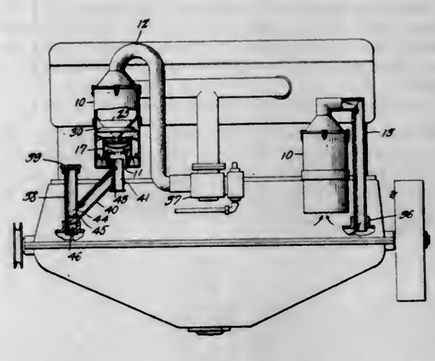
1,781,635. OVEN SCOOP. HENRY L. FISCHACHER, Boston, Mass. Filed Oct. 15, 1928. Serial No. 312,492. 2 Claims. (Cl. 294—32.)



2. A cooking pan scoop comprising a member having a flat bottom and two inclined side walls and one end wall, with the opposite end open, a handle on the end wall, a member arranged to secure the said handle to the end wall and to form a stop inwardly of the said scoop for abutment by a pan, and means to assist in the rocking of the scoop to baste meat in a pan on the scoop, the said means comprising a handle rigidly secured on each of the side walls and extending upwardly and outwardly in the same general direction as the side walls.

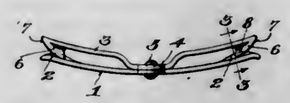
1,781,636. CANDY. IRMA HUYS VANDER GHEYNST, New York, N. Y. Filed Dec. 13, 1927. Serial No. 239,811. 2 Claims. (Cl. 99—16.)

1. A method of producing a candy which includes as an ingredient, an initially extracted uncooked vegetable juice, consisting in incorporating said juice in the candy by cooking of the same with the candy, and by cooking with the candy and said juice for a predetermined period of time, a substance for concealing the unpalatable flavor without destroying the nourishing or medicinal qualities of the vegetable juice.



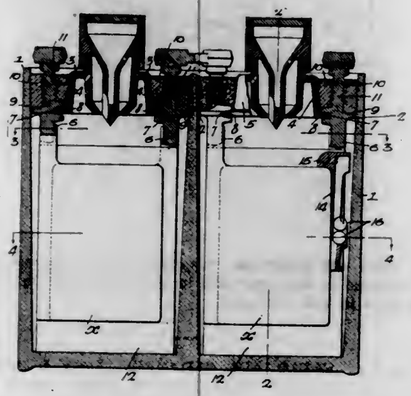
1,781,637. TRACK SANDER. EDWARD J. GILLIGAN, Croton-on-Hudson, and ALLAN H. MCLEAN, Ossining, N. Y. Filed Mar. 5, 1930. Serial No. 433,363. 10 Claims. (Cl. 291—33.)

1. A track sander; including a sand box, a rotatable conveyor extending from said sand box, a sand conduit extending from said box and surrounding said conveyor, a fluid motor associated with said conveyor for rotating



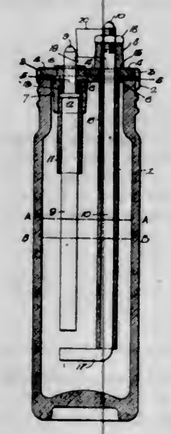
the same, and means for supplying fluid under pressure to the sand in said box, said means comprising fluid passageways in said conveyor.

1,781,638. FLUID AIR CLEANER. JOHN L. GREEN, El Dorado, Ark. Filed June 26, 1929. Serial No. 373,871. 3 Claims. (Cl. 183—31.)



1. An air cleaner comprising a housing having an inlet, an outlet spaced from the inlet and adapted for communication with a source of suction, an inwardly extending flange surrounding the inlet and providing a fluid reservoir between the flange and housing, an air trap located within the housing between the inlet and outlet, spaced walls at the top of the trap defining a fluid distributing chamber, one of said walls having means to divert the fluid into the fluid distributing chamber, and means to direct the fluid from said chamber to the walls of the trap.

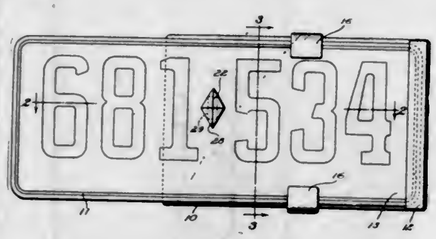
1,781,639. COLLAR FASTENER. LOUIS A. HILL, Washington, D. C. Filed Feb. 12, 1930. Serial No. 427,816. 4 Claims. (Cl. 24—81.)



4. In a collar fastener, a front member, a rear member, means carried by the end parts of the members to grip the ends of the collar therebetween, and means to connect the members whereby to enable one of same to be rotatably moved relative to the other so as to release the collar ends.

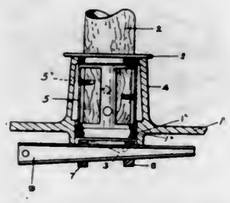
1,781,640. ELECTRIC BATTERY. WALTER E. HOLLAND, Philadelphia, Pa., assignor to Philadelphia Storage Battery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 10, 1925. Serial No. 8,204. 4 Claims. (Cl. 136—80.)

1. A battery cell comprising a container having ledges; a non-conducting cover member supported upon said ledges in the top of said container; and plate groups of opposite polarity interlocked with the edges of said member and suspended therefrom in the container from the ledges.



1,781,641. ELECTROLYTIC CELL. WALTER E. HOLLAND, Philadelphia, and LAWRENCE J. PEARSON, Wyncote, Pa., assignors to Philadelphia Storage Battery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 30, 1925. Serial No. 65,856. 8 Claims. (Cl. 175—318.)

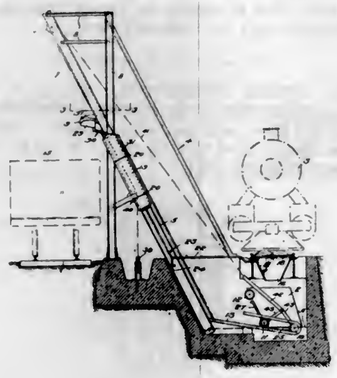
1. An electrolytic cell comprising a container, a cover secured thereto, an air-tight rubber gasket intermediate the cover and the container, confined against both lateral and perpendicular expansion, and mineral oil or grease associated with said gasket.



8. An electrolytic cell comprising a container, a cover for the container having an apertured boss projecting from each of the inner and outer surfaces thereof, an electrode extending through each of the bosses, a member threaded into the inner boss for retaining one electrode, and a member threaded onto the second electrode and engaging the outer boss for retaining said second electrode in the cover.

1,781,642. LICENSE-PLATE HOLDER. ALFRED H. HUMPHREY, Salem, N. Y. Filed Apr. 20, 1928. Serial No. 271,536. 4 Claims. (Cl. 40—125.)

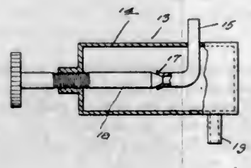
1. A license plate holder including a casing, catch members held rigid within said casing, a latch associated therewith and adapted to engage a license plate, additional catch members held rigid within said casing, latches associated with said latter catch members, certain of said latches having clips to engage the edges of the license plate and one of said latches having a strip associated therewith and a member rigid with said strip and adapted to receive the end of the license plate.



1,781,643. LOCKING DEVICE. GEORGE THOMAS IRWIN, Toronto, Ontario, Canada. Filed Feb. 2, 1928, Serial No. 251,421, and in Canada Mar. 4, 1927. 1 Claim. (Cl. 287—20.)

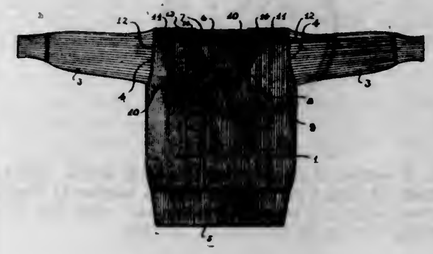
In a locking device, a base member provided with a cylindrical vertical bearing open at both ends, an annular ratchet extending around the lower opening of the bearing, a cylindrical member fitting in the bearing and turnable therein and provided with an enlarged portion at its upper end engaging the upper end of the bearing, loop members formed integral with the cylindrical member and extending downwardly through the lower open end of the bearing, a wedge key extending through the loop portion and bearing adjacent each end against the aforesaid ratchet surfaces so that when the cylindrical member is turned within the bearing the key ends will be carried circumferentially into wedging contact with the aforesaid ratchet surfaces.

1,781,644. MATERIAL-HANDLING APPARATUS. LOOMIS L. KELLY, Salem, Va. Filed May 4, 1928. Serial No. 275,194. 11 Claims. (Cl. 214—120.)



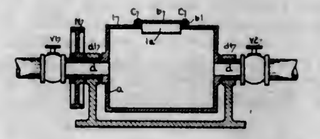
5. In a material handling apparatus, the combination with a pit, of a movable container, mechanism for lowering said container into said pit to receive material and for thereafter elevating and tilting said container to discharge the material outside of the pit, a reservoir for supplying water to the material delivered to the container, means carried by the container for bailing excess water collected in the pit, said means involving a compartment provided with an opening for receiving the water and with discharge means for permitting the water to flow therefrom, said material and said water being discharged from the container and compartment respectively when the container is tilted and being deposited into separate devices, and means for returning the said water to the supply reservoir.

1,781,645. PROCESS FOR MAKING EMULSIFIED COMPOSITIONS. LESTER KIRSCHBRAUN, Leonia, N. J. Original application filed Dec. 2, 1925, Serial No. 72,818. Divided and this application filed May 6, 1927. Serial No. 189,460. 7 Claims. (Cl. 92—21.)



1. A method of making a waterproofed fibrous sheet comprising intimately mixing fibrous pulp with a normally adhesive bituminous waterproofing material dispersed in an aqueous vehicle containing soap and rendered non-adhesive by the incorporation therewith of an agent in quantity less than would substantially impair the waterproofing properties of the bituminous waterproofing material, forming a sheet from said mixture, and drying the sheet to cause the bituminous material to resume its adhesive condition and waterproof the fibers.

1,781,646. REAR-CURTAIN-OPERATING DEVICE. NORMAN V. KREGER, Ben Avon, Pa. Filed May 9, 1929. Serial No. 361,748. 2 Claims. (Cl. 156—28.)

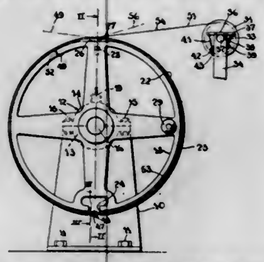


1. In a suction operated device for actuating automobile curtains comprising a control valve including an elongated casing, a tubular elbow, an arm on the elbow projecting through the side wall of the casing, the other arm of the elbow disposed longitudinally in the casing, a valve seat on the free end of the longitudinal arm, and a manually operable valve threaded through one end wall of the cylinder and engageable with the valve seat.

1,781,647. KNITTED SWEATER. ARTHUR M. LOWENTHAL, Rochester, N. Y., assignor to Max Lowenthal & Sons, a Copartnership consisting of Harry M. Lowenthal, Eugene M. Lowenthal, and Arthur M. Lowenthal. Filed Dec. 14, 1927. Serial No. 240,028. 6 Claims. (Cl. 2—90.)

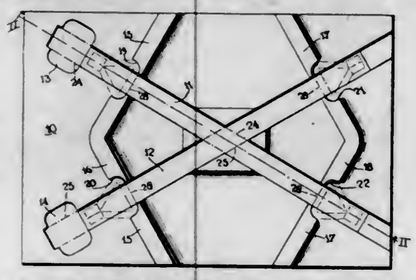
1. In a sweater, the combination with a knitted body formed with a central neck recess in its front and sleeves seamed to this body, of a separately knitted one piece strip stitched to the edges of said recess and extending between the upper portions of the back and of the front of the body of the sweater to the sleeve seams.

1,781,648. PROCESS OF MAKING PAINTS. HENRY H. MAPOTHER, Jr., Louisville, Ky., assignor to Vacuum Process Corporation, a Corporation of Kentucky. Filed Nov. 17, 1928. Serial No. 320,094. 3 Claims. (Cl. 134—39.)



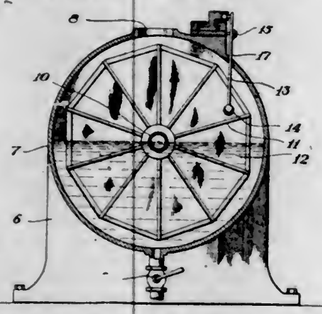
1. The process of mixing paint which consists in subjecting the finely ground dry pigments to a vacuum, mixing a liquid vehicle with the said pigments which have been subjected to the vacuum and uniformly dispersing the pigments in the vehicle while maintaining the vacuum.

1,781,649. METHOD OF UNITING RUBBER AND OTHER SUBSTANCES. LORIN B. SEBRELL, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 26, 1928. Serial No. 273,166. 7 Claims. (Cl. 18—59.)



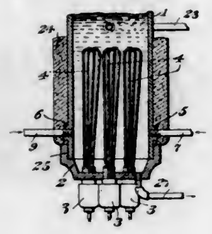
1. A method of securing fibrous materials to metal or to each other which comprises treating a rubber cement with a polymerizing agent, permitting the materials partially to react, coating the surfaces to be secured together with the cement and then heating the body thus formed to cause the rubber and the polymerizing agent completely to react.

1,781,650. METHOD AND APPARATUS FOR MAKING CABLE BEADS. HOMER R. TEEGARDEN, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 26, 1928. Serial No. 272,922. 8 Claims. (Cl. 140—88.)



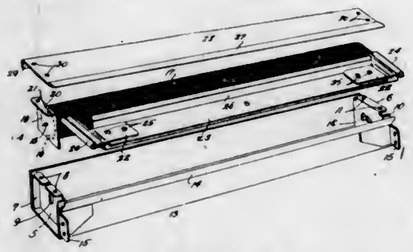
1. A method of constructing tire beads which comprises spirally winding a portion of a tension member to form an endless cable and helically winding the cable with a remaining portion of the tension member.

1,781,651. TEMPLATE FOR ASSEMBLING STRIPS OF TIRE-CHAIN MATERIAL. CLEMENT J. BURKLEY and ELMER G. KIMMICH, Akron, Ohio, assignors to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 22, 1927. Serial No. 185,795. 3 Claims. (Cl. 18—2.)



1. A template for assembling strips of tire chain material having anchoring means at the ends comprising a central portion having grooves extending transversely thereof, and raised portions extending transversely toward the grooves and having abutments adjacent thereto, the abutments being adapted to aid in the proper positioning of the anchoring means.

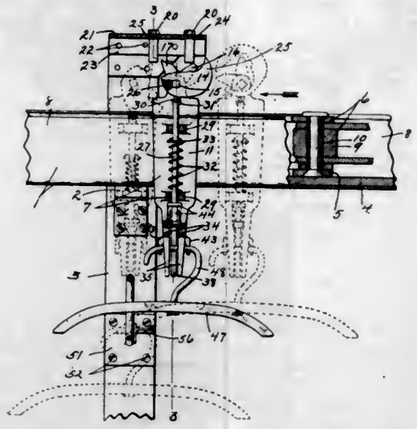
1,781,652. METHOD OF AND MEANS FOR TREATING THE FILTER CAKE PRODUCED FROM CONTINUOUS FILTERS. BERTRAM HURST RYLEY, Moyie, British Columbia, Canada. Filed May 4, 1928. Serial No. 275,147. 2 Claims. (Cl. 210—200.)



1. An apparatus for treating filter cake produced from continuous filters including a pulp containing tank; a shaft within said tank; a drum carried on said shaft and rotatable in said tank; an oscillating member operable on said tank for striking the head of said drum and setting up transverse vibrations therein as the drum is withdrawn from the pulp; a slide block operable on said tank; resilient connections between said oscillating beating member and said slide block to operate the former from the latter; and operating means for said slide block.

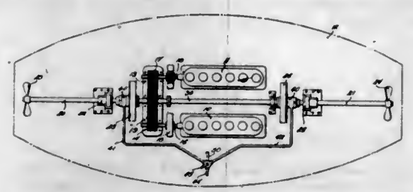
1,781,653. STEAM GENERATOR. EDWIN W. STROM, Woburn, Mass., assignor of one-half to Paul Bilezikian, Watertown, Mass., and one-half to Arakel S. Bilezikian, Newton, Mass. Filed Mar. 13, 1928. Serial No. 261,321. 1 Claim. (Cl. 219—38.)

In a steam generating outfit, a boiler including a body having a cylindrical side wall, the lower end of said body being open, a deep pan shaped plate constituting a head for the open end of the boiler and including a flat lower wall and a cylindrical side wall, the side wall of the plate being provided with an annular seat adjacent to its upper edge for the reception of the lower end of the cylindrical side wall of the body, and a plurality of electric immersion heaters carried directly by the lower wall of said plate and extending into the body, as and for the purpose specified.



1,781,654. ADJUSTABLE WINDOW SCREEN. GEORGE J. CORPORON, Portland, Me., assignor to The E. T. Burrows Company, Portland, Me., a Corporation of Maine. Filed Aug. 7, 1929. Serial No. 384,045. 5 Claims. (Cl. 156—39.)

5. A roll box for adjustable window screens, comprising a box provided with an end permanently attached and having a slot extending to its edge, a roller having a projecting pintle at the end, an auxiliary end plate having a central bearing carrying said pintle and arranged against the inside of said permanent end with the pintle in said slot.

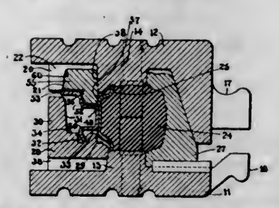


1,781,655. CONVEYER SYSTEM. JAMES T. COWLEY, Syracuse, N. Y., and WILLIAM J. TAYLOR, Winthrop Harbor, Ill., assignors to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed Jan. 6, 1928. Serial No. 244,857. 13 Claims. (Cl. 104—88.)

12. A conveyer system comprising means for conveying an article, unloading stations along the path of travel of the means, a pair of stationary trips spaced longitudinally of the path at each station, a pair of contact members on said means adapted to coact with both the trips at a predetermined station, one member being normally in the trip-coacting position, the other being normally in a non-trip-coacting position, connections between said

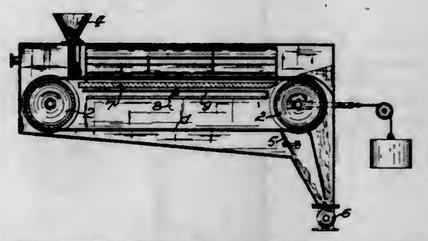
members whereby the coaction of the first member with a trip brings the second member into trip-coacting position, and mechanism for releasing the article from said means, which mechanism is actuated solely by the successive coactions of the contact members with the trips at a predetermined station.

1,781,656. FERRYBOAT. PERCY C. DAY, Milwaukee, Wis., assignor to The Falk Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 7, 1928. Serial No. 268,168. 5 Claims. (Cl. 115—37.)



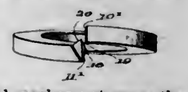
1. A propulsion mechanism for ferry boats comprising a propeller shaft at each end of the boat, a right hand propeller on one shaft, a left hand propeller on the other shaft, a pair of internal combustion engines, and means including speed reduction gearing and cooperating clutches operable to connect both of said engines in driving relation with one or the other of said shafts selectively to thereby drive the boat in one direction or the other.

1,781,657. PNEUMATIC TIRE. ROSS E. JENKINSON, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 16, 1926. Serial No. 95,060. 2 Claims. (Cl. 154—14.)



1. A method of fabricating flat built tire casings which comprises providing inner bands of fabric of equal width, shaping the bands to have substantially cylindrical midportions and outwardly inclining the marginal portions, applying molded semi-cured beads of substantially polygonal configuration to the margins, turning the edges of the fabric upwardly about the beads to enclose the latter upon two sides, providing additional plies of fabric of the same width as the first mentioned plies and disposing them in position upon the partially formed carcass, adding a tread element and such other elements as are required to complete the assembly, then stitching the margins of the last mentioned fabric plies downwardly over the beads to complete the enclosure thereof, finally shaping the fabricated tires and subjecting them to vulcanization.

1,781,658. MOLD. PARRY KELLER, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 17, 1928. Serial No. 270,676. 5 Claims. (Cl. 18—42.)

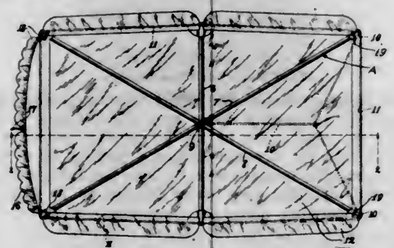


5. A molding device for curing tires supported upon base bands, comprising upper and lower plates, a base ring on the lower plate having an annular groove in its upper surface for accommodating a portion of a felloe adapting member integral with the base band of a tire, and a plurality of other base rings adapted to be employed selectively between plates in conjunction with the first mentioned base ring, for vulcanizing selectively, tires supported on base bands provided with adapting members, and tires supported on base bands free from such adapting members.

1,781,659. PROCESS FOR THE THERMAL TREATMENT OF PULVERULENT MATERIAL. FRIEDRICH BARTLING, Munich, Germany. Filed Feb. 14, 1929, Serial No. 340,004, and in Germany Feb. 2, 1928. 2 Claims. (Cl. 202—5.)

1. The process for the thermal decomposition of solid carbonizable material in finely divided form, which comprises maintaining said material in surface adhesion on a moving support by an electrostatic charge thereon, and subjecting the finely divided material to destructive distillation while in adhesion to said moving support.

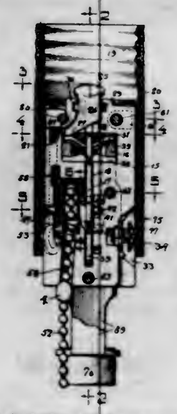
1,781,660. LOCK WASHER. GLEN A. AIKEN and JOSEPH R. ROYSTON, Pittsburgh, Pa. Filed Jan. 14, 1929. Serial No. 332,539. 8 Claims. (Cl. 151—36.)



2. A split helical washer not more than 360° in circumference having one of its work engaging faces unaltered

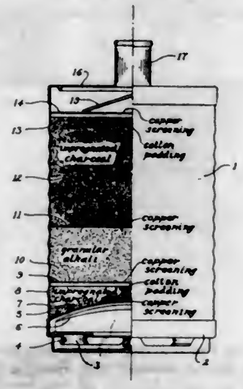
but the other work engaging face at one end having an abutment interrupting a prolongation of the helical surface of the opposed unaltered work engaging face.

1,781,661. PROCESS OF REGENERATING USED COOKING FATS. MILLARD BRANDT, Tamaqua, Pa., assignor to Darco Corporation, Wilmington, Del., a Corporation of Delaware. Filed Oct. 25, 1926. Serial No. 144,037. 1 Claim. (Cl. 87—12.)



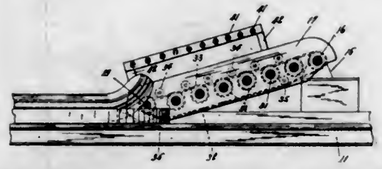
In periodic regeneration of cooking fats and oils by means of active carbon, the process which comprises percolating a batch of used fat or oil in the liquid state through a body of coarse-grained, highly activated, adsorbent carbon, maintaining the carbon during said percolation at a temperature near that of boiling water, then exposing said carbon to the air while at about the same temperature and thereafter percolating therethrough another batch of used fat or oil.

1,781,662. KITE. ALFRED B. CABRERA, Chicago, Ill., assignor to George A. Youngdahl, Chicago, Ill. Filed Oct. 25, 1928. Serial No. 314,933. 1 Claim. (Cl. 244—22.)



A kite comprising a sheet of material secured to a frame formed of a plurality of intersecting rods secured at the point of intersection by a pin, a connecting cord extending around the ends of said rods to complete the frame, a separate cord secured to the adjacent ends of a pair of said rods, an ornamental depending strip secured to said separate cord, and a tail cord secured to said separate cord adjacent the center thereof.

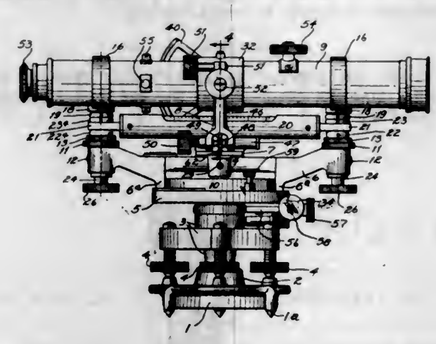
1,781,663. LAMP SOCKET. JOHANNES R. CARLSON, Hartford, Conn., assignor to The Arrow Electric Company, Hartford, Conn., a Corporation of Connecticut. Filed Apr. 14, 1925. Serial No. 23,021. 15 Claims. (Cl. 117—354.)



1. An electric switch for a lamp socket or the like, comprising a spring actuated oscillating switch bar, a reciprocating peak cam for controlling the throw of said bar, an eccentric for imparting motion to said cam, and a ratchet mechanism for rotating the eccentric.

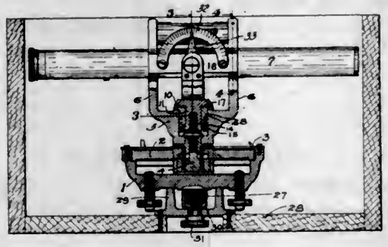
1,781,664. PROCESS AND APPARATUS FOR PURIFYING AIR. PAUL O. ROCKWELL, Edgewood Arsenal, Md. Filed July 2, 1926. Serial No. 120,073. 10 Claims. (Cl. 23—4.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 370 O. G. 757.)

1. In a process of treating a mixture of gases containing toxic gases including cyanogen chloride, withdrawing moisture from said mixture and then passing the residual gas through dry, granular, inorganic, alkaline material.



1,781,665. APPARATUS FOR REMOVING ARTICLES FROM MOLDS. RAY D. HULSLANDER, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 1, 1929. Serial No. 351,609. 14 Claims. (Cl. 18—2.)

7. The combination with a conveyor for vulcanizing molds for making annular flexible rubber articles of means for stripping said articles from said molds, comprising a continuously rotating stripping element extending transversely of the conveyor and adapted to be engaged by the advancing end portion of said article in a section of said mold, said element rotating upwardly with respect to the engaged surface of said article to pull it from the mold, the central portion of said element being of such rough or grooved formation as to have substantial purchase on the article at the leading and following end portions thereof to strip these portions of the article from the mold, and the portions of said element at either side of the central portion being comparatively smooth for stripping the intermediate portions of said article from the mold.

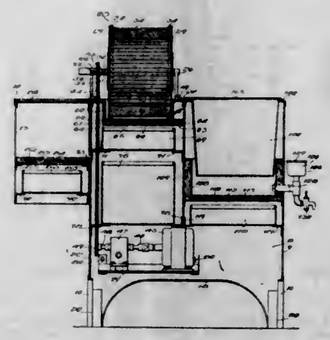


1,781,666. TRANSIT LEVEL. FRANK MIHALYI, St. Louis, Mo., assignor to The David White Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 6, 1926. Serial No. 153,010. 21 Claims. (Cl. 33—73.)

1. In a surveying instrument, a cross bar, individual two-part bearings for a telescope mounted on each end of said cross bar, the parts of said bearings being separable by relative horizontal movement.

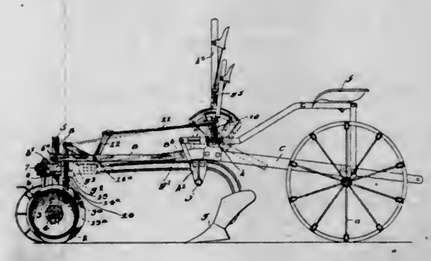
13. In a surveying instrument, a cross bar, a central vertical rotatable shaft extending above said cross bar, a telescope carried on said shaft and rotatable horizontally therewith independently of said cross bar, and spaced telescope supports on said cross bar with their upper ends below the level of the barrel of said telescope, when the latter is horizontally disposed on said shaft, whereby the telescope may be swung over said supports without removal from said shaft.

1,781,667. SURVEYING INSTRUMENT. FRANK MIHALYI, St. Louis, Mo., assignor to The David White Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 3, 1928. Serial No. 251,650. 7 Claims. (Cl. 33—73.)



1. In a surveying instrument, a base, a member mounted in said base, a rotatable vertical shaft having a downwardly facing shoulder, a bearing on said member for engaging said shoulder to support said shaft, a spring yieldingly holding said shoulder to said bearing, horizontally spaced brackets carried by said shaft, a telescope mounted in said brackets and tiltable thereon in a vertical plane, and horizontally spaced rigid elements on said member for supporting said telescope in a horizontal plane when said telescope and elements are aligned.

1,781,668. FIBROUS SHEET MATERIAL AND PROCESS OF MAKING SAME. JAMES C. PEABODY, Boston, and ALFRED BROWN, Everett, Mass.; E. Louise Peabody, executrix of said James C. Peabody, deceased, assignors, by direct and mesne assignments, to Frank B. Hopewell, Newton, Mass., as trustee. Filed July 23, 1929. Serial No. 380,456. 20 Claims. (Cl. 92—21.)

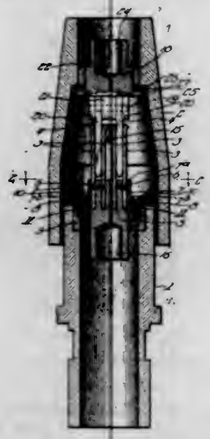


4. The process of treating natural vegetable cellulose fibres which consists in incompletely converting the fibres into cellulose xanthate to render the fibres swollen, gelatinous and insoluble in water or dilute caustic soda.

1,781,669. COOKING MACHINE. MARTIN C. PETERSEN, Ipswich, S. Dak. Filed Oct. 17, 1927. Serial No. 226,749. 6 Claims. (Cl. 219—19.)

4. In a machine of the class described, the combination of a rotatable cylindrical roasting drum for loosely holding Frankfurters, a heater unit underlying a part of said drum, said unit comprising a completely closed metallic casing having a curved surface conforming to the contour of said drum and containing the heat generating means, a food storage drawer, said drawer being disposed beneath said heater unit and extending beyond it under the remainder of the lower side of said drum, means for rotating said drum to thereby evenly expose the Frankfurters to said heater, and means for disconnecting said drum from said rotating means and for stopping it to permit discharging the Frankfurters into said drawer.

1,781,670. RIDGE SPLITTER. JAMES A. SMETHERS and WILLIAM ELLIOTT, Beatrice, Nebr., assignors to Dempster Mill Manufacturing Company, Beatrice, Nebr., a Corporation of Nebraska. Filed Jan. 29, 1929. Serial No. 335,804. 10 Claims. (Cl. 97—243.)

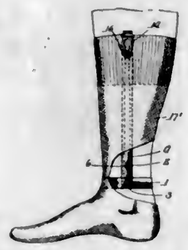


1. Equipment for adapting a two row lister for ridge splitting, embodying lister supporting and guiding wheels, a carriage for said wheels and cooperating guiding and controlling mechanism whereby the carriage and its said wheels are held against movement forwardly and rearwardly and are held to straight line vertical movement to and from operative position.

1,781,671. POTHEAD DEVICE FOR USE ON ELECTRICAL CIRCUITS. PAUL F. WILLIAMS, Chicago, Ill., assignor to G & W Electric Specialty Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 20, 1920, Serial No. 360,267. Renewed Sept. 24, 1928. 12 Claims. (Cl. 173—353.)

3. In a device of the class specified the combination of a body member provided at its upper end with a ring, a

supporting member detachably secured to said ring and contact jaws secured to said supporting member, by



means of a flange extending laterally from said contact jaws and screws passing through said flange and also into said ring.

1,781,672. CHOCOLATE MATERIAL AND METHOD OF MAKING SAME. EARL B. WORKING, Manhattan, Kans. Filed July 16, 1930. Serial No. 468,463. 13 Claims. (Cl. 99—11.)

1. A chocolate mass adapted for coating cores of confectionery, comprising chocolate and a small percentage of added lecithin, the percentage of lecithin being sufficient to at least retard "graying."

3. In the art of making confectionery, the herein described improvement which comprises incorporating, at any stage of the manufacture, with confectionery material including chocolate carrying such amounts of fatty material as to be normally subject to "graying," a sufficient percentage of lecithin to retard "graying."

1,781,673. GARTER. BENZION WOLF, Chicago, Ill. Filed Mar. 10, 1930. Serial No. 434,571. 2 Claims. (Cl. 214—6.)

1. In a garment support of the class described, a flexible band adapted to be applied above and to rest upon the ankle of a wearer, a supporting means secured to and extending upwardly from said flexible band, said supporting means including an elongated fabric strip provided with an elongated pocket and a reinforcing member inserted within said pocket for lending rigidity to said supporting means, closure means extending across the upper portion of said pocket at a point adjacent the upper extremity of the reinforcing member to prevent any appreciable relative movement between the fabric strip and the reinforcing member, and a garment fastening device secured to the upper extremity of said supporting means to receive the garment to be supported.

EXECUTIVE ORDER

Facilitating the Consideration of Applications for Plant Patents

[No. 5,464]

I, Herbert Hoover, President of the United States of America, under the authority conferred upon me by act of May 23, 1930 (Public No. 245), entitled "An act to provide for plant patents," and by virtue of all other powers vested in me relating thereto, do hereby direct the Secretary of Agriculture: (1) to furnish the Commissioner of Patents such available information of the Department of Agriculture, or (2) to conduct through the appropriate bureau or division of the department such research upon special problems, or (3) to detail to the Commissioner of Patents such officers and employees of the department, as the Commissioner may request for the purposes of carrying said act into effect.

HERBERT HOOVER.

The White House, October 17, 1930.

International Convention—Adhesion

France, Tunis

This Office has been notified by the State Department of the receipt of a notice from the Swiss Legation that the Government of France has adhered to the Convention of the Union for the Protection of Industrial Property, as revised at The Hague on November 6, 1925, and has also adhered to that convention for the French zone of the Shereefian Empire and for Tunis, the adherences to take effect October 20, 1930.

THOMAS E. ROBERTSON,
Commissioner of Patents.

DESTRUCTION OF FILES
ABANDONED APPLICATIONS
ACT OF APRIL 11, 1930

DEPARTMENT OF COMMERCE,
U. S. PATENT OFFICE, *Washington, Oct. 20, 1930.*

(ORDER NO. 3,166)

Section 6 of the act of April 11, 1930 (393 O. G. 1031-2) reads as follows:

The Commissioner of Patents is hereby authorized to annually destroy or otherwise dispose of all the files and papers belonging to all abandoned applications which have been on file for more than twenty years.

(1) If any patentee calls attention within 60 days from the date of this order to an abandoned application referred to in his patent, the file of that abandoned application will be retained in this Office.

(2) If any member of the public similarly calls attention to a patent having reference to such an abandoned application, the file of that application will be retained.

(3) Except as indicated in paragraphs (1) and (2), where any applicant or the assignee of any application wishes to obtain the file of an application which has been abandoned for more than 20 years, such application will be sent to him if request therefor is made within 60 days from date of this order, provided that if request is made by the applicant for such file and the record shows an assignment thereof, the request must be accompanied by the assent of the assignee.

Except as above indicated, steps will be taken to destroy the files of all abandoned applications which have been on file longer than the 20-year period fixed by statute.

THOMAS E. ROBERTSON,
Commissioner.

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE WIETZEL AND MICHAEL

No. 2,229. Decided April 14, 1930

[39 F.(2d) 669]

PATENTABILITY—PROCESS OF MANUFACTURING HYDROCYANIC ACID.

Claims for a process of manufacturing hydrocyanic acid *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Messrs. Hauff & Warland and *Mr. William E. Warland* for Wietzel and Michael.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

HATFIELD, *J.:*

This is an appeal from the decision of the Board of Appeals affirming the decision of the Examiner denying appellant's claims—1 to 5, inclusive—for an alleged invention relating to a process of manufacturing formamid and hydrocyanic acid.

The claims in issue read as follows:

1. The process of manufacturing formamid and hydrocyanic acid which consists in exposing alkyl formate vapor and ammonia to elevated temperatures in the presence of a contact mass.

2. The process of manufacturing hydrocyanic acid which consists in exposing alkyl formate vapor and ammonia to a temperature of between about 200 degrees and 500 degrees centigrade and in the presence of a contact mass of a dehydrating character and while contacting the gases with said mass sufficiently long to cause dehydration to hydrocyanic acid.

3. The process of manufacturing formamid and hydrocyanic acid which consists in passing alkyl formate vapor and ammonia in a quantity exceeding the calculated one, over a contact mass at an elevated temperature.

4. The process of manufacturing formamid and hydrocyanic acid which consists in passing alkyl formate vapor and ammonia and an inert gas over a contact mass at an elevated temperature.

5. The process of manufacturing hydrocyanic acid which consists in passing a mixture of vaporized alkyl formate and formamid and ammonia over a contact mass of a dehydrating character, at a temperature of between about 200 degrees and 500 degrees centigrade and at conditions causing the formation of hydrocyanic acid.

The claims were rejected on the following references: Textbook of Organic Chemistry, Holleman-Walker, 1920, pages 100, 127, and 349; Chemical Society Journal, vol. 1, 1863, pages 73–74; Organic Chemistry, Richter, vol. 1, pages 227, 228, and 229; Handbook of Modern Chemistry, Tidy, page 762.

It appears from appellants' specification and claims that, by the alleged novel process, formamid, hydrocyanic acid, or a mixture of these substances, may be produced by exposing alkyl formate and ammonia to elevated temperatures in the presence of a catalyst; and that, if a mixture is obtained, the mixed products may be separated.

In view of the fact that the Board of Appeals has reviewed the decision of the Examiner in the light of the criticisms made of it by counsel for appellants, we think it may be helpful to quote rather extensively from its decision.

The Examiner cited the text book on Organic Chemistry by Holleman-Walker, as disclosing on page 103, that nitriles can be formed by passing esters mixed with ammonia over alumina and on page 127 that amides, which will be intermediates formed by treating the esters, as on page 103, can be converted into nitriles by heating (distilling) with a dehydrating agent, phosphorous pentoxide. See also Richter's Organic Chemistry, vol. 1, page 266 (3). That hydrocyanic acid may be considered a nitrile of formic acid is disclosed on page 349, of Holleman-Walker.

From these statements the Examiner deduces that, as alkyl formate is a formic ester and hydrocyanic acid is the nitrile of formic acid, the heating of alkyl formate vapor with ammonia over alumina would produce formamid as an intermediate product and that the formamide will be converted into hydrocyanic acid by treating with a dehydrating agent such as phosphorous pentoxid.

The brief states that the only ester disclosed by the text book is an acetic acid ester and esters of higher members of the aliphatic series and that it could not be foreseen that the reaction could be carried out with esters of formic acid. While formic acid is the first member of the group of fatty acids, of which acetic acid is a higher member, it is contended that formic acid and its derivatives in most cases fail to conform to the characteristics of the series. It is to be noted that in the text book cited, the reaction is not limited to an ester of acetic acid or any other of the group of fatty acids, but is stated broadly with reference to acid amides, and at the bottom of page 127, acid amides are again mentioned and *formamide* is referred to as the only one which is liquid. It seems clear that the disclosure was not intended to be limited to acetamid nor to exclude formamide. In Richter's Organic Chemistry, vol 1, page 227, it is stated that formamide may be formed by heating formic ester with alcoholic ammonia to 100° and also that heated rapidly with $P_2 O_5$ it liberates HCN(hydrocyanic acid). The Examiner further cites the Journal of the Chemical Society—vol. 1, 1863, pages 73, 74, as disclosing the making of formamide by heating ethyl formate with dry ammonia at 195° C. In view of these disclosures we are of the opinion that there is every reason to believe that the statement in Holleman-Walker text book applies to esters of formic acid as well as to other members of the fatty acid group.

The brief then attacks the statement that hydrocyanic acid may be considered as the nitrile of formic acid, and cites a text book by Meyer-Jacobson as expressing a doubt whether hydrocyanic acid is to be represented by the nitrile formula $H-C{\equiv}N$ or by the isonitrile formula—

$$H-N{=}C{<} \text{ or } H-N{=}C.$$

In addition to the statement on page 349 of Holleman-Walker we find the same statement in Richter's Organic Chemistry on pages 228, 229, and in Handbook of Modern Chemistry by Dr. Meymott Tidy, page 762, and, in view thereof, we consider these disclosures sufficient to raise a presumption at least that the reactions disclosed would apply to formamid and to hydrocyanic acid as the nitrile of formic acid, and, where there is no real reason to suppose that the result would not be produced there is no invention in trying it and finding out that the process is successful.

It is contended that the references cited by the tribunals of the Patent Office "do not constitute anticipations;" that it is evident from the decisions below that the Examiner and the Board of Appeals were in doubt as to whether the process disclosed in appellants' application involved invention; and that the claims in issue were rejected on the presumption only that they were anticipated by the references. It is further contended that the decisions below rest upon two assumpions, namely: first, that hydrocyanic acid is a nitrile of formic acid; and, second, that formic acid had all the attributes and characteristics of other members of the "fatty acid" group, and that, as the other members of the group could be used in the formation of acid amides and nitriles, invention was not involved in discovering that—

in the case of formic acid an analogous reaction, viz.: the process of producing formamid or hydrocyanic acid or both by exposing alkyl formate and ammonia to elevated temperatures, can be carried out;

and that neither of these assumptions is sufficiently well founded to warrant the rejection of appellants' process claims.

Several authorities on the subject agree that hydrocyanic acid is the nitrile of formic acid, whereas some contend that it is an isonitrile. In view of the

fact that the authorities are not in entire harmony, it is argued that the Board of Appeals erred in adopting the views of one group and ignoring the views of the other.

Counsel for appellants, however, do not rest their case upon this proposition.

Granting, as counsel do, for the purpose of discussion, that hydrocyanic acid is the nitrile of formic acid, it is contended, nevertheless, that the claimed process is novel. We quote from the brief of counsel for appellants:

> • • • First it splits off alcohol from the starting material and produces formamid and then water is split off from the formamid and hydrocyanic acid produced. This fact alone in appellants' opinion marks a distinct advance in the art. The references do not show this. There is nothing in the reference to indicate that one catalytic substance would fulfill both of these requirements.

Many other arguments are advanced in the brief of counsel for appellants in denying the soundness of the decision below.

In cases involving intricate and highly technical questions, such as those presented in the case at bar, and especially in the absence of evidence of those expert in the art, concurring decisions of the Patent Office tribunals will not be disturbed, unless it appears that they are manifestly wrong. *In re Beswick*, 16 App. D. C. 345, 91 O. G. 1436.

We have given the issues careful study in an effort to determine whether, as counsel for appellants contend, the decision of the Board of Appeals is clearly erroneous. We are unable to hold that such is the case.

The Examiner and the Board of Appeals have discussed the issues and the references in detail. In view of the fact that we concur in the conclusion of the Board, we deem it unnecessary to contribute to the discussion of the technical features of the case.

We are unable to agree with the contention that the decision of the Board of Appeals, in rejecting appellants' claims, was predicated on either presumtions or assumptions. It is true that, in referring to the authorities cited as references, the Board said:

> We consider these disclosures sufficient to raise a presumption at least that the reactions disclosed would apply to formamid and to hydrocyanic acid as the nitrile of formic acid.

However, the meaning and purpose of this observation is made clear by the language immediately following:

> And, where there is no real reason to suppose that the result would not be produced there is no invention in trying it and finding out that the process is successful.

The decision is affirmed.

Affirmed.

U. S. Circuit Court of Appeals—Sixth Circuit

REYNOLDS SPRING CO. *v.* L. A. YOUNG INDUSTRIES, INC.

Nos. 5,215, 5,216. Decided December 3, 1929

[36 F.(2d) 150]

1. PATENTABILITY—INVENTION.
   The utilization of well known expedients in a more or less obvious solution of the problems which confronted the patentees *Held* not invention.
2. SAME—SAME.
   Patent No. 1,428,701, and Patent No. 1,439,891, relating to spring constructions *Held* invalid for want of invention.
3. SAME—SAME.
   Patent No. 1,058,285 for an S type of base frame in spring upholstery construction *Held* valid and infringed.
4. PATENTS—INFRINGEMENT.
   Mere improvement upon a patented device without departure from the basic concept and mode of operation does not avoid infringement.

APPEAL and cross-appeal from the District Court of the United States for the Eastern District of Michigan; Benjamin C. Dawkins, judge.

Patent infringement suit by the L. A. Young Industries, Incorporated, against the Reynolds Spring Company. From the decree rendered, both parties appeal. Affirmed in part, and in part reversed and remanded with instructions.

Mr. Otto F. Barthel and *Mr. Walter F. Murray* (*Messrs. Barthel, Flanders & Barthel* on the brief) for Reynolds Spring Co.

Mr. Otis A. Earl and *Mr. Melville Church* (*Messrs. Chappell & Earl*, on the brief) for Young Industries.

Before DENISON, MOORMAN, and HICKENLOOPER, Circuit Judges

HICKENLOOPER, *C. J.:*

Three patents are involved in the present appeal and cross-appeal. Patent No. 1,058,285, issued to L. A. Young, April 8, 1913, covers the use of the S type of base frame, or marginal strip on the base frame, in spring upholstery construction such as seats for automobiles. Claims 1, 2, 3, 5, and 7 are in suit and were held valid and infringed. Patent No. 1,428,701, issued to Otto A. Michelis, September 12, 1922, claims in combination with such spring structures a tie loop, having arms terminating in hooks with relatively short bills, the bight of one hook extending beyond the other to facilitate engagement in connecting the springs. Both claims of the patent are in suit and were held valid and infringed. Patent No. 1,439,891, issued to J. T. Holtfoth, December 26, 1922, so far as this action is concerned, covers telescoping the ends of the base frame, of S cross section such as is disclosed in the Young patent, so as to form an endless frame with continuous channels. Claims 2, 3, 6, 7, and 8 are in suit and were held not infringed.

[1, 2] After careful consideration and study we feel constrained to hold the claims in suit of both the Michelis and the Holtfoth patents invalid for want of invention, in that they but utilize well-known expedients in the more or less obvious solution of the problems confronting the patentees. *Concrete Appliances Co.* v. *Gomery*, 269 U. S. 177, 184, 46 S. Ct. 42, 70 L. Ed. 222; *Hollister* v. *Benedict & Burnham Mfg. Co.*, 113 U. S. 59, 73, 5 S. Ct. 717, 28 L. Ed. 901; *Grand Rapids Refrigerator Co.* v. *Stevens*, 27 F.(2d) 243 (C. C. A. 6).

The sole element of novelty claimed for the tie loop of Michelis lies in having one bight extend beyond the other. This construction is common in numerous other uses, both differing and analogous,

CARNEGIE LIBRARY OF ATLANTA

and when confronted with the problem of securing greater facility in mounting the loops, it required no more than skillful selection from known devices to attain the desired end. Such use may have had novelty in connection with spring upholstery construction, but such novelty of use in a particular art does not alone justify a patent. Nor is it apparent that any advantage is gained in claiming a tie loop of this specific design as in combination with the springs to be joined. Once placed, the tie loop but performs its usual and well-recognized function and the useful purpose of the bights of different length has been completely fulfilled. The patentee was refused a patent on the loop as such and whether claiming it in combination with the other elements of the spring structure results in aggregation or in a true combination, we are convinced that it does not disclose the exercise of invention.

The same conclusion is applicable to the Holtfoth patent. Given the Young S type base frame, then old, the only problem which confronted Holtfoth was that of securing a firm union of the two ends of frame after bending to the shape desired. Overlapping or telescoping the two ends of metal parts to be joined, whether such parts be tubular, flat, or of other shape, is one of the commonest and most used means of securing union in every art. To produce the Holtfoth joint, with such slight adaptation as was necessary, required no more than mechanical skill and familiarity with common practice and expedients. After union the purpose of the telescoping was subserved. If there was no invention in that, such invention is not found in enumerating, as elements in combination, the other features of the spring construction.

The prior art discloses nothing precisely like the S base frame construction of the patent to Young, No. 1,058,285. The base frames of spring seat cushions were at first made of wood to which the upholstery cover was tacked. This necessitated a binding or tacking strip and by natural evolution the art soon developed the use of a groove into which the upholstery cover was laid and in which a metal or wooden binding strip was sunk, securing the cover. Patents to Henry, No. 941,875, and to Hale, No. 734,701, are examples. The use of a tacking insert, in which a wooden or fiber strip was held in a metal groove, was also developed. Kilburn & Budd, No. 897,541; Budd, No. 944,662; and Hale, No. 884,730. In other patents the edge of the upholstery cover was wrapped around a clamping strip and this strip was then inserted into a flat groove at right angles to the direction of tension or in such manner that it would not slide out. The upholstery cover was thus hooked in its channel. Foster, No. 1,020,407; Ostrander, No. 847,023. In several patents, also, use had been made of the single U-channel for clamping woven metal fabric (Fisher, No. 771,866) or springs (Van Cise, No. 804,352), against tension; and of the double U-strip, or a flat strip folded twice upon itself, for the purpose of holding the edges of leather, in one case, and of window shade fabric, in another, in oppositely disposed grooves. Lieb, No. 233,154; Michel, No. 241,689; compare, also, Norton, No. 304,350. In each of these last, however, the clamping was produced by flat surface tension when the double U-strip was heavily compressed. The patent to Brink, No. 1,061,218, is also suggestive, in that the upholstery cover is held by a drawstring in the upper groove of an S-frame and the springs in the lower groove.

[3] It remained for Young, however, to conceive the idea of using a bead upon the edge of the cover and of confining this within the outer groove of the S-frame, and the adjacent springs within the inner groove, by merely compressing the flanges. The cover is thus held by the narrowed opening rather than by surface friction and the necessity of all tacking is avoided. The nearest approach to this idea of a single S-frame having this double function is, we think, found in the patent to Young, No. 1,014,736, in which a similar S-strip is used to clamp the oppositely disposed edges of parallel rows of springs in a spring seat construction, or in the patent to Brink, supra. But a number of problems were presented in devising the S base rim which did not confront Young in the patent just mentioned. In devising the base rim it was necessary to protect the upholstery cover against cutting or contact with sharp edges. It was necessary also to confine it permanently within its channel against varying stresses and strains. This last Brink did not accomplish as well. These problems Young solved by the apparently simple, but we think inventive, thought of placing the bead of the cover in the lower and outwardly facing groove, whence the cover passed over the curved portion of the S, and the spring edges in the upper or inwardly facing groove, and merely clamping the edges of the two flanges to secure the cover and springs when so placed. The rim so devised has all of the advantages of the much heavier and much more expensive wood frames and the great utility of firmly and permanently holding the upholstery cover without tacking and protecting it against cutting and wear. The use of this frame has been highly successful commercially. A large number of other devices have been designed apparently with the idea of securing advantage of its simplicity and utility without infringing the patent itself. Up to the present alleged infringement, the patent has been generally respected in the art. We have no doubt that the patent involved invention, was not anticipated, and is infringed.

[4] The strongest argument on behalf of the defendant-appellant is that in view of the prior known uses of the double U-strip, offering oppositely disposed grooves for clamping fabric or springs or other material, no invention lay in the concept of using such a strip for a base rim or in pinching the beading of the cover in the groove, in place of the wood or fiber tacking strip in devices of the latter sort; that such invention could be exercised, in view of this prior art, only in the adaptation of

the old device to the new use; and that Young merely disclosed in his patent the well-known double U-frame without any adaptation thereof to the needs of the new use. It is thus urged that the true invention lay in the practical adaptation of this idea, of oppositely disposed grooves for holding spring and upholstery cover, by designing the S-frame in such manner and shape as to present leverage surfaces upon which the clamping tools could operate; and that this concept and reduction to practice, which made the device practical and gave to it most of its utility, was the work of one Hawes, an employee of the Young Industries. It may be conceded for the purposes of this opinion that a patent for an impractical device or one which is inoperative will not be held to anticipate an invention which is highly practical and useful even though it bears some similarity in form and concept to the earlier patented device. Compare *Lovell* v. *Seybold Mach. Co.*, 169 F. 288 (C. C. A. 2). In the present case, however, we are convinced that the patent in suit is not without utility and that the asserted improvement of the Hawes S construction over the double U form of the patent has reference to the matter of commercial production rather than to intrinsic utility and the advance made by Young. The basic idea and inventive concept were those of the patentee. He showed the double U base rim as the preferred form of his invention. It is perfectly possible to utilize this preferred form in structures of the type shown. Speed of operation and quantity production in this precise form are perhaps impractical, but the disclosure sufficiently covers the later commercial forms. It is unnecessary to give the claims a broad construction such as was disallowed in our decisions of *Firestone Tire & Rubber Co.* v. *Seiberling* (C. C. A.) 257 F. 74, 79, 80; *National Malleable Casting Co.* v. *Buckeye, etc., Co.* (C. C. A.) 171 F. 847; etc. The claims read fully upon the defendant's device and upon the Hawes particular S form. Under these circumstances the most that can be said in behalf of the Hawes S design is that if a patent had issued to him for this improvement, neither he nor Young could have manufactured the improved device without license from the other. We have so frequently held that mere improvement upon a patented device, without departure from the basic concept and mode of operation, does not avoid infringement, that citation of precedent seems unnecessary. *Farrington* v. *Haywood* (C. C. A.) 35 F.(2d) 628; *Gordon Form Lathe Co.* v. *Walcott Mach. Co.* (C. C. A.) 32 F.(2d) 55.

We therefore conclude that the judgment of the district court dismissing the bill as to the claims in suit of the patent to Holtfoth, No. 1,439,891, for lack of infringement, be affirmed as to said dismissal upon our finding that said claims are invalid for want of invention; that the decree of the district court finding the claims of the patent to Michells, No. 1,428,701, valid and infringed, be reversed; and that said decree of the district court finding the claims in suit of the patent to Young, No. 1,058,285, valid and infringed, be affirmed. The cause is remanded to the district court, with instructions to modify the decree in accordance with this opinion. The master should be instructed also to ascertain and report a reasonable royalty, so that it may be adopted as the measure of damages, if such adoption should seem to the court to be appropriate. The costs in this court will be borne in equal proportions by the two parties here.

Re. 17,514, McCabe & Schoenholz, Pocketbook top; Des. 80,008, same, Pocketbook latch, filed Sept. 4, 1930, D. C., S. D. N. Y., Doc. E 55/178, *McCabe & Schoenholz, Inc.*, v. *Artistic Wire Forming Co., Inc.*

Des. 80,008. (See Re. 17,514.)

Adjudicated Patents

(C. C. A. N. Y.) Boyce patent, No. 1,206,783, for temperature-indicating system and apparatus for internal-combustion engines, *Held* invalid. *Leander Development Corporation* v. *Taft-Buick Corporation*, 42 F.(2d) 823.

(C. C. A. N. Y.) Boyce patent, No. 1,275,654, for indicating means for motor-propelled vehicles, claims 4 and 25 *Held* invalid. *Id.*

(C. C. A. Ill.) Olsen patent, No. 1,314,752, for burned shale and method of preparing the same and concrete made therefrom, claims 1, 2, 3, and 5 *Held* not infringed, claims 4, 6, 10, and 11 *Held* invalid. *Silica Products Co.* v. *Haydite Co.*, 42 F.(2d) 865.

(D. C. Ill.) Olsen patent, No. 1,314,752, for burned shale and method of preparing the same and concrete made therefrom, claims 1, 2, 3, 4, 5, 6, 10, and 11, *Held* not infringed. *Silica Products Co.* v. *Haydite Co.*, 42 F.(2d) 861.

(D. C. N. Y.) Wachsman patent, No. 1,358,483, for stop mechanism for knitting machines, *Held* valid and infringed. *Wachsman* v. *Wachsman*, 42 F.(2d) 869.

(C. C. A. Minn.) Fisher and Kristofek reissue patent, No. 16,253, for pencil, claims 2, 3, 4, 5, and 6 *Held* not infringed. *Brown & Bigelow* v *Louis F. Dow Co.*, 42 F.(2d) 785.

Disclaimers

1,568,692.—*Alan Adair Pollock*, Leamington Spa, England. DYNAMO-ELECTRIC MACHINE. Patent dated January 5, 1926. Disclaimer filed October 24, 1930, by the assignee, *General Electric Company*.

Hereby enters this disclaimer to claim 1 of said patent which is in the following words:

"1. A dynamo electric machine of the commutating type, having an armature winding comprising coils, each coil comprising a plurality of conductors, two of said conductors of each coil being located substantially 360 electrical degrees apart and another of said conductors of each coil being located substantially 180 electrical degrees from each of said first mentioned conductors."

1,607,993.—*Raymond G. F. Loewy*, Jackson Heights, N. Y. CONTAINER TUBE. Patent dated November 23, 1926. Disclaimer filed October 29, 1930, by the patentee.

Hereby enters this disclaimer to the subject-matter of claims 1, 3, 5, 6, 7 and 8, which are as follows:

"1. A container tube having a neck at one end thereof, said neck having a bore therein, a closure disposed in said bore comprising a resilient diaphragm extending across said bore and having a slit therein, a tubular portion joined to said diaphragm and fitting the wall of said bore, and means to prevent displacement of said closure."

"3. A container tube having at one end thereof a breast terminating in a neck, said neck having a bore therein, a closure disposed in said bore comprising a resilient diaphragm extending across said bore and having a slit therein, a tubular portion joined to said diaphragm and fitting the wall of said bore, and an annular flange joined to said tubular portion and contacting with the breast of said tube to prevent displacement of said closure."

"5. A container tube having a neck at one end thereof, said neck having a bore therein, a closure for said bore comprising a resilient diaphragm extending across said bore and having a slit therein whereby, when pressure is applied to the tube, the contents thereof may be forced outwardly through the slit, the material of the diaphragm on either side of the slit resiliently yielding to permit passage of the contents and upon release of the pressure returning to its original condition to close the slit and retain the contents in the tube, and means for preventing displacement of said closure.

"6. A container tube having a neck at one end thereof, said neck having a bore therein, a closure for said bore comprising a resilient diaphragm of cellulose material extending across said bore and having a slit therein whereby, when pressure is applied to the tube, the contents thereof may be forced outwardly through the slit, the material of the diaphragm on either side of the slit resiliently yielding to permit passage of the contents and upon release of the pressure returning to its original condition to close the slit and retain the contents in the tube, and means for preventing displacement of said closure.

"7. A container tube having a neck at one end thereof, said neck having a bore therein, a closure for said bore comprising a resilient diaphragm extending across said bore and having a plurality of radiating slits therein intersecting at a point whereby, when pressure is applied to the tube, the contents thereof may be forced outwardly through the slits, the material of the diaphragm on either side of the respective slits resiliently yielding to permit passage of the contents and upon release of the pressure returning to its original condition to close the slits and retain the contents in the tube, and means for preventing displacement of said closure.

"8. A container tube having a neck at one end thereof, said neck having a bore therein, a closure for said bore comprising a resilient diaphragm of cellulose material extending across said bore and having a plurality of radiating slits therein intersecting at a point whereby, when pressure is applied to the tube, the contents thereof may be forced outwardly through the slits, the material of the diaphragm on either side of the respective slits resiliently yielding to permit passage of the contents and upon release of the pressure returning to its original condition to close the slits and retain the contents in the tube, and means for preventing displacement of said closure."

1,732,814.—*Erwin L. Klos*, Kenosha, Wis. BED BOTTOM. Patent dated October 22, 1929. Disclaimer filed October 29, 1930, by the assignee, *Simmons Company*.

Disclaims from the scope of the claim of said Patent any structure with springs having generally circular top end coils where any material portion of the general curve of said top coils extends outside of the area bounded by the line of the inner edge of the horizontal flange of the border angle, and

Limits the scope of said claim to a structure in which the parts projecting from said top coils comprise relatively narrow loops of such length as to position the general curves of the said top coils within the area bounded by the inner edge of the horizontal flange of the border angle.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,691,906, Aaron Lefkowitz, by judicial change of name, Aaron Landis, Bag, decided October 7, 1930, claims 7, 8, and 9.

Pat. 1,610,394, H. A. Thompson, Railway-traffic-controlling apparatus, decided October 8, 1930, claims 1, 2, and 5.

TRADE-MARKS

OFFICIAL GAZETTE, NOVEMBER 18, 1930

[VOL. 400. No. 3]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 291,142. RELIABLE COAL & MINING CO., Chicago, Peoria, and Springfield, Ill.; Moberly and Kansas City, Mo.; and Omaha, Nebr. Filed Oct. 16, 1929.

For Coal.
Claims use since Sept. 1, 1929.

Ser. No. 291,144. RELIABLE COAL & MINING CO., Chicago, Peoria, and Springfield, Ill.; Moberly and Kansas City, Mo.; and Omaha, Nebr. Filed Oct. 16, 1929.

The drawing is lined to indicate the color red.
For Coal.
Claims use since Aug. 1, 1929.

Ser. No. 295,361. ELMER CARD, doing business as Card Seed Company, Fredonia, N. Y. Filed Jan. 30, 1930.

The words "Lawn Grass" and "Fredonia, N. Y." are hereby disclaimed as a part of the trade-mark.
For Garden Seeds.
Claims use since Oct. 1, 1929.

Ser. No. 302,897. WILLIAM HURWITZ, doing business as William Hurwitz & Co., London, England. Filed June 27, 1930.

FRANFURTIA

The lining shown in the drawing is intended to represent shading only.
For Leather and Artificial Leather.
Claims use since July 3, 1928.

Ser. No. 306,702. FREDERICK C. HITCHCOCK, Boston, Mass. Filed Oct. 13, 1930.

COVULC

For Cold-Vulcanized Rubber.
Claims use since Aug. 4, 1930.

CLASS 2

Receptacles

Ser. No. 297,493. NEW IDEA MANUFACTURING COMPANY, INC., Philadelphia, Pa. Filed Mar. 18, 1930.

NIMCO

For Garment Bags, Laundry Bags, Shoe Bags, Wardrobe Bags, and Household Utility Containers or Receptacles Constructed of Textile Material.
Claims use since June, 1925.

Ser. No. 306,231. CHASE BAG COMPANY, New York, N. Y. Filed Sept. 30, 1930.

TYRITE

For Paper Bags.
Claims use since Oct. 1, 1907.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 296,730. CHICAGO SANITARY PRODUCTS CO., doing business as Cleanwell Mfg. Co., Chicago, Ill. Filed Mar. 3, 1930.

No claim is made to the exclusive use of the word "Cleanwell" apart from the mark as shown in the drawing.
For Brass Polish, Green Soap, Liquid Soap, Laundry Soap, Liquid and Powder Metal Polish, Mechanic's Liquid Soap, Chemically-Treated Polishing Cloths, Soap Powder, Sweeping Compound, Scouring Compound, Scouring Soap, Scouring Powder, and Toilet Soaps.
Claims use since Jan. 30, 1930.

Ser. No. 303,406. THE TROPICAL PAINT AND OIL COMPANY, Cleveland, Ohio. Filed July 11, 1930.

TROPICAL

Applicant disclaims exclusive right to the use of the words "Steel," "Stucco," "Wood," "Roofs," "Stacks," "Concrete," "Brick," and "Interiors" apart from the trade-mark as shown in the drawing.
For Cleaner for Cleaning Tile, Marble, Granite, Stone, Mosaic, Linoleum, Dishes, Cooking Utensils, Windows, Show Cases, Crockery, Cut Glass, Mirrors, Skylights; for Washing Clothes; for Removing Grease, Paint, and Dirt from the Hands; and for General Cleaning Purposes, and for Belt Dressing.
Claims use since June 16, 1930.

Ser. No. 303,837. THE CARBORUNDUM COMPANY, Niagara Falls, N. Y. Filed July 26, 1930.

For Certain Abrasive Articles and Compounds Comprising Prepared Abrasive Grains and Powders; Abrasive Paper and Cloth in the Form of Sheets, Rolls, Pads, Discs, Strips, Coils, and Special Shapes; Abrasive Wheels of All Kinds, Abrasive-Wheel Segments, Abrasive Discs and Cones; Molded Abrasive Articles Comprising Blocks, Bricks, Stones, Scythestones, Sharpening Stones of Various Shapes, Hones, Strops; Bonded Abrasive Sticks with and without Handles, Strips of Bonded Abrasive Material Having a Metal Reinforcement Along One Edge for Dressing Contact Points and for Other Fine Abrasive Operations, Abrasive Insert Stones of Tooth Form, Abrasive Points, Pin Wheels, Combination Paper, Breasting Paper, Waterproof Abrasive Paper and Cloth, and Belts having Abrasive Material on the Outside Surface Thereof for Use in Sanding Machines.
Claims use since July 1, 1902.

Ser. No. 305,457. GERTRUDE W. STANBERY, Deerfield, Mich. Filed Sept. 8, 1930.

TREG

For Metal Polish and Metal-Polishing Cloths.
Claims use since Aug. 23, 1930.

CARNEGIE LIBRARY OF ATLANTA

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 290,344. CHARLES A. DE LONE, doing business as Enoled Laboratories, Harrisburg, Pa. Filed Sept. 28, 1929.

BONATA

For Mouth Wash and Antiseptic for the Gums After Extracting Teeth.
Claims use since Aug. 11, 1922.

Ser. No. 293,928. MELLIER COMPANY, PERFUMER, St. Louis, Mo., and New York, N. Y. Filed Dec. 20, 1929.

La Rosa de Guadalupe

For Perfumery, Cold Cream, Skin and Tissue Cream, Vanishing Cream, Cleansing Cream, Bleaching Cream, Massage Cream, Bath Salts, Bath Crystals, Almond Meal, Toilet Cerate, Toilet Water, Headache Cologne, Smelling Salts, Face Powder, Bath Powder, Talcum Powder, Rice Powder, Toilet Powder, Body Powder, Dusting Powder, Compact Powder, Shampoo Powder and Liquid, Tooth Powder, Tooth Paste, Dentifrices, Rouge, Liquid and Dry Rouge, Lip Sticks, Lip Salve, Hair Tonics, Hair Oils, Bay Rum, Face Lotions, Skin Lotions, Sachet, Brilliantine, Nail Polish, Nail Enamel, Eyebrow Pencil, Mascara, Cocoa Butter, Depilatory, Pomade, Rubbing Alcohol, Sunburn Ointments, Deodorant.
Claims use since June 30, 1922.

Ser. No. 295,483. P. A. LEFEBVRE & COMPANY, LIMITED, Alexandria, Ontario, Canada. Filed Feb. 1, 1930.

Applicant disclaims all wording with the exception of the word "Magic" apart from the mark as shown on the drawing.
For Preparation Used in Gasoline and Kerosene Engines for Removing and Eliminating Carbon and for Increasing Power and Mileage.
Claims use since 1920.

Ser. No. 297,512. CECELIA BELLE, INC., New York, N. Y. Filed Mar. 19, 1930.

Cecelia Belle

For Cold Creams, Compact Powders, Face Powders, Rouges, Lip Sticks, Lip Rouge, Lip Salves, Perfumes, and Talcum Powders.
Claims use since Mar. 1, 1930.

Ser. No. 297,518. CLUNY, INC., New York, N. Y. Filed Mar. 19, 1930.

DELANNE

For Cold Creams, Compact Powders, Eyebrow Pencils, Eyelash Cosmetic, Face Powders, Face Creams, Rouges, Lip Sticks, Lip Jelly, Lip Rouge, Lip Salves, Manicure Preparations, Perfumes, Skin Creams, Skin Lotions, Talcum Powders, and Toilet Waters.
Claims use since Mar. 1, 1930.

Ser. No. 297,519. CLUNY, INC., New York, N. Y. Filed Mar. 19, 1930.

Le Faun

For Cold Creams, Compact Powders, Eyebrow Pencils, Face Powders, Face Creams, Rouges, Lip Sticks, Lip Jelly, Lip Rouge, Lip Salves, Perfumes, Skin Creams, Skin Lotions, Talcum Powders, and Toilet Waters.
Claims use since Mar. 1, 1930.

Ser. No. 298,284. JACOB M. LEVIN, doing business as Lava Chemical Company, Philadelphia, Pa. Filed Apr. 2, 1930.

The drawing is lined for red.
For Medicinal Ointment for Rubbing Purposes in the Treatment of Rheumatism, Fatigue, Neuralgia, Sprains, Colds, Coughs, and Congestion of the Chest.
Claims use since Feb. 21, 1930.

Ser. No. 299,569. GENERAL COSMETICS CORPORATION, New York, N. Y. Filed Apr. 28, 1930.

MAISONETTE des COSMETIQUES

The words "Des Cosmetiques" are claimed only in connection with the other features of the mark.
For Lip Rouge, Face Rouge, Face Powder, Talcum Powder, Toilet Water, Perfume, Cold Cream, Vanishing Cream, Skin Sachet, Nail Polish, Face Lotion, Face Creams, Bleach Creams, Beauty Creams, Cleansing Creams, Eyebrow and Eyelash Grower, and Astringents.
Claims use since May 15, 1929.

Ser. No. 299,675. F. M. EUGENE BLASS, doing business as E. Am. Ass'n. for Oxygen-Therapy, New York, N. Y. Filed Apr. 30, 1930.

OXY-VIGOR

For Pharmaceutical Preparation Acting as Blood Purifier, Prophylactic, Laxative, Body Rejuvenator, Body Regenerator, and Blood Circulation Accelerator.
Claims use since Jan. 2, 1930.

Ser. No. 300,607. MANUEL J. BETTENCOURT, New Bedford, Mass. Filed May 16, 1930.

POMADA SECATIVA DE S. LAZARO

Applicant disclaims the words "Pomada Secativa De" apart from the mark as shown on the drawing.
For Ointment for Treatment of Inflammatory Conditions of the Skin and Old Sores and Wounds.
Claims use since Mar. 1, 1927.

Ser. No. 302,180. HERMANN HAHN, doing business as Hahn & Co., Hamburg, Germany. Filed June 5, 1930.

For Cod-Liver Oil.
Claims use since Dec. 21, 1929.

Ser. No. 303,379. ADOLF CHARLES JOHNSTON, doing business as Nuvita Company, Burnley near Melbourne, Victoria, Australia. Filed July 11, 1930.

No claim is made to any of the wording appearing on the drawing with the exception of the word "Nuvita", apart from the other features shown.
For General Tonic.
Claims use since 1921.

Ser. No. 304,246. LOUIS MOCQ, New York, N. Y. Filed Aug. 5, 1930.

Rejuvia

For Astringents, Astringent Cerates, Bleach Creams, Beauty Creams, Cold Creams, Cleansing Creams, Obesity Creams, Refreshing Creams, Obesity Astringents, Dry Rouges, Face Bleaches, Liquid Rouges, Face Packs, Eyebrow and Eyelash Grower, Eyedrops, Hand Lotions, Skin Lotions, After-Shaving Lotions, Pomades, Face Powders, Talcum Powders, Sachets, Hair Salves, Hair Elixirs, Dandruff Preparations, Hair Tonics, Hair Oils, Shampoos, Hair Dyes, Bath Salts, Smelling Salts, Lip Sticks, Incense, Tooth Powders, Mouth Washes, Dentifrices, Tooth Pastes, Nail Powders, Nail Creams, Nail Bleaches, Witch-Hazel, Peroxide, Petroleum Jellies, Witch-Hazel Salves, Camphor Creams, Foot Powders, Corn Salves, Deodorants, Disinfectants, Bay Rum, Perfumes, and Toilet Waters.
Claims use since July 17, 1930.

Ser. No. 304,501. RALPH GALOWIN, doing business as Ens-Em Chemical Company, Brighton, Brooklyn, N. Y. Filed Aug. 12, 1930.

ENS-EM

For Preparation for Killing Moths.
Claims use since May 1, 1929.

Ser. No. 304,581. HECTOR M. ROBERTSON, Los Angeles, Calif. Filed Aug. 13, 1930.

DOGAIDS

For Sulphur Tablets, Stomach Sedative Tablets, Calcium Phosphate, Canine Elixir, Cod-Liver-Oil Capsules, Nerve Sedative Tablets, Cough Tablets, Constipation Tablets, Digestant Tablets, Astringent Tablets, Diuretic and Stimulative Tablets, Dip Disinfectant, Ear-Canker Ointment, Eye-Lotion Tablets, Ointment for Mange and Eczema, Flea Powder, Hair Salve, Cathartic Tablets, Diuretic Tablets, Liniment, Laxative Tablets, Mange Medicine, Mouth and Throat Wash, Expectorant, Purgative Tablets, Tablets for Aches and Soreness, Tapeworm Medicine, Tonic and Condition Tablets, Capsules for Ascarids and Large Round Worms in Dogs, Capsules for Ascarids and Large Round Worms in Puppies, Tonic and Condition Tablets for Toy Dogs and Puppies, Distemper Tablets, Antiasmatic Tablets, Antirickets Tablets.
Claims use since June 1, 1929.

Ser. No. 304,987. WING YEEN WONG, Oakland, Calif. Filed Aug. 23, 1930.

No claim is made to the words "Herb" and "Preparations."
For Medicinal Preparation in Powder Form for the Treatment of Appendicitis, Asthma, Coughs, Influenza, and Rickets.
Claims use since June 1, 1930.

Ser. No. 304,994. CARLE, INC., Des Moines, Iowa. Filed Aug. 25, 1930.

CYTHEREA

For Perfume.
Claims use since July 26, 1930.

Ser. No. 305,007. ARAM KAMALIAN, Hollywood, Calif. Filed Aug. 25, 1930.

For Perfumes.
Claims use since Oct. 28, 1928.

Ser. No. 305,163. MICHAEL F. DOUGHERTY, Logansport, Ind. Filed Aug. 30, 1930.

ReJuv

For General Tonic.
Claims use since Feb. 4, 1930.

Ser. No. 305,189. THE KURLASH COMPANY, INC., Rochester, N. Y. Filed Aug. 30, 1930.

Shadette

For Eye-Shading Preparation in Compact Form.
Claims use since Mar. 10, 1929.

Ser. No. 305,352. CARL FLOYD, doing business as Thermolene Properties, Boonville, Ind. Filed Sept. 5, 1930.

Thermolene

For Antifreeze Solutions.
Claims use since July 5, 1930.

Ser. No. 305,371. SANOZYM, INCORPORATED, New York, N. Y. Filed Sept. 5, 1930.

FORESTOL

For Preparation Composed of Essential Volatile Extracts of Balsamic and Pinus Plants Which Possess Antiseptic and Healing Properties to be Used in Liquid Form as an Inhalent Medicine for Nasal Infection and Catarrh.
Claims use since Nov. 1, 1929.

Ser. No. 305,416. ROYAL BAKING POWDER COMPANY, INC., New York, N. Y. Filed Sept. 6, 1930.

Applicant makes no claim to the exclusive right to use any of the words displayed upon said trade-mark (other than the word "Royal") apart from the mark as shown; nor to the color blue as indicated by the lining on the drawing except when used in connection with the trade-mark as shown.
For Baking Powder.
Claims use since July 2, 1930.

Ser. No. 305,503. WEAVER-JACKSON COMPANY, Los Angeles, Calif. Filed Sept. 9, 1930.

CHELONI-SKIN

The word "Skin" is disclaimed apart from the mark shown.
For Salve Used for Eradicating Wrinkles.
Claims use since December, 1929.

Ser. No. 305,554. THE BATTERY WONDER POWER INC., San Francisco, Calif. Filed Sept. 10, 1930.

VITABAT

For Liquid Composition in the Nature of an Electrolyte for Use in Storage Batteries.
Claims use since May 14, 1930.

Ser. No. 305,592. ALBERT GALLATIN THOMAS, doing business as The Thomas Chemical Co., Lynchburg, Va. Filed Sept. 11, 1930.

CUREX

For Ointment for the Treatment of Eczema and Other Skin Disorders.
Claims use since Aug. 6, 1930.

Ser. No. 305,807. DIXIE DEB, Atlanta, Ga. Filed Sept. 18, 1930.

DIXIE DEB

For Toilet Preparations—Namely, Face Creams, Perfumes, Toilet Waters, and Hair Preparations, Including Hair Tonic, Wave Set, Brilliantine, and Emulsified-Cocoanut-Oil Shampoo.
Claims use since Aug. 29, 1930.

ANTOX

For Medicinal Compound for Treatment of the Teeth and Mouth.
Claims use since January, 1930.

CLASS 7

Cordage

Ser. No. 273,330. ALEXANDER L. SYKES, doing business as The International Cordage & Yarn Co., New York, N. Y. Filed Oct. 3, 1928.

ICY

The lining on the drawing indicates the color green.
For Manila, Flax, Jute, or the Like Rope.
Claims use since May 1, 1927.

Ser. No. 273,331. ALEXANDER L. SYKES, doing business as The International Cordage & Yarn Co., New York, N. Y. Filed Oct. 3, 1928.

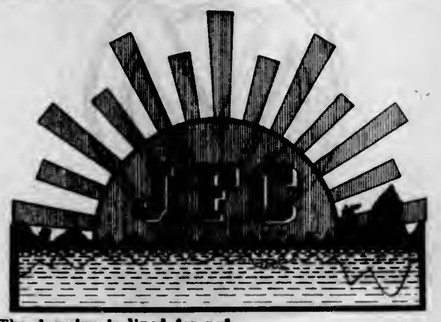
ICY

For Fibre Rope.
Claims use since May 1, 1927.

CLASS 9

Explosives, Firearms, Equipments, and Projectiles

Ser. No. 306,723. REMINGTON ARMS COMPANY, INC., Bridgeport, Conn., and Ilion and New York, N. Y. Filed Oct. 13, 1930.



SPORTSMAN

For Firearms, Especially Shotguns.
Claims use since Sept. 5, 1930.

CLASS 10

Fertilizers

Ser. No. 306,059. JACKSON FERTILIZER COMPANY, Jackson, Miss. Filed Sept. 25, 1930.

The drawing is lined for red.
For Fertilizer.
Claims use since Sept. 2, 1930.

Ser. No. 306,190. LIEBIG'S EXTRACT OF MEAT COMPANY, LIMITED, London, England. Filed Sept. 29, 1930.

LEMC

For Fertilizers.
Claims use since 1880.

CLASS 11

Inks and Inking Materials

Ser. No. 286,028. CHEMICAL PROCESS CORPORATION, Chicago, Ill. Filed June 24, 1929.

No claim is made to the exclusive use of the words "Green Bak," "Evergreen," "Worth Their Weight in Gold," apart from the mark as shown in the drawing.
For Carbon Paper.
Claims use since June 15, 1929.

CLASS 13

Hardware and Plumbing and Steam-Fitting Supplies

Ser. No. 298,467. THE STANLEY WORKS, New Britain, Conn. Filed Apr. 5, 1930.

COLORGRAPH

For Strip-Steel Strapping.
Claims use since Feb. 20, 1930.

Ser. No. 299,187. THE DELTA-STAR ELECTRIC COMPANY, Chicago, Ill. Filed Apr. 21, 1930.

"UNICLAMP"

For Forged-Steel Pipe Fittings.
Claims use since May 23, 1929.

Ser. No. 300,162. ARTCRAFT VALANCE MANUFACTURING COMPANY, Seattle, Wash. Filed May 9, 1930.

Applicant disclaims the word "Products" apart from the mark as shown.
For Waterproof Shower Curtains.
Claims use since Apr. 6, 1928.

Ser. No. 299,604. TELKOR, INC., Elyria, Ohio. Filed Apr. 28, 1930.

TELKOR

For Cable-Armor Cutters.
Claims use since Sept. 26, 1929.

Ser. No. 303,456. WICACO MACHINE CORPORATION, Philadelphia, Pa. Filed July 12, 1930.

WICACO

For Spindles, for Winding Threads of Silk or Rayon, Machinery Bushings, Worm Gears, Gear Blanks, Continuous Oil Groovers, Tools, Jigs, Fixtures for the Manufacture of Interchangeable Parts for Rayon Machinery, and Rayon Spinning-Room Machinery and Equipment—Namely, Rayon-Spinning Machines, Pot Spinning Machines, Bobbin Spinning Machines, Rayon-Spinning Pumps, Both of the Gear and Piston Type, Rayon Mechanical Screw Presses, Rayon-Bundling Presses, Skein-Washing Machines, Centrifugal Washing Machines, Bleaching Machines, Reeling Machines, Mixers; Xanthaters, Godet Wheels, Candle Filters, and Jet Holders, All of Which are for the Treatment of Rayon.
Claims use since 1868 on some goods and since 1915 on rayon machinery.

Ser. No. 303,982. UNIT ELECTRIC TOOL CO., INC., Syracuse, N. Y. Filed July 29, 1930.

UNIQUIP

For Portable Power-Driven Routers.
Claims use since July 12, 1930.

Ser. No. 304,430. SAVAGE BROS. CO., Chicago, Ill. Filed Aug. 9, 1930.

SAVAGE

For Portable Candy Mixer and Cooker, Tilting Cooker and Mixer for Candy, with Steam Jacket Copper Tilting Kettle, Tilting Mixer, Double-Geared Tilting Cooker and Mixer with Steam Jacket Copper Tilting Kettle, Combination Tilting and Draw-Off Mixer for Cooking and Mixing, Double-Action Draw-Off Mixer and Cooker, Double Geared Draw-Off Mixer for Cooking and Mixing with Steam Jacket Copper Kettle, Draw-Off Floor or Gravity Mixer and Cooker with Steam Jacket Copper Kettle, Gum Kettle and Cooker and Mixer with Steam Jacket Copper Kettle, Combination Cooker and Mixer with Steam Jacket Copper Kettle, Mixer and Cooker Battery with Steam Jacket Copper Kettles, Copper Revolving Pans, Two-Way Marshmallow Cutter, Two-Way Candy Cutter, Candy Cutter, Sizing Machine, Oval-Type Marshmallow Beater, Barrel Marshmallow Beater, Marshmallow Beater, Candy Beater, Formula-Mixing Tank, Revolving-Can Mixing Machine, Steam Peanut Fryer, Chocolate Melter and Mixer, Chocolate-Coating Machine, Water-Cooled Steel Slab, Continuous Candy-Paste Cooler, Continuous Candy Cutter for Hard Candy, Mint Cutter, and Portable Motor-Driven Power Unit.
Claims use since 1904.

Ser. No. 305,021. ARTHUR HUGH TEMPLETON, Dunedin, New Zealand. Filed Aug. 25, 1930.

IVY AERATOR

The word "Aerator" is disclaimed other than as a part of the completed mark.
For Aerators Used as an Attachment for Milk and Cream Pasteurizers, Regenerators, and the Like.
Claims use since June 28, 1928.

Ser. No. 305,456. HENRY ROHWEDDER, New York, N. Y. Filed Sept. 8, 1930.

ROHER PENCIL SHARPENER

No claim is made to the words "Pencil Sharpener" apart from the mark shown in the drawing.
For Pencil Sharpener.
Claims use since July 1, 1930.

Ser. No. 305,713. EUGENE LIVINGSTON, Cass City, Mich. Filed Sept. 15, 1930.

JIFFY

For Power-Driven Litter-Handling Equipment and Stable-Cleaning Apparatus.
Claims use since Mar. 20, 1930.

Ser. No. 306,105. GEORGE F. PETTINOS, Philadelphia, Pa. Filed Sept. 26, 1930.

WHIRLWIND

For Pulverizing Machines.
Claims use since Apr. 29, 1929.

CLASS 26

Measuring and Scientific Appliances

Ser. No. 305,146. SOFT-LITE LENS CO., INC., New York, N. Y. Filed Aug. 29, 1930.

Soft-Lite Lenses

Applicant claims ownership of registered Trade-Mark No. 91,909, registered June 3, 1913. Applicant disclaims the word "Lenses" apart from the mark as shown.
For Ophthalmic Lenses and Blanks.
Claims use since July 12, 1930.

Ser. No. 305,790. PARAMOUNT PUBLIX CORPORATION, New York, N. Y. Filed Sept. 17, 1930.

THE FAMOUS BOUNCING BALL

For Moving-Picture Films.
Claims use since July 1, 1930.

CLASS 27

Horological Instruments

Ser. No. 306,485. L. BAMBERGER & CO., Newark, N. J. Filed Oct. 7, 1930.

Chalet

For Watches.
Claims use since Sept. 9, 1930.

Ser. No. 306,572. I. OLLENDORFF CO., INC., New York, N. Y. Filed Oct. 9, 1930.

Veteran

For Watches, Clocks, and Parts Thereof.
Claims use since May 26, 1930.

CLASS 28

Jewelry and Precious-Metal Ware

Ser. No. 303,869. J. R. WOOD & SONS, INC., New York, N. Y. Filed July 26, 1930.

WOOD

No claim being made herein for the name "Wood" apart from the mark shown in the drawing.
For Jewelry for Personal Wear, Not Including Watches.

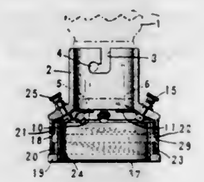
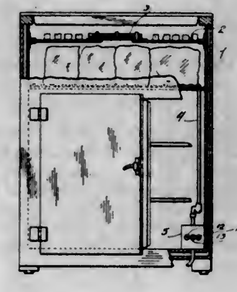
REISSUES



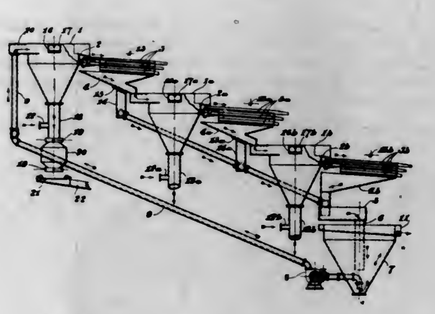
NOVEMBER 18, 1930

17,870. SHIFTABLE NUT FASTENING. FRED S. CARR, deceased, Newton, Mass., by United-Carr Fastener Corporation, Cambridge, Mass., assignee. Filed Mar. 18, 1930. Serial No. 436,913. Original No. 1,694,580, dated Dec. 11, 1928, Serial No. 45,279, filed July 22, 1925. 5 Claims. (Cl. 85—32.)



1. A shiftable nut device comprising, in combination, a pressed metal nut holder and a pressed metal nut, said holder having a base portion presenting an aperture therethrough to permit a screw to pass therethrough, opposed fingers extending therefrom and overlying portions of the nut to hold the nut in assembly with the holder, a boss presented by said nut and extending toward the base of the holder, opposed flanges presented by said nut having their edges terminating in substantially the same plane as the end of said boss to prevent entrance of said boss in the aperture provided in the base of the holder and opposed projections extending from the base of said holder to limit the movement of said nut in any direction generally crosswise relative to said fingers.

17,871. COMBINED TRANSFORMER AND ELECTRON-TUBE SOCKET. JOHN W. SIMMONS, Cleveland, Ohio, assignor, by mesne assignments, to Robert S. Allyn, New York, N. Y. Filed Mar. 22, 1927. Serial No. 177,456. Original No. 1,535,261, dated Apr. 28, 1925, Serial No. 635,805, filed Apr. 30, 1923. 4 Claims. (Cl. 175—356.)



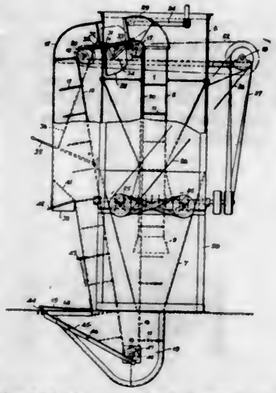
4. An electron tube apparatus comprising a socket arranged to receive an electron tube, terminals carried by said socket and arranged to establish connections with an electron tube inserted in said socket, a cylindrical transformer comprising a grooved rim, a core concentric therewith, and windings on said rim, said transformer being carried by a portion of said socket whereby extremely short connections may be made with said terminals.

17,872. REFRIGERATOR. AMOS V. PANKEY, Harrisonburg, Va. Filed Aug. 6, 1930. Serial No. 473,444. Original No. 1,712,713, dated May 14, 1929, Serial No. 243,255, filed Dec. 29, 1927. 4 Claims. (Cl. 62—31.)

4. A refrigerator having a drip conduit, means for holding ice and directing the drip water into said drip conduit, and metering means for measuring the amount of drip water flowing therethrough.

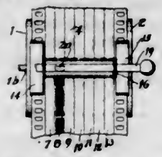
17,873. SEPARATION OF MATERIALS OF DIFFERENT SPECIFIC GRAVITIES. THOMAS M. CHANCE, Merion, Pa. Filed Aug. 15, 1930. Serial No. 475,609. Original No. 1,685,521, dated Sept. 25, 1928, Serial No. 202,030, filed June 28, 1927. 7 Claims. (Cl. 209—173.)

1. A method of separating materials of different specific gravities which consists in immersing said materials in a fluid mass consisting of an agitated mixture of liquid and comminuted solids heavier than said liquid and substantially insoluble therein and having a specific gravity intermediate that of the lighter and heavier of said materials, in providing a plurality of individual fluid masses of the



described type, in locating the top of said fluid masses at vertically differing elevations, said differences in elevation depending upon the horizontal distances separating said bodies, in proportioning the gradients between said fluid masses to permit the free flow of liquids by gravity from the top of the fluid mass at a higher elevation to that of one at a lower elevation, in separately feeding into each of said fluid masses materials to be separated thereby, in causing a mixture of comminuted solids and liquid to be circulated from a body of such mixture located at an elevation below said fluid masses into and across the higher of said fluid masses, in separating lighter materials transported by said fluid mixture away from said fluid mass from the constituents of said mixture and of said fluid mass intermixed therewith, in then passing said circulating mixture into and across the top of another of said plural separating fluid masses, in separating the lighter materials carried away from said second fluid mass by said circulating mixture, and in returning said circulating mixture, after the removal of said lighter materials into the said body of said mixture located at said lower level.

17,874. ELECTRIC RESISTANCE FURNACE ADAPTED FOR HARDENING BY NITROGENIZATION. ADOLF FRY, Essen-Ruhr, Germany, assignor, by mesne assignments, to The Nitralloy Corporation, a Corporation of Delaware. Filed July 20, 1929. Serial No. 379,861. Original No. 1,661,694, dated Mar. 6, 1928, Serial No. 126,650, filed Aug. 2, 1926, and in Germany Sept. 4, 1925. 4 Claims. (Cl. 266—1.5.)



1. In an electric resistance furnace adapted for hardening metals by nitrogenization, a roller system, a nitrogenizing receptacle mounted thereon, and a removable electrically heated casing surrounding said receptacle and enclosing a portion of the roller system.

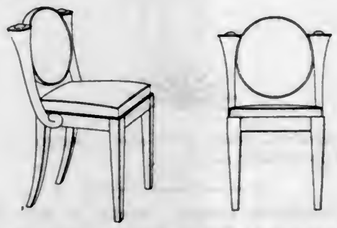
17,875. MIXING APPARATUS. GEORGE HERBERT HAINES, Caledonia, Ohio, assignor to The Grain Machinery Company, Marion, Ohio, a Corporation of Ohio. Filed Aug. 27, 1930. Serial No. 478,262. Original No. 1,769,576, dated July 1, 1930, Serial No. 398,902, filed Oct. 11, 1929. 16 Claims. (Cl. 259—4.)

1. Mixing apparatus comprising a mixing chamber, an upwardly-extending conduit within said chamber, and an endless conveyer movable upwardly through said conduit and having its downwardly-moving run disposed in a path outside of said chamber.

17,876. TALKING-PICTURE APPARATUS. FREEMAN H. OWENS, New York, N. Y. Filed Dec. 4, 1929. Serial No. 411,703. Original No. 1,735,335, dated Nov. 12, 1929, Serial No. 198,647, filed June 13, 1927. 11 Claims. (Cl. 179—100.3.)

11. Sound reproducing means comprising a light source, a multiplicity of sound records arranged side by side longitudinally on a film, means for moving said film, a light slit extending laterally of said film the width of all of said sound records, means for restricting the passage of light from said source through said slit to a selected one only of said sound records and a light sensitive device arranged to receive light modulated by the selected sound record.

DESIGNS

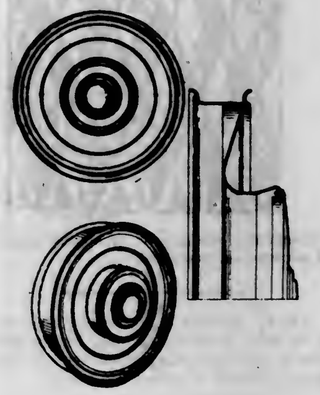


NOVEMBER 18, 1930

82,537. TEXTILE FABRIC. FRED W. BADER, Hillsdale, N. J., assignor to J. Kridel, Sons & Co., a Partnership of New York. Filed Aug. 29, 1930. Serial No. 36,820. Term of patent 7 years.

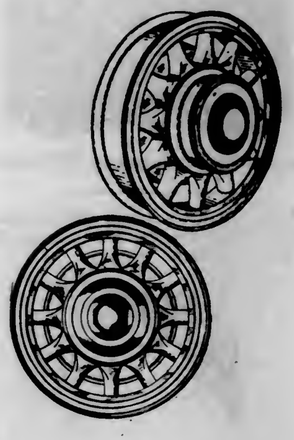
The ornamental design for a textile fabric as shown and described.

82,538. CHAIR. ALEXANDRA T. BARTLETT, New York, N. Y., assignor to Helen M. Snyder, New York, N. Y. Filed Aug. 6, 1930. Serial No. 36,569. Term of patent 7 years.



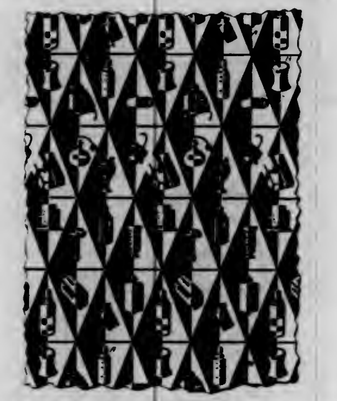
The ornamental design for a chair substantially as shown.

82,539. LIGHTING FIXTURE OR ARTICLE OF SIMILAR NATURE. HUGO BOHL, Westfield, N. J., assignor to Radiant Lighting Fixture Co. Inc., New York, N. Y. Filed Feb. 12, 1930. Serial No. 34,499. Term of patent 3½ years.



The ornamental design for a lighting fixture, or article of similar nature, as shown and described.

82,540. DISK WHEEL. WILLIAM N. BOOTH, Detroit, Mich., assignor to Kelsey-Hayes Wheel Corporation, Detroit, Mich., a Corporation of New York. Filed May 13, 1929. Serial No. 31,199. Term of patent 14 years.

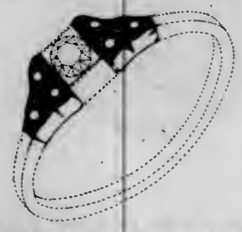


The ornamental design for a disk wheel substantially as shown.

82,541. WOOD WHEEL. WILLIAM N. BOOTH, Detroit, Mich., assignor to Kelsey-Hayes Wheel Corporation, Detroit, Mich., a Corporation of New York. Filed May 13, 1929. Serial No. 31,200. Term of patent 14 years.

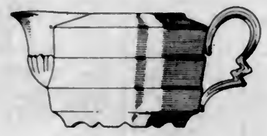
The ornamental design for a wood wheel substantially as shown.

82,542. WRAPPING PAPER. DONALD B. CLEMENT, New York, N. Y., assignor to McKesson & Robbins, Incorporated, Bridgeport, Conn., a Corporation of Connecticut. Filed June 7, 1930. Serial No. 35,956. Term of patent 14 years.

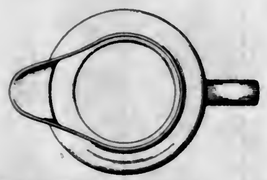


The ornamental design for wrapping paper substantially as shown and described.

82,543. LACE. GEORGE M. DICKEN, Hulmeville, Pa., assignor to John Bromley & Sons, Incorporated, a Corporation of Pennsylvania. Filed Sept. 5, 1930. Serial No. 36,878. Term of patent 3½ years.



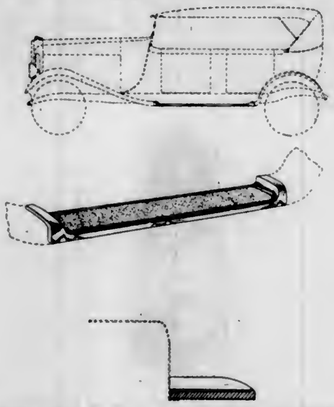
The ornamental design for lace, as shown and described.



82,544. RING. ANTHONY FRANK DI CRISTINA, Los Angeles, Calif. Filed Nov. 13, 1929. Serial No. 33,435. Term of patent 7 years.

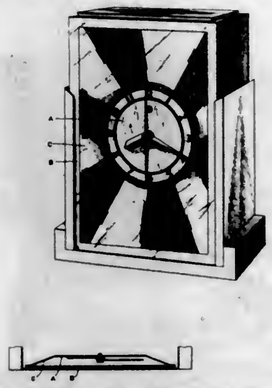
The ornamental design for a ring, as shown.

82,545. PITCHER OR THE LIKE. CHARLES WEISS, New York, N. Y. Filed June 27, 1929. Serial No. 31,847. Term of patent 7 years.



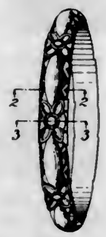
The ornamental design for a pitcher or the like, as shown and described.

82,546. SHOE ORNAMENT OR SIMILAR ARTICLE. EARL T. DUGAN, Providence, R. I., assignor to Abe Manheimer & Company, Inc., St. Louis, Mo., a Corporation of Missouri. Filed Sept. 9, 1930. Serial No. 36,920. Term of patent 3½ years.



The ornamental design for a shoe ornament or similar article, substantially as shown.

82,547. RUNNING BOARD. HARLEY J. EARL, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 18, 1928. Serial No. 27,883. Term of patent 14 years.



The ornamental design for a running board as shown.

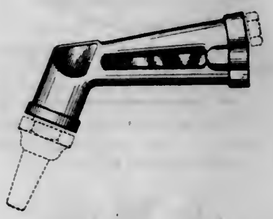
82,548. COMBINED CLOCK CASING AND DIAL THEREFOR OR SIMILAR ARTICLE. PAUL T. FRANKL, New York, N. Y., assignor to Warren Telechron Company, a Corporation of Maine. Filed July 14, 1930. Serial No. 36,350. Term of patent 14 years.

The ornamental design for a combined clock casing and dial therefor or similar article as shown and described.

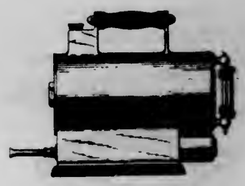
82,549. RING. ALBERT J. FRIEDMAN, Chicago, Ill. Filed Dec. 19, 1929. Serial No. 33,858. Term of patent 7 years.

The ornamental design for a ring, as shown.

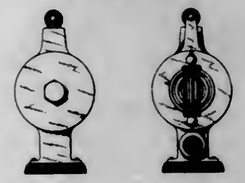
82,550. BRIDGE MEMBER FOR AN OPTICAL MOUNTING. WILLIAM PETER GLINTENKAMP, Bellaire, N. Y., assignor to May Manufacturing Co. Inc., New York, N. Y. Filed Aug. 29, 1929. Serial No. 32,615. Term of patent 3½ years.



The ornamental design for a bridge member for an optical mounting, as shown and described.



82,551. BLOWPIPE HEAD. FLORIN M. GIFFEN, Union, N. J., assignor to Oxweld Acetylene Company, a Corporation of West Virginia. Filed Aug. 16, 1929. Serial No. 32,423. Term of patent 14 years.

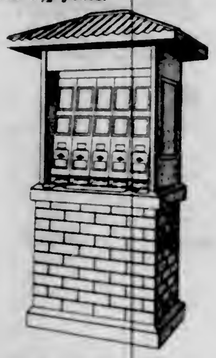


The ornamental design for a blowpipe head substantially as shown.

82,552. WATER HEATER. BENJAMIN D. GOLDBERG, New York, N. Y. Filed May 10, 1930. Serial No. 35,581. Term of patent 14 years.

The ornamental design for a water heater substantially as shown.

82,553. RIM FOR DOME LIGHTS OR THE LIKE. GEORGE GRAFF, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 26, 1928. Serial No. 29,406. Term of patent 14 years.



The ornamental design for a rim for dome lights or the like, substantially as shown.

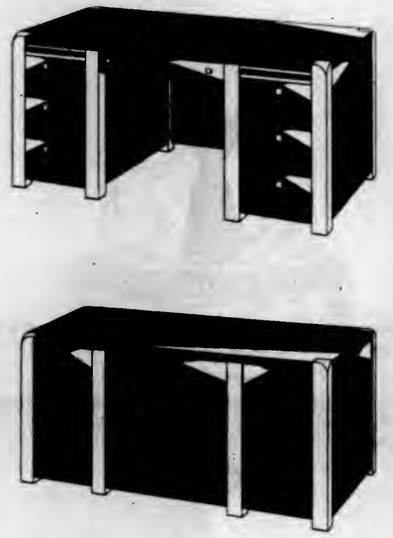
82,554. GLASS DISH OR SIMILAR ARTICLE. WALTER J. GRAHAM, Marietta, Ohio. Filed Dec. 7, 1929. Serial No. 33,692. Term of patent 7 years.

The ornamental design for a glass dish or similar article, as shown and described.

82,555. GOODS-VENDING DISPLAY STAND. GARNET P. GRANT, Long Island City, N. Y., assignor to Autosales Corporation, Long Island City, N. Y., a Corporation of New York. Filed Aug. 22, 1929. Serial No. 32,508. Term of patent 3½ years.

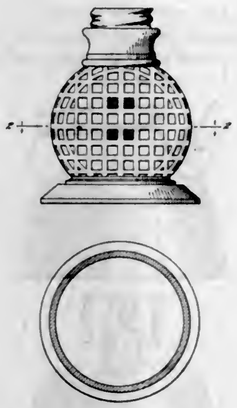
The ornamental design for a goods vending display stand, as shown and described.

82,556. DISPLAY CASE. JOSEPH G. GREEN, San Francisco, Calif. Filed May 12, 1930. Serial No. 35,587. Term of patent 14 years.



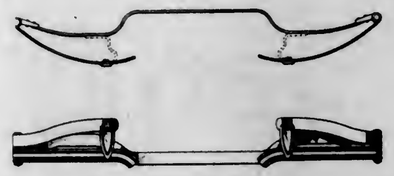
The ornamental design for a display case as shown.

82,557. CASING FOR A LIQUID-DISPENSING APPARATUS. WILLIAM M. GRIFFIN and CARROLL L. MERRIMAN, Fort Wayne, Ind., assignors to Wayne Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Dec. 2, 1929. Serial No. 33,600. Term of patent 14 years.



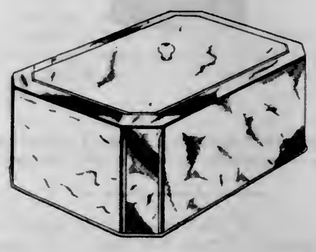
The ornamental design for a casing for a liquid dispensing apparatus as shown and described.

82,558. DESK. WILLIAM EARL GUNN, Grand Rapids, Mich., assignor to Gunn Furniture Company, Grand Rapids, Mich., a Corporation of Michigan. Filed Sept. 17, 1930. Serial No. 37,002. Term of patent 3½ years.



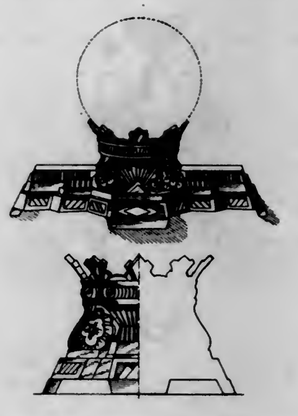
The ornamental design for a desk, as shown.

82,559. SALT AND PEPPER SHAKER OR SIMILAR ARTICLE. JAMES W. JENNINGS, Providence, R. I., assignor to Quaker Silver Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Sept. 13, 1930. Serial No. 36,956. Term of patent 7 years.



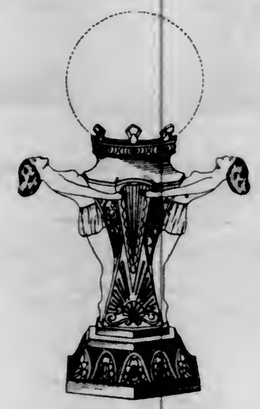
The ornamental design for a salt and pepper shaker or similar article substantially as shown.

82,560. BUMPER. HERBERT S. JANDUS, Detroit, Mich., assignor, by mesne assignments, to General Spring Bumper Corporation, a Corporation of Michigan. Filed July 28, 1927. Serial No. 22,917. Term of patent 3½ years.



The ornamental design for a bumper substantially as shown and described.

82,561. COMBINATION BREAD AND CAKE COVER. PHILIP KEMPTER, Milwaukee, Wis., assignor to Gender, Paeschke & Frey Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 18, 1930. Serial No. 36,695. Term of patent 3½ years.



The ornamental design for a combination bread and cake cover as shown.

82,562. LAMP OR SIMILAR ARTICLE. MICHAEL KIWAD, New York, N. Y., assignor to La Belle Specialty Co. Inc., a Corporation of New York. Filed Aug. 30, 1930. Serial No. 36,837. Term of patent 3½ years.

The ornamental design for a lamp or similar article substantially as shown and described.

82,563. LAMP OR ARTICLE OF ANALOGOUS NATURE. MICHAEL KIWAD, New York, N. Y., assignor to La Belle Specialty Co. Inc., a Corporation of New York. Filed Aug. 30, 1930. Serial No. 36,838. Term of patent 3½ years.

The ornamental design for a lamp or article of analogous nature substantially as shown and described.

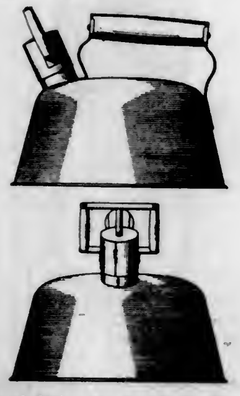
82,564. LAMP OR ARTICLE OF ANALOGOUS NATURE. MICHAEL KIWAD, New York, N. Y., assignor to La Belle Specialty Co. Inc., a Corporation of New York. Filed Aug. 30, 1930. Serial No. 36,839. Term of patent 3½ years.

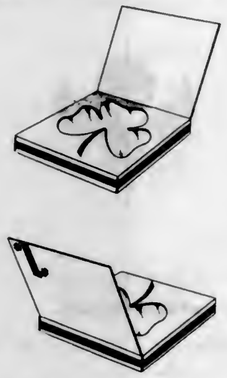
The ornamental design for a lamp or article of analogous nature substantially as shown and described.

82,565. LAMP OR ARTICLE OF ANALOGOUS NATURE. MICHAEL KIWAD, New York, N. Y., assignor to La Belle Specialty Co. Inc., a Corporation of New York. Filed Aug. 30, 1930. Serial No. 36,841. Term of patent 3½ years.

The ornamental design for a lamp or article of analogous nature substantially as shown and described.

82,566. WEDDING RING. PHILIP KRASNOW, Brooklyn, N. Y. Filed Sept. 14, 1929. Serial No. 32,754. Term of patent 7 years.



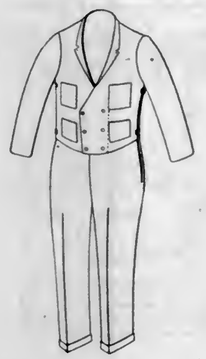


The ornamental design for a wedding ring, as shown and described.

82,567. WATER KETTLE. EDITH CARLA LAWSON, Geneva, N. Y. Filed Sept. 12, 1930. Serial No. 36,943. Term of patent 14 years.

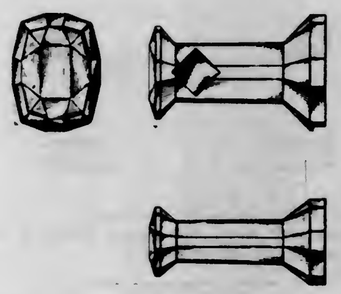
The ornamental design for a water kettle as shown.

82,568. DISPLAY BOX. MURRAY LESSER, Brooklyn, N. Y. Filed Aug. 29, 1930. Serial No. 36,818. Term of patent 7 years.



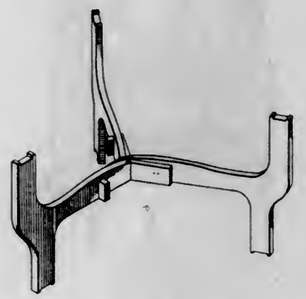
The ornamental design for a display box substantially as shown and described.

82,569. DRESS. DOROTHY LONG, New York, N. Y., assignor to Franklin Simon & Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 27, 1930. Serial No. 36,799. Term of patent 3½ years.



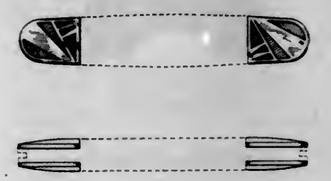
The ornamental design for a dress substantially as shown and described.

82,570. DOUBLE-BREASTED GARMENT. CLYDE G. LONGNECKER, Evanston, Ill. Filed Feb. 7, 1930. Serial No. 34,446. Term of patent 3½ years.



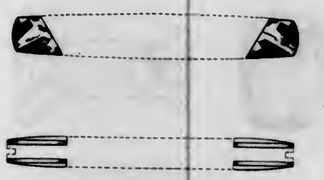
The ornamental design for a double breasted garment, as shown and described.

82,571. BRACKET FOR BATHROOMS. CHARLES H. LOVETT, Trenton, N. J., assignor to The Cook Pottery Company, Trenton, N. J., a Corporation of New Jersey. Filed Mar. 12, 1930. Serial No. 34,827. Term of patent 7 years.



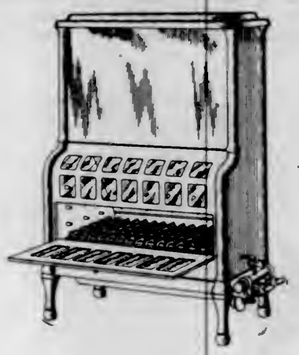
The ornamental design for a bracket for bathrooms, substantially as shown.

82,572. BOILER STAND. JOHN K. LUTON, Cleveland, Ohio, assignor to The Consolidated Iron-Steel Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 18, 1929. Serial No. 33,832. Term of patent 14 years.



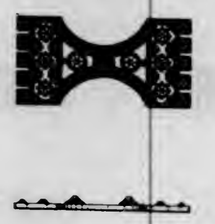
The ornamental design for a boiler stand, as shown.

82,573. KNIFE HANDLE OR SIMILAR ARTICLE. WALTER J. MATT, Utica, N. Y., assignor to Utica Cutlery Company, Utica, N. Y., a Corporation of New York. Filed June 28, 1930. Serial No. 36,221. Term of patent 7 years.



The ornamental design for a knife handle or similar article as shown and described.

82,574. KNIFE HANDLE OR SIMILAR ARTICLE. WALTER J. MATT, Utica, N. Y., assignor to Utica Cutlery Company, Utica, N. Y., a Corporation of New York. Filed June 28, 1930. Serial No. 36,222. Term of patent 7 years.

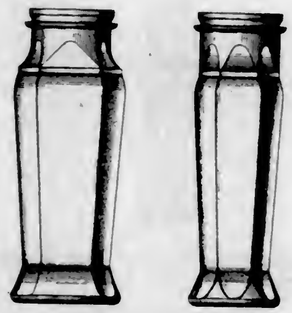


The ornamental design for a knife handle or similar article as shown and described.

82,575. COMBINED HEATER CASING AND FIRE BOX. HENRY C. MAUL, Detroit, Mich., assignor to Detroit Michigan Stove Company, Detroit, Mich., a Corporation of Michigan. Filed June 16, 1930. Serial No. 36,051. Term of patent 7 years.

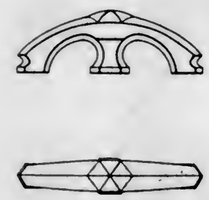
The ornamental design for a combined heater casing and fire box substantially as shown.

82,576. BROOCH OR SIMILAR ARTICLE. BERNAT MECHLOVITS, New York, N. Y. Filed Sept. 4, 1930. Serial No. 36,864. Term of patent 3½ years.



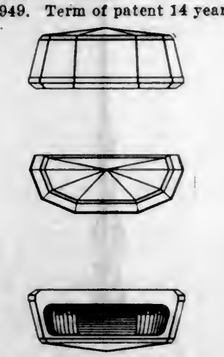
The ornamental design for a brooch or similar article, as shown.

82,577. BROOCH OR SIMILAR ARTICLE. BERNAT MECHLOVITS, New York, N. Y. Filed Sept. 22, 1930. Serial No. 37,041. Term of patent 3½ years.



The ornamental design for a brooch or similar article, as shown.

82,578. BOTTLE OR SIMILAR CONTAINER. HERBERT OBLANDER, Chicago, Ill., assignor to Bunte Brothers, Chicago, Ill., a Corporation of Illinois. Filed Sept. 8, 1930. Serial No. 36,899. Term of patent 14 years.

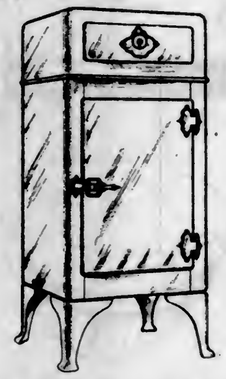


The ornamental design for a bottle or similar container as shown.

82,579. PULL KNOB. CLYDE H. OVERMYER and GEORGE J. OVERMYER, Hartford City, Ind. Filed Mar. 17, 1930. Serial No. 34,948. Term of patent 14 years.

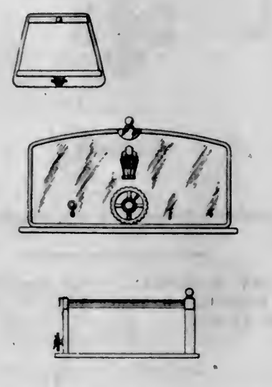
The ornamental design for a pull knob as shown.

82,580. PULL HANDLE. CLYDE H. OVERMYER and GEORGE J. OVERMYER, Hartford City, Ind. Filed Mar. 17, 1930. Serial No. 34,949. Term of patent 14 years.



The ornamental design for a pull handle as shown.

82,581. PLATE OR THE LIKE. FREDERICK J. PETERS, Babylon, N. Y. Filed Sept. 16, 1930. Serial No. 36,979. Term of patent 7 years.



The ornamental design for a plate or the like, as shown.

82,582. REFRIGERATOR CABINET. HERMAN E. PLEASANT, Mansfield, Ohio, assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 15, 1930. Serial No. 34,563. Term of patent 14 years.

The ornamental design for a refrigerator cabinet substantially as shown.

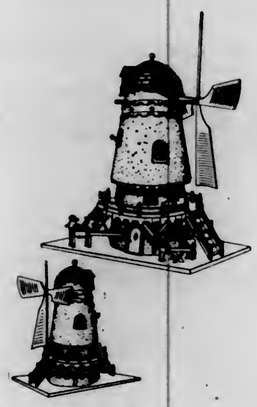
82,583. RADIOCABINET. MARTIN PASTERNAK, New York, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Jan. 16, 1930. Serial No. 34,160. Term of patent 3½ years.

The ornamental design for a radio cabinet substantially as shown.

82,584. LAMP. SAMUEL PERLA, Brooklyn, N. Y. Filed Aug. 23, 1930. Serial No. 36,750. Term of patent 7 years.

The ornamental design for a lamp substantially as shown and described.

82,585. WEDDING RING. ALBERT H. QUAST and OSCAR B. OLSEN, Chicago, Ill. Filed Mar. 15, 1930. Serial No. 34,903. Term of patent 3½ years.



The ornamental design for a wedding ring, as shown and described.

82,586. COIN HOLDER. EDWARD A. RULFS, New York, N. Y. Filed Sept. 21, 1929. Serial No. 32,829. Term of patent 14 years.

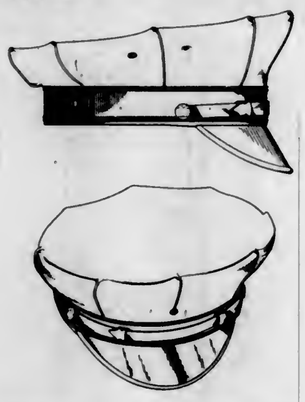
The ornamental design for a coin holder, as shown and described.

82,587. TOY WINDMILL. OTTO SCHEIBE, Maquoketa, Iowa. Filed June 9, 1930. Serial No. 35,996. Term of patent 7 years.

The ornamental design for a toy windmill, as shown.

82,588. RADIATOR CAP OR SIMILAR ARTICLE FOR AN AUTOMOTIVE VEHICLE. WILLIAM SCHNELL, Detroit, Mich., assignor to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed June 19, 1930. Serial No. 36,099. Term of patent 7 years.

82,588—Continued.

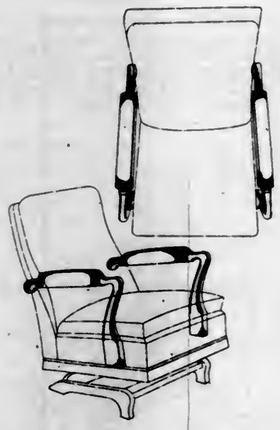


The ornamental design for a radiator cap or similar article for an automotive vehicle substantially as shown.

82,589. BREAKFAST-NOOK BENCH. GEORGE A. SIMONS and GEORGE FREEBERG, Minneapolis, Minn., assignors to Simons Millwork, Inc., Minneapolis, Minn., a Corporation of Minnesota. Filed May 31, 1929. Serial No. 31,499. Term of patent 14 years.

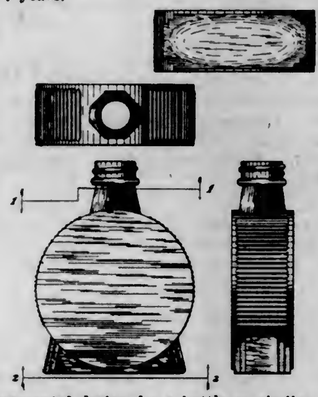
The ornamental design for a breakfast nook bench as shown.

82,590. UNIFORM CAP. ALBERT R. STERN, New York, N. Y. Filed July 30, 1930. Serial No. 36,516. Term of patent 3½ years.



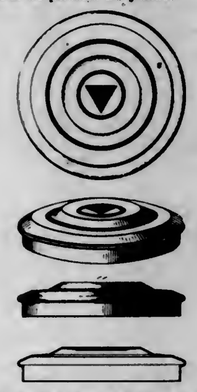
The ornamental design for a uniform cap or similar article as shown.

82,591. TEXTILE FABRIC OR THE LIKE. LEONARD L. STEED, Johnson City, N. Y., assignor to Endicott Johnson Corporation, Endicott, N. Y., a Corporation of New York. Filed Jan. 9, 1930. Serial No. 34,060. Term of patent 14 years.



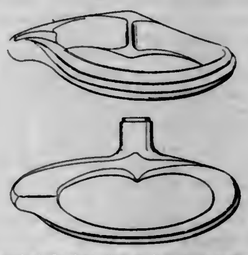
The ornamental design for a textile fabric or the like, substantially as shown and described.

82,592. CHAIR OR SIMILAR ARTICLE. CARL F. STREIT, Cincinnati, Ohio. Filed July 24, 1930. Serial No. 36,460. Term of patent 3½ years.



The ornamental design for a chair or similar article as shown.

82,593. BOTTLE OR SIMILAR CONTAINER. WALTER D. TEAGUE, Forest Hills, N. Y., assignor to Turner Glass Corporation, Terre Haute, Ind., a Corporation of Indiana. Filed Sept. 8, 1930. Serial No. 36,907. Term of patent 7 years.

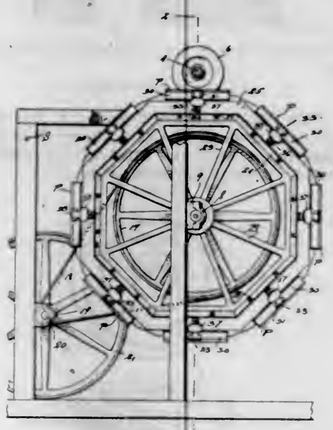


The ornamental design for a bottle or similar container as shown.

82,594. HUB CAP. MILLARD H. TONCRAY, Detroit, Mich., assignor to Hudson Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 15, 1930. Serial No. 34,897. Term of patent 14 years.

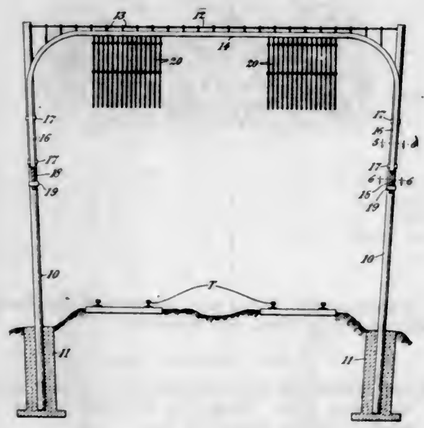
The ornamental design for a hub cap substantially as shown.

82,595. LATCH HANDLE. FREDERICK C. RUPPEL, Grand Rapids, Mich., assignor, by mesne assignments, to Checker Cab Manufacturing Corporation, Kalamazoo, Mich. Filed July 28, 1930. Serial No. 36,494. Term of patent 7 years.



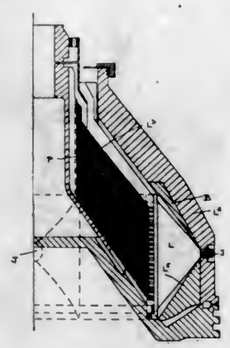
The ornamental design for a latch handle as shown.

PATENTS



GRANTED NOVEMBER 18, 1930

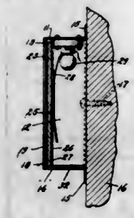
1,781,674. AUTOMATIC PLANER-KNIFE GRINDER. WILLIAM HALE ASHWORTH, Columbia, S. C. Filed July 14, 1927. Serial No. 205,649. 3 Claims. (Cl. 51—134.)



1. A planer knife grinding machine comprising, in combination, a supporting structure, a rotating grinder carried thereby and including a rim, a shaft disposed in a direction parallel to the axis of the grinder, means for supporting the shaft both for rotation and endwise movement, means for rotating the shaft, a blade carried by the shaft for rotation therewith, the rim of the carrier having a series of circumferentially spaced facets, each of said facets being disposed transversely of an incline with the high point of the facet at the side of the carrier adjacent to the grinder, the high marginal portion of each of the facets being provided therealong with a rabbet to receive the inner marginal portion of a blade to be ground with the opposite marginal portion of the blade extending beyond the high point of the facet, means carried by the facet and coacting with an applied blade and the portion of the facet rearwardly of the blade to hold the blade in applied position, and an expansible spring contacting with an end of the shaft for urging the carrier in a direction toward the grinder.

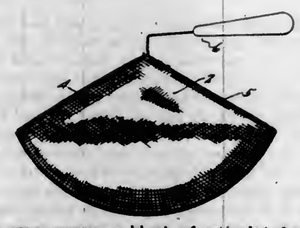
1,781,675. BRIDGE WARNING INDICATOR. HERBERT R. CAMPBELL, Paterson, N. J. Filed Aug. 7, 1928, Serial No. 298,121. Renewed Feb. 18, 1930. 9 Claims. (Cl. 246—486.)

1. In a bridge warning indicator, supporting means including a fixed substantially horizontal housing extending across the railroad track, a tell-tale carrier directly supported by and slidable lengthwise on said fixed housing, and tell-tales depending from and slidable with said carrier.



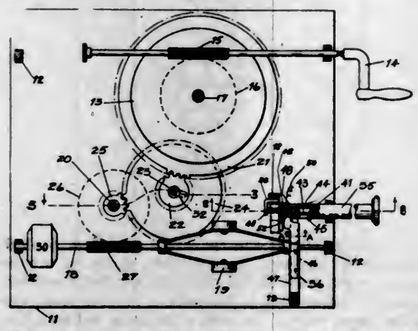
1,781,676. CENTRIFUGAL LIQUID PURIFIER. JAMES WALTER ADAMS, Bradford, England. Filed Dec. 20, 1929, Serial No. 415,380, and in Great Britain Jan. 4, 1929. 3 Claims. (Cl. 233—46.)

1. In a centrifugal action liquid purifier of the plate type, the combination of a bowl having unobstructed jets



disposed in the major diameter thereof, said bowl being shaped at its interior to give a lead in every direction to each of said jets, and leads disposed within the plate system and forming a continuation of those formed in the bowl.

1,781,677. ILLUMINATED SIGN. GEORGE H. BARNES, Joliet, Ill. Filed Apr. 30, 1927. Serial No. 187,890. 5 Claims. (Cl. 40—133.)

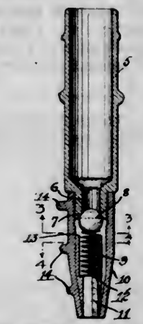


1. In a device of the class described, a housing comprising side and front walls having outwardly extending flanges formed integral with the side walls, the front wall having an opening, a transparent member covering said opening, opaque members having character openings therein disposed against said transparent member, a removable frame against said transparent member, and yielding means secured to the housing holding said frame against said opaque members.

1,781,678. CORN POPPER. ARTHUR H. BASEL, Ithaca, Nebr. Filed May 5, 1930. Serial No. 449,760. 2 Claims. (Cl. 53—4.)

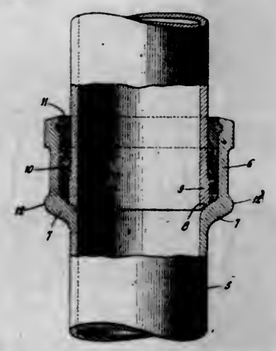
1. In a corn popper, a blank of reticulated material the corner portions of the said blank being bent upwardly and inwardly and sewed together along their proximate edges to form a bag, and means for inserting corn into the bag and removing the corn from the bag.

1,781,679. PHONOGRAPH. RICHARD BRENCHLEY, Reims, France, assignor, by mesne assignments, to Dual Motors Ltd., London, England. Filed Jan. 4, 1927, Serial No. 158,878, and in France Jan. 14, 1926. 13 Claims. (Cl. 185—2.)



1. In a phonograph, the combination of a spring driven drum, an electric motor, a chain of speed increasing gearing connecting the drum with the motor, and a turntable spindle carrying an intermediate gear of said connecting gearing.

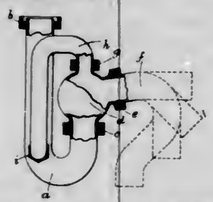
1,781,680. ELECTROMECHANICAL SYSTEM. WALTER G. CADY, Middletown, Conn., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Aug. 1, 1925. Serial No. 47,483. 4 Claims. (Cl. 171—327.)



1. A piezo-electric resonator comprising two piezo-crystal plates attached on opposite sides of a layer of electrically conductive material, the outer faces of the plates being provided with conductive coatings electrically connected together, the whole structure being adapted to vibrate flexurally with both ends free.

1,781,681. GREASE NOZZLE. GEORGE W. COOKE, Forest Hills, N. Y., assignor, by mesne assignments, to Allied Die-Casting Corporation, Long Island City, N.Y., a Corporation. Filed Feb. 8, 1928. Serial No. 252,802. 6 Claims. (Cl. 251—144.)

6. A lubricating nozzle comprising a body member having a tip at its outer end, said tip portion having a plurality of parallel ribs providing passages between them, said ribs being shouldered to form a seat, a spring mounted on said seat, and a valve for closing the passages through the nozzle held to its work by said spring.

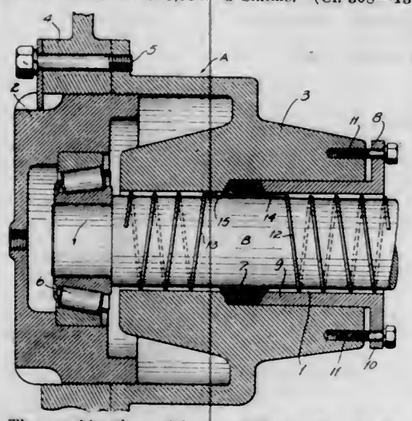


1,781,682. SOIL PIPE. JOSEPH J. CROTTY, New York, N. Y., assignor to The Universal Pipe and Radiator Company, New York, N. Y., a Corporation of Maryland. Filed Mar. 15, 1928. Serial No. 261,801. 2 Claims. (Cl. 285—115.)

1. In a pipe joint of the bell and spigot type a bell having an interior tapered shoulder adapted to receive

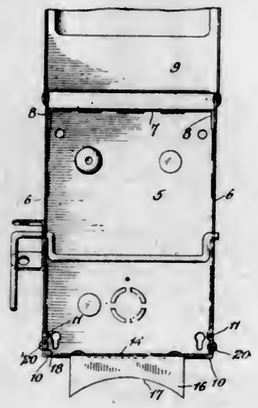
the tapered spigot end of an adjacent pipe, the wall of said bell being substantially thickened at said shoulder to reinforce the same, the thickened portion being gradually merged into the main section of said pipe and the main wall of the bell without abrupt alterations in thickness and without abrupt shoulders, said thickened portion at its outer end extending beyond the main wall of said bell end to form a reinforcing bead.

1,781,683. ANTISIPHONIC LIQUID-SEAL TRAP. JOHN MCDERMID, Ennerdale, England. Filed Mar. 14, 1930, Serial No. 435,777, and in Great Britain Mar. 23, 1929. 5 Claims. (Cl. 182—12.)



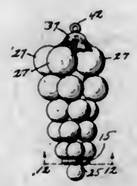
1. In an antisiphoning trap, a U-shaped pipe, a chamber of larger diameter than said U-shaped pipe connected to the outlet limb of said U-shaped pipe, an antisiphoning pipe detachably connected to the lower portion of the inlet limb of said U-shaped pipe and to said chamber, and an outlet pipe connected to said chamber.

1,781,684. GOLF TEE. LOUIS DUNKELSBERG, New York, N. Y. Filed June 4, 1926. Serial No. 113,626. 1 Claim. (Cl. 273—33.)



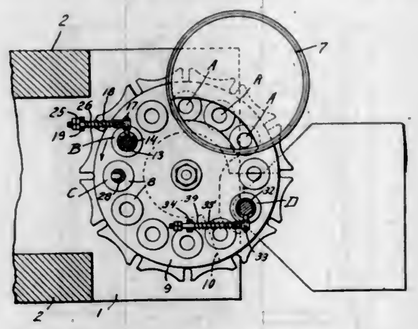
A molded golf tee composed of flat celluloid of substantially uniform thickness including a disk shaped head having top concavity, a triangular shaped prong at an angle of less than 90° with said head and joined to said head by a bent portion arranged with a curvature from a continuation of the material of a side of said head into the plane of said prong.

1,781,685. SHAFT INCLOSURE. PARDEE H. FRANK, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Feb. 8, 1929. Serial No. 338,581. 3 Claims. (Cl. 308—134.)



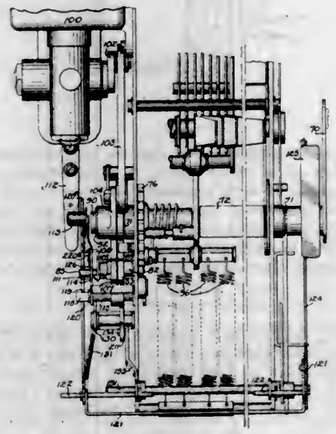
1. The combination with a rotating shaft, of an oil containing bearing casing comprising a main oil containing body portion and a closure member therefor having an opening adapted to receive said shaft, and two reversely wound helical coils surrounding said shaft one at the inner and the other at the outer end of the opening in said closure member.

1,781,686. METER-ENTRANCE SWITCH BOX. SAMUEL HAMMER, Brooklyn, N. Y. Filed Mar. 13, 1925. Serial No. 15,423. 1 Claim. (Cl. 247—2.)



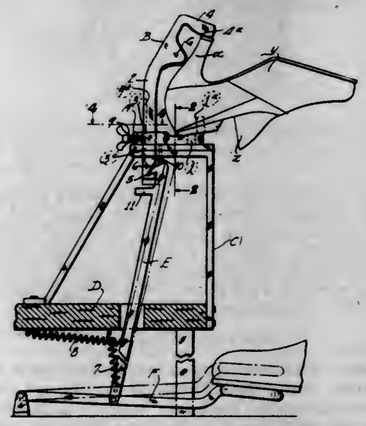
A meter entrance switch box open at one end and having opposite side walls at said open end thereof each provided with an inwardly projecting flange, each of said side walls being further provided in laterally spaced relation from said flange with an inwardly pressed rib extending substantially the entire depth of the box, said rib and the flange with the part of the box wall connecting the same forming a vertical guide channel, a meter adapted end wall for said open end of the box provided at its opposite side edges with angularly disposed flanges adapted for removable engagement in said side wall channels in contacting engagement with the base walls of said channels between the flanges and stop ribs, and means for detachably securing said adapted end wall in its applied position with respect to the side walls of the box.

1,781,687. ORNAMENTING DEVICE AND METHOD OF MAKING THE SAME. JACOB HAZMAN, Providence, R. I., assignor to Leo Weiner, Providence, R. I. Filed Dec. 7, 1929. Serial No. 412,335. 7 Claims. (Cl. 41—10.)



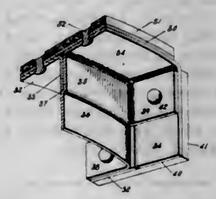
1. In an article of the character described, a plurality of annularly arranged binding rods, series or ornaments mounted upon each of the rods, an abutment member engaging the lower ends of the rods, a binding loop connecting the upper ends of the rods, a clamping rod engaging the abutment member at its lower end, and a plate upon the upper portion of the rod engaging the series of ornaments.

1,781,688. METHOD OF AND APPARATUS FOR MAKING DRY-CELL CORES. JOSEPH M. HENDERSON, Madison, Wis., assignor to Burgess Battery Company, Madison, Wis., a Corporation of Wisconsin. Filed Dec. 21, 1927. Serial No. 241,585. 17 Claims. (Cl. 18—5.)



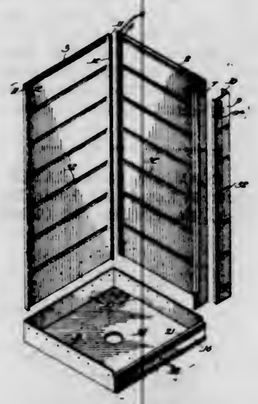
1. Means for making a cylindrical dry cell core comprising an open top cylindrical mold with a removable bottom, a tamping tool having a conically countersunk face with the face of said cone at an angle of about 30° with a plane perpendicular to the axis of the tool, means for reciprocating said tamping tool in said mold to compress moist depolarizing mix previously introduced into said mold, means for twisting said tamping tool during the last part of its downward stroke and first part of its upward stroke, means for ejecting said core from said mold, said means comprising a cylindrical knockout punch having a conically countersunk face with the face of said cone at an angle of about 20° with a plane perpendicular to the axis of said punch and having a recess to accommodate a carbon rod projecting upward from said mix, means for reciprocating said punch to push through and discharge said core from the bottom of said mold, and means for twisting said punch during its downward stroke while contacting with said mix.

1,781,689. CONTROLLING MECHANISM FOR POWER-DRIVEN CALCULATING MACHINES. ALLEN A. HORTON, Plymouth, Mich., assignor to Burroughs Adding Machine Company, Detroit, Mich., a Corporation of Michigan. Original application filed Jan. 29, 1926, Serial No. 84,616. Divided and this application filed Dec. 30, 1926. Serial No. 158,078. 15 Claims. (Cl. 192—.02.)



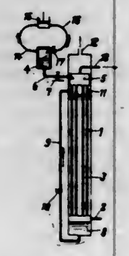
5. The combination in a calculating machine of an operating mechanism having a forward and a return stroke of movement, an electric driving means therefor, a pawl urged toward a position to connect the operating mechanism to the driving means, a latch for restraining said pawl, an electric switch adapted to be closed to start the driving means, an operating member for the switch, said operating member engaging said latch to release said pawl as said member is moved to close the switch, and means carried by the operating mechanism and engaging said operating member during the return stroke of said mechanism for returning said member to open said switch.

1,781,690. CLAMPING APPARATUS FOR SHOE HEELS. ALBERT F. KOEPPE, St. Louis, Mo. Filed July 18, 1927. Serial No. 206,582. 10 Claims. (Cl. 12—125.)



1. A shoe heel clamping apparatus, comprising a supporting means, a stationary clamping member adapted to be mounted on said supporting means beneath a shoe, a movable clamping member adapted to be arranged in engagement with the heel that is positioned on the sole of said shoe, a shank on said movable member projecting downwardly through a hole in said stationary member, a means removably combined with said shank for drawing said clamping members together so as to force the heel tightly against the sole of the shoe, comprising a treadle operated link provided at its upper end with a hook that it adapted to engage a part on said shank when said link is moved downwardly, and means for disengaging said hook from said shank when said link moves upwardly.

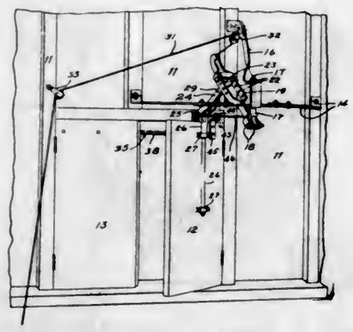
1,781,691. BRAKE. ROBERT F. KOHR, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Jan. 16, 1928. Serial No. 247,225. 12 Claims. (Cl. 188—250.)



1. A brake shoe comprising two angular sections secured back to back, the reinforcing web of one section having an offset therein and having the inner edge thereof extending beyond the reinforcing web of the other of said sections.

1,781,692. SHOWER CABINET. FREDERICK H. LEWIS, Chicago, Ill. Filed Feb. 1, 1930. Serial No. 425,105. 17 Claims. (Cl. 4—145.)

1. In a shower bath casing, a pan having an upturned rim, an inclosure comprising a rear panel, side panels and pilasters extending upwardly from and secured to said upstanding rim, the front edge of said rim being flanged inwardly and downwardly to provide a threshold and a reinforcing member inserted between said flange and the bottom of said pan.

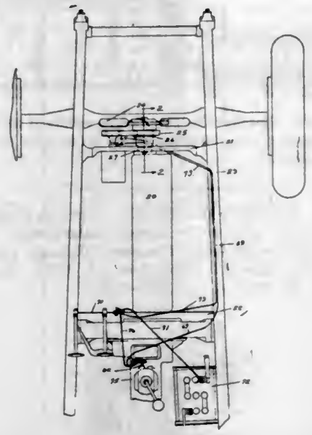


1,781,693. PROCESS FOR LIQUEFYING AND SEPARATING GAS MIXTURES. KARL EDUARD RUDOLF MEWES, Dortmund, Germany. Filed Nov. 17, 1925, Serial No. 69,653, and in Germany Nov. 18, 1924. 5 Claims. (Cl. 183—115.)

5. The process for the separation of gaseous mixtures, particularly of air, which includes compressing a gaseous mixture to a high pressure, expanding it to form a liquid portion under a lower pressure, returning the unliquefied portion of said mixture to be recompressed, evaporating said liquid at a still lower pressure, causing air to flow upwardly in a stream under low pressure, partially liquefying the air in said stream, collecting the liquid at the lower end of said stream, evaporating said last mentioned liquid, and transferring heat from said stream to both of said liquids to effect the evaporation of both and to effect the said partial liquefaction.

1,781,694. DOOR-OPERATING MECHANISM. LOUIS MEYER, Milford, Ill. Filed Nov. 13, 1926. Serial No. 148,175. 3 Claims. (Cl. 268—62.)

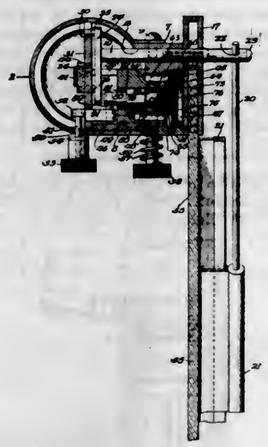
1. The combination with a vertical support having two complementary door members hinged therefrom; of a door operating mechanism comprising a frame relatively stationary with respect to the pivotal door member; two link mechanisms pivotally and rotatably joined to the frame and one of the door members respectively, one link being pivotally joined intermediate the ends of the



second link; the free end of said second link extending across the path of movement of said first link; means secured to the free end of the second link for manipulating the links; and means interconnecting the doors for effecting coactive movement therebetween.

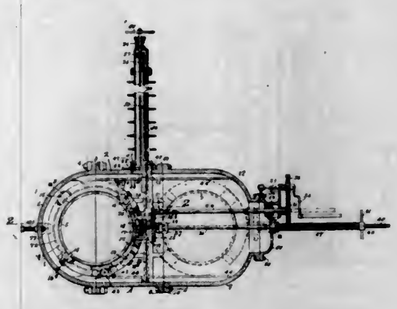
1,781,695. REEL FOR FISHING RODS AND THE LIKE. LORENZO MITCHELL-HENRY, London, England. Filed July 27, 1928, Serial No. 295,667, and in Great Britain Aug. 15, 1927. 10 Claims. (Cl. 242—84.7.)

1. A reel for a fishing rod and the like comprising the combination of a rotary spool, a hand-operable driving shaft mounted in axial alignment with said spool, clutch mechanism interposed between said shaft and spool for frictionally connecting these parts, and a movable member operated by said shaft for positively connecting the latter to said spool independently of said clutch mechanism.



1,781,696. INTERNAL-COMBUSTION ENGINE. EDWARD C. NEWCOMB and DELMAR G. ROOS, South Bend, Ind., assignors to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed June 4, 1928. Serial No. 282,680. 11 Claims. (Cl. 123—171.)

1. In an internal combustion engine, a cooling fan therefor, driving means for said fan, magnetic means for normally holding said fan in engagement with said driving means at speeds less than a predetermined speed of

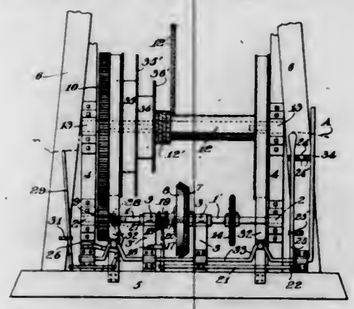


said driving means and means for controlling the action of the magnetic means independent of the speed of the driving means.

1,781,697. WINDSHIELD-CLEANER-OPERATING MECHANISM. JOHN L. NILSON and JOHN F. PRINCE, Chicago, Ill. Filed Aug. 25, 1923. Serial No. 659,245. 9 Claims. (Cl. 121—164.)

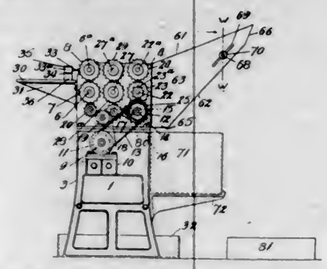
1. The combination with a cylinder or casing for a wind shield cleaner operating mechanism, of a reciprocatory member within the casing, a valve responsive in its operation to the movement of said member, said member having oppositely inclined slide contact tracks or surfaces, an oscillatory shaft, a crank on said shaft having parts connected therewith to be engaged by said tracks or surfaces, whereby the shaft will be oscillated when said member is reciprocated, means for imparting reciprocating movement to the said member, and means for maintaining said shaft at rest during a predetermined time in and at a predetermined point of the reciprocation of said member to permit movement of the valve independently of the shaft.

1,781,698. VALVE-INSERTING METHOD AND MECHANISM. DENIS F. O'BRIEN, East Orange, N. J. Filed July 18, 1925. Serial No. 44,494. 4 Claims. (Cl. 137—73.)



1. The method of inserting valve mechanism in a pipe without shutting off the flow of fluid therein including the steps of applying a rotary pipe cutter to said pipe to cut a section transversely therefrom, permanently securing to said pipe a valve body having an open end projecting in a substantially horizontal direction beyond the side of the pipe and provided with endwise adjustable valve seats, temporarily applying to said valve body a vertically arranged dome bearing a gate movable across the open end of the valve body in an aperture near the end thereof, also temporarily applying to said valve body a casing in substantial horizontal alinement therewith and having mechanism for rotating the cutter and outside means for operating said mechanism, rotating the cutter around the pipe to cut a section of the pipe, removing the cutter and cut pipe section from the valve body and into said casing, moving the gate aforesaid across the open end of the valve body to temporarily close it, removing the casing containing the cutter rotating mechanism, permanently securing to the open end of the valve body in substantial horizontal alinement therewith a dome bearing a pair of valve disks and trimmings and means projecting therefrom for moving said disks and trimmings into the valve body and for moving said disks to and from the valve seats in the valve body, adjusting the valve seats relatively to the cut ends of the severed portion of the pipe and to their respective valve disks, withdrawing the temporary gate aforesaid from the aperture aforesaid, applying permanent closure means to the outer end of said aperture, and removing the dome bearing said gate.

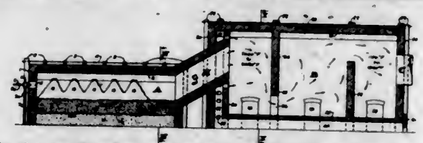
1,781,699. REENFORCED CONCRETE PIPE. WALTER C. PARMLEY, Upper Montclair, N. J. Filed May 7, 1927. Serial No. 189,613. 9 Claims. (Cl. 72—53.)



1. A concrete pipe section having a plurality of grooves extending circumferentially of said pipe, reenforcing means disposed in said grooves under tension and adapted to create an initial compression in said pipe, means for sealing said reenforcing means within said grooves, and means for preventing adhesion between said reenforcing means and said sealing means.

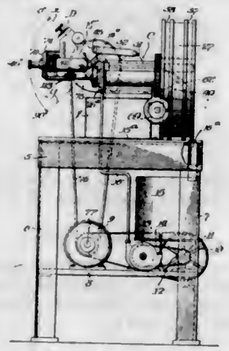
1,781,700. HOISTING MACHINE. GLADE W. PAYNE, Vergil, Kans., assignor of one-half to James F. Neely, Emporia, Kans. Filed June 26, 1928. Serial No. 288,358. 2 Claims. (Cl. 254—145.)

1. In a transmission for portable oil well pulling machinery, the combination with a spool having a gear on one end thereof and rotatably mounted on the frame of a gin pole and a power transmission, comprising a chain sprocket rigidly connected to a drive shaft, the said drive shaft being separated by a friction clutch from a driven shaft and the driven shaft having a gear rotatable therewith and slidable thereon and in mesh with the gear mounted on the spool when in position, levers as means to release the clutch and levers as means to disengage the gears substantially as shown.



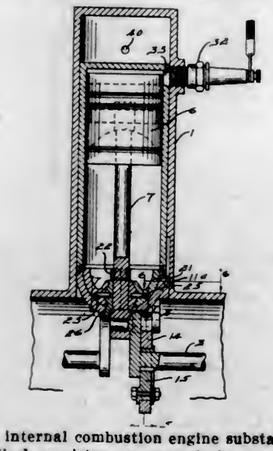
1,781,701. MACHINE FOR REMOVING FLAGS AND OTHER ADHERING LEAF FROM THE STALKS OF TOBACCO LEAVES. MORRIS GODFREY PHILIP PHILLIPS, London, England. Filed Aug. 21, 1928, Serial No. 301,064, and in Great Britain May 16, 1928. 8 Claims. (Cl. 131—57.)

1. In a machine for stripping or removing the leaf portions of tobacco from the stems, in combination, rollers adapted to feed the stem, rotary brushes preceding said feed rollers and running at a lower speed than said feed rollers, other rotary brushes succeeding said feed rollers and running at a higher speed than said feed rollers, a box like body, into which the stems and tobacco pass from the second brushes, said body comprising side and top members and an inclined bottom member, said body having therein an opening at the inner end thereof and an opening at the outer end thereof, a partition disposed transversely of said body and in spaced relationship to the ends and top thereof, and means for causing a current of air to pass through said body.



1,781,702. PROCESS OF MANUFACTURING HIGH-GRADE ZINC OXIDE. FREDERIC E. PIERCE, New York, N. Y. Filed July 9, 1921, Serial No. 483,552. Renewed Mar. 30, 1928. 15 Claims. (Cl. 23—148.)

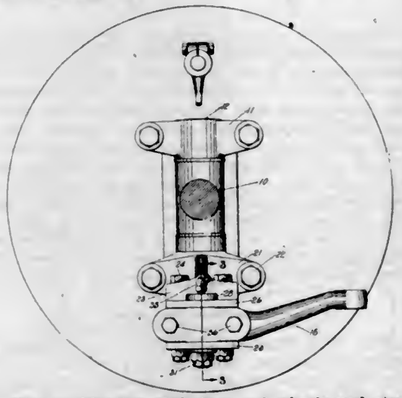
13. That process of treating zinc carrying ores which comprises smelting said ores in a reducing atmosphere in a reverbatory furnace and in a reducing atmosphere in the presence of carbon and such other substances as will form a slag with the ore impurities and then conveying the zinc vapor into a combustion chamber and introducing



air therewith whereby the vapors are oxidized and cooled, then separating the oxidized zinc from the remaining gaseous products.

1,781,703. CUTTING MACHINE. JERRY J. PONDELICEK, Chicago, Ill., assignor, by mesne assignments, to Acme Motion Picture Projector Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 14, 1922. Serial No. 600,832. 20 Claims. (Cl. 90—135.)

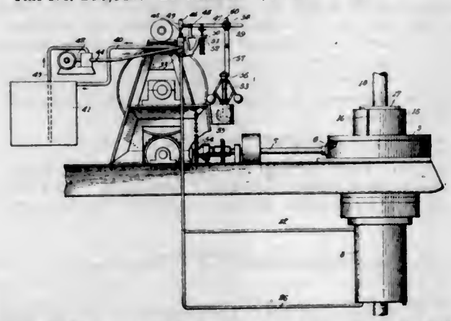
1. In a device of the character described, in combination, means for rotating an object to be worked upon, a cutting tool, and means for initially applying a cutting tool in a plane substantially tangentially to the periphery of said object and in a plane radially of such object, said means operating to displace the tool relatively to the object in a curved path during cutting and without disturbing the radial relationship of the tool and object.



1,781,704. INTERNAL-COMBUSTION ENGINE. ROBERT A. REYNOLDS, Detroit, Mich. Filed Jan. 8, 1930. Serial No. 419,429. 11 Claims. (Cl. 123—47.)

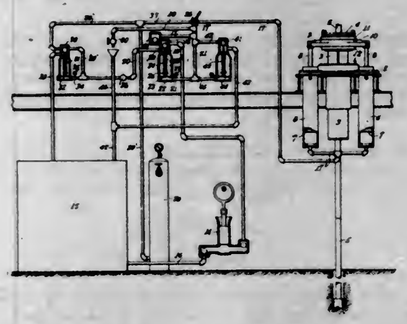
7. In an internal combustion engine substantially of the type described, a piston, a crankshaft, a connecting rod joining the two, a sleeve in which the piston moves, means for reciprocating the sleeve in timed relation to piston movements, a substantially half-spherical member closing

the end of the sleeve through which the connecting rod projects, said member being slotted for the reception of the connecting rod, means sealing against the connecting rod and allowing the same to reciprocate therethrough and sealing against the said member to close the slot, said means being rockable in the half-spherical member to accommodate for angular positions at the connecting rod, and means on the sealing member projecting through the slot and overlying an outside surface of the half-spherical member.



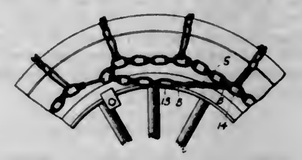
1,781,705. STEERING MECHANISM. DELMAR G. ROOS, South Bend, Ind., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Mar. 22, 1928. Serial No. 263,905. 9 Claims. (Cl. 280—95.)

1. The combination with the road wheels and steering cross tube of a motor vehicle, of means connecting one of said wheels with said cross tube comprising a bracket rigidly secured on the steering knuckle of said wheel, an arm pivotally connected with said cross tube pivotally supported in said bracket for permitting pivotal movement of one of said wheels relative to the other wheel, and means between said arm and bracket positioned on each side of the pivotal axis of said arm for normally constraining said wheels to equal pivotal movement.



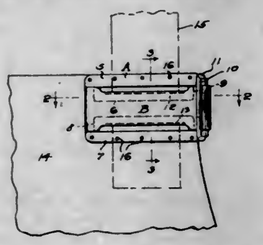
8. A steering mechanism for a motor vehicle road wheel comprising a support extending from the wheel steering knuckle, a steering arm pivotally mounted in said support on a pin having its longitudinal axis substantially parallel with the longitudinal axis of the steering knuckle to provide pivotal movement of said arm relative to said wheel, and means for normally constraining said arm to pivot with said wheel.

1,781,706. WELL-DRILLING APPARATUS. WALDO SHELDON, South Norwalk, Conn. Filed May 5, 1926. Serial No. 106,850. 17 Claims. (Cl. 255—22.)



1. In well drilling apparatus, a table for rotating the drill hydraulic power mechanism for controlling feed of the drill, a control valve for said hydraulic power mechanism and a speed governor associated with the table and adapted to exercise control over said valve.

1,781,707. WELL-DRILLING APPARATUS. WALDO SHELDON, South Norwalk, Conn. Filed May 16, 1927. Serial No. 191,795. 14 Claims. (Cl. 255—22.)



3. In well drilling apparatus, a hydraulic cylinder, a piston therein operative in one stroke to govern the drill feed, a pressure storing reserve tank for containing a reserve supply of fluid for effecting rapid return stroke of the piston, a pump for supplying actuating fluid to the cylinder and reserve tank, connections from the pump to the cylinder and reserve tank and means automatically governed by the pressure in the cylinder and reserve tank for controlling the flow from the pump to the cylinder and reserve tank.

1,781,708. METHOD OF FASTENING LOOSE ENDS OF TIRE CHAINS. THEODORE E. SHELDRAKE, Philadelphia, Pa. Filed May 15, 1928. Serial No. 277,828. 2 Claims. (Cl. 267—74.)

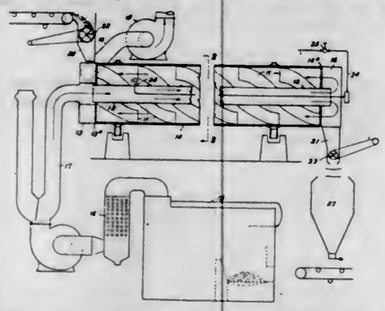
1. A tire chain having the superfluous loose end links, in combination with means for securing said links, said means comprising a resilient member having one end attached to said links and the other attached to another portion of the chain, substantially as described.

1,781,709. BUCKLE. THOMAS S. SPEAR, Nichols, Fla. Filed Feb. 7, 1930. Serial No. 426,606. 4 Claims. (Cl. 24—166.)

1. A device of the character described, comprising a base consisting of a longitudinally extending center bar,

opposite side bars and transverse end bars, of a hinged tongue extending longitudinally along and over the center bar and carried by the rear transverse bar, and a swinging bail carried by the front transverse bar of the base, adapted to swing inwardly over the free end of the tongue, said tongue being provided with inwardly projecting flanges along its opposite edges, which project over but lie in spaced relation to the center bar.

1,781,710. ELECTRIC SWITCH. WILLIAM C. STEVENS and GEORGE J. MEUER, Milwaukee, Wis., assignors to Cutler-Hammer, Inc., Milwaukee, Wis., a Corporation of Delaware. Filed July 25, 1929. Serial No. 380,905. 12 Claims. (Cl. 200—6.)

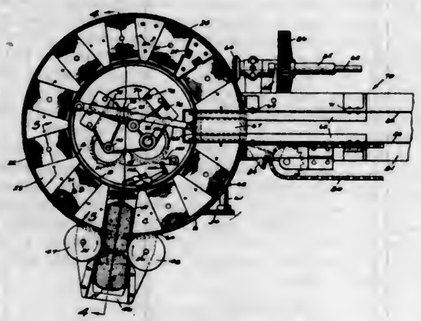


1. In a multiple circuit controlling switch, in combination, an insulating base, a plurality of sets of fixed contacts carried by said base, a plurality of oscillatable bridging contactors each adapted for movement into and out of engagement with one of said sets of contacts respectively, common actuating means for said contactors, said means comprising a reciprocating member adapted upon movement thereof from one extreme position to the other to effect disengagement of one of said contactors and subsequent engagement of another of said contactors, said member being also adapted upon movement thereof to an intermediate position to effect disengagement of all of said contactors, and spring means for effecting such movements of said contactors with a snap action.

1,781,711. SHELLAC COMPOSITION. RICHARD E. SUMNER, Plainfield, N. J., assignor, by mesne assignments, to The Calco Chemical Company, Inc., a Corporation of Delaware. Filed Apr. 5, 1928, Serial No. 267,802. Renewed Dec. 31, 1929. 4 Claims. (Cl. 106—1.5.)

1. A composition of matter for use in making phonograph records and for other purposes, comprising a filler, a shellac agglomerant by which the filler is bound together, and an azine base dye.

1,781,712. WOOD-PULP MATERIAL. JOSEPH H. WALLACE, Stamford, Conn., assignor to Pine Waste Products, Inc., New York, N. Y., a Corporation of Delaware. Filed Feb. 5, 1925. Serial No. 6,958. 6 Claims. (Cl. 92—7.)



1. The herein described method of making pulp which comprises removing excess moisture from a mass of wood chips by treating the mass with steam in the presence of heated gases and then at once transferring said mass to a digester.

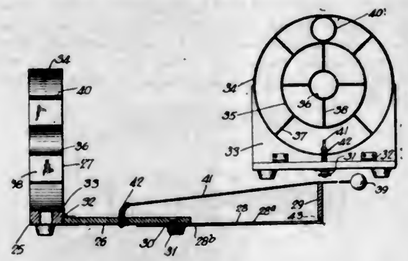
1,781,713. DEMOUNTABLE COVER FOR DUMPING BODIES. LEROY E. WILLIAMS, Edgerton, Wis., assignor to Highway Trailer Company, Edgerton, Wis., a Corporation of Wisconsin. Filed Dec. 23, 1927. Serial No. 242,021. 1 Claim. (Cl. 296—101.)

In combination with an upwardly open vehicle body, a removable cover comprising a plurality of sections disposed in pairs including a pair of sections adjacent each end of the body and one or more intermediate pairs independent of and unconnected with said end sections, the sections of each pair being detachably secured to opposite edges of the body respectively and sloping upwardly therefrom toward each other, the upper edges of said sections being provided with vertical flanges for mutual abutment and having inter-engaging features associated with said flanges opposing slippage of one flange vertically with respect to the other, whereby the covers are substantially self-sustaining and the intermediate sections require no auxiliary supports extending over the load-carrying space of the body.

1,781,714. BAG SHAKER AND FEEDER. HELMER ANDERSON, Minneapolis, Minn., assignor to General Mills, Inc., Minneapolis, Minn., a Corporation of Delaware. Filed Apr. 21, 1930. Serial No. 445,954. 21 Claims. (Cl. 259—91.)

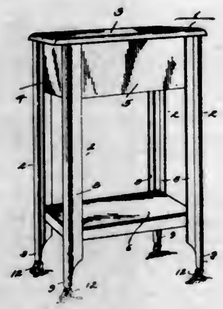
1. In an apparatus of the class described, the combination of a rotatable member provided with a plurality of compartments, means for feeding a container into each compartment and simultaneously pressing the container walls inwardly to shape the body of the container, means for causing a vibratory movement to be imparted to the containers in said compartments to settle the material therein, and means for ejecting the containers from said compartments.

1,781,715. INSOLE AND METHOD OF MAKING SAME. SIDNEY R. BLAKELY, Jamaica Plain, Mass. Filed Feb. 14, 1929. Serial No. 339,811. 7 Claims. (Cl. 36—27.)



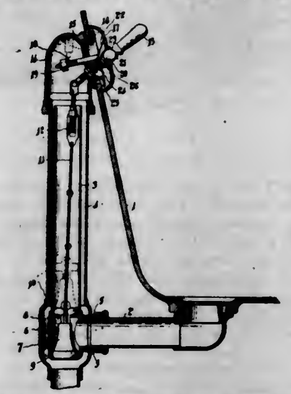
1. In an insole for use in the manufacture of boots and shoes, a layer of reinforcing material fixed on the heel portion thereof, said heel portion and said reinforcing layer having a cup formed therein before application to a last, and a separate layer of reinforcing material fixed thereto along the shank portion thereof, said shank portion and said reinforcing layer having an arch formed therein before application to a last.

1,781,716. PAPER-COATING COMPOSITION. DONALD B. BRADNER and CHARLES H. MILLIGAN, Hamilton, Ohio, assignors to The Champion Coated Paper Co., Hamilton, Ohio, a Corporation of Ohio. Filed Dec. 31, 1927. Serial No. 244,038. 22 Claims. (Cl. 134—20.)



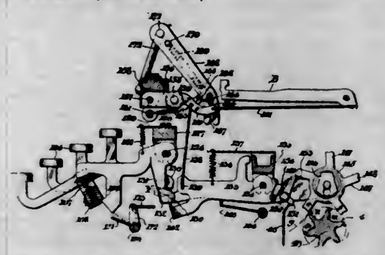
1. Process of making paper coating compositions which comprises admixing chlorinated protein adhesive and mineral pigment.

1,781,717. GAME AND AMUSEMENT DEVICE. MERRITT B. BRADT, Brooklyn, N. Y. Filed Dec. 21, 1928. Serial No. 327,518. 6 Claims. (Cl. 273—98.)



1. A game of the class described comprising a table member, an upstanding body adjacent one end of the table member having a passage extending therethrough, a manually controlled game piece involving a resilient extensible member, one end of which is coupled directly with said table member at a point forwardly of said body and adapted to be advanced for passage through the passage in said body and a wall member adjustably supported in connection with the table member and extending upwardly therefrom and adapted to be extended forwardly with respect thereto and to said body and in connection with which the movable game piece operates.

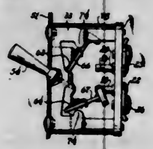
1,781,718. SHEET-METAL FURNITURE. ISAIAH CONRAD, Columbus, Ohio, assignor to F. O. Schoedinger, Columbus, Ohio. Filed Aug. 8, 1925. Serial No. 49,099. 1 Claim. (Cl. 45—31.)



An article of furniture of the character described, formed of metal, including a plurality of vertically extending corner members each formed to provide a tubular body having a longitudinally extending opening in one side thereof and a flat longitudinally extending angularly disposed integral wing extending outwardly from each vertical edge of the opening and at right angles one to the other, a top supported by the corner members, the lower ends of the tubular bodies being formed and adapted to receive the shanks of casters, and a horizontally extending member supported by and between the corner members, the wings of the corner members extending parallel with and engaging the marginal edges of the horizontally supported member for a substantial distance and the corners of the supported member extending through the longitudinally extending openings of the corner members to be received within the tubular body portions thereof, the vertical edges of the openings engaging the marginal edges of the horizontally extending member.

1,781,719. WASTE-PIPE FITTING. WILLIAM HENRY DARLING, London, Ontario, Canada. Filed Sept. 27, 1929. Serial No. 395,614. 2 Claims. (Cl. 4—203.)

1. Improvements in waste pipe fittings including a down-flow waste pipe; a valve controlling discharge through the same; means for actuating the valve extending up through the waste pipe; a closure for the upper end of the waste pipe having a lateral opening; a cap for said opening detachably secured in place and having an opening therein; an operating lever for the valve actuating means adapted to be projected through said opening from the outside, the wall of said opening and the said lever being formed with engaging parts forming a bearing on which said lever may rock up and down; a cam face on the inner side of the cap; and spring actuated means on the inner end of the lever engaging the cam face, the latter being figured to tend to retain the lever, by its engagement with the sliding member, in either of at least two positions.

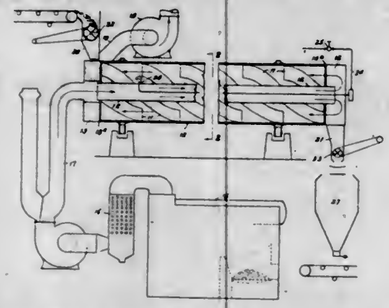


1,781,720. TYPEWRITING MACHINE. GUSTAVE O. DEGENER, New York, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 28, 1927. Serial No. 243,063. 24 Claims. (Cl. 197—17.)

7. In a power operated typewriting machine, a type action, a power lever connected to the same, a power

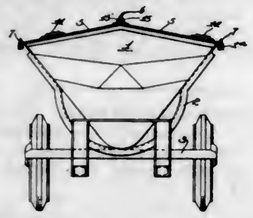
opposite side bars and transverse end bars, of a hinged tongue extending longitudinally along and over the center bar and carried by the rear transverse bar, and a swinging bail carried by the front transverse bar of the base, adapted to swing inwardly over the free end of the tongue, said tongue being provided with inwardly projecting flanges along its opposite edges, which project over but lie in spaced relation to the center bar.

1,781,710. ELECTRIC SWITCH. WILLIAM C. STEVENS and GEORGE J. MEUER, Milwaukee, Wis., assignors to Cutler-Hammer, Inc., Milwaukee, Wis., a Corporation of Delaware. Filed July 25, 1929. Serial No. 380,905. 12 Claims. (Cl. 200—6.)



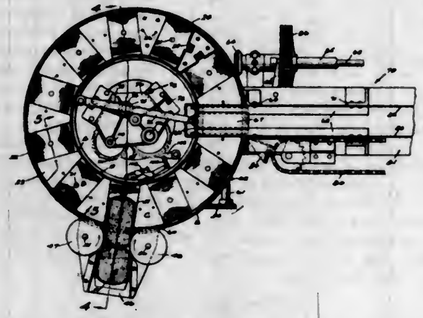
1. In a multiple circuit controlling switch, in combination, an insulating base, a plurality of sets of fixed contacts carried by said base, a plurality of oscillatable bridging contactors each adapted for movement into and out of engagement with one of said sets of contacts respectively, common actuating means for said contactors, said means comprising a reciprocating member adapted upon movement thereof from one extreme position to the other to effect disengagement of one of said contactors and subsequent engagement of another of said contactors, said member being also adapted upon movement thereof to an intermediate position to effect disengagement of all of said contactors, and spring means for effecting such movements of said contactors with a snap action.

1,781,711. SHELLAC COMPOSITION. RICHARD E. SUMNER, Plainfield, N. J., assignor, by mesne assignments, to The Calco Chemical Company, Inc., a Corporation of Delaware. Filed Apr. 5, 1928, Serial No. 267,802. Renewed Dec. 31, 1929. 4 Claims. (Cl. 106—1.5.)



1. A composition of matter for use in making phonograph records and for other purposes, comprising a filler, a shellac agglomerant by which the filler is bound together, and an azine base dye.

1,781,712. WOOD-PULP MATERIAL. JOSEPH H. WALLACE, Stamford, Conn., assignor to Pine Waste Products, Inc., New York, N. Y., a Corporation of Delaware. Filed Feb. 5, 1925. Serial No. 6,958. 6 Claims. (Cl. 92—7.)



1. The herein described method of making pulp which comprises removing excess moisture from a mass of wood chips by treating the mass with steam in the presence of heated gases and then at once transferring said mass to a digester.

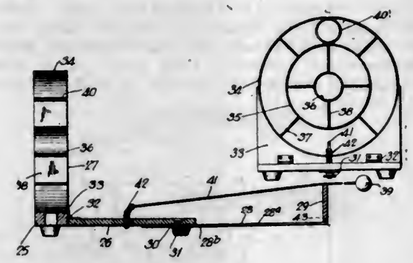
1,781,713. DEMOUNTABLE COVER FOR DUMPING BODIES. LEROY E. WILLIAMS, Edgerton, Wis., assignor to Highway Trailer Company, Edgerton, Wis., a Corporation of Wisconsin. Filed Dec. 23, 1927. Serial No. 242,021. 1 Claim. (Cl. 296—101.)

In combination with an upwardly open vehicle body, a removable cover comprising a plurality of sections disposed in pairs including a pair of sections adjacent each end of the body and one or more intermediate pairs independent of and unconnected with said end sections, the sections of each pair being detachably secured to opposite edges of the body respectively and sloping upwardly therefrom toward each other, the upper edges of said sections being provided with vertical flanges for mutual abutment and having inter-engaging features associated with said flanges opposing slippage of one flange vertically with respect to the other, whereby the covers are substantially self-sustaining and the intermediate sections require no auxiliary supports extending over the load-carrying space of the body.

1,781,714. BAG SHAKER AND FEEDER. HELMER ANDERSON, Minneapolis, Minn., assignor to General Mills, Inc., Minneapolis, Minn., a Corporation of Delaware. Filed Apr. 21, 1930. Serial No. 445,954. 21 Claims. (Cl. 259—91.)

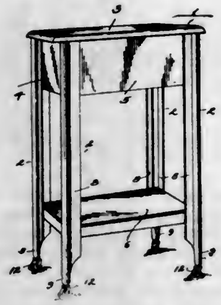
1. In an apparatus of the class described, the combination of a rotatable member provided with a plurality of compartments, means for feeding a container into each compartment and simultaneously pressing the container walls inwardly to shape the body of the container, means for causing a vibratory movement to be imparted to the containers in said compartments to settle the material therein, and means for ejecting the containers from said compartments.

1,781,715. INSOLE AND METHOD OF MAKING SAME. SIDNEY R. BLAKELY, Jamaica Plain, Mass. Filed Feb. 14, 1929. Serial No. 339,811. 7 Claims. (Cl. 36—27.)



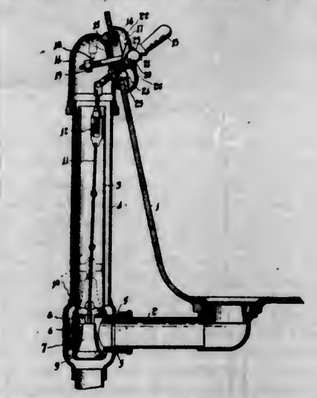
1. In an insole for use in the manufacture of boots and shoes, a layer of reinforcing material fixed on the heel portion thereof, said heel portion and said reinforcing layer having a cup formed therein before application to a last, and a separate layer of reinforcing material fixed thereto along the shank portion thereof, said shank portion and said reinforcing layer having an arch formed therein before application to a last.

1,781,716. PAPER-COATING COMPOSITION. DONALD B. BRADNER and CHARLES H. MILLIGAN, Hamilton, Ohio, assignors to The Champion Coated Paper Co., Hamilton, Ohio, a Corporation of Ohio. Filed Dec. 31, 1927. Serial No. 244,038. 22 Claims. (Cl. 134—20.)



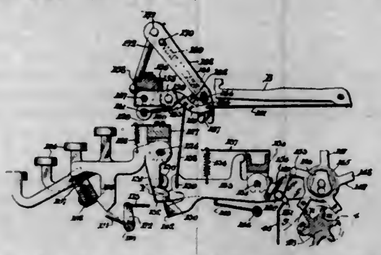
1. Process of making paper coating compositions which comprises admixing chlorinated protein adhesive and mineral pigment.

1,781,717. GAME AND AMUSEMENT DEVICE. MERRITT B. BRADT, Brooklyn, N. Y. Filed Dec. 21, 1928. Serial No. 327,518. 6 Claims. (Cl. 273—98.)



1. A game of the class described comprising a table member, an upstanding body adjacent one end of the table member having a passage extending therethrough, a manually controlled game piece involving a resilient extensible member, one end of which is coupled directly with said table member at a point forwardly of said body and adapted to be advanced for passage through the passage in said body and a wall member adjustably supported in connection with the table member and extending upwardly therefrom and adapted to be extended forwardly with respect thereto and to said body and in connection with which the movable game piece operates.

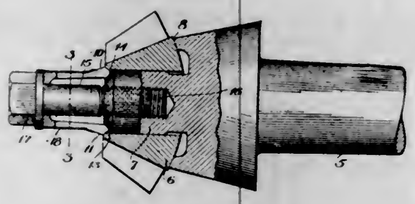
1,781,718. SHEET-METAL FURNITURE. ISAIAH CONRAD, Columbus, Ohio, assignor to F. O. Schoedinger, Columbus, Ohio. Filed Aug. 8, 1925. Serial No. 49,099. 1 Claim. (Cl. 45—31.)



An article of furniture of the character described, formed of metal, including a plurality of vertically extending corner members each formed to provide a tubular body having a longitudinally extending opening in one side thereof and a flat longitudinally extending angularly disposed integral wing extending outwardly from each vertical edge of the opening and at right angles one to the other, a top supported by the corner members, the lower ends of the tubular bodies being formed and adapted to receive the shanks of casters, and a horizontally extending member supported by and between the corner members, the wings of the corner members extending parallel with and engaging the marginal edges of the horizontally supported member for a substantial distance and the corners of the supported member extending through the longitudinally extending openings of the corner members to be received within the tubular body portions thereof, the vertical edges of the openings engaging the marginal edges of the horizontally extending member.

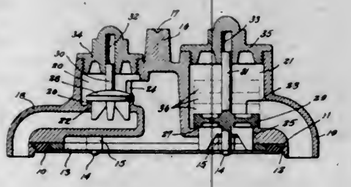
1,781,719. WASTE-PIPE FITTING. WILLIAM HENRY DARLING, London, Ontario, Canada. Filed Sept. 27, 1929. Serial No. 395,614. 2 Claims. (Cl. 4—203.)

1. Improvements in waste pipe fittings including a down-flow waste pipe; a valve controlling discharge through the same; means for actuating the valve extending up through the waste pipe; a closure for the upper end of the waste pipe having a lateral opening; a cap for said opening detachably secured in place and having an opening therein; an operating lever for the valve actuating means adapted to be projected through said opening from the outside, the wall of said opening and the said lever being formed with engaging parts forming a bearing on which said lever may rock up and down; a cam face on the inner side of the cap; and spring actuated means on the inner end of the lever engaging the cam face, the latter being figured to tend to retain the lever, by its engagement with the sliding member, in either of at least two positions.



1,781,720. TYPEWRITING MACHINE. GUSTAVE O. DEGENER, New York, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 28, 1927. Serial No. 243,063. 24 Claims. (Cl. 197—17.)

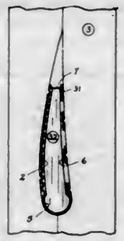
7. In a power operated typewriting machine, a type action, a power lever connected to the same, a power



driven rotating element having projections thereon, a star wheel pivoted to the power lever and frictionally held against accidental rotation, said star wheel having fingers normally held out of the path of said projections, means for moving the fingers of the star wheel into the path of said projections to actuate the lever and thereby the type action, and means for preventing overthrow of the star wheel.

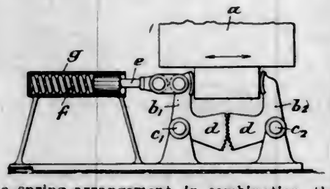
1,781,721. CHUCK. SCHUYLER H. EARL, Rochester, N. Y., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed June 30, 1924. Serial No. 723,287. 5 Claims. (Cl. 287—53.)

3. A chuck for gears comprising a spindle constructed to enter the bore of a gear to support the same and having means thereon against which the inner end of the gear seats, a collapsible bushing, said bushing and spindle having co-operating parts adapted to expand the bushing on axial movement thereof in one direction to clamp a gear on the spindle, and means for moving the bushing axially of the spindle, the maximum diameter of the means for moving the bushing and of the bushing, when collapsed, being less than the minimum diameter of the bore of the gear whereby the gear may be removed from said spindle without removal of the bushing or the means for moving the same.



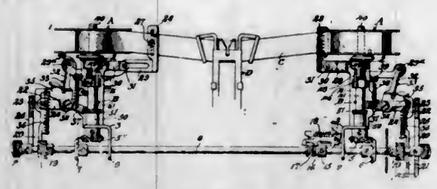
1,781,722. THIEF-HOLE COVER. CONRAD EHRET, Oklahoma City, Okla. Filed Oct. 28, 1929. Serial No. 403,028. 7 Claims. (Cl. 220—85.)

2. A thief hole cover for tanks comprising a base adapted to be secured upon a tank about an opening therein, a cover for the upper end of said base and formed with ports, valve houses each independent of the other and each having an inner opening and an outer opening, conduits leading from the outer openings of said valve houses and having downturned outer ends, and check valves in said valve houses, the valve in one house opening inwardly and the valve in the other house opening outwardly.



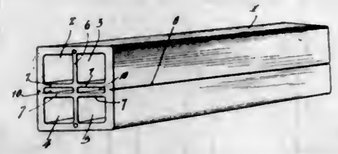
1,781,723. METHOD OF SHAPING HOLLOW BODIES. HAROLD E. FOX, Pittsburgh, Pa., assignor to Pittsburgh Metal Airplane Company, a Corporation of Pennsylvania. Filed Jan. 28, 1930. Serial No. 423,949. 5 Claims. (Cl. 29—148.2.)

5. The method herein described of building a hollow sheet-metal, interiorly-trussed airplane wing which consists in arranging and securing a plurality of cut-out templets with the edges of their cut-out spaces in coincidence with the surfaces to which the sheet metal is to



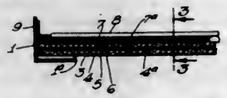
be shaped, shaping sheet metal to a shell over forming members and within the templets, securing truss members within the so shaped shell, and applying a covering to the shell.

1,781,724. SPRING ARRANGEMENT. PETER FÜSGEN and WALTER KOST, Dusseldorf, Germany, assignors to Rheinische Metallwaaren- und Maschinenfabrik, Dusseldorf-Derendorf, Germany. Filed Feb. 1, 1929, Serial No. 336,842, and in Germany June 16, 1927. 5 Claims. (Cl. 267—1.)



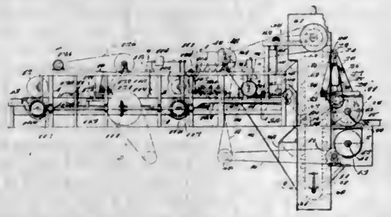
1. In a spring arrangement, in combination, thrust elements engaging a body to be held resiliently and connected with each other so as to positively move together in opposite directions, a rod pivotally connected to one of said thrust elements, a sleeve, and a spring arranged in said sleeve and bearing at one end against the bottom of said sleeve and at the other end against said rod, said spring always tending to bring the said thrust elements in a position in which they engage said body.

1,781,725. TYPEWRITING MACHINE. GEORGE F. HANDLEY, Glendale, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Original application filed Dec. 15, 1928, Serial No. 326,318. Divided and this application filed Nov. 19, 1929. Serial No. 408,248. 11 Claims. (Cl. 197—165.)



1. In a typewriter or the like, a ribbon feeding mechanism including a ribbon spool and a ribbon wound thereon, a ribbon reversing mechanism, a movable ribbon-controlled means for operating said reversing mechanism, means for returning the ribbon-controlled means to its initial position immediately following the operation of the reversing mechanism whereby a slack in the ribbon is formed between the spool and the ribbon-controlled means, and a spring connected to the spool and placed under tension when the ribbon-controlled means is actuated by the ribbon and effective to rotate the spool to take up the ribbon slack simultaneously with the return movement of the ribbon-controlled means to its initial position.

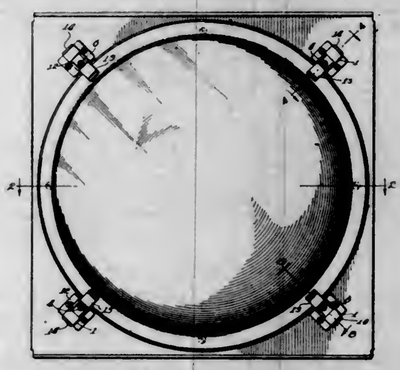
1,781,726. DISTRIBUTING CONDUIT. HOWARD W. JEWELL, Los Angeles, Calif. Filed Oct. 10, 1928. Serial No. 311,618. 3 Claims. (Cl. 247—32.)



1. A multiple duct conduit including exterior walls and a plurality of interior webs dividing said conduit into ducts, one of said webs being substantially twice the thickness of the exterior walls, said web being cored to facilitate separation of the conduit through the center of said web, the remaining webs being of a thickness not exceeding the thickness of the exterior walls.

1,781,727. ADVERTISING SIGN AND THE LIKE. EMERALD W. KNECHTEL, Bell, Calif. Filed Dec. 22, 1927. Serial No. 241,956. 19 Claims. (Cl. 40—133.)

1. In a means of the class described, a translucent light transmitting medium, an opaque shield having open letters therein positioned at one side of the medium, and another shield having corresponding letters positioned at the opposite side of the medium, the letters of the latter shield being wider than those of the first shield and positioned in front of the same.

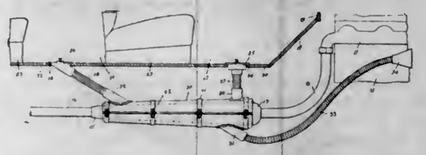


1,781,728. METHOD AND APPARATUS FOR PREPARING WET MIXTURES. JOHN C. MACILDOWIE, Nashua, N. H., assignor to Asbestos Wood & Shingle Co., Nashua, N. H., a Corporation of New Hampshire. Filed Oct. 29, 1927. Serial No. 229,771. 31 Claims. (Cl. 18—48.)

14. Method of producing a uniform mixture of discrete, semi-wet particles which comprises subjecting a supply of the components of the mixture to a loose shearing action, depositing the same substantially without relative movement in the form of a sheet, removing the upper portion of the deposit to the desired contour, and thereafter consolidating the mixture.

1,781,729. LENS-HOLDING LOCK FOR REFLECTORS. ROSCOE E. MAJOR, Chicago, Ill., assignor to Major Equipment Co., Inc., a Corporation of Illinois. Filed Feb. 6, 1930. Serial No. 426,298. 3 Claims. (Cl. 292—114.)

1. Lens latching means comprising a fixed frame of two parts bent and secured together to form a longitudinally extending guideway for a slidable latching clip, a latching clip movably mounted in the guideway and provided with a lug projecting to one side of the guideway, a spring bearing between said lug and a portion of said frame structure at one side of said guideway, said frame structure being formed to provide a fulcrum for the clip around which the clip may move perpendicularly to its longitudinal movement, said spring and fulcrum forming

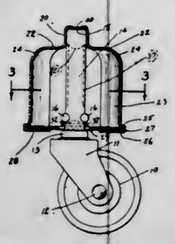


a couple, and means preventing the perpendicular movement of the clip except at one point of its longitudinal stroke.

1,781,730. COMPOSITION OF MATTER. LEIELLA MORRIS, Dallas, Tex. Filed Mar. 22, 1929. Serial No. 349,276. 2 Claims. (Cl. 134—18.)

1. A composition of matter for preserving knitted textile fibers comprising two parts alum with one part each of magnesium sulphate and sodium chloride, the said parts being mixed with warm water.

1,781,731. AUTOMOBILE HEATER. QUINTIN G. NOBLITT, Indianapolis, Ind., assignor to Indianapolis Pump & Tube Company, Indianapolis, Ind., a Corporation. Filed Oct. 17, 1927. Serial No. 226,550. 3 Claims. (Cl. 257—241.)

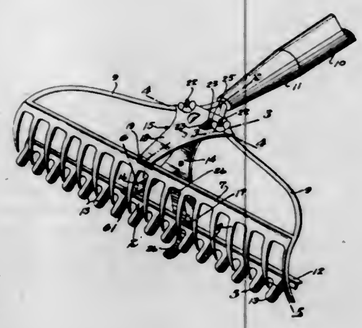


1. In combination with a conical muffler, a heater casing surrounding the same, an air inlet for said casing, and an air outlet at each end of said casing, said casing being shaped with a smaller diameter adjacent the smaller end of said muffler and having a substantially longitudinal partition in the end thereof adjacent the larger end of said muffler for reducing the cross sectional area of the path of flow to the outlet at that end whereby delivery of air at a substantially equal temperature from both of said outlets is secured.

1,781,732. DETACHABLE TOP-BEARING CASTER AND SOCKET. WILLIAM H. NOELTING, Evansville, Ind., assignor to Faultless Caster Company, Evansville, Ind., a Corporation. Filed Apr. 15, 1927. Serial No. 183,987. 3 Claims. (Cl. 16—139.)

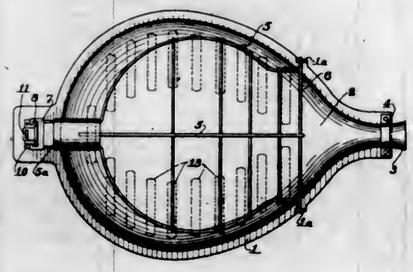
1. A detachable caster and socket combination comprising a caster stem having a plurality of laterally extending rigid enlargements near the bottom thereof, said enlargements being arranged in spaced relation to each other and lying in substantially the same plane transverse to the stem axis, a centrally apertured plate for receiving said stem and including a plurality of recess extensions com-

municating therewith, each of slightly larger dimension than and of similar outline to the stem enlargement and arranged in similarly spaced relation for the simultaneous passage of the enlargements therethrough for stem mounting and detachment, yielding means positioned adjacent all of the recesses and normally in registration therewith



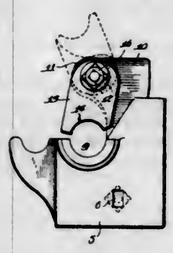
for engaging the enlargements for retaining said stem in the plate when the stem is not under load, said yielding means being movable out of registration with the recesses upon forcible entry or removal of the stem when the enlargements thereof are in registration with said recess extensions.

1,781,733. CYCLIC PROCESS OF FIBER LIBERATION. GEORGE A. RICHTER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Mar. 9, 1929. Serial No. 345,868. 6 Claims. (Cl. 92—9.)



1. A process which comprises cooking raw cellulosic material in a solution of sodium carbonate to dissolve a portion of its cementitious content, and then cooking in a solution of sodium sulphide to effect fiber liberation.

1,781,734. HAND-RAKE-CLEANING ATTACHMENT. ROBERT G. ROTH, Minneapolis, Minn. Filed Apr. 9, 1930. Serial No. 442,946. 1 Claim. (Cl. 55—146.)

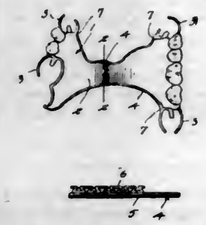


A device of the class described comprising a clamp including a plate adapted to rest on the head and arms of a rake and having short depending hooks engageable with said head and arms to hold the plate against bodily shifting movement thereon and clips for securing the plate to said arms, an arm hinged to the clamp for vertical swinging movement, a body carried by the arm and having stripper fingers arranged to project between the teeth of the rake, and a shoe on the arm arranged to slide on the ground during raking action and hold the body raised.

1,781,735. APPARATUS FOR MEASURING THE VITAL CAPACITY OF THE LUNGS. ROY WESLEY SCOTT, Cleveland, Ohio. Filed June 10, 1927. Serial No. 197,855. 6 Claims. (Cl. 73—112.)

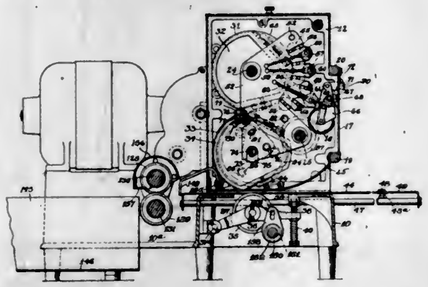
5. In apparatus of the character described, the combination with a support, of a normally flat bag of flexible material, having a blow opening at one end and increasing in width from the blow end toward the opposite end, and means for indicating degree of inflation, including a flat member pivotally supported near the end of the bag having the blow hole and overlying the bag, a member pivotally supported near the opposite end of the bag and a slidable connection between the said members.

1,781,736. WARP-BEAM LOCK. CLAUDE C. SHAW, Camden, S. C. Filed Jan. 11, 1928. Serial No. 245,877. 2 Claims. (Cl. 308—24.)



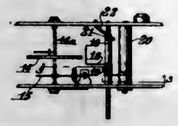
1. In a device of the class set forth, a bracket adapted for attachment to the loom-frame having a shaft-receiving semibearing in its upper edge and also an upstanding standard at its rear edge, behind said bearing, and a locking-bar clamped to said standard by means of a bolt extending through said standard and a slot in said locking-bar, said slot inclining downwardly and forwardly, said locking-bar being provided with a semibearing at its lower edge adapted to fit down on the top side of the shaft, said locking-bar being also provided with a lug extending laterally under the projecting end of said standard.

1,781,737. PIN STEM. ROGERS T. STAFFORD, East Providence, R. I., assignor to B. A. Ballou & Co., Inc., Providence, R. I., a Corporation of Rhode Island. Filed Mar. 1, 1930. Serial No. 432,436. 8 Claims. (Cl. 24—155.)



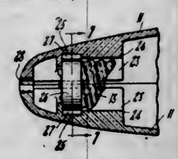
1. A pin stem having a shank portion and a head portion, said head portion having pivot means and connector means additional thereto.

1,781,738. REENFORCED DENTURE. JOSEPH PHILIAS TETREAULT, Providence, R. I. Filed Feb. 12, 1929. Serial No. 339,481. 7 Claims. (Cl. 32—4.)



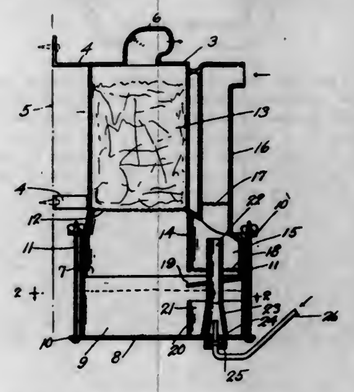
1. A reenforced denture, comprising a body of composition material, a resilient wire outlining certain edges of the body, and means forming a part of the wire designed to be imbedded in the material to bond the wire thereto.

1,781,739. APPARATUS FOR PRINTING NEGOTIABLE PAPER. CHARLES G. TIEFEL and WALTER B. PAYNE, Rochester, N. Y., assignors to The Todd Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 18, 1926. Serial No. 142,194. 53 Claims. (Cl. 101—218.)



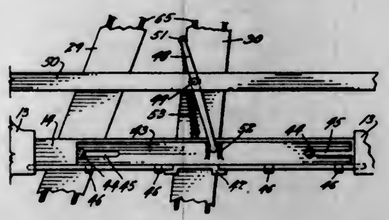
1. In a printing machine of the class described, the combination of a frame, plate and blanket rolls rotatably mounted one adjacent another upon the frame, means for driving said rolls including a clutch mechanism arranged for automatic release following each printing operation, means for adjusting one roll relative to another, and a platen positioned to cooperate with the blanket roll.

1,781,740. MECHANISM FOR STARTING CLOCKS. WILLIAM J. VANDERPOOL, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Apr. 13, 1928. Serial No. 269,702. 2 Claims. (Cl. 58—1.)



1. In apparatus of the character described, the combination with a clock having a balance wheel, of a shaft disposed on the clock parallel to the axis of the balance wheel, said shaft being mounted for both rotary and axial movement, a crank arm carried by the shaft, adapted to strike against the balance wheel when the shaft is rotated, a helical spring surrounding the shaft, having one end connected thereto, means in close proximity to the shaft for anchoring the other end of the spring and means on the shaft and on the clock for causing the shaft to undergo rotary movement when it is moved axially.

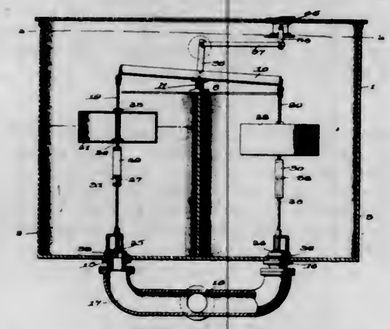
1,781,741. HEATING PAD. HANS H. WANDERS, Boston, Mass. Filed Nov. 15, 1928. Serial No. 319,461. 2 Claims. (Cl. 219—45.)



1. A device of the class described comprising a two-part shell of moldable electrical insulating material, an electric light socket therein, each part of said shell having portions projecting inwardly and cooperating to grip said socket when the shell is assembled, and means for securing said parts together.

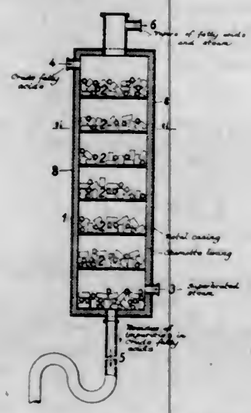
1,781,742. AUTOMOTIVE AIR-CLEANSING DEVICE. HERMAN B. ANGLEMEYER, Calexico, Calif., assignor of one-tenth to J. A. Allard, Jr., one-fourth to A. M. Lichty, one-fourth to B. Chaffey Shepherd, one-eighth to M. W. Zander, and one-sixteenth to Ira H. Van Cleave, Pomona, Calif. Filed Feb. 12, 1929. Serial No. 339,374. 7 Claims. (Cl. 183—11.)

7. In an air cleansing device of the class described, a casing provided at its top with a cleansed air outlet and provided on one side with an atmospheric air intake pipe, an oil screen chamber at the lower end of said pipe, an oil trough in said casing beneath said chamber, an induction oil elevating tube in said trough having its upper end extending into said chamber and a motive gas pipe connected with said tube.



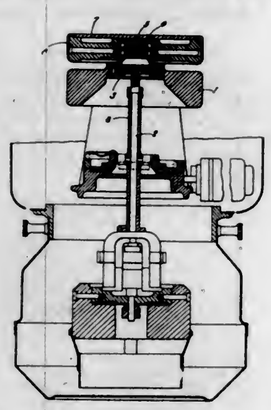
1,781,743. PLANT THINNER. ERNST J. ANTONI, Denver, Colo. Filed July 1, 1929. Serial No. 375,019. 8 Claims. (Cl. 97—38.)

1. A plant thinning machine comprising: a wheel supported main frame; arms suspended from said main



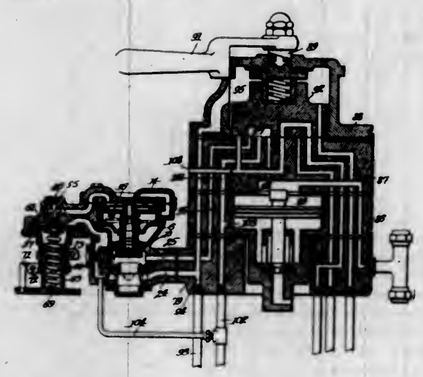
frame and arranged to swing laterally of the line of travel thereof for movement into and out of engagement with a plant row; means for swinging said arms; positively driven rake wheels carried on the lower extremities of said arms; and means operated by swinging movement of each of said arms into cultivating position for forcing and maintaining the respective arms forward of their respective planes of movement.

1,781,744. FLUID METER. CHARLES H. BERGQUIST and RICHARD BATTLE, Okmulgee, Okla. Filed July 9, 1926. Serial No. 121,415. 3 Claims. (Cl. 73—28.)



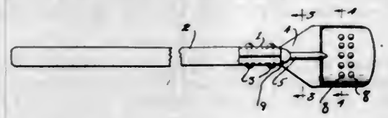
1. A gravity meter for liquids including pivotally mounted oscillatory means, a nozzle discharging liquid into said means adjacent its pivotal axis, said nozzle extending in a horizontal direction and being flared outwardly for distributing liquid at a distance on both sides of said pivotal axis to increase the inertia of the liquid in its descent toward the lower end of said means, vessels into which said receiving means alternately discharges, means responsive to a definite depth of liquid in said vessel for oscillating said first mentioned means, discharge valves for said vessels, and means for alternately actuating said valves, said last mentioned means moving independently of said valve during the initial part of each oscillatory movement, whereby to gather inertia and to deliver a hammer blow to said valves for opening the latter.

1,781,745. APPARATUS FOR DISTILLING FATTY ACIDS. HERMANN BOLLMANN, Hamburg, Germany. Filed Dec. 16, 1925, Serial No. 75,744, and in Germany Feb. 2, 1925. 1 Claim. (Cl. 202—153.)



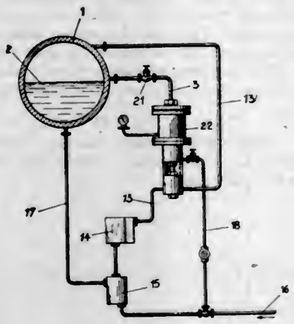
In an apparatus for distilling fatty acids, the combination of a column comprising a chamber, partitions spaced at intervals across said chamber and defining a plurality of compartments, said partitions having such construction as to prevent the substantial accumulation of liquid thereon and having free openings near the center of each of the same for permitting the passage of vapor, the remaining parts of said partition being impervious to the passage of vapor, means for introducing fatty acid near the top of said column, means for withdrawing vapors from said column, and means for introducing superheated steam near the foot of said column, said openings being unprovided with hoods.

1,781,746. GYROSCOPIC INDICATING INSTRUMENT. SIDNEY GEORGE BROWN, North Acton, England. Filed Nov. 21, 1929, Serial No. 408,871, and in Great Britain Nov. 29, 1928. 2 Claims. (Cl. 74—78.)



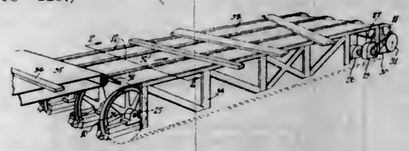
1. A gyroscopic indicating instrument comprising a series of gyro wheels, a universal coupling between and rotatably connecting each adjacent pair of said wheels, a driving spindle, a universal coupling rotatably connecting said driving spindle with the first of said series of gyro wheels and an indicating device fitted to the last of said gyro wheels.

1,781,747. FEED VALVE FOR AIR BRAKES. CHARLES A. CAMPBELL, Watertown, N. Y., assignor to The New York Air Brake Company, a Corporation of New Jersey. Filed Sept. 24, 1927. Serial No. 221,810. 27 Claims. (Cl. 303—59.)



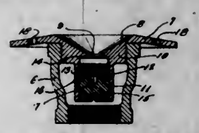
1. The combination of a main reservoir pipe; a brake pipe; an engineer's brake valve adjustable to perform the ordinary release and running functions and including a feed valve discharge passage and a warning port which are connected in release position, and a brake pipe port which is connected with the feed valve discharge port in running position; a feed valve having a regulating diaphragm which controls its action, said valve being connected with the engineer's brake valve in such manner as to feed air with reduction of pressure, from the main reservoir pipe to said feed valve discharge port; a direct pressure transmitting connection between the brake pipe and said diaphragm; and a bleed connection from the last named connection to said feed valve discharge passage.

1,781,748. BOOT HOOK. FRANK E. CHAPPER and WILLIAM R. MCGEE, Detroit, Mich. Filed Mar. 25, 1929. Serial No. 349,575. 6 Claims. (Cl. 132—7.)



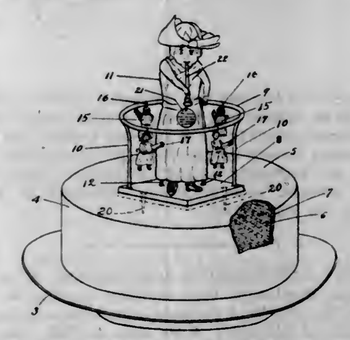
6. A boot hook comprising a handle, a sheet metal member connected with and extending beyond the end of the handle and having a terminal arcuate portion approximately parallel with the handle and an angularly disposed portion providing a shoulder between the terminal arcuate portion and the angular portion to engage the upper edge of a rubber or other footwear to limit the extent to which the terminal portion may be inserted therein and positioning the handle rearwardly of the rear end thereof, said arcuate portion being provided with gripping portions to engage the rubber or other article whereby as the foot is being inserted therein the operator, by pulling on the handle, may draw the shoe or rubber to final position over the heel.

1,781,749. APPARATUS FOR MAINTAINING A PREDETERMINED WATER LEVEL IN STEAM BOILERS. GEORGE HEINRICH DAVIN, Cassel, Germany, assignor to Schmidt'sche Heissdampf G. m. b. H., Cassel-Wilhelmshohe, Germany, a Corporation of Germany. Filed May 18, 1928, Serial No. 278,834, and in Germany July 11, 1927. 8 Claims. (Cl. 122—451.)



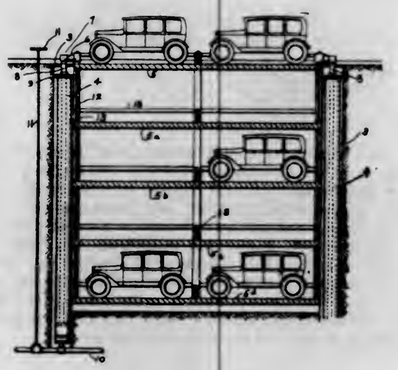
1. Apparatus for maintaining a predetermined water level in a steam boiler comprising a drum containing water and steam, a feed pump for maintaining a water level in the drum, a steam supply line to said feed pump, a throttling device in said supply line, and means inserted between the drum and the feed line of the pump for controlling said throttling device, said means comprising a chamber, a laybrinth throttle having passages of considerable length at one end of said chamber, and a pressure operated plunger communicating with the chamber adjacent said throttle and connected thereto.

1,781,750. CONVEYER. HAROLD C. DODGE, Portland, and WALTER H. BEANE, Klamath Falls, Oreg. Filed June 27, 1928. Serial No. 288,662. 4 Claims. (Cl. 198—129.)



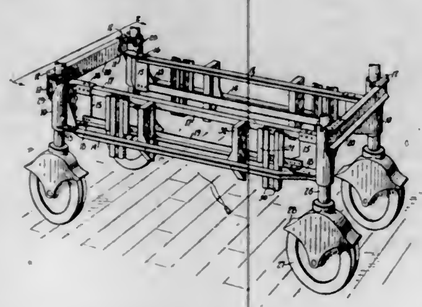
1. The combination of a plurality of transfer mechanisms each having a driven wheel, a drive wheel, a conveyer passing around said wheels, said conveyer having rubber lumber-engaging faces, said conveyer and wheels having tongue and groove connections between their contacting surfaces, means for supporting the upper run of each conveyer belt between its driven and driving wheels consisting of a channel-shaped support in which said belt can lie, and a sloping guide between the lowermost portion of the guide in which said belt lies and the uppermost portion of the next adjacent guide.

1,781,751. IRRIGATING APPARATUS. HOWARD H. ENELL, Cleveland Heights, Ohio. Filed May 16, 1927. Serial No. 191,818. 2 Claims. (Cl. 299—60.)



1. A spray nozzle for lawn sprinkler systems, comprising a body portion threaded for connection to a piping system and provided with a cylindrical skirt member provided with tangentially disposed slots opening through its lower edge and extending longitudinally along the skirt, said skirt being internally threaded and enclosing an inner chamber, the body portion at the upper end of the skirt being provided with a cross wall having an outer conical depression flaring upwardly from a central through orifice smaller in diameter than said chamber and communicating therewith, and an imperforate plug threaded into the threads of said skirt and adapted for adjustment along the same in said chamber for more or less closing said slots therein.

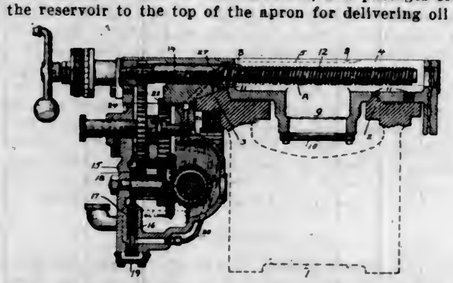
1,781,752. MESSAGE HOLDER. ANNA M. FISHER, Los Angeles, Calif. Filed Sept. 16, 1929. Serial No. 393,107. 3 Claims. (Cl. 41—10.)



1. In a cake ornament support, a railing, means to support said railing upon a cake in a spaced relation to the top surface thereof, a master object within said railing, and subordinate related objects supported by said railing.

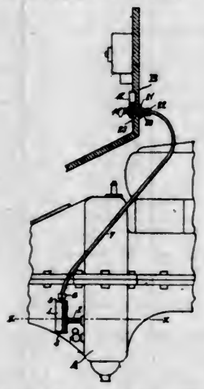
1,781,753. AUTOMOBILE PARKING SYSTEM. BERNARD M. FLANNERY, Seattle, Wash. Filed Sept. 16, 1929. Serial No. 393,046. 1 Claim. (Cl. 214—16.1.)

An automobile housing device comprising an elevator having a series of platforms at different horizontal levels, said elevator being adapted to be lowered into a pit adjacent a curbstone, cylinders at each corner of the elevator, pistons operating in said cylinders, piston rods extending the length of the cylinder and secured to the elevator at each upper corner, and means for operating the pistons to raise and lower the elevator.



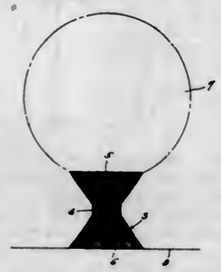
1,781,754. FRAME FOR TRAVERSING HOISTS. GUSTAV A. GRAB, Portland, Oreg. Filed Apr. 6, 1927. Serial No. 181,456. 22 Claims. (Cl. 280—61.)

1. A spindle housing for traversing hoist frames consisting of an upright cast tubular member having an angle plate formed along the top of one side thereof, and having a projection formed on the opposite side thereof having a pair of vertically spaced, horizontal bolting faces formed thereon, said projection extending at a right angle to the angle plate.



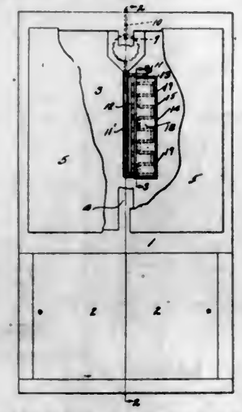
1,781,755. LATHE-OILING MECHANISM. WILLIAM F. GROENE, Cincinnati, Ohio, assignor to The R. K. Le Blond Machine Tool Company, Cincinnati, Ohio, a Corporation of Delaware. Filed June 4, 1928. Serial No. 282,672. 6 Claims. (Cl. 184—5.)

5. An oiling system for lathes comprising an oil pump in the apron, channels in the slide adjacent the cross slideways to which oil is delivered by the pump, passages therefrom to the cross slideways, passages therefrom delivering oil to a reservoir located in the slide, and passages from the reservoir to the top of the apron for delivering oil by



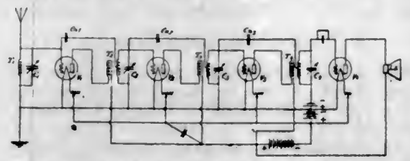
gravity from the reservoir to the interior of the apron and passages communicating with the delivery of the said pump, extending to the shaft bearings in the said apron.

1,781,756. OIL GAUGE. THOMAS A. HODGES, Tulare, Calif., and HENRY E. ELROD, Dallas, Tex. Filed Dec. 5, 1925. Serial No. 73,429. 5 Claims. (Cl. 73—54.)



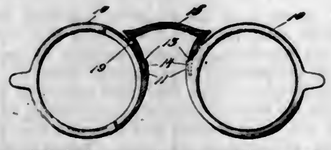
1. In combination with a liquid reservoir, a cylinder, the upper end of said cylinder being above the intended maximum level of the liquid in the reservoir, connecting means between said reservoir and said cylinder whereby the liquid level in said cylinder is maintained on a par with that in said reservoir, an indicating chamber having a transparent wall, a conduit connecting said cylinder to said indicating chamber, a piston in said cylinder, and means for actuating said piston to force the liquid from said cylinder into said conduit and said indicating chamber.

1,781,757. GOLF TEE. ALBERT DAWSON HOLDEN, Texon, Tex. Filed Mar. 26, 1930. Serial No. 439,163. 6 Claims. (Cl. 273—33.)



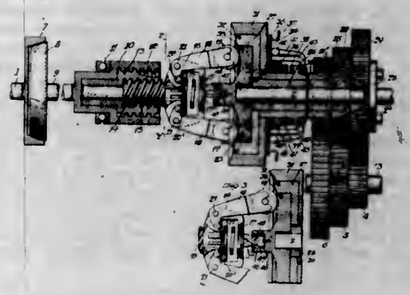
1. A golf tee comprising an elongated fibrous body, said body cupped at its top and botom, and means intermediate the ends of the body for anchoring the fibers in immovable relation to each other.

1,781,758. REFRIGERATOR. HARRY E. LARSEN, New York, N. Y., assignor to Edmund E. Allyne, as trustee for a syndicate composed of Edmund E. Allyne, Rollin H. White, and Harry E. Larsen. Filed June 30, 1927. Serial No. 202,559. 4 Claims. (Cl. 62—95.)



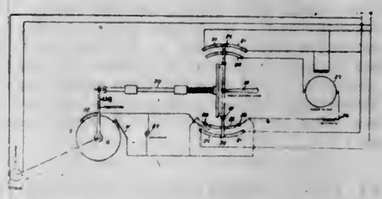
1. The combination of a refrigerator having heat insulated outer and inner refrigerating compartments and refrigerating apparatus therefor comprising a heat-insulated refrigerant storage tank within said outer compartment and evaporator elements in parallel gravitating communication with said storage tank and located in said outer and inner refrigerating compartments.

1,781,759. AMPLIFICATION SYSTEM. WILLIAM A. MACDONALD, Little Neck, N. Y., assignor to Hazeltine Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Oct. 10, 1925. Serial No. 61,687. 17 Claims. (Cl. 179—171.)



1. In a multi-stage tuned radio-frequency vacuum tube amplifier, each stage being coupled to the next adjacent stage by a single transformer, a variable condenser associated with each transformer in a tuned circuit for tuning the same over a predetermined wave-length range, the effective input impedance of each transformer at resonance being adjusted to such value that the ultimate amplification of all of said stages is substantially constant throughout said wave-length range when all of said condensers are adjusted so that their respective tuned circuits are substantially in resonance with each other.

1,781,760. OPHTHALMIC MOUNTING. GERARDO F. MARCIANO, Providence, R. I., assignor to Universal Optical Corporation, Providence, R. I., a Corporation of Rhode Island. Filed Oct. 1. 1928. Serial No. 309,597. 4 Claims. (Cl. 88—42.)

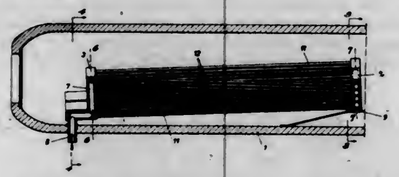


1. An ophthalmic mounting comprising a pair of spaced non-metallic eyewires, nose guard members integral therewith and having recesses therein, a bridge member having a pair of downwardly-extending side arms, the free end of each arm continuing its general extent into and terminating in and being secured in the recess of the corresponding nose guard member.

1,781,761. TORQUE-CONTROLLED GEAR-CHANGING MECHANISM. FRED W. MAYER, Chicago, Ill. Filed Sept. 26, 1928. Serial No. 308,387. 9 Claims. (Cl. 74—59.)

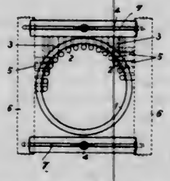
1. In a speed changing transmission gearing, driving and driven shafts, variable speed gears for connecting said shafts, means for changing the speed relationship between said gears, said means comprising radially shiftable clutch elements mounted for rotation by the drive shaft, and cooperating rotary clutch elements each having operative connections with different ones of the speed changing gears; said cooperating clutch elements having clutch faces radially spaced apart, and means operable by the difference in torque between the drive and driven shafts for shifting said radially movable clutch elements.

1,781,762. VARIABLE-SPEED CONTROL FOR ELECTRIC MOTORS. EDWIN J. MURPHY, Philadelphia, Pa. Filed Apr. 25, 1928. Serial No. 272,802. 1 Claim. (Cl. 171—222.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928; 870 O. G. 757.)



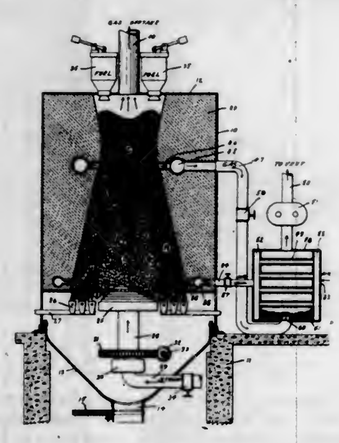
In a speed control for electric motors, a rotor, means for rotating the rotor at a constant speed, spaced insulated contacts on the rotor, a fixed brush contacting the rotor and a movable brush contacting the rotor and moved to vary the period of time during which the brushes engage a contact, a reversing switch provided with insulated terminals, means operated by the throw of the switch for moving the movable brush, a switch contact connected to one of the brushes, contacts adjacent to said contact connected to the other brush and to one terminal of a motor, such contacts adapted to be alternately engaged by a terminal of the switch after it has passed over the first contact, spaced contacts connected to respective terminals of a source of electrical supply and alternately engageable by the said switch terminal, a switch contact connected to the other terminal of the motor and engaged by the other switch terminal, and spaced contacts connected to respective terminals of a source of electrical supply, and alternately engaged by the last mentioned switch terminal.

1,781,763. SPRAY BRUSH. CHARLES O. NEWLIN, Seattle, Wash. Filed May 20, 1929. Serial No. 364,603. 2 Claims. (Cl. 15—65.)



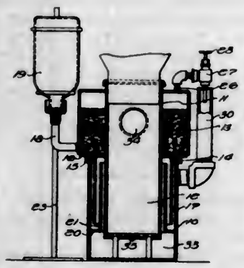
1. A device of the class described comprising a core structure including a hollow shaft, means for mounting bristles thereon, said hollow shaft being apertured among the bristles, a second hollow shaft having an internal flange, a coupling connecting the hollow shafts, a valve seat formed at the end of the first hollow shaft in the coupling, a valve in said coupling between the valve seat and flange, a spring engaging the flange and the valve, a stem engaged with the valve and slidable through the valve seat, and a plug at the other end of the first shaft, said stem being slidably mounted in said plug and extending therethrough, a base, a bearing on said base in which said second shaft is journaled, a cylinder over a portion of said second shaft, said portion of said second shaft being perforated, and means for connecting said cylinder with a source of water.

1,781,764. INDIRECTLY-HEATED STEAM GENERATOR. HEINRICH PEPERKORN, Cassel-Wilhelmshohe, Germany, assignor to Schmidt'sche Heissdampf-Gesellschaft m. b. H., Cassel-Wilhelmshohe, Germany, a Corporation of Germany. Filed Dec. 31, 1928, Serial No. 329,640, and in Germany Jan. 5, 1928. 2 Claims. (Cl. 257—236.)



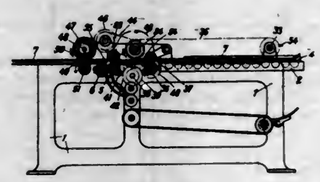
1. In an indirectly heated steam generator the combination of a boiler drum with heating elements disposed within the drum, each heating element having a steam inlet chamber and a condensate outlet chamber at its one end and a return header at its other end, a group of tubes connecting the said inlet chamber with the return header, a second group of tubes connecting the return header with said outlet chamber, the said two groups of tubes being arranged side by side and crossing one another.

1,781,765. GENERATOR OR PRODUCER. ERNST SCHUMACHER, Frankfort-on-the-Main, Germany. Filed Jan. 31, 1928, Serial No. 250,880, and in Germany Feb. 8, 1927. 5 Claims. (Cl. 122—5.)



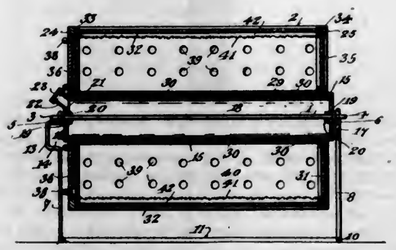
1. A gas generator having a lining of tubes, straight accessible upper and lower header drums connected together by said tubes, said water tubes having substantially right angled bends, the upper header drums being at right angles to the lower header drums and the bent portions of the tubes lying in two planes at right angles to one another.

1,781,766. METHOD OF AND APPARATUS FOR GENERATING COMBUSTIBLE GAS AND COKE. HARRY F. SMITH, Dayton, Ohio, assignor to The Gas Research Company, Dayton, Ohio, a Corporation of Ohio. Filed Sept. 9, 1922. Serial No. 587,075. 15 Claims. (Cl. 202—6.)



1. In the distillation of solid carbonaceous material, so as to generate a combustible gas and also produce coke in which a substantially continuous charge of the material being distilled is maintained within a retort, the method which comprises blasting the outer zone of said charge of ignited material with air to incandescence to generate heat for raising the temperature of the contiguous central zone of said material to cause the driving off of the volatile constituents therefrom; and concomitantly blasting with steam the material within the central zone from which the volatile constituents have been evolved.

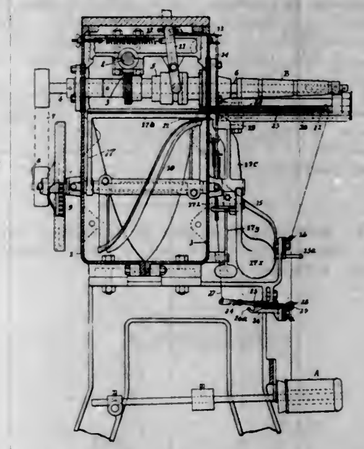
1,781,767. GAS PRODUCER. HARRY F. SMITH, Dayton, Ohio, assignor to The Gas Research Company, Dayton, Ohio, a Corporation of Ohio. Original application filed Jan. 30, 1925, Serial No. 532,724. Divided and this application filed Dec. 10, 1923. Serial No. 679,603. 3 Claims. (Cl. 48—64.)



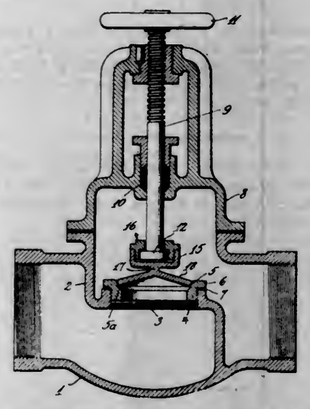
3. A gas producer of the character described, comprising a metallic shell, an inner tube spaced therefrom providing a gas generating chamber adapted to contain a fuel bed of incandescent carbonaceous material, a plurality of concentric upright partitions interposed between the shell and the said tube and spaced therefrom and from each other, the space between said tube and the partition immediately surrounding said tube having communication with said gas generating chamber, and the spaces between partitions being in staggered communication with each other and in communication with said first mentioned space, whereby a staggered connected passage around said partitions is provided, water vapor generating means in heat transferring relation with said producer, an air inlet for said producer, and means for causing said air and water vapor to circulate through said staggered passage as it travels to the fuel bed to thereby heat said air and water vapor prior to its introduction into the fuel bed.

1,781,768. FOLDING MACHINE. GEORG SPIESS, Leipzig, Germany. Filed May 9, 1928, Serial No. 276,328, and in Germany Feb. 15, 1927. 9 Claims. (Cl. 270—68.)

1. A folding machine for folding sheets of paper or the like having in combination with folding rollers and means for feeding the forward part of the sheets past said rollers a sheet clamping device placed a short distance beyond said rollers in the direction of feed, said clamping device comprising an abutment member and a member moved alternately to and from said abutment member.



1,781,769. COMBINED DISPLAY AND STORAGE DEVICE. HUGH A. STOUT, Shawnee, Okla. Filed Aug. 26, 1929. Serial No. 388,576. 3 Claims. (Cl. 312—125.)

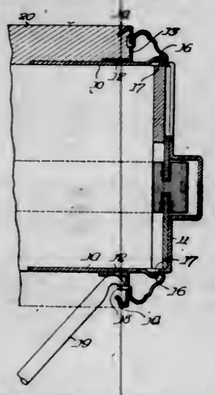


1. A combined display and storage device comprising a longitudinally disposed element provided with a plurality of storage compartments having transparent outer walls, and a skeleton support having upstanding side portions provided with combined seat and retaining portions for rotatably supporting said element from the ends thereof between said upstanding side portions, said element further including a refrigerant compartment having extended from one end thereof a combined filling and discharge tube therefor, one of said upstanding side portions being outset to provide a clearance for said tube during the rotation of said element.

1,781,770. WINDING MACHINE. HOMER D. TRACY, Ridgewood, N. J., assignor to Barbour Flax Spinning Co., Paterson, N. J., a Corporation of New Jersey. Filed Feb. 10, 1928. Serial No. 253,306. 9 Claims. (Cl. 242—43.)

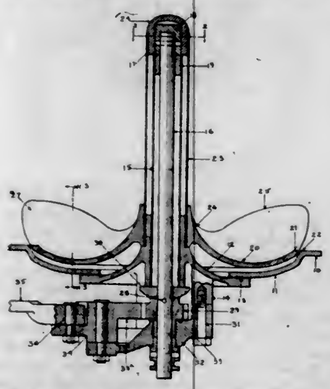
1. In combination, the frame, means therein to rotate the tapered wound package being formed, a support movable in the frame from, and in a plane substantially perpendicular to, the true axis of the package, and a yarn traverser arranged to reciprocate in the support, said support having a guideway for the traverser arranged substantially parallel with the taper of the package.

1,781,771. VALVE. WYLIE G. WILSON, Jersey City, N. J., assignor to Wilson Rings Company, Jersey City, N. J., a Corporation of New Jersey. Filed Jan. 25, 1926, Serial No. 83,417. Renewed Apr. 16, 1930. 4 Claims. (Cl. 251—167.)



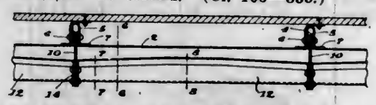
1. In a valve, a seat cylindrical in form, having a sealing face parallel with its axis and an annular shoulder within said cylindrer of a less diameter than the diameter of said cylinder, in combination with a hollow conical section of obdurate metal, the external and internal walls of said hollow conical sections being parallel, said hollow conical section having a peripheral bearing surface parallel with the axis thereof, said hollow conical section mounted within said cylindrical face and normally bearing the relation of a loose fit with said cylindrical sealing face, and mounted to engage said annular shoulder within said cylinder, means to compress said hollow conical section axially to cause the same to engage said shoulder and to expand cross-axially to engage said cylindrical surface, the degree of such compression being limited within the elastic limit of said hollow conical section, and means to relieve such compression to permit said hollow conical section to react due to the inherent resiliency thereof.

1,781,772. PROCESS OF MANUFACTURING COLOR LAKES FROM PETROLEUM. GILLERT ALLEMAN, Swarthmore, Pa., assignor to Sun Oil Company, Philadelphia, Pa., a Corporation of New Jersey. Original application filed Feb. 6, 1924, Serial No. 691,023. Divided and this application filed Aug. 24, 1926. Serial No. 131,311. 8 Claims. (Cl. 260—1.)



1. The process of manufacturing color lakes which comprises adding to a water-soluble fatty acid soap derived from petroleum, a water-soluble dyestuff and a water solution of a water-soluble metal salt adapted to precipitate said soap.

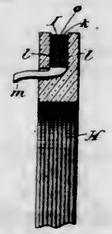
1,781,773. MOLDING FOR METAL FRAMES. ISAAC A. BAUM, Chicago, Ill. Filed Oct. 3, 1928. Serial No. 310,049. 5 Claims. (Cl. 72—98.)



1. In combination, a frame element, a plaster finish flange perpendicular thereto, said flange having openings therethrough, and a metal molding strip having tongues adapted to project into said openings to serve as fastening devices for the strip.

1,781,774. AGITATOR FOR WASHING MACHINES. MEYER E. BLOCK, Peoria, Ill. Filed Feb. 20, 1928. Serial No. 255,791. 2 Claims. (Cl. 259—101.)

1. In combination with a washing machine tub having a depressed bottom portion, a water agitator comprising a central vertical stem portion, a vertical drive shaft projecting through the bottom center of the tub and supporting the vertical stem, a disk portion merging into said vertical stem and being disposed in the depressed portion of the tub and plural blade members upstanding from the face of said disk, said blades having a portion of their water agitating surface projecting a substantial distance beyond the adjacent edges of the disk and depressed tub portion.

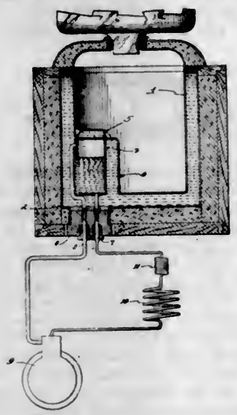


1,781,775. CARLINE REENFORCEMENT AND LOAD-LIFTING ARRANGEMENT. CHARLES D. BONSALL, New Kensington, Pa., assignor to P. H. Murphy Company, New Kensington, Pa., a Corporation of Pennsylvania. Original application filed Mar. 8, 1926, Serial No. 93,155, Patent No. 1,645,217, dated Oct. 11, 1927. Divided and this application filed May 3, 1927. Serial No. 188,565. 10 Claims. (Cl. 105—355.)

1. In a railway car having side plates, the combination of a plurality of carlines with their opposite ends attached to the opposite side plates, a longitudinally extending beam secured to the carlines, and roofing positioned in a plane above said beam and spaced therefrom, said beam being of U-section with an upwardly and outwardly extending flange at each upper margin thereof.

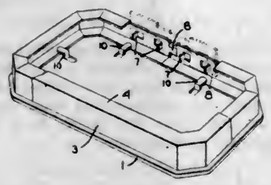
2. In a railway car, the combination of a longitudinally extending beam, and roofing positioned in a plane above said beam and spaced therefrom, said beam being of U-section with an upwardly and outwardly extending flange at each upper margin thereof.

1,781,776. RADIO FREQUENCY TRANSFORMER. FRANK L. CAPPS, Bridgeport, Conn. Filed Mar. 10, 1926. Serial No. 93,578. 1 Claim. (Cl. 175—359.)



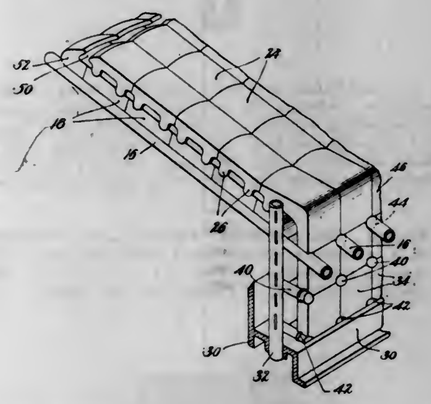
A radio frequency transformer comprising a ring of relatively large internal diameter and having an annular groove relatively wide as compared with the width of the ring formed in the outer periphery thereof, a secondary coil comprising superposed layers disposed within said groove and maintained against lateral movement by the walls thereof, and a primary coil comprising a single layer of wire disposed side by side arranged against the inner periphery of said ring.

1,781,777. ANTIGLARE DEVICE. FRANK T. CONNER, South Chicago, Ill. Filed Mar. 23, 1929. Serial No. 349,447. 2 Claims. (Cl. 296—97.)



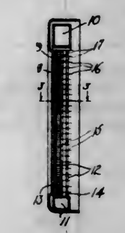
2. A device of the character described comprising a supporting member, a plate member spacedly positioned from said supporting member, a vertically disposed stop wall secured to said supporting member and said plate and adapted to maintain said plate member in spaced relation to said supporting member, a shank member slidably and rotatably disposed through said plate and said supporting member, a spring positioned about said shank and adapted to constantly urge said shank outwardly of said plate, a plurality of shade members swingingly positioned on said shank, said shade members being adapted to abut against said stop wall whereby to position said shade members in operative position, a shade engaging rod secured to said shank, and a stop lug on said supporting member and adapted for engagement with said rod whereby to hold said rod and said shade members in inoperative position.

1,781,778. REFRIGERATING UNIT OF FIRED CERAMIC MATERIAL. LLOYD G. COPEMAN, Flint, Mich., assignor to Copeman Laboratories Company, Flint, Mich., a Corporation of Michigan. Filed Feb. 29, 1928. Serial No. 257,811. 6 Claims. (Cl. 62—95.)



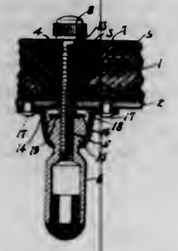
1. Refrigerating apparatus, comprising in combination a cooling unit formed of fired ceramic material, refrigerant receiving and conducting means forming a part of an automatic refrigerating system, located in proximity to an isolated portion of said wall or walls of fired ceramic material, and means in the form of a fluid serving as a heat conductor between said refrigerant receiving and conducting means and all the effective walls of said fired ceramic material.

1,781,779. BOX FOR JEWELRY AND THE LIKE. HARRY J. FARRINGTON, Auburndale, Mass. Filed Mar. 29, 1928. Serial No. 265,681. 12 Claims. (Cl. 206—75.)



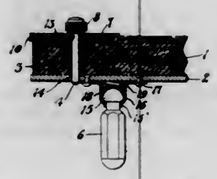
1. An ornamental box for jewelry and the like comprising a base, a continuous vertical side wall of structural shaped material having a web and flanges extending laterally therefrom so positioned that one of the members thereof forms the upper edge of said side wall and presents a rim simulating a thick side wall of massive appearance, covering material on the outer face of said side wall and extending over and around the upper edge thereof, a base having its edge projecting beyond the periphery of said side wall, covering material on the outer face of said base extending around the edge thereof, and beneath the lower edge of said side wall, and means securing said base to said side wall with the base covering therebetween.

1,781,780. REFRACTORY STRUCTURE. ARTHUR F. HALL, Boston, Mass., assignor to Hall Arch Company, Philadelphia, Pa., a Corporation of Delaware. Filed Sept. 27, 1928, Serial No. 308,607. Renewed Apr. 10, 1930. 10 Claims. (Cl. 110—76.)



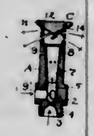
1. A refractory furnace structure comprising a flat support, a plurality of semi-cylindrical spacer bars arranged flat side down upon said support and having a rib near each end, and inner and outer wall sections having curved recesses in their lower surfaces with grooves to fit the ribs of the spacer bars.

1,781,781. RADIATOR. HARRY A. HIGGINS, Detroit, Mich., assignor to Long Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 13, 1925. Serial No. 22,857. 3 Claims. (Cl. 257—129.)



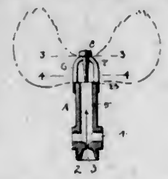
3. In a radiator construction, the combination with upper and lower headers and a plurality of water tubes arranged in rows three deep from the front to the rear of the radiator and connecting the upper and lower headers respectively, of a plurality of horizontal fin plates extending from the front to the rear of the radiator and engaging all of the said tubes, and a plurality of additional fin plates extending from the front of the radiator to a point midway between the front and the rear thereof, the said last mentioned fin plates terminating adjacent the middle row of water tubes.

1,781,782. PAD HOLDER. JOHN B. KEMP, Ridgewood, N. J., assignor to Clark Loose Leaf Manufacturing Company, a Corporation of New York. Filed Dec. 4, 1929. Serial No. 411,427. 14 Claims. (Cl. 40—120.)



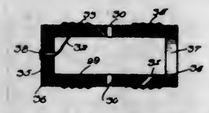
1. A pad holder including a base and pivoted standards associated therewith for movement to extended position for supporting said base in inclined position with respect to a supporting surface, said standards including substantially spherical heads, said base including sockets for pivotally retaining said heads with respect to said base.

1,781,783. PAD HOLDER. JOHN B. KEMP, Ridgewood, N. J., assignor to Clark Loose Leaf Manufacturing Company, a Corporation of New York. Filed Feb. 7, 1930. Serial No. 426,547. 5 Claims. (Cl. 40—120.)



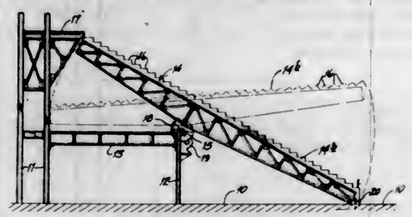
1. A pad holder including a base and pivoted standards associated therewith for movement to extended position for supporting said base in inclined position with respect to a supporting surface, said standards including heads, said base including sockets for pivotally retaining said heads and a retaining assembly within said sockets including bearing members for said heads to retain said standards in adjusted position.

1,781,784. GAS BURNER. HARRY E. KERR, Cleveland, Ohio, assignor to The Barber Gas Burner Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 2, 1928. Serial No. 266,531. 11 Claims. (Cl. 158—99.)



1. A gas burner, comprising a tube of relatively small dimensions having a gas orifice axially therein and an air port opposite said orifice, including an expanding passage extending into a mixing chamber having a closed outer end, communicating with circumferential slots in the side wall of the chamber.

1,781,785. GAS BURNER. HARRY E. KERR, Cleveland, Ohio, assignor to The Barber Gas Burner Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 9, 1928. Serial No. 268,404. 6 Claims. (Cl. 158—99.)



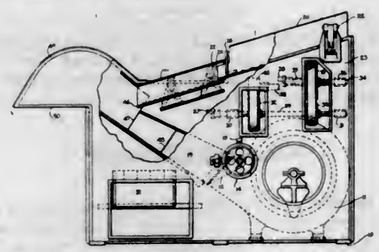
1. A gas burner, comprising a relatively small tube having a main discharge passage of equal cross-sections including an air port, extending into said passage and a gas orifice communicating with one end of said passage, together with a slotted deflecting cap surmounting the mouth of the tube.

1,781,786. MULTIPLE-SCREW FUSE PLUG. WILLIAM J. LUSE, New York, N. Y. Filed Apr. 2, 1926. Serial No. 99,224. 10 Claims. (Cl. 200—125.)

1. A device of the character described embodying a continuous, non-conducting hollow cylindrical body having a circular interior and provided intermediate its ends with vent openings extending through its wall, countersunk seats at the opposite ends of said body, an insulating stopper seated in each countersunk end of the body with the outer face of each stopper flush with the corresponding end of the body and permanently secured to the body against removal, an annular threaded metallic sleeve embracing the body adjacent each end thereof and free from engagement with the stoppers, said sleeves being permanently secured to the body against removal, a contact terminal at the center of each stopper, and fusible material connecting each contact terminal with the corresponding threaded sleeve.

1,781,787. MOVABLE BALCONY FOR BUILDINGS. BENJAMIN H. MARSHALL, Wilmette, Ill. Filed Mar. 21, 1930. Serial No. 437,633. 4 Claims. (Cl. 189—1.)

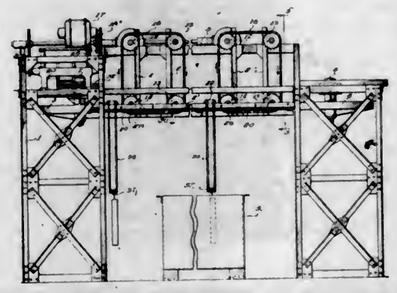
1. In a building, a floor, a platform elevated above said floor, a movable balcony adapted to extend diagonally from said platform to the floor, said balcony being hingedly mounted between said platform and floor, and means for tilting said balcony about said hinges so as to clear the floor space beneath said balcony.



1,781,788. PROCESS FOR THE PRODUCTION OF A FERMENT. WINCENTY MATZKA, London, England. Filed Mar. 2, 1926, Serial No. 91,854, and in Great Britain Apr. 8, 1925. 9 Claims. (Cl. 195—20.)

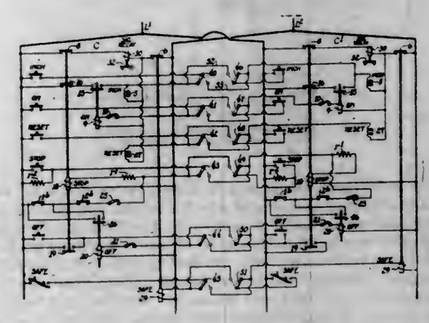
9. Process for the production of a ferment for the fermentation of the aqueous saccharine extract from waste vegetable raw material containing sugar which comprises treating said waste vegetable raw material to obtain an aqueous extract, supplying approximately 12% of alcohol to said extract, inoculating said extract with a small quantity of alcohol-producing ferment, and then progressively adding to said extract sugar from another source to propagate said ferment while maintaining sugar concentration characteristic of said vegetable material and alcohol concentration approximately constant, and stabilizing the ferment so propagated with alcohol, glycerine and a weak organic acid.

1,781,789. CHROMIUM PLATING. JOHN F. K. MCCULLOUGH and BENJAMIN W. GILCHRIST, Detroit, Mich., assignors to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 30, 1927. Serial No. 223,235. 5 Claims. (Cl. 204—1.)



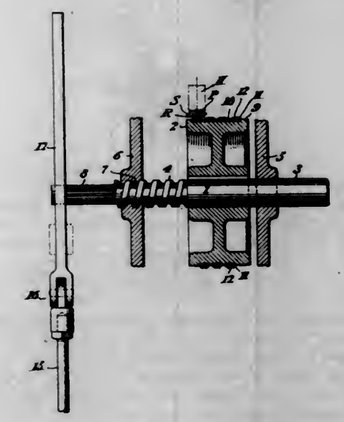
1. In a chromium chloride plating bath, the incorporation of an addition agent in said bath which combines with the hydroxyl ions for the purpose of preventing the deposit of chromium hydroxide on the work.

1,781,790. SEPARATOR. WILLIAM M. MCKENZIE, Glenbrook, Conn. Filed Apr. 20, 1929. Serial No. 356,821. 2 Claims. (Cl. 209—149.)



1. In a machine of the class described, a vibrating feeder plate, a second vibrating feeder plate adapted to receive material from said first plate, means for vibrating said second plate at a higher speed than said first plate, an air draft passage, said second plate being adapted to drop material into said passage.

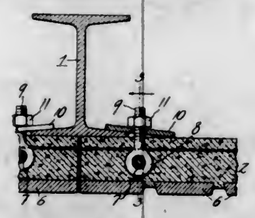
1,781,791. ELECTROPLATING MACHINE. CONSTANTINE G. MILLER, Chicago, Ill. Filed Dec. 22, 1928. Serial No. 328,031. 7 Claims. (Cl. 204—5.)



1. In a plating machine, a supporting structure comprising spaced end columns and an intermediate structure, a continuous loop shaped trough extending between said columns and located in a substantially horizontal plane, an endless conveyor movably mounted in said trough comprising spaced upright pins, article carriers removably supported on said trough, each comprising a shoe having a slot therein for receiving one of said upright pins, and spaced endless vertical traveling members mounted on said intermediate structure comprising projecting rollers for engaging a groove in the shoes of said carriers to intermittently lift the carriers from said longitudinal conveyor and replace them thereon in advanced position for facilitating the transfer of articles from one plating tank to another.

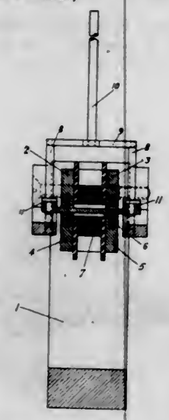
1,781,792. MOTOR CONTROLLER. THOMAS H. RODMAN, New York, N. Y., assignor, by mesne assignments, to Cutler-Hammer Inc., Milwaukee, Wis., a Corporation of Delaware. Filed Apr. 27, 1922. Serial No. 556,939. 5 Claims. (Cl. 177—311.)

1. The combination with a plurality of motor controllers each including manual control switches and electroresponsive switches controlled by the former switches, of signaling means associated with each of said controllers and subject to control by certain of the manual and electroresponsive switches thereof and commutatable connections whereby the signaling means of one controller may be subjected to control by the corresponding switches of another of said controllers.



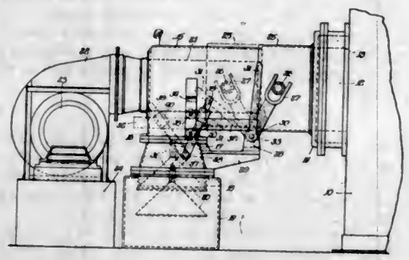
1,781,793. WEIGHT-PRINTING MECHANISM FOR SCALES. HARRY E. SPENCER, New York, N. Y. Filed Aug. 16, 1927. Serial No. 213,365. 9 Claims. (Cl. 101—91.)

1. A weighing scales comprising a weighing platform; a rotor provided upon its periphery with a series of numbers running circumferentially around the rotor and transversely across its peripheral face; means operatively connecting the weighing platform to the rotor to turn said



rotor when the weighing platform is depressed; and means for moving the rotor axially during its rotation to bring the number indicating the amount of weight on the platform to a fixed point, the means connecting the weighing platform to the rotor automatically returning the rotor to normal position when the weight is removed.

1,781,794. BUILDING CONSTRUCTION. ROBERT TAPPAN, Forest Hills, N. Y. Filed Jan. 13, 1928. Serial No. 246,422. 1 Claim. (Cl. 72—20.)

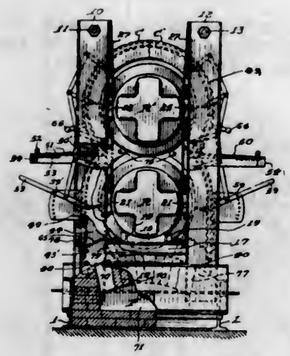


In building construction including a plurality of vertically disposed and spaced apart I-beams, panels attached to the flanges of said I-beams, each of said panels including embedded eye-bolts having their threaded portions projecting beyond the rear face of said panel, rods extending vertically through said panel and passing through the eyes of said eye-bolts and means for securing said bolts to the flanges of said I-beams, said means including washers that overlie the maginal edges of said flanges.

1,781,795. DEVICE FOR CONVERTING ELECTRIC OSCILLATIONS INTO MECHANICAL VIBRATIONS. ROELOF VERMEULEN, AREND THOMAS VAN URK, and THEODORUS HENDRICUS HERMANS, Eindhoven, Netherlands, assignors to Radio Corporation of America, a Corporation of Delaware. Filed May 18, 1927, Serial No. 192,430, and in the Netherlands May 21, 1926. 3 Claims. (Cl. 175—339.)

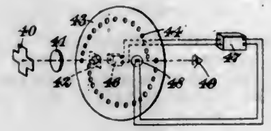
1. A device for converting electrical oscillations into mechanical vibrations comprising a permanent magnet, pole pieces for said magnet providing two north poles and two south poles, a flat armature positioned between the poles of said pole pieces, said pole pieces being so constructed and arranged that there is one north pole and one south pole below and above the armature, members connected to the ends of said armature, a yoke connecting said members, an operating rod connected to said yoke, and a coil surrounding said armature, said coil being adapted to carry a voice-modulated current to vary the magnetic force between the magnet pole pieces and the armature.

1,781,796. BURNER. FREDERICK H. WILLCOX and EDGAR P. EVERHARD, Chicago, Ill., assignors to Freyn Engineering Company, Chicago, Ill., a Corporation of Maine. Filed Apr. 14, 1928. Serial No. 269,926. 3 Claims. (Cl. 263—19.)



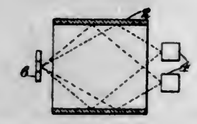
3. In combination, a hot blast stove, means for directing air and gas to said stove, said means stopping short of said stove, and a sleeve slidable along said means for conducting a mixture of gas and air delivered by said means to said stove, said sleeve being adapted to complete the connection between said means and said stove.

1,781,797. PROCESS OF MAKING PACKING MATERIAL AND PRODUCT. HARRISON R. WILLIAMS, New York, N. Y. Filed Mar. 22, 1927. Serial No. 177,267. 2 Claims. (Cl. 154—54.)



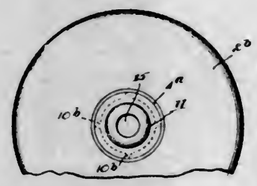
1. A packing sheet for fragile articles consisting of soft, loosely felted fibers and a backing of relatively strong fabric, said soft material having its outer surface dyed, and having a tinted outer covering, the color of said soft material reinforcing that of said outer covering.

1,781,798. ROLL HEATER. JOHN D. WILLIAMS, Niles, Ohio. Filed Oct. 24, 1928. Serial No. 314,570. 12 Claims. (Cl. 80—41.)



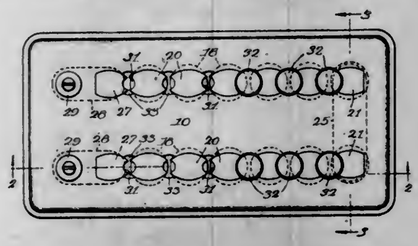
1. A machine for heating rolls comprising a base, a furnace adjacent the base adapted to supply heat for heating the rolls, a casing supported on the base and adapted to receive a plurality of rolls disposed one below the other, means for conducting the products of combustion from the furnace to the lower part of the casing, means extending from the base for rotatably supporting the rolls within the casing and independently thereof, and means for positively driving at least one of the rolls.

1,781,799. METHOD OF AND MEANS FOR TRANSMITTING SIGNALS. JOHN LOGIE BAIRD, London, England, assignor to Television Limited, London, England, a British Company. Filed Oct. 7, 1927, Serial No. 224,711, and in Great Britain Oct. 15, 1926. 6 Claims. (Cl. 178—6.)



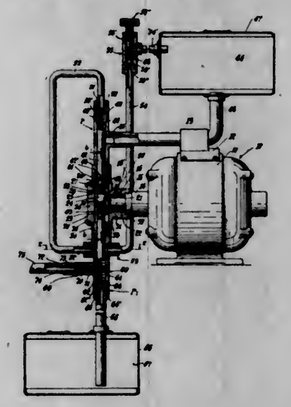
1. In apparatus of the class described, in combination, means for directing rays of non-visible frequencies against an object, a light sensitive device sensitive to such rays and arranged adjacent said object for producing a modulated electric current, scanning means disposed between said object and device, a source of illumination oporatively coupled with said device and acting in response to the impulses transmitted thereby, and exploring means forming an integral part of said scanning means and disposed adjacent said source of illumination.

1,781,800. TELEVISION APPARATUS AND THE LIKE. JOHN LOGIE BAIRD, London, England, assignor to Television Limited, London, England, a British Company. Filed Apr. 8, 1929, Serial No. 353,633, and in Great Britain Apr. 16, 1928. 5 Claims. (Cl. 178—6.)



1. In a television system, the combination, with light-sensitive means responsive to light reflected from an object, of reflecting surfaces disposed adjacent the path of light from the object to the light-sensitive means, said reflecting surfaces being adapted to concentrate onto said light-sensitive means light scattered laterally from said object.

1,781,801. SPOOL OR BOBBIN. LUTHER CHASE BALDWIN, Providence, R. I., assignor, by mesne assignments, to U. S. Bobbin & Shuttle Company, 1929, Providence, R. I., a Corporation of Rhode Island. Filed Sept. 15, 1927. Serial No. 219,621. 9 Claims. (Cl. 242—124.)

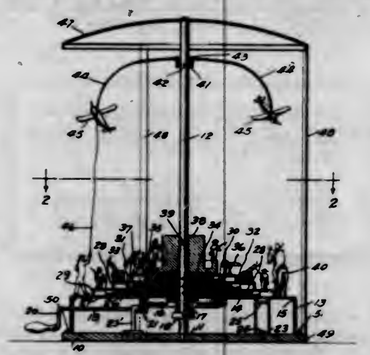


1. A spool or bobbin comprising a tubular barrel and a head independent thereof, the head having a central aperture receiving the end portion of the barrel, the wall of said aperture having circumferentially spaced recesses and the barrel having integral projections engaging said recesses whereby positively to prevent relative rotation of the head and the barrel, said recesses being spaced from the outer surface of the head and tapering in width, being widest adjacent to said inner face of the head.

1,781,802. RESISTANCE BOX. ERICH BANDOLY, Chicago, Ill., assignor to Central Scientific Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 8, 1926. Serial No. 86,867. 5 Claims. (Cl. 201—61.)

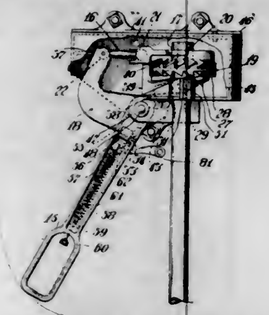
1. A ventilated resistance box having top, side, and end walls molded as an integral structure with an elongated slot in the top of the box and a series of oval lugs having recesses in the side thereof, said lugs being of conducting material disposed within the slot and having the walls of the slot molded in interlocking engagement therewith, said interlocking engagement forming means independent of frictional resistance for resisting the relative movement of said lugs and top in every direction, said lugs being disposed in spaced relation and defining openings therebetween for receiving tapering plugs of conducting material.

1,781,803. OIL PUMP. ANTHONY BIZZARRI, New York, N. Y. Filed June 29, 1927. Serial No. 202,214. 10 Claims. (Cl. 103—153.)



1. In a fluid pumping system, a source of supply of fluid, outlet means communicating with said source of supply of fluid, pumping means communicating with said outlet means and therethrough with said source of supply of fluid, and a discharge conduit communicating with the outlet of said pumping means, in combination with a second source of supply of fluid, outlet means communicating with said second source of supply of fluid, and pumping means including a plunger communicating with said last-mentioned source of supply of fluid, said plunger traversing said conduit so as to be in contact with the fluid passing therethrough, both of said pumping means being eccentrically operated.

1,781,804. MECHANICAL TOY. JOSEPH BULKOWSKI, Chicago, Ill. Filed Jan. 16, 1930. Serial No. 421,182. 2 Claims. (Cl. 272—31.)

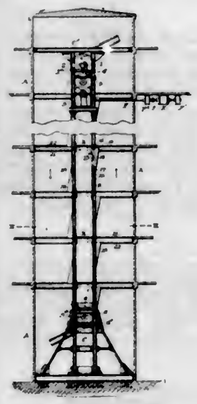


1. A mechanical toy comprising a plurality of platforms of graduated diameters, a post passing through

said platforms and around which the latter are adapted to rotate, a gear affixed to one of said platforms, a crank

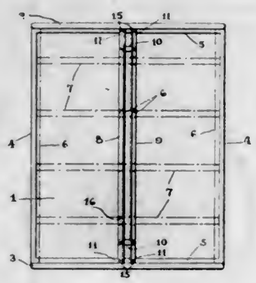
shaft, a gear positioned upon said crank shaft and meshing with the first named gear, and rollers in frictional contact with each pair of adjacent platforms.

1,781,805. BRAKE MECHANISM FOR RAILWAY CARS. PERCY B. CAMP, Maywood, Ill., assignor to Universal Draft Gear Attachment Co., a Corporation of Illinois. Filed Nov. 7, 1925. Serial No. 67,611. 24 Claims. (Cl. 74—116.)



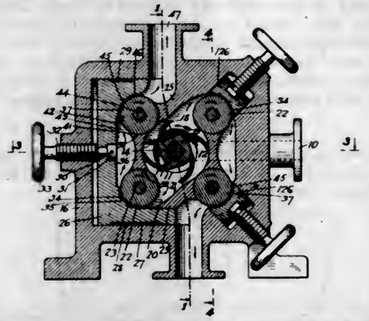
5. In a railway hand brake of the type wherein the hand power for applying the brakes is transmitted thru an upright brake shaft which is rotatably mounted in a position that cannot advantageously accommodate the conventional hand lever devices, the combination of an upright brake shaft, a hand lever mounted for brake-operating oscillating movements about a horizontal axis transverse to the brake shaft and a driving connection between the lever and shaft for rotating the shaft by the oscillating movements of the lever, said connection including an overrunning clutch, one element of which is horizontal and is oscillated by the lever and another element of which rotates with the shaft, ratchet means for restraining the shaft from unwinding, and means for disengaging the overrunning clutch and the ratchet means to release the brakes.

9. In a railway hand brake, the combination with the wall of a car, of an upright brake shaft to be driven, a horizontal drive shaft extending through the wall, a crank handle for each end of the drive shaft, a driving crank arm for one of the crank handles and in operative relation with the drive shaft, and a driving connection between the driving crank arm and the brake shaft including a ratchet clutch, one element of which is connected to and oscillated by the driving crank arm and the other element of which is connected to and rotates with the brake shaft.



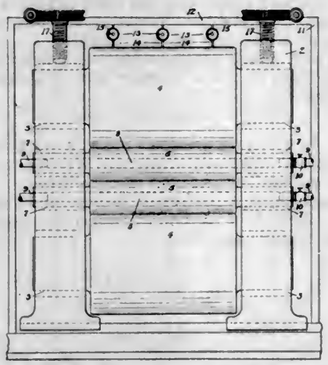
11. In a railway hand brake, the combination of an upright brake shaft, an upright hand lever mounted to rotate about a horizontal axis transverse to the shaft, a horizontal driving connection between the lever and the shaft, including an upright crank arm rotatably mounted with respect to the hand lever, and means carried by the hand lever for engaging the crank arm to normally prevent relative rotation.

1,781,806. ELEVATOR MECHANISM. JAMES STARR DA COSTA, Merchantville, N. J., assignor of one-half to Jervis B. Webb, Detroit, Mich. Filed Nov. 24, 1928. Serial No. 321,087. 8 Claims. (Cl. 198—137.)



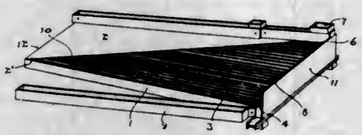
1. In an elevator structure, a plurality of sets of endless chains, sprocket wheels over which said chains pass, platforms disposed between said sets of chains, sets of spaced rods disposed in pairs and operatively connecting the respective platforms to the respective sets of chains in alternate relation, means whereby said rods may alter their spaced relation with respect to said platforms when passing over the sprocket wheels, and means for simultaneously driving the respective sets of chains in one direction.

1,781,807. UNIT TWIN BED. FRANCES M. DE LEON, New York, N. Y. Filed Dec. 1, 1928. Serial No. 323,153. 5 Claims. (Cl. 5—8.)



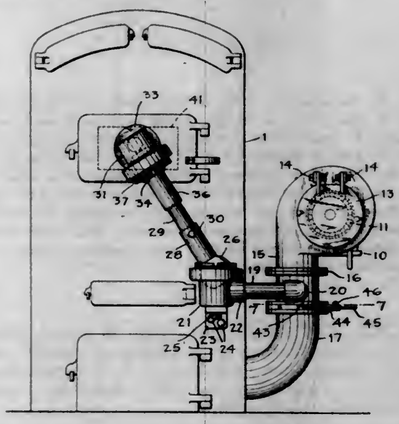
1. A bed converter comprising a duplex stringer formed of two angle-irons L-shaped in cross-section and arranged in spaced apart relation with their vertical walls adjacent and parallel, their horizontal walls directed away from each other, and their channeled sides presented upwardly providing two parallel receptacles for the adjacent side bars of single mattresses, and means for connecting said angle-irons and for holding them in the relation stated.

1,781,808. GRINDER FOR PIGMENTS AND THE LIKE. EUGENE DE ROZIERES, Metuchen, N. J. Filed May 23, 1928. Serial No. 280,101. 29 Claims. (Cl. 83—22.)



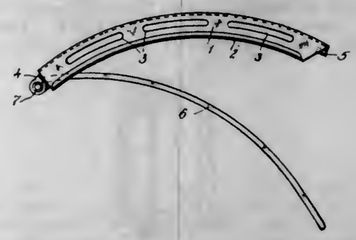
1. In a grinder, a revoluble roll, means for forming a passage to said roll, and a stationary block adjustable relatively to said roll, and provided with a smooth arcuate surface substantially continuous with and tangent to the adjacent part of the walls of said passage and substantially parallel to the surface of the roll, whereby the grinding action takes place between said roll and said surface and the material advanced along the passage meets the roll in a direction tangent to the surface of the roll at the point of contact.

1,781,809. ROLLING MILL. WILLIAM F. DETWILER. Tarentum, Pa., assignor to Allegheny Steel Company, Brackenridge, Pa., a Corporation of Pennsylvania. Filed Dec. 14, 1927. Serial No. 239,904. 7 Claims. (Cl. 80—41.)



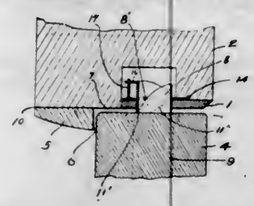
7. In a four high mill, backing rolls, reducing rolls, means for controlling the temperature of the reducing rolls, and means for indicating variations in the temperature of said reducing rolls, said means comprising deflection gauges co-operating with a backing roll.

1,781,810. ORE-CONCENTRATING TABLE. FREDERICK C. DYER, Toronto, Ontario, Canada. Filed Feb. 3, 1928. Serial No. 251,607. 6 Claims. (Cl. 209—441.)



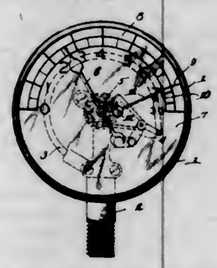
1. A concentrating table having a sloping plane surface extending from the upper feed side to a diagonal sloping to the discharge end, and a riffle surface extending downwardly from said diagonal to the tailings discharge side, the riffled surface being inclined longitudinally upwardly from the head end to the diagonal.

1,781,811. FURNACE ATTACHMENT. HARRY F. EASTWOOD, Merrick, N. Y. Filed Apr. 25, 1929. Serial No. 357,912. 4 Claims. (Cl. 110—72.)



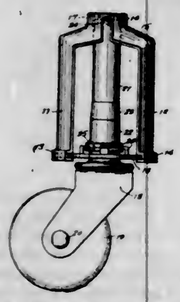
1. An attachment for furnaces having an ash pit, a grate and a fire door with an opening above the grate, comprising a conduit connected to the ash pit, a motor driven blower for supplying air to the conduit, a branch pipe connected to said conduit for receiving a part of the air supplied to the conduit, permanent connections between the branch pipe and the fire door for supplying air through the opening in the door, a diffusing plate for distributing the air above the grate, said permanent connections including a universal ball and socket joint mounted on the door of the furnace, the ball and the socket of said joint being provided with openings for the passage of air and a valve for regulating the amount of air supplied by the conduit and by the branch pipe so as to provide a constantly balanced relation between the amount of air delivered above the grate and the amount of air delivered below the grate of the furnace.

1,781,812. PINCH WAVER. ABRAHAM GOODMAN and JACOB GOODMAN, Brooklyn, N. Y. Filed June 19, 1929. Serial No. 372,080. 2 Claims. (Cl. 132—41.)



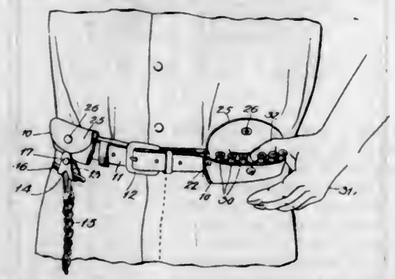
1. A pinch waver comprising a channel member having a substantially continuous top portion and parallel side portions, said channel member being arched lengthwise, an arched tongue of single curvature pivotally secured to one end of the channel member and extending lengthwise thereof intermediate its parallel side portions, and a catch at the opposite end of the channel to engage and hold the free end of the tongue in closed position.

1,781,813. LOCK DEVICE. SELDEN J. GOODWIN, San Francisco, Calif. Filed Sept. 17, 1928. Serial No. 306,363. 7 Claims. (Cl. 70—15.)



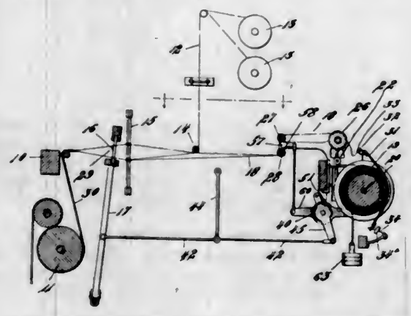
1. In combination with a door lock having its outer face in one plane, a spring bevel-sided bolt adapted to engage the edge of an opening in a striker plate, a rigid wall projecting outwardly from said striker plate guarding the bolt when engaged with the plate of a height to take up the normal clearance between lock and plate when the door is hung and substantially touching the face of the lock exposed at the edge of the door, said wall extending along one vertical edge of said opening adjacent the beveled side of the bolt.

1,781,814. RETARD GAUGE. OTTO W. HEISE, Bridgeport, Conn., assignor to Consolidated Ashcroft Hancock Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 21, 1927. Serial No. 234,567. 14 Claims. (Cl. 73—109.)



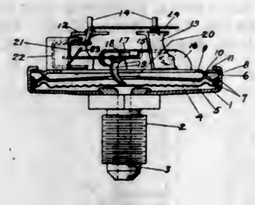
1. A retard pressure gauge having a pressure responsive element, a movable index, connections for transmitting movement of the pressure responsive element to the index, and yielding means cooperable directly with the index, after a predetermined movement thereof for retarding further movement of the index.

1,781,815. CASTER. WALTER F. HEROLD, Upper Montclair, N. J., assignor to The Bassick Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 7, 1927. Serial No. 238,311. 1 Claim. (Cl. 16—39.)



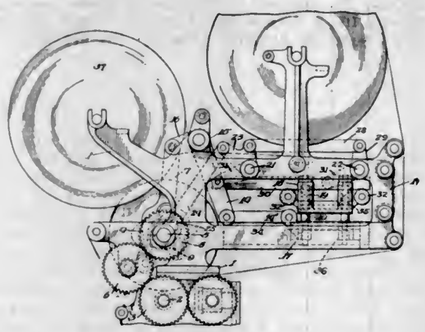
In a support, a floor engaging element including a pintle, pintle receiving means adapted to be secured to a furniture leg or the like and including a base, a split spring ring adapted to be expanded and contracted, ring supporting means carried by said base disposed laterally outwardly of said ring and adapted to retain said ring laterally with respect to said pintle receiving means, said ring including means disposed transversely above and below said supporting means and adapted to confine said ring axially, said ring being adapted to retain said pintle with respect to said pintle receiving means.

1,781,816. CARTRIDGE HOLDER. JOHN B. JOVINO, Brooklyn, N. Y. Filed Nov. 8, 1928. Serial No. 317,893. 5 Claims. (Cl. 224—23.)



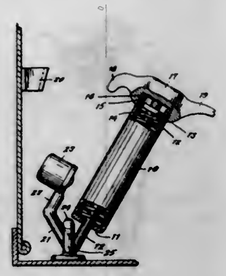
1. A cartridge holder of the class described comprising an elongated pocket, the depth of said pocket being substantially less than the length of the cartridges to be inserted therein, means within said pocket for loosely supporting a plurality of cartridges in upright position and in a plurality of independent groups therein whereby the upper ends of said cartridges will project well above the top of said pocket, and means adapted to be arranged over said cartridges for retaining the same against accidental displacement whereby the removal of said means will expose the projected ends of said cartridges to permit the grasping of a plurality thereof and the quick removal of said cartridges by virtue of their loose mounting within said pocket.

1,781,817. TENSIONING DEVICE FOR ELASTIC THREADS. CHARLES FRANKLIN KENYON, Shannock, R. I., assignor to Columbia Narrow Fabric Company, Shannock, R. I., a Voluntary Association of Rhode Island. Filed Feb. 1, 1928. Serial No. 251,057. 21 Claims. (Cl. 139—104.)



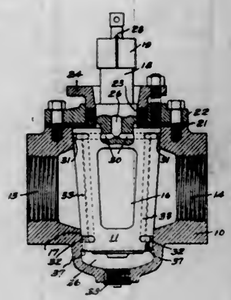
1. In a machine for covering elastic threads, a support for a package of elastic threads, means for applying a covering of yarn to these threads as fed through the machine, means operated by action of the machine for separately engaging and feeding each individual thread, means responsive to the tension of a group of said threads for controlling the action of the feed device for that group, and means on the feed device for controlling the degree of tension to be applied to said thread group necessary for operating said feeding mechanism.

1,781,818. PRESSURE GAUGE. CARL T. MASON, East Orange, N. J., assignor to Tiffany Manufacturing Company, Newark, N. J. Filed Dec. 1, 1928. Serial No. 323,109. 8 Claims. (Cl. 73—110.)



5. In a pressure gauge, a base member having means for attaching a pressure conduit thereto and also having an inner periphery, a pair of movable diaphragms which at lower pressures are separated but having their peripheries fitting and sealed within the inner periphery of the base forming a compression chamber therewith, the inner diaphragm being thin and deformed for the purposes specified and adapted to be brought into engagement with the outer diaphragm as the pressure increases, the outer diaphragm being much thicker than the inner one and acting as a stop therefor as and for the purpose specified and responsive to pressures above that required to bring the inner diaphragm into contact with it, a mounting plate carried on the base adjacent the outer diaphragm, an indicating device and means carried on the mounting plate for connecting said device in operative relation to the inner diaphragm, said outer diaphragm having an opening therein to permit said operative connection to be made with the inner diaphragm.

1,781,819. PERFORATING DEVICE. WES W. McCAIN, Oak Park, Ill., assignor to Blue Valley Creamery Company, Chicago, Ill., a Corporation of Delaware. Filed July 16, 1927. Serial No. 206,295. 4 Claims. (Cl. 164—49.)

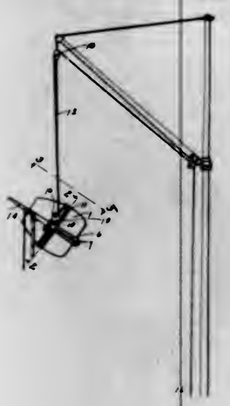


2. In a perforating device of the class described, the combination of a frame, a carriage movable on the frame in parallel relation to the line of movement of the web, a perforating head on said carriage, horizontal bars engaging said head to move the head vertically, links pivotally connecting the bars with the frame to maintain said bars in parallel relation to the line of movement of the web, and means for actuating said links to move the bars vertically in parallel relation to the web.

1,781,820. HOOD CATCH. RAYMOND G. MOORE, Bridgeport, Conn., assignor to The Bassick Company, Bridgeport, Conn., a Corporation fo Connecticut. Filed May 23, 1928. Serial No. 279,909. 5 Claims. (Cl. 292—128.)

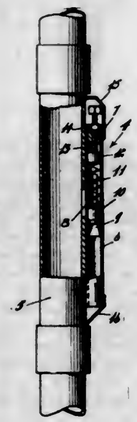
1. In a hood catch or the like, a member having a keeper engaging hold down clamp, a member longitudinally slidable relatively to said first member, means coacting between and adapted to exert a contracting pressure on said members, said second member having inclined means rigidly connected thereto disposed in inclined angular relation to the longitudinal axis of said member, a fixed support engaged by said inclined means whereby contracting movement of said members is adapted to cause relative inward movement of said inclined means relatively to said support, and side engaging means disposed between the catch and the hood adapted upon said inward movement of the inclined means to exert an inward pressure on the hood.

1,781,821. LUBRICATED PLUG VALVE. SVEN JOHAN NORDSTROM, San Francisco, Calif., assignor to Merco Nordstrom Valve Company, San Francisco, Calif., a Corporation of Delaware. Filed Feb. 26, 1929. Serial No. 342,853. 14 Claims. (Cl. 251—93.)



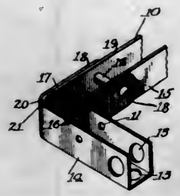
1. In a valve, a body member having an inflow and an outflow passage, a tapered plug member rotatable within said body and having a port adapted to register with said passages when the plug is in open position, said members having a seating surface formed between the same, a groove interrupting said seating surface and substantially surrounding at least one of said passages when the plug member is in closed position, means utilizing fluid pressure for effecting longitudinal jacking movement of said plug to unseat the same, and a lubricant chamber communicating with both said groove and said means and adapted to contain lubricant under pressure.

1,781,822. COMBINED BRUSH AND HAT HOLDER. CARL V. POHLSON, Pawtucket, R. I. Filed Mar. 26, 1930. Serial No. 439,011. 7 Claims. (Cl. 211—33.)



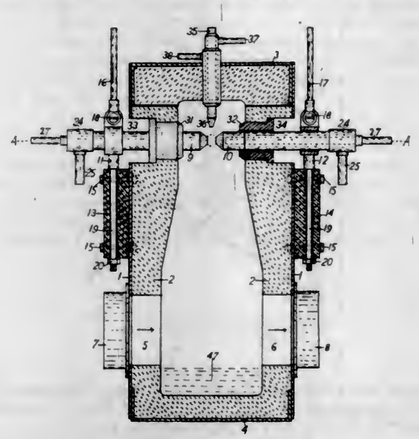
1. A combined brush and hat holder comprising a base, a standard supported by the base, and a brush supported on the standard provided with a portion arranged to support a hat.

1,781,823. CONCRETE MIXER. FRANK D. ROBBINS, Newberg, Oreg., assignor of one-half to William A. Bond, Newberg, Oreg. Filed July 5, 1928. Serial No. 290,604. 1 Claim. (Cl. 83—73.)



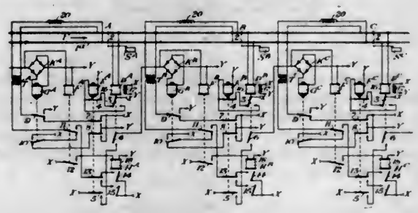
In a concrete mixer, in combination with a mixing shell, a yoke encompassing the shell, a journal pin centrally disposed on the base of the yoke, said journal pin centrally disposed within the base of the shell about which the shell is adapted for rotation, a pair of supports, each having a slot being adjustably positioned relative to the arms of the yoke substantially near their ends, a pair of guide rollers journaled on the top of each support, a furcated U-shaped band centrally disposed about the outer circumference of the shell and directly aligned with the guide rollers and a hoisting line passing once around the shell within the furcated U-shaped band and between the two sets of guide rollers, substantially as shown and described and for the purposes set forth.

1,781,824. FLUID-LEVEL REDUCER FOR OIL WELLS. HUBERT J. SMITH, Long Beach, Calif. Filed Jan. 21, 1929. Serial No. 333,946. 3 Claims. (Cl. 103—232.)



1. In combination with an oil well including casing, tubing, and a flow device adjacent the lower end of the tubing, of a fluid level reducer positioned in said tubing above the flow device, said reducer comprising, a pipe secured to the flow tubing, said pipe and tubing having a communicating slot formed therein, a valve in the pipe below said slot, and spring means bearing against said valve.

1,781,825. MILK-BOTTLE CRATE. ROBERT STODDARD, Chicago, Ill., assignor to Milk Bottle Crate Company, Chicago, Ill., a Corporation of Illinois. Filed Aug. 17, 1927. Serial No. 213,507. 1 Claim. (Cl. 217—19.)

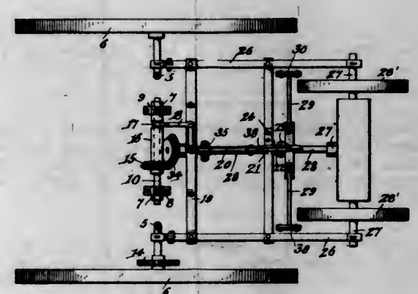


A rectangular crate having sides and ends fastened together, a channel frame receiving the bottom edges of the sides and ends of the crate, said channel frame having the side members of one end fitting within the side members of the other end adjacent a corner of the crate, the outer side member of one end being bent around the corner of the crate, and extending beyond said corner and the outer side member of the other end lying flush against the inside of said bent portion, and outside angle members fastened at the corners of the crate with their lower ends overlapping and secured to said channel frame.

1,781,826. PROCESS OF TREATING HYDROCARBONS. DONALD L. THOMAS, New York, N. Y. Filed July 23, 1927. Serial No. 207,850. 5 Claims. (Cl. 196—24.)

4. In the process of improving hydrocarbons, the steps which consist in bringing the hydrocarbons to be treated into intimate contact with substantially dry, oxygen-free electrified atomic hydrogen previously produced in an electric arc and effecting the reaction therebetween in a zone out of the direct influence of said arc.

1,781,827. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HOWARD A. THOMPSON, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed June 26, 1928. Serial No. 288,336. 5 Claims. (Cl. 246—39.)



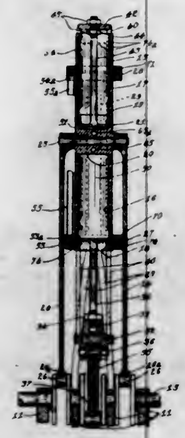
1. In combination, a stretch of railway track divided into sections, a track circuit for each section including a source of track circuit current reversibly connected with the rails of the section and a track relay responsive to reversals of current, a repeater relay for each section, means for energizing each repeater relay when and only when the associated track relay is energized in reverse direction and for subsequently keeping the repeater relay energized when the track relay becomes energized in normal direction, and means controlled by each repeater relay for supplying to the rails of the associated section train governing current of such characteristic as to give a less restrictive or a more restrictive indication according as the repeater relay is energized or de-energized, the relative polarity of the train governing current in each section being the same as that of the track circuit current normally supplied to the section next in advance, so that if an insulated joint fails and the track relay for the section in advance of such joint becomes energized by train control current from the section in the rear while the advance section is occupied, the repeater relay for the rear section will remain de-energized and the more restrictive indication will be given in the rear section.

1,781,828. LUBRICATING RINGS AND TRAVELERS IN DOUBLING AND LIKE FRAMES. WILFRED WHITELEY, Elland, England, assignor to Eadie Brothers and Company Limited, Paisley, Scotland, a Company of Great Britain. Filed July 8, 1929, Serial No. 376,733, and in Great Britain Aug. 10, 1928. 12 Claims. (Cl. 118—59.)

10. A spinning ring having an annular groove formed in the inner wall thereof and a radial opening extending outwardly from said groove, and an absorbent wick arranged within said groove and extending through said opening.

1,781,829. COTTON CHOPPER. JOHN W. ALLEN, Fresno, Calif. Filed June 25, 1929. Serial No. 373,563. 2 Claims. (Cl. 97—15.)

1. In a cotton chopper, a frame, a main shaft supported by the frame, chopping blades rotated by the shaft, said shaft having an offset portion, a controlling lever, means actuated by the controlling lever for throwing the shaft into and out of operation, and a coiled spring connected with the lever and having connection with the offset portion of the shaft for moving the shaft to its initial position when the lever is operated to throw the shaft out of operation.



1,781,830. PROCESS FOR FIXING OR RECOVERING CHLORINE. EDWIN O. BARSTOW, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Oct. 30, 1926. Serial No. 145,374. 3 Claims. (Cl. 23—219.)

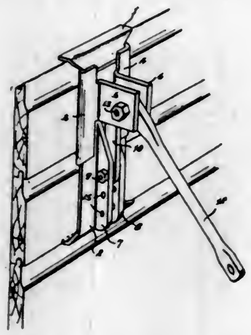
2. In a method of controlling chlorine where electrolyzing fused compounds yielding a metal and a gas at elevated temperature, the steps which comprise exhausting such chlorine while admitting air thereinto and treating the resulting mixture with an agent for selectively retaining the chlorine.

1,781,831. RECIPROCATING ENGINE. HERBERT JAMES ALDERSON, Toronto, Ontario, Canada, assignor of forty-five per cent to James Legge, Lampton Park, Ontario, Canada. Filed Jan. 9, 1929. Serial No. 331,243. 4 Claims. (Cl. 123—50.)

4. In reciprocating engines, stationary rings having rods journalled on a crankshaft and having exhaust ports,

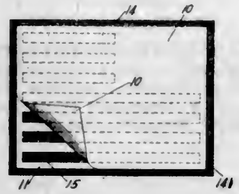
a female piston forming combustion chambers on either side and slidable in said rings and connected to crank

throws on said crankshaft and having inlet ports, and male pistons reciprocating in said chambers and connected to an opposite crank throw on said crankshaft.



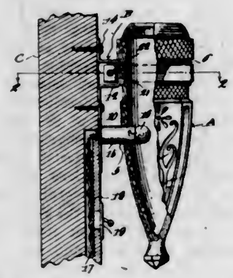
1,781,832. WEARING APPAREL. ERSWELL V. CRENSHAW, St. Louis, Mo., assignor to Langenberg Hat Company, St. Louis, Mo., a Corporation of Missouri. Filed May 31, 1928. Serial No. 281,715. 1 Claim. (Cl. 2—10.)

A head covering provided with a brim and having in combination therewith, a visor for both eyes of the wearer of the head covering formed of a single section of resilient sheet material, said section of material being transparent throughout its length from end to end thereof and being provided with a continuously bowed lower edge, and an elongated strap of flexible fabric securing the visor directly to the brim of the head covering, said visor being located at the front portion only of said head covering, said flexible strap serving also as a sweat band for the head covering and said visor being of a height permitting same to be disposed in an inoperative position within the head covering without folding.



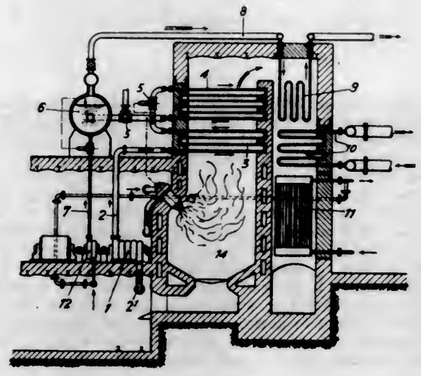
1,781,833. SIDING CLAMP. FREEMAN BAKER CUMMER, Carman, Manitoba, Canada. Filed Apr. 15, 1926, Serial No. 102,276, and in Canada Apr. 24, 1925. 3 Claims. (Cl. 255—17.)

1. A siding clamp comprising an anchoring jaw provided with a flat extending shank positioned at right angles to the jaw, a clamping jaw provided with a flat extending shank positioned at right angles to the clamping jaw and fitted with marginal guides slidably receiving the shank of the anchoring jaw, a pair of opposing



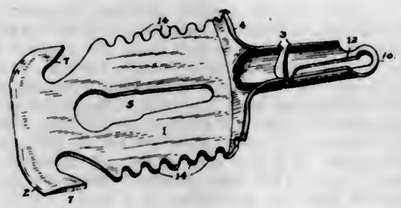
spaced lugs carried by the guides, an operating lever pivotally carried by the lugs and a link pivotally connecting the lever to the shank of the anchoring jaw.

1,781,834. STENCIL SHEET. LOUIS F. D'AUTREMONT, Dayton, Ohio, assignor of one-half to A. S. Daneman, Dayton, Ohio. Filed May 6, 1929. Serial No. 360,754. 6 Claims. (Cl. 101—127.)



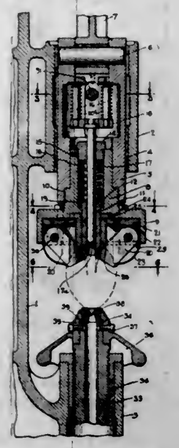
1. A stencil sheet for reproducing multicolored designs comprising a transparent backing sheet and a transparent film carried by but removable from said backing sheet, whereby portions of the film corresponding to selected portions of the design may be cut away and removed from the backing sheet.

1,781,835. ILLUMINATED FLOWER VASE. FRANK C. EMMES and HENRY J. KNOPP, Brussels, Wis. Filed June 12, 1929. Serial No. 370,374. 4 Claims. (Cl. 240—2.)



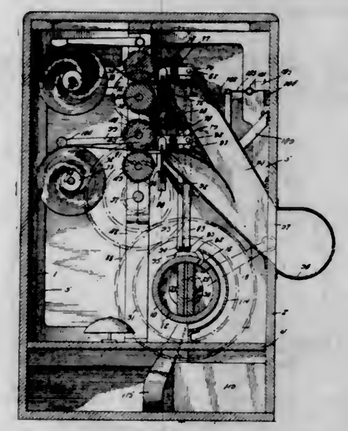
3. The combination with a flower vase having an opening therein at a point intermediate its ends, of a supporting bracket, means for securing the bracket to a support, the bracket having a substantially U-shaped arm struck out from one face thereof, a lamp socket secured to the bracket and projecting therefrom beyond the arm for the reception into the opening, an incandescent lamp disposed completely within the vase and connected with the socket, and a split band encircling the vase adjacent to the upper end thereof and extending through the U-shaped arm.

1,781,836. PLANT FOR THE GENERATION OF HIGH-PRESSURE STEAM. FRITZ FLATT, Zurich, Switzerland, assignor to the Firm Aktiengesellschaft der Maschinenfabriken Escher Wyss & Cie., Zurich, Switzerland. Filed July 19, 1926, Serial No. 123,469, and in Switzerland July 22, 1925. 6 Claims. (Cl. 122—31.)



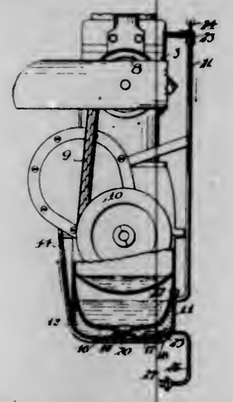
1. A plant for the generation of superheated high pressure steam, comprising in combination, a furnace, a coil of pipe arranged in the stream of hot fire gases of the furnace, a feed pump to feed water under high pressure to said coil and in which the water is converted into steam and superheated, a water reservoir into which the superheated steam from said coil is led to evaporate a part of the water in said reservoir, means to feed water directly into said reservoir, a superheater connected to said reservoir, and means to lead steam from said superheater to a steam consuming device.

1,781,837. COMBINATION KITCHEN UTENSIL. JOHN G. FUNK, Cleveland, Ohio. Filed Jan. 17, 1929. Serial No. 333,170. 3 Claims. (Cl. 294—32.)



1. A kitchen utensil comprising a flat plate portion adapted to be inserted under pots and the like, the side of the plate portion being cut away to form hooks to engage the bails of pots and the like, the plate portion being provided with a slotted opening to grasp the knobs of lids and the like, and a handle connected to the rear end of the plate portion.

1,781,838. MACHINE AND PROCESS FOR CRACKING NUTS. WILLIAM E. GIESECKE, New York, N. Y., assignor to Charles T. Wilson Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 12, 1927. Serial No. 232,842. 12 Claims. (Cl. 146—10.)

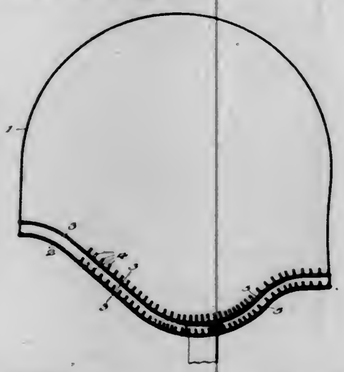


1. The method of cracking nuts with a central resistance column, which consists in supporting the nut by grasping it at the ends of the column, and simultaneously segregating one end of the central column and splitting the outer wall of the nut from the segregated end of the column toward the other end.

1,781,839. VENDING MACHINE. RALPH I. GRAVES, Washington, D. C., assignor to Mildred Van Sweringen Graves, Chevy Chase, Md. Filed May 11, 1925. Serial No. 29,498. 14 Claims. (Cl. 164—48.)

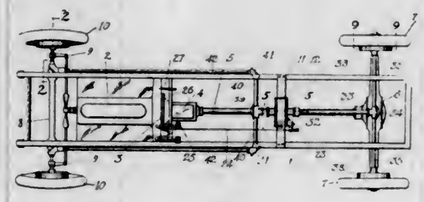
8. In a vending machine, in combination with a delivery table and clamping mechanism, a tapering blade mounted in a guideway diagonal with respect to the delivery table, the blade bearing against the edge of the table, and means connected with the blade for imparting a diagonal upward movement thereto.

1,781,840. CRANK-CASE-OIL HEATER. THOMAS P. HANNEGAN, St. Paul, Minn. Filed Apr. 14, 1928. Serial No. 269,921. 1 Claim. (Cl. 123—196.)



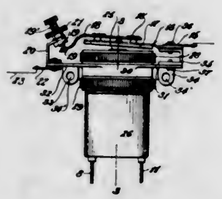
A crankcase oil heater for water cooled motors comprising a pan connected beneath the crankcase of said motor and spaced therefrom to provide a water jacket between said crankcase and said pan, said pan having an indentation therein about an oil drain opening said pan being connected to said crankcase about said opening to form a hermetically sealed joint therewith, a water passage from said water jacket to an upper portion of the water cooling system of said motor, and a second water passage from said water jacket to a lower portion of the water cooling system of said motor.

1,781,841. INSECTICIDE AND METHOD OF PRODUCTION. ALBERT HARTZELL, Yonkers, N. Y., assignor to Boyce-Thompson Institute for Plant Research, Inc., Yonkers, N. Y., a Corporation of New York. Filed July 9, 1926. Serial No. 121,497. 10 Claims. (Cl. 167—20.)



8. An insecticide consisting essentially of minute particles of colloidal sublimed sulphur in an emulsion of fish oil soap and water.

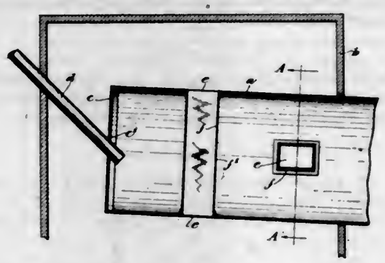
1,781,842. APPAREL. THOMAS J. HOWLAND, Long Branch, N. J. Filed May 5, 1930. Serial No. 449,800. 5 Claims. (Cl. 2—63.)



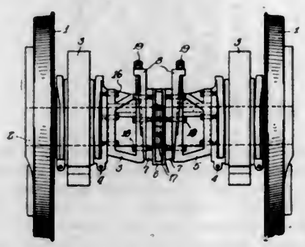
1. An article of apparel comprising a main portion and an elastic body-gripping edge portion, said edge portion having on the inside a relatively narrow, peripherally-extending rib for maintaining a substantially watertight seal between the edge portion and the body of the wearer, and bracing means for maintaining the rib in upright position, said braces being of a height less than the rib at corresponding places.

1,781,843. MOTOR-VEHICLE BRAKE MECHANISM. MERRILL M. INNIS and ORVILLE S. WARD, Columbus, Ohio. Filed Aug. 22, 1929. Serial No. 387,627. 8 Claims. (Cl. 188—10.)

1. In a motor vehicle, a frame, ground engaging wheels carried by the frame, a motor, and motion transmitting mechanism between said motor and at least certain of said wheels, of a brake mechanism comprising an internal gear fixed for rotation in connection with each of the ground engaging wheels, a pinion in engagement with the teeth of each of said gears, shafts carried by said frame and mounted independently of the drive mechanism for said wheel, said shafts being rotatably connected with said pinions, a main brake shaft rotated by said first named shafts in unison with said wheels, and a central brake unit carried by said frame and operative through manual control to govern the rotation of said wheels independently of said drive mechanism by applying rotation retarding forces to said brake shaft.



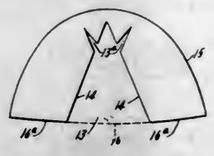
1,781,844. DEVICE FOR CONTROLLING THE VOLTAGE OF STORAGE BATTERIES. EDWARD B. JACOBSON, Pittsfield, Mass. Filed July 12, 1927. Serial No. 205,131. 3 Claims. (Cl. 175—336.)



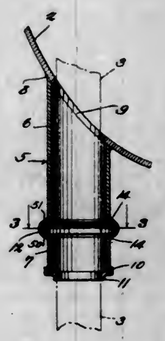
1. A device for the purpose described, comprising an electromagnet, an armature operated by the electromagnet, a magnetic shell enclosing the magnet, the magnetic shell being formed with externally located threads, threaded rings located on the threads of the shell, a slidable collar located between the rings, said rings being for the purpose of adjusting the collar and armature on the shell, whereby the positions of the collar will vary the air gap between the armature and the pole of the electromagnet and whereby the threaded rings operate to firmly lock the collar in its adjustable positions.

1,781,845. ROTARY CEMENT-BURNING KILN. AXEL V. JENSEN, Copenhagen, Denmark, assignor to F. L. Smidth & Co., New York, N. Y., a Corporation of New Jersey. Filed Apr. 25, 1928, Serial No. 272,631, and in Great Britain Nov. 28, 1927. 2 Claims. (Cl. 222—7.)

1. The combination of a rotary cement burning kiln, a dust chamber about the feed end of the kiln and a slurry chute, the kiln having an end plate with a central opening for the entrance of the slurry chute, and having in its circumferential wall in the zone of the dust chamber an opening for the escape of substantially all of the products of combustion, and a guard within the kiln to prevent the escape of slurry through such opening in the circumferential wall.

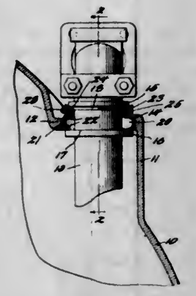


1,781,846. ADJUSTABLE LINER. WILLIAM H. JOHNSTON, Proctor, Minn. Filed May 18, 1927. Serial No. 192,374. 14 Claims. (Cl. 105—79.)



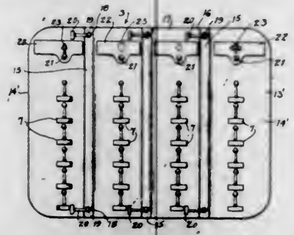
1. In a device of the character described, the combination of a locomotive frame, a filler block, a thrust bearing, and a U-shaped member adapted to be interposed between the filler block and thrust bearing to eliminate the axle lateral.

1,781,847. LIFT FOR SEPARATELY-FORMED ATTACHABLE HEELS. SYDNEY C. KAYES, Brockton, Mass., assignor to Montello Heel Company, Brockton, Mass., a Corporation of Massachusetts. Filed Jan. 31, 1930. Serial No. 424,780. 2 Claims. (Cl. 36—34.)



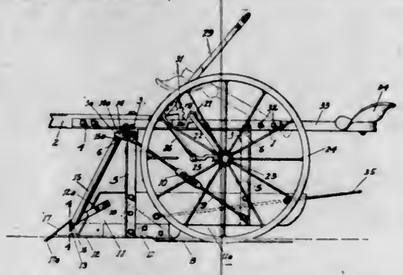
1. As an article of manufacture, a heel lift blank made from a box-toe skiving and convertible into an operative heel lift, said blank having a curved marginal edge, and a breast edge, the outer breast corners of said blank being a greater distance apart than when the blank is formed into a heel lift, the thickness of the blank gradually decreasing from said edges to the center, a portion of the blank being cut out to form a V-shaped recess having a wide mouth leaving two spaced apart sections extending from the heel end to the breast edge, each of said sections converging widthwise from the breast toward the heel end, and at the breast, said sections being of such width so that when brought together, the breast corners of the blank will approximately coincide with the respective breast corners of the heel lift into which the blank is to be formed.

1,781,848. JOINT. JOHN THOMAS KELLY, Waco, Tex. Filed Mar. 12, 1928. Serial No. 261,045. 1 Claim. (Cl. 285—30.)



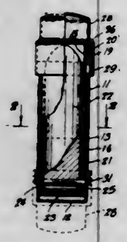
The combination with the boiler shell of a locomotive engine, and a steam pipe entering the shell: of a tubular casing about the pipe, one end of the casing being hermetically closed about the pipe, and the opposite end of the casing being connected to the shell, and an annular expansible intermediate piece fashioned from a metal which is more expansible than the casing, the intermediate piece being U-shaped in cross section and being arranged in substantially concentric relation with respect to the axis of the casing, the U-shaped piece being interposed in the casing, and separating the casing into parts, the inner end of one part of the casing being secured directly to one of the side walls of the intermediate piece, and the inner end of the other part of the casing being secured directly to the other side wall of the intermediate piece.

1,781,849. SMOKE-ARCH SEAL. WILLIAM F. KIESEL, Jr., Altoona, Pa. Filed July 11, 1927. Serial No. 205,019. 9 Claims. (Cl. 285—30.)



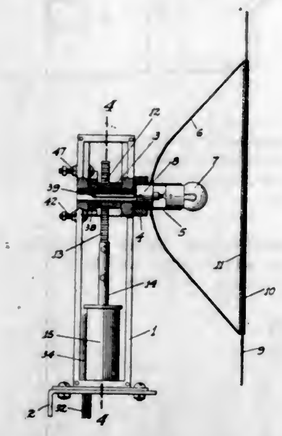
1. In a locomotive, in combination, a smoke-box having an opening through the wall thereof, a pipe passing loosely through said opening and subject to longitudinal and lateral movements due to temperature changes, a pair of circumferential flanges on said pipe spaced one on each side of said smoke-box wall, an annular seal of resilient material the outer surface of the cross section being U-shaped, the base of the U having a pressed fit into said opening, the inner edges of said seal being spaced from said pipe so that one of said flanges can pass therethrough on assembly, one side of said seal abutting one of said flanges, a sectional wedge ring between the other side of said seal and said other flange and means to contract said wedge ring to form an airtight fit between said seal and smoke-box and between said seal and flange.

1,781,850. BRIDGE-GAME ACCESSORY. LILLIAN RADCLIFF LADD, Mobile, Ala. Filed Aug. 22, 1929. Serial No. 387,719½. 4 Claims. (Cl. 273—150.)



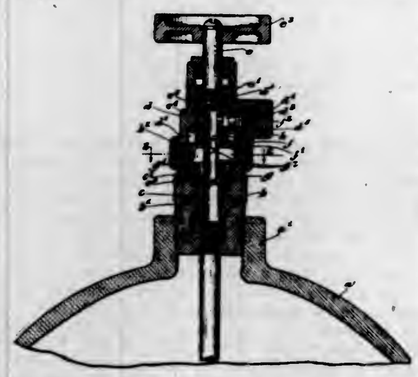
2. A bridge game accessory comprising a hand holder, means for holding and spacing the cards including a plurality of spring clips, each clip having on its free end an outwardly directed card spacing member, said clips arranged one below the other in a series of columns and at such distance apart that the spacing member of one clip engages the card held by the clip next below, each column adapted to hold and display a suit of cards in tiers according to sequence and numerical value.

1,781,851. BEAN CUTTER. GREGORY LANG, Yuba City, Calif. Filed Jan. 21, 1928. Serial No. 248,360. 6 Claims. (Cl. 55—60.)



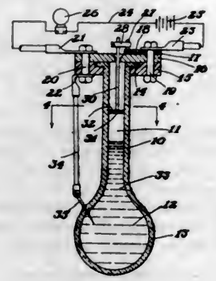
6. In a bean cutter, a frame, side runners below and supported from the frame, ground engaging tips on the forward ends of the runners, tension rods secured to and depending from the frame, means securing the lower ends of the rods in rigid connection with the tips, and rollers disposed about the rods.

1,781,852. LIP-STICK HOLDER. ANKER S. LYHNE, Bridgeport, Conn. Filed Dec. 20, 1929. Serial No. 415,416. 10 Claims. (Cl. 206—56.)



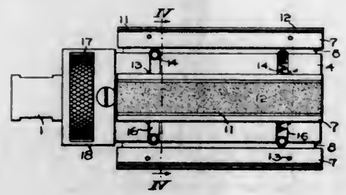
1. In a lipstick container, an outer casing, a stationary sleeve in the casing, a rotary sleeve embraced by the stationary sleeve, one of said sleeves having a longitudinal slot and the other a spiral slot and a longitudinally movable cosmetic carrier in said rotary sleeve carrying a lateral projection in said slots, said rotary sleeve being open at its upper end for protrusion of a cosmetic stick carried by the carrier and provided with means at said open end accessible outside the casing by which said sleeve may be rotated to shift the carrier.

1,781,853. DIRECTION SIGNAL FOR AUTOMOBILES. JOSEPH F. LYNCH, Stockton, Calif. Filed Dec. 27, 1926. Serial No. 157,111. 1 Claim. (Cl. 177—327.)



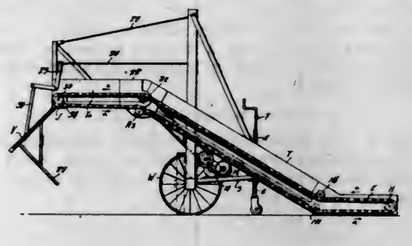
In a direction signal, a lamp housing, an open-ended sleeve projecting through the housing and secured intermediate its ends thereto, a rotatable hollow shaft axially alined with the sleeve outwardly of the housing, said shaft being of smaller diameter than the sleeve, a socket on the end of the shaft adjacent the sleeve and into which the portion of the sleeve outwardly of the housing projects, a terminal plug in the sleeve abutted against the adjacent end of the shaft; the sleeve being also arranged to receive the base of a lamp-bulb from its ends inside the housing so that said base will engage the plug and a circuit wire in the shaft leading to the plug.

1,781,854. RELEASE MECHANISM FOR FIRE-EXTINGUISHING SYSTEMS. DANIEL MAPES, Mamaroneck, N. Y., assignor to Walter Kidde & Company, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 20, 1928. Serial No. 307,075. 9 Claims. (Cl. 221—73.5.)



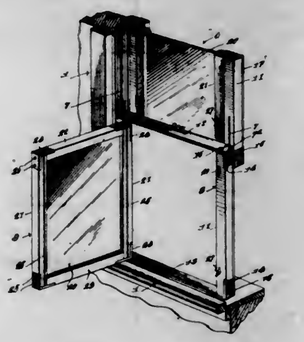
6. A valve for containers of a medium under pressure comprising a valve body secured to the container, a frangible disc carried by the valve body and confining the medium within the container, a cutter for rupturing the disc, means to move the cutter with respect to the disc, an outlet for the medium, a valve carried by the valve stem between the frangible disc and the outlet, means to close the valve by movement of the cutter away from the disc, and means normally preventing the escape of the medium when the valve is closed and adapted to relieve the pressure within the container upon the rupturing of the frangible disc due to an excess pressure within the container.

1,781,855. FIRE-ALARM DEVICE. HARRY MICHELMAN, Brooklyn, N. Y. Filed Apr. 9, 1928. Serial No. 268,496. 1 Claim. (Cl. 200—141.)



A fire alarm device for closing an electrical circuit and ringing a bell upon the rising of temperature comprising a well, a reservoir communicating with said well, a liquid in said well and reservoir adapted to increase its volume upon rise of temperature of the surrounding atmosphere, a perforated flange, a stem suspending said flange, a tapering needle piercing the wall of said reservoir and entering into said reservoir forming one terminal of the circuit, a bifurcated arm engaging said stem, a stud, said arm projecting from said stud, said stem entering into said bifurcated end of said arm, and a bus bar forming a current-carrying member having said stud secured thereon.

1,781,856. CYLINDER HONING DEVICE. FREDERICK C. MOSER, East Brook, Pa. Filed Feb. 26, 1929. Serial No. 342,690. 5 Claims. (Cl. 51—184.3.)



1. In a device for the purpose set forth, the combination of a mandrel having inclined channels spaced thereabout, tool holders correspondingly inclined at their base and engaging within the said channels, a honing tool secured in each of said holders, a sleeve within which the mandrel is slidably fitted and provided with openings through which said tool holders extend into the mandrel channels, and a nut on said spindle cooperating with said sleeve whereby rotative adjustment of said nut effects a longitudinal sliding movement of the sleeve on the spindle and radial adjustment of the tool holders therethrough.

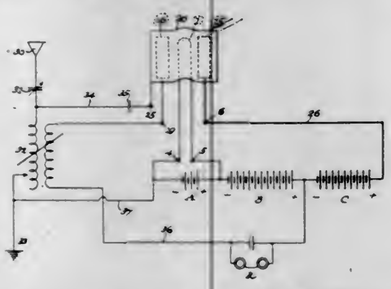
1,781,857. APPARATUS FOR SCREENING, SORTING, AND HANDLING MATERIAL. BYRON W. PAPE, Salt Lake City, Utah. Original application filed Mar. 21, 1925, Serial No. 17,224. Divided and this application filed May 12, 1926. Serial No. 108,623. 6 Claims. (Cl. 209—416.)

1. In combination with a conveyor having an adjustable discharge portion, an apparatus for sorting material comprising a bell crank mounted on the discharge portion, a screening member supported by the bell crank, means to adjust the inclination of the screening member, and means coacting with a fixed portion of the conveyor and the bell crank for operating the screening member.

1,781,858. SLIDING AND SWINGING WINDOW. LEONARD B. PAUL, Williamstown, W. Va., assignor, by direct and mesne assignments, of one-third to Alice Omeara Paul, Williamstown, W. Va., and two-thirds to Louis G. Zachos, Chicago, Ill. Filed Aug. 21, 1928. Serial No. 301,065. 1 Claim. (Cl. 20—48.)

In a window construction, a sliding window sash comprising an outer frame including side rails and upper and lower metal straps bridging the upper and lower ends of the side rails having oppositely extending right angularly disposed feet imbedded in the outer faces of the rails and flush therewith, a swinging inner glass panel carrying frame received in the outer frame, hinges connecting one side of the inner frame to one side rail of the outer frame, stop strips secured to the outer side faces of the side rails and extending inwardly of the same and in the path of movement of the inner frame for limiting the swinging movement thereof in one direction, the inner swinging frame having the outer side faces thereof provided with longitudinally extending grooves, V-shape ribs on the outer longitudinal edges of the stop strips for reception in the grooves when the swinging frame is in abutting engagement with the stop strips, and latches carried by the side rails of the outer frame for engaging the inner faces of the inner swinging frame to hold the same against movement in abutting engagement with said stop strips.

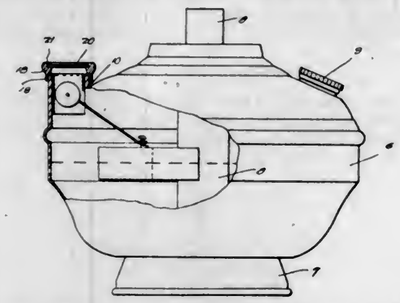
1,781,859. METHOD OF MAKING HYDROGEN PEROXIDE. JAMES B. PIERCE, Jr., Charleston, W. Va., assignor to Barium Reduction Corporation, Charleston, W. Va., a Corporation of Delaware. Filed Dec. 14, 1927. Serial No. 240,081. 5 Claims. (Cl. 23—207.)



1. The herein described process consisting essentially of adding strontium peroxide to a solution of a mixture of acids one of which forms a relatively insoluble strontium salt and the other of which forms a relatively soluble strontium salt, the second acid being present in a small amount, to form a relatively insoluble strontium salt and hydrogen peroxide.

1,781,860. COMBINATION LUGGAGE CARRIER AND COLLAPSIBLE BOAT. EDWARD F. REESE, South St. Paul, Minn. Filed June 27, 1930. Serial No. 464,209. 6 Claims. (Cl. 9—2.)

5. A collapsible boat comprising a number of quadrangular box-like sections all opening upwardly, means holding said sections rigidly in alinement, suitably tapered end sections securable rigidly one to each of the outer ends of the quadrangular sections, one of said end sections also opening upwardly and formed larger than the other end section to receive the latter within it, means for laying the thus combined end sections within one of the end quadrangular sections but in non-removable relation therewith.



1,781,861. RADIO RECEPTION APPARATUS. MYRON J. RITTENHOUSE, Cleveland, and OSCAR V. MAURER, East Cleveland, Ohio; said Maurer assignor to said Rittenhouse. Filed Jan. 14, 1925. Serial No. 2,297. 7 Claims. (Cl. 250—27.)

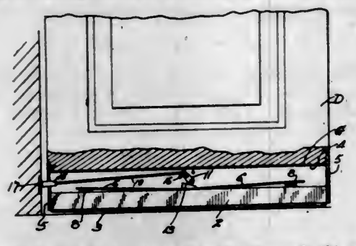
1. A radio reception tube comprising the combination with an evacuated vessel of an electron emitting member inclosed therein, two companion electrodes inclosed within said vessel and adapted between them to absorb the electrons emitted by the first electrode, a conductive plate supported in inductive relation as regards one of said electrodes and adapted to bind an induced charge thereon, means for maintaining said conductive plate at a fixed potential of substantial magnitude, means for conveying the oscillations to be detected and amplified to the electrode having the induced charge, and a receiving circuit containing said electron emitting member and the remaining electrode.

1,781,862. LAMP GAUGE. OSCAR SCHNASER, Milbank, S. Dak. Filed Jan. 28, 1930. Serial No. 424,116. 2 Claims. (Cl. 116—118.)

1. In combination with a lamp fuel reservoir, having a vertically extending air compartment, said fuel reservoir having an open neck therein, a cap extending into the neck and having an opening in its upper wall and a pair of aligned openings in its side walls, said cap further having a slot in its side wall between the openings, a closure cap having diaphanous panel across its upper face supported at the upper end of the neck over the first mentioned cap, a float disposed in the reservoir in slidable abutment with

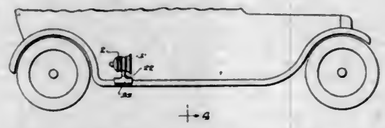
the air compartment, a drum having oppositely extending trunnions journaled in said pair of openings with its axis in parallelism with the top of the cap so as to register indicia on the peripheral face thereof with the yoke in the cap, a rod rigidly secured at one end to the periphery of the drum and at its other end movably coupled with the float for transmiting movement of the float to the drum.

1,781,863. CUTTING TOOL. WILLIAM WALTER SHOEMAKER, New York, N. Y. Filed Mar. 22, 1928. Serial No. 263,756. 3 Claims. (Cl. 164—124.)



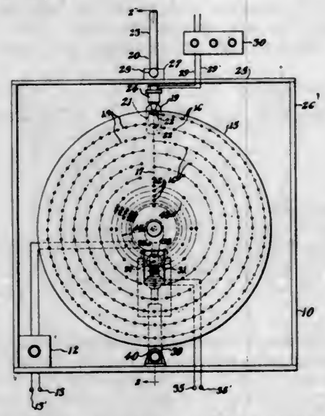
1. A rotary cutting tool comprising a cutting portion of arcuate cross section and having a semi-cylindrical outer surface, said cutting portion having a lateral cuting edge parallel to the axis of the cylindrical surface, an end cutting edge in a plane perpendicular to the axis of the cylindrical surface and a curved intermediate cutting edge joining the end cutting edge and the lateral cutting edge.

1,781,864. DRAFT AND NOISE STOP. CLAYTON F. WYATT, Los Angeles, Calif., assignor, by mesne assignments, of one-half to Pauline S. Seccombe. Filed Mar. 27, 1929. Serial No. 350,288. 1 Claim. (Cl. 20—68.)



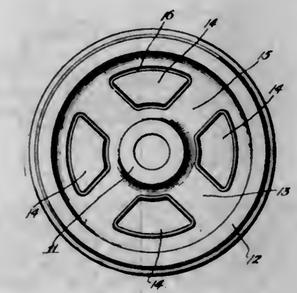
A draft and noise stop strip comprising an elongated shell having an open bottom and adapted to be sunk in a grooved-edge carrying part, an inverted channel section slidably mounted for rise and fall in the shell and having

a packing exposed at its bottom, a bridge-like cam fixed medially to the top of the shell and a leaf spring secured under the bridge and having outwardly directed free ends, cross-hangers in the shell above the packing section and on which said spring ends rest and which form top stops for the channel section, a lever pivoted medially of its length and having on its lower end a roller engaging the



top of the cam to be actuated thereby through the spring; said lever being connected to and outwardly thrusting, a push rod, said rod projecting from the shell to engage a fixed abutment when the carrier is moved to a given position and whereupon the packing device is bodily depressed to effective position; the spring having the dual function of lifting the packing and of projecting the push rod.

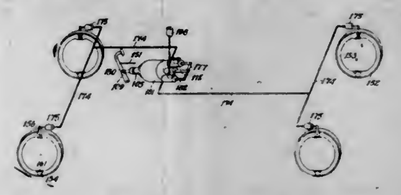
1,781,865. VEHICLE LAMP. JOHN F. ANIOL, Chicago, Ill. Filed Apr. 23, 1928. Serial No. 272,168. 5 Claims. (Cl. 240—8.2.)



3. A vehicle lamp comprising a casing formed of tough resilient material having an open end provided with a recess around its inner wall spaced away from the periphery at the open end thereof and a reflector of concave shape with a flaring circular edge fitting into said recess to position it in said casing and to strengthen the open end thereof.

1,781,866. SPEED INDICATOR AND VARIABLE SYNCHRONIZER. ROBERT H. BAHNEY, Massillon, Ohio, assignor of one-half to Hurxthal F. Frease, Canton, Ohio. Filed Nov. 30, 1928. Serial No. 322,927. 8 Claims. (Cl. 178—6.)

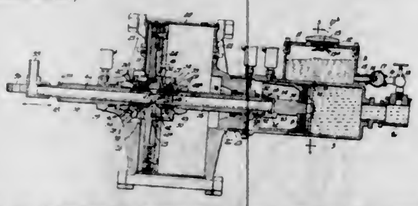
1. A variable speed indicator and synchronizer including a rotating body, an indicator of time intervals adjacent the body, and a plurality of means on the body each adapted for cooperating with the indicator for emitting a characteristic signal when the body is rotating at a desired speed, and for emitting different signals when the body is rotating at speeds above or below the desired speed, and each cooperating means on the rotating body including a set of apertures therein, the apertures of each set being adapted for traversing the indicator.



1,781,867. CAR WHEEL. FRANK B. BELL, Pittsburgh, Pa., assignor to Edgewater Steel Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 4, 1928. Serial No. 297,558. 6 Claims. (Cl. 295—29.)

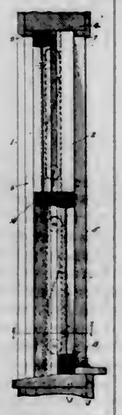
1. A car wheel, comprising a central hub, a peripheral flanged rim, and a web connecting said hub and rim, said web being provided with outstanding ribs upset from the material of the web to circumscribe isolated web areas.

2. A car wheel, comprising a central hub, a peripheral flanged rim, and a web connecting said hub and rim, areas of said web having continuous circumscribing ribs upset from the metal within the ribs outwardly to form the ribs.



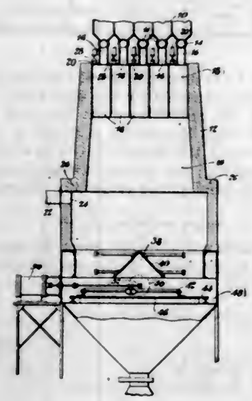
1,781,868. HYDRAULICALLY-ACTUATED BRAKE MECHANISM. CALEB S. BRAGG, Palm Beach, Fla., and VICTOR W. KLIESRATH, Port Washington, N. Y., assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y., a Corporation of New York. Filed June 26, 1924, Serial No. 722,485. Renewed Oct. 13, 1928. 18 Claims. (Cl. 188—155.)

18. In a hydraulically actuated brake mechanism, the combination with a plurality of pressure cylinders, each having a pressure piston therein, a separate hydraulic system connected with each of said pressure cylinders, including an actuating piston, a cylinder, and liquid conducting connections therefrom to the pressure cylinder, each pressure cylinder being at all times in free communication with its connected hydraulic system, and provided with a port on its upper side adapted to be opened by the pressure piston when in retracted position, and to be closed during the power stroke of the pressure piston, an equalizing passage connecting the said ports of said pressure cylinders, and communicating freely in both directions with said cylinders when the pressure pistons are retracted, and a vented reservoir located above said equal-



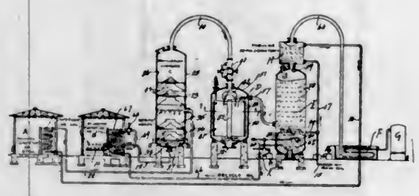
izing passage and communicating freely therewith at all times, to keep the several pressure cylinders and their hydraulic systems filled, to vent occluded air from said systems, and to compensate for the expansion and contraction of the liquid in each pressure cylinder, and the hydraulic system connected therewith under variations in temperature.

1,781,869. HYDRAULICALLY-ACTUATED BRAKE MECHANISM. CALEB S. BRAGG, Palm Beach, Fla., and VICTOR W. KLIESRATH, Port Washington, N. Y., assignors to Bragg-Kliesrath Corporation, Long Island City, N. Y., a Corporation of New York. Filed Aug. 20, 1925, Serial No. 51,300. Renewed Oct. 13, 1928. 14 Claims. (Cl. 188—152.)



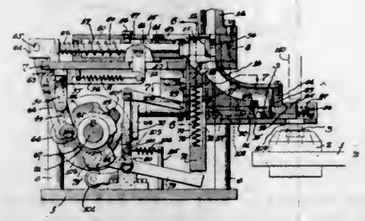
4. In a hydraulic brake system, the combination with a main hydraulic cylinder, a main hydraulic piston working therein, said cylinder being provided with a venting and filling port on its upper side, adjacent to the position of the piston when in retracted position, and adapted to be closed by the first part of the active stroke of the piston, a liquid reservoir located above said cylinder and communicating with said port by means providing a body of oil of greater horizontal diameter than said port, adjacent thereto, to permit the escape of occluded air through said liquid to the surface of the liquid in the reservoir, and prevent said air from being drawn back into said cylinder in maintaining the system in filled condition, a hydraulic brake actuating cylinder, a piston therein, brake mechanism connected with said piston, pipe connections extending from the main hydraulic cylinder to said brake actuating cylinder, a pipe connecting said reservoir with the system adjacent to the discharge end of said main hydraulic cylinder, for filling or bleeding the system, a check valve in said pipe for preventing the return of liquid therethrough to the reservoir, a shut off valve in said connecting pipe, and means for operating the main hydraulic piston.

1,781,870. WINDOW HOLDER. CHARLES J. CHRISTOPHERSON, Oak Park, Ill. Filed July 29, 1929. Serial No. 381,783. 1 Claim. (Cl. 292—76.)



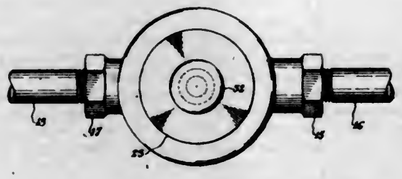
In a device of the class described, a window frame, upper and lower window sashes each having recesses in their lateral edges slidably mounted in said frame, a guide member mounted on the side of said frame comprising a channel for retaining said sashes in spaced relation, a pair of belts movably mounted in said channel, each extending outwardly on opposite sides thereof, means on each belt connected with one of said sashes, a pair of resilient members on said channel frictionally engaging said belts for holding said sashes in adjusted position.

1,781,871. METHOD AND APPARATUS FOR DISTILLING SOLID CARBONACEOUS MATERIAL. HENRY L. DOHERTY, New York, N. Y. Filed May 8, 1925. Serial No. 28,866. 10 Claims. (Cl. 202—15.)



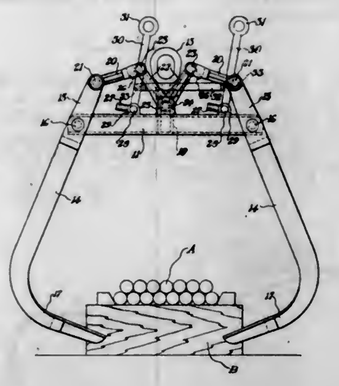
1. A method of controlling distillation of solid volatile-containing carbonaceous fuel which comprises passing said fuel downwardly in a column through a shaft retort, passing a current of hot non-combustion-supporting gas upwardly through the fuel column to distil the fuel by heat transfer therewith, and removing the mixture of gas distilling medium and volatile products evolved from any portion of the fuel selectively from the top of the fuel column so as to force the gas distilling medium to distribute itself in uniform concentrations through each cross section of the fuel column during its upward passage therethrough.

1,781,872. PROCESS FOR MAKING MOTOR FUEL. BENJAMIN FIXMAN, Bartlesville, Okla. Filed Nov. 18, 1926. Serial No. 149,195. 3 Claims. (Cl. 196—57.)



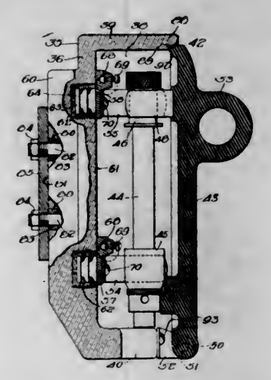
1. The process of producing hydrocarbons of substantially the character of motor fuels which consists in heating a raw heavy mineral oil to the conversion temperature under pressure, heating a recycle oil, intimately contacting the heated heavy mineral oil and the reaction products resulting therefrom with the separately heated recycle oil, releasing the resultant hydrocarbon mixture at a reduced pressure which will enable liquid components of the mixture to vaporize, removing carbon from the vapor by electromagnetic treatment, and separating the hydrocarbons of the desired characteristics from those requiring recycling to produce the recycle oil above mentioned.

1,781,873. AUTOMATIC LOADING DEVICE. FELIX HAMROL, Detroit, Mich., assignor, by mesne assignments, to Motor City Sales Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 31, 1929. Serial No. 336,414. 9 Claims. (Cl. 10—162.)



3. In a device for loading articles into a machine holding means for retaining an article, a carrier movable towards said holding means, grasping means carried by said carrier and yieldably held thereby, said grasping means being shaped to receive a given end of the article and to exclude the other end, an ejector adapted to release the article from said grasping means, a delivery chute beneath said holding means, and a partition slidable in the mouth of said chute and adapted to divide the same into two compartments, one of which is between said holding means and ejector, said ejector being timed to discharge the article from said grasping means into said compartment, said partition being actuated and timed to engage the discharged article and guide it into said chute.

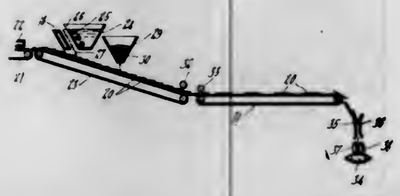
1,781,874. OIL STRAINER. ROBERT C. HOPKINS, Alliance, Ohio. Filed Nov. 2, 1928. Serial No. 316,776. 3 Claims. (Cl. 210—165.)



1. An oil strainer including a housing having inlet and outlet openings, a valve seat between the inlet and outlet openings and having a central opening many times larger than the area of the inlet opening forming the only communication between the inlet and outlet, a spring pressed disk valve having a cutting edge normally seated upon the valve seat and adapted to be raised a predetermined distance by pressure of the incoming oil so as to permit passage of the oil between the cutting edge and valve seat and prevent passage of sludge in the oil, and a sludge chamber beneath the valve seat.

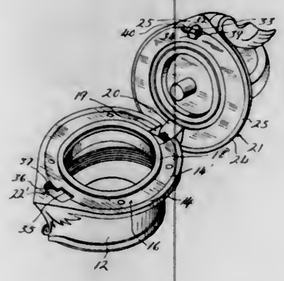
1,781,875. PICKLING TONGS. ROBERT C. HOPKINS, Alliance, Ohio. Filed June 22, 1929. Serial No. 372,956. 7 Claims. (Cl. 294—106.)

1. Tongs including a supporting frame, a pair of jaws hinged upon said frame, toggle levers connected to the jaws for automatically locking the jaws in closed position, and a rocker shaft for releasing the jaws to permit them to open.



1,781,876. FUSE BOX. WILLIAM D. KYLE, Milwaukee, Wis., assignor to Line Material Company, South Milwaukee, Wis., a Corporation of Delaware. Filed July 16, 1929. Serial No. 378,785. 1 Claim. (Cl. 200—138.)

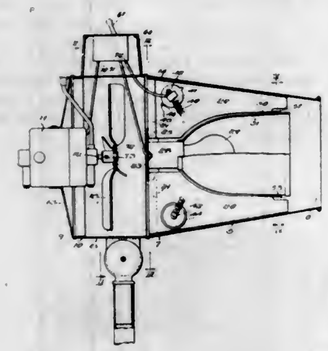
A device of the class described comprising a fuse box adapted to be exposed to the weather for housing a high voltage fuse and consisting of the combination of a unitary body member comprising a back wall member from which extends forwardly an integral rim defining substantially parallel sidewalls and a top wall leaving the front and bottom open, said back member and rim being formed as an integral unitary piece of dense wet process porcelain the same being throughout completely impervious to moisture and to metallic vapors generated by the blowing of the fuse, and being non-porous throughout and of very high dielectric strength, a movable cover member loosely fitting within the front opening, the body member having an external recess and there being secured therein a supporting member to mount the fuse box in such position that the back wall is substantially vertical, the inside of the body member having a pair of recesses and there being secured in said latter recesses a pair of contact supports, and an



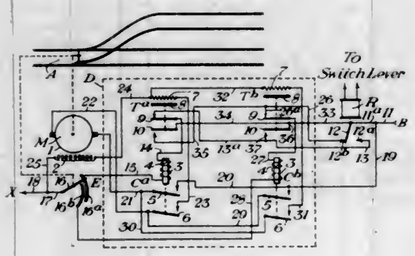
expulsion fuse mounted in the box and connected to said contact supports having an opening for the expulsion of metal vapors upon blowing of the fuse out through the bottom opening of the box, said sidewalls having perforations therethrough for the leading in of conductors to the contact supports in the box.

1,781,877. METHOD OF AND MECHANISM FOR COATING ROOFING ELEMENTS. HAROLD L. LEVIN, Passaic, N. J., assignor, by mesne assignments, to The Patent and Licensing Corporation, Boston, Mass., a Corporation of Massachusetts. Filed Mar. 22, 1927. Serial No. 177,407. 9 Claims. (Cl. 91—68.)

9. The method of coating a roofing element, which comprises covering a portion of a face of a roofing blank with another roofing blank, covering the remaining portion of the face and adjacent edges with a coating of liquefied asphalt, and separating said blanks.



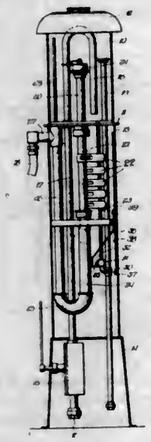
1,781,878. RADIATOR-CAP CONSTRUCTION. RUDOLPH MILLER, Detroit, Mich., assignor, by mesne assignments, to Bohn Aluminum & Brass Corporation, Detroit, Mich., a Corporation of Michigan. Filed Dec. 12, 1927. Serial No. 239,569. 15 Claims. (Cl. 220—24.)



1. The combination with a filler tube of a radiator, of a ring secured to said filler tube having a recess therein, a member positioned within said recess, a closure having a part hingedly mounted upon said ring and another part rotatably mounted upon said first mentioned part, and means upon said rotatable part engageable in a portion of said recess in one rotative position of said rotatable part and engageable with said member in another rotative position thereof to subject the closure to a sealing pressure upon said ring.

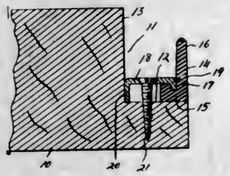
1,781,879. HAIR DRIER. OLIVER NORDEN, Chicago, Ill., assignor to William Meyer, Chicago, Ill. Filed Oct. 28, 1929. Serial No. 402,890. 7 Claims. (Cl. 34—26.)

3. In a drier of the class described, a drum having an outlet casing part extending forwardly therefrom, means for projecting a body of air through said outlet casing part, radial guide vanes mounted in said casing part for preventing swirling of the body of air, a socket member mounted upon the rearward ends of said vanes, an electric light mounted in said socket and a reflector surrounding and extending forwardly from said light and surrounded by said vanes and attached thereto.



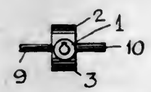
1,781,880. MOTOR-CONTROL APPARATUS. BERNARD E. O'HAGAN, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed July 5, 1929. Serial No. 375,976. 14 Claims. (Cl. 246—242.)

1. In combination, a device capable of assuming a first or a second position, an electric motor for operating said device, manually controlled means for supplying current to said motor to drive said device from said first position to said second position, and means responsive to the magnitude of the current supplied to said motor for at times deenergizing said motor and for subsequently automatically supplying current to the motor to restore said device to said first position.



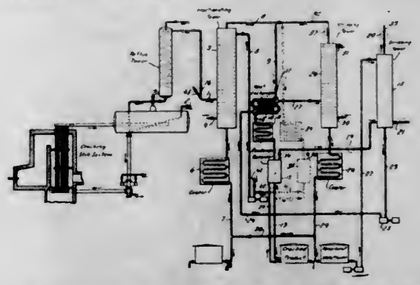
1,781,881. LIQUID-DISPENSING APPARATUS. WALTER H. PARKER, Beaver, Pa., assignor, by mesne assignments, to The Wayne Pump Company, Baltimore, Md., a Corporation of Maryland. Filed July 13, 1925. Serial No. 43,152. 4 Claims. (Cl. 221—100.)

1. In liquid dispensing apparatus, the combination of a casing for control parts of the apparatus, a measuring container, means for controlling the draining of said container including a self-closing valve and a valve operating member, said valve having means therein for positively closing said valve, said casing having a door with a portion for operating said member and valve to drain said container when the door is moved into one position and



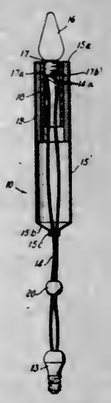
having another portion for embracing said member to prevent meddling with said member and improper operation of said valve when the door is in another position.

1,781,882. WEATHER STRIP. WILLIAM S. PRITCHARD, Detroit, Mich., assignor to Motor Products Corporation, Detroit, Mich., a Corporation of New York. Filed Apr. 25, 1927. Serial No. 186,517. 1 Claim. (Cl. 296—93.)



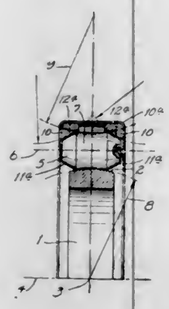
The combination with a support, of a weatherstrip having a grooved lateral extension mounted upon one wall of said support, a substantially U-shaped retaining strip having one leg engaging in said groove and the other leg spaced inwardly from the end of the extension aforesaid and engageable with the said wall of the support, and means for securing said strip to said support including a fastening element extending through the base of the strip and into the support at a point spaced from the end of the extension whereby upon clamping the strip to the support, the same pivots about the leg engageable with the wall aforesaid to firmly clamp the weatherstrip to the support.

1,781,883. AERONAUTICAL PROPELLER. SYLVANUS A. REED, New York, N. Y., assignor to The Reed Propeller Co. Inc., a Corporation of New York. Filed Oct. 29, 1929. Serial No. 403,165. 15 Claims. (Cl. 170—173.)



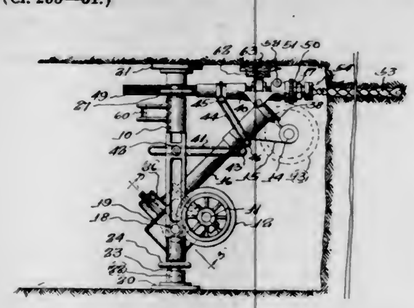
1. A metal aeronautical propeller including a hub unit and two or more blade pairs, the blade pairs in each instance being substantially hairpin shaped with the loop end of each pair bearing on and passing around said hub.

1,781,884. ART OF CRACKING HYDROCARBONS. HORACE K. ROGERS, Chicago, Ill., assignor to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed Oct. 11, 1928. Serial No. 311,744. 5 Claims. (Cl. 196—48.)



1. In cracking operations for the production of lower boiling hydrocarbon oils from higher boiling hydrocarbon oils, the improvement which comprises taking off a gas-vapor mixture from the cracking operation including vapors of the desired product, condensing the desired product therefrom, subjecting the gases and vapors remaining uncondensed to scrubbing treatment with an absorbent menstruum to absorb therein condensable constituents of the gases and vapors, passing the absorbent menstruum containing absorbed constituents from the scrubbing treatment in indirect heat exchanging relation with the gas-vapor mixture from which the desired product is condensed, vaporizing absorbed constituents from the thus heated absorbent menstruum while preventing direct contact between the gas-vapor mixture from the cracking operation and the absorbent menstruum and condensing these vaporized constituents.

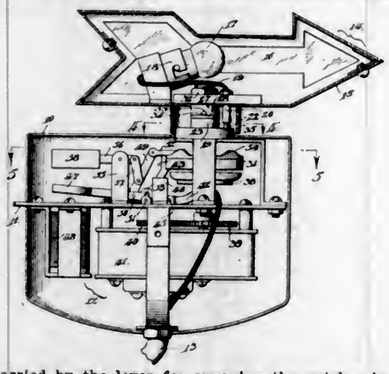
1,781,885. ELECTRIC-LIGHTING DEVICE. ALBERT SADACCA, New York, N. Y., assignor to Noma Electric Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 5, 1928. Serial No. 267,522. 2 Claims. (Cl. 240—10.)



1. A decorative lighting device of the character described simulating a candle comprising a tubular member having an open end, an integral closure for the other end of said member having a central opening therein, an insulating bushing, a filler piece surrounding said bushing, said bushing and piece being snugly fitted into the open end of said member to form a reinforcement for the latter, a receptacle outlet adapted to receive an electric bulb carried by said bushing, and flexible conductor wires connected to said outlet, said wires extending through said bushing member and the closure opening as and for the purpose described and specified.

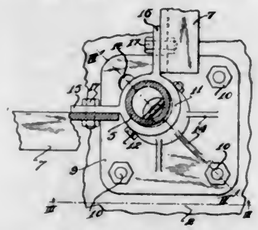
1,781,886. SELF-ALIGNING ROLLER BEARING. WILLIAM L. SCRIBNER, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Mar. 15, 1929. Serial No. 347,209. 4 Claims. (Cl. 308—212.)

1. A roller bearing comprising an annular inner bearing member convexly curved lengthwise, a circular series of bearing rollers thereon having their axes parallel with the axis of the bearing and having their body portions concavely curved to cooperate with said inner bearing member, and cup members having tapering bores constituting outer raceways, said rollers having tapering end portions to cooperate therewith.



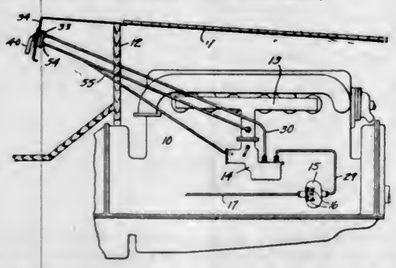
1,781,887. DRILLING MECHANISM. FREDERICK W. VODOZ, Wilmette, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 20, 1928. Serial No. 307,073. 9 Claims. (Cl. 255—51.)

5. In a portable drilling mechanism, a main frame, a pair of feet on one end of said main frame adaptable to rest on a mine bottom, a bearing member on the opposite end of said main frame adaptable to bear against a mine roof to hold said main frame in a vertical position, a motor pivotally mounted on said main frame adjacent said feet, a drilling arm pivotally mounted on said main frame on the same pivotal axis as the pivotal axis of said motor, drilling mechanism on the opposite end of said drilling arm driven by said motor, and a plurality of wheels on said main frame and said drilling arm for supporting said main frame in a horizontal position for transporting said drilling mechanism from working place to working place.



1,781,888. DIRECTION INDICATOR. FRANK WEIDLINGER, Bethlehem, Pa. Filed July 13, 1928. Serial No. 292,483. 8 Claims. (Cl. 177—327.)

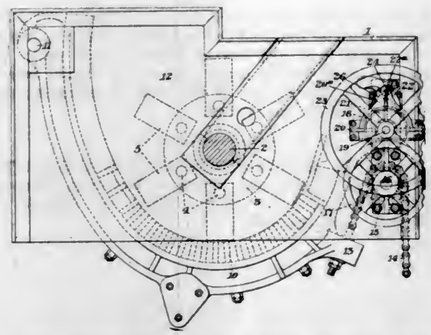
1. A direction indicator including a frame, a shaft rotatable therein, a pointer on the shaft, a perimetrically notched clutch wheel on the shaft, a rotatable clutch member, means for rotating the clutch member, a lever for moving the clutch member into engagement with the clutch wheel, a



dog carried by the lever for engaging the notches in the clutch wheel, and means for actuating the lever and moving the dog into such notch engaging position.

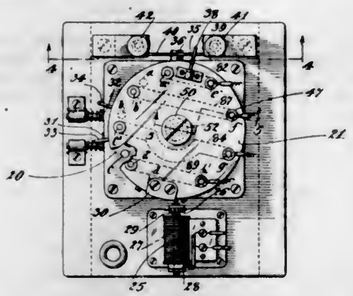
1,781,889. FOOT CASTING FOR DERRICKS AND METHOD OF USING THE SAME. DALLAS D. WERTZBERGER Tulsa, Okla. Filed June 2, 1928. Serial No. 282,328. 1 Claim. (Cl. 189—21.)

As an article of manufacture, a unitary support for a derrick leg adapted to be fastened to the top of the plastic foundation comprising a base formed to be secured to said foundation, a slanting tube integral with said base for receiving the lower end of a slanting derrick leg, lateral ears disposed at substantially a right angle to each other and formed integral with said tube for attachment to derrick girders and the like adapted to extend directly over the base of the derrick, and a releg boss integral with said base and disposed between said ears, said lateral ears being arranged so as to guide the releg in said boss.



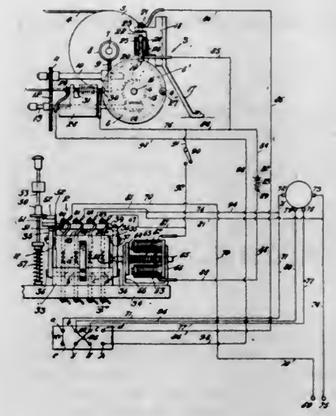
1,781,890. PRIMING DEVICE. SUMNER WILTSE, Detroit, Mich., assignor to Wiltse Appliance Company, a Corporation of Michigan. Filed Sept. 1, 1927. Serial No. 216,827. 8 Claims. (Cl. 123—139.)

1. In combination with an internal combustion engine having an intake manifold, a carbureter connected thereto,



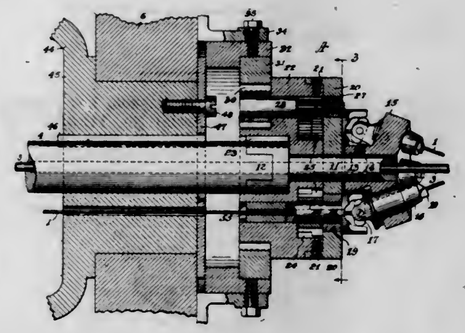
and a mechanically driven pump for delivering fuel to said carbureter, means for priming said pump comprising a passage exterior to said carbureter between the float bowl thereof and said intake manifold, and means in said passage for closing the same.

1,781,891. HAMMER CRUSHER. GEORGE W. BORTON, New Lisbon, N. J., assignor to Pennsylvania Crusher Company, New York, N. Y., a Corporation of New York. Filed July 6, 1928. Serial No. 290,801. 5 Claims. (Cl. 83—11.)



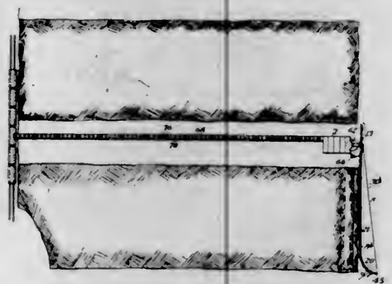
1. The combination with a crushing machine having a frame, an adjustable screen mounted therein, adjustable supporting means for one end of said screen, gearing including a driving and a driven element for actuating said adjustable supporting means, and mechanism for holding the driving element of said gearing against movement including a ratchet wheel and a pawl in engagement with said ratchet wheel, of a shear pin support for said pawl, and a bracket support carried externally of the wall of the crushing machine frame in which the ends of said shear pin are mounted.

1,781,892. CONTROL SWITCH. HARRY E. CHIPMAN, Springfield, Mass., assignor, by direct and mesne assignments, to Andrew Le Roy Chipman, New York, N. Y. Filed Sept. 18, 1926. Serial No. 136,246. 9 Claims. (Cl. 200—12.)



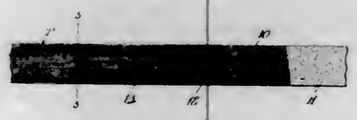
1. In a switch of the character described, in combination, two sets of cooperating electrical terminals arranged in adjacent parallel planes, one set being rotatable with respect to the other set into and out of contact with terminals of the other set selectively, resilient means operative to move said rotatable carrier in either direction to normally maintain the terminals thereon in out of contact position with the terminals of the other carrier, means for latching the rotatable set of terminals in various positions with respect to the other set, and electro-magnetic means operative when energized to release said latching means.

1,781,893. CONTROL SWITCH. HARRY E. CHIPMAN, Springfield, Mass., assignor, by direct and mesne assignments, to Andrew Le Roy Chipman, New York, N. Y. Filed May 3, 1928. Serial No. 274,774. 11 Claims. (Cl. 200—107.)



1. In a switch of the character described, in combination, a pair of carriers, a set of electrical terminals fixed to the periphery of one of said carriers, a plurality of sets of electrical terminals fixed to a side face of the other of said carriers, means for normally retaining one of said carriers in out-of-electrical contacting position in reference to the other carrier, and means for rotating one of said carriers with respect to the other in either direction from said normal position to place the terminals thereon into and out of contact selectively with the terminals of the other carrier.

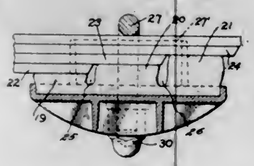
1,781,894. MACHINE FOR MAKING WIRE STRANDS, ROPES, AND CABLES. EDWARD A. CONNER, Stratford, Conn., assignor to American Cable Company, Inc., a Corporation of Delaware. Filed Jan. 12, 1927, Serial No. 160,571. Renewed Feb. 11, 1930. 7 Claims. (Cl. 117—20.)



1. In a machine for making wire strand, rope or cable, a preforming head comprising a central shaft having a member rotatable therewith and furnished with a plurality of preforming devices mounted for individual rotation in bearings spaced around the axis of said central shaft, and a hub on said central shaft having planetary gearing adapted to rotate said preforming devices individually.

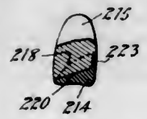
1,781,895. COAL-LOADING MACHINE. GEORGE M. CRAWFORD, Ingomar, and JACOB M. LONDON, Butler, Pa. Filed June 21, 1926. Serial No. 117,246. 17 Claims. (Cl. 198—7.)

1. A loading machine including a machine frame, a loading arm carried thereby, a scraper movable along the arm, a receiving disc for receiving material from the loading arm means, and a conveyer associated with the machine to which the receiving disc delivers.



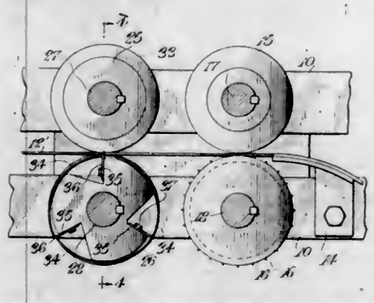
1,781,896. BIAS INSULATING TAPE. HARRY I. DIAMOND, Atlanta, Ga. Filed Dec. 13, 1927. Serial No. 239,687. 13 Claims. (Cl. 154—2.6.)

12. An insulating tape comprising a bias-cut fabric having one set of the threads disposed at an angle between 5° and 40° relative to the longitudinal edge of the strip, a coating of friction material on one side thereof, a coating of rubber on the other side thereof, and a removable protective covering on said rubber coating.



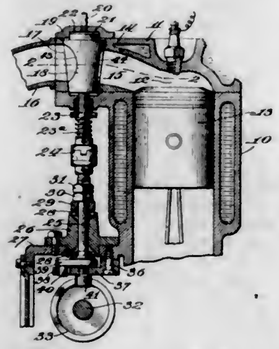
1,781,897. [WITHDRAWN.]

1,781,898. SNUBBER. ROLLIE B. FAGEOL, Los Angeles, Calif. Filed Oct. 16, 1926, Serial No. 141,924. Renewed Oct. 21, 1929. 20 Claims. (Cl. 267—53.)



1. In combination with a multi-leaf spring, a plurality of resilient members separately bearing against the exposed overlapping faces of the spring leaves, and means for clamping said members against said exposed faces whereby yieldable friction will be produced between the contacting faces of the several leaves.

1,781,899. PONTIC FOR BRIDGEWORK. BERNARD FISCHLER, Brooklyn, N. Y., assignor, by mesne assignments, to The Columbus Dental Manufacturing Co., Columbus, Ohio, a Corporation. Filed Dec. 17, 1924. Serial No. 756,511. 3 Claims. (Cl. 32—9.)



1. An artificial tooth having an integral root, and a flat oblique occlusally disposed end extending from the lingual to the labial face, and having undercut side walls, the undercuts increasing in depth toward the lingual face, a recess in the lingual face of the tooth intercepting said undercuts at their lingual end.

1,781,900. MATCH-STOCK-CUTTING APPARATUS. SAMUEL M. FRIEDE and FRANK J. MCGUIRE, Sarasota, Fla. Filed May 19, 1928. Serial No. 278,973. 4 Claims. (Cl. 164—68.)

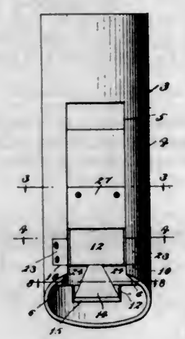
1. In a machine of the kind described, a rotary cutter comprising opposed rollers, one serving as a bearer for the stock and the cut off knives, and the other having spaced peripheral knives, a circumferential groove for each knife and a stripper spring in each groove extending circumferentially, said spring located between the knives and fixed at its middle portion.

1,781,901. OSCILLATING VALVE. JOSEPH GAMACHE, Los Angeles, Calif., assignor to Imperial Oscillating Valve Company, Las Vegas, Nev., a Corporation of Nevada. Filed Jan. 23, 1929. Serial No. 334,467. 4 Claims. (Cl. 123—81.)

1. In an oscillating valve, a valve carrying stem, a crank arm projecting from the lower end of said stem,

a lever fulcrumed at one end and having a pin and slot connection with said crank arm, a roller journaled on said lever between its fulcrum and the pin and slot connection with said crank arm, and a cam for engaging and actuating said roller.

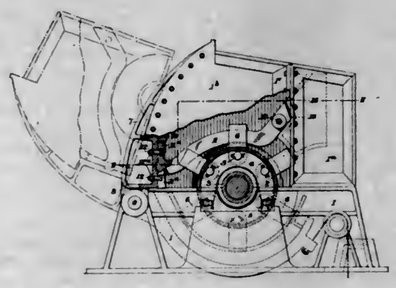
1,781,902. MANIFOLDING. EDWIN R. GILL, Jr., Yonkers, N. Y. Filed Jan. 15, 1929. Serial No. 332,697. 9 Claims. (Cl. 282—26.)



1. The method of manifolding which consists in respectively providing the surfaces of two sheet members with chemical reagents which are capable of reacting with each other to form an ink, superposing said sheets with the reagent surfaces in contact and impressing written matter upon the outer surface of one of said sheets with pressure sufficient to bring said reagents into intimate contact with each other.

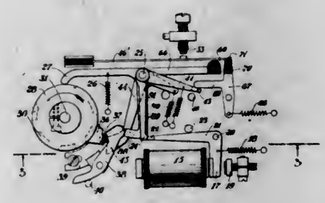
5. In a manifolding system, superposed contacting sheets, the contacting surfaces being respectively provided with reagents capable of reacting when in intimate contact to form an ink.

9. The method of printing which consists in respectively providing the surfaces of two sheet members with chemical reagents which are capable of reacting with each other to form an ink, superposing said sheets with the treated surfaces in contact and applying to one of said sheets concentrated pressure along a line or lines of the shape of a legible character to bring the reagent materials which are subjected to such pressure into sufficiently intimate contact to cause them to react.



1,781,903. WELL TOOL. ARTHUR A. HELMECKE, Bay City, Tex. Filed Aug. 28, 1929. Serial No. 389,031. 6 Claims. (Cl. 294—86.)

1. A tool of the class described comprising a cylinder, a barrel slidable therein, a pair of plates slidably connected with the barrel, cooperating means carried by the barrel and plates for sliding the plates toward each other during upward sliding movement of the barrel within the cylinder.

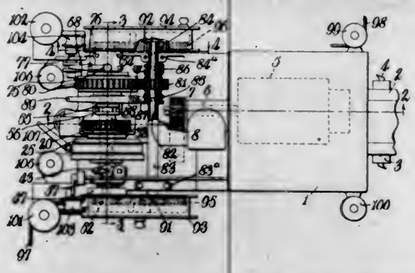


1,781,904. HAMMER MILL. CHARLES A. JAMISON, Philadelphia, Pa., assignor to Pennsylvania Crusher Company, New York, N. Y., a Corporation of New York. Filed June 30, 1928. Serial No. 289,503. 14 Claims. (Cl. 83—11.)

1. A crushing structure comprising a hopper for the material to be crushed having its bottom made up of spaced bars in the form of a grate, rotary beaters adapted to pass between the bars of said grate into said hopper, a pivotally mounted support for the bars of said grate to

which they are fixed at a point adjacent said pivot, and a transverse support upon which the opposite ends of said grate bars may freely rest.

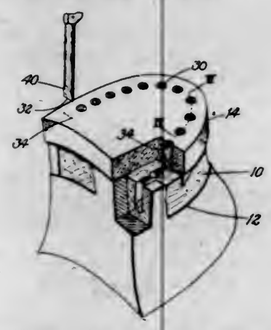
1,781,905. PRINTING TELEGRAPHY. EDWARD E. KLEINSCHMIDT, Chicago, Ill., assignor, by mesne assignments, to Teletype Corporation, Chicago, Ill. Filed Mar. 7, 1922, Serial No. 541,745. Renewed Dec. 1, 1928. 42 Claims. (Cl. 178—33.)



1. In a selective system, rotary means, means for arresting rotation of said rotary means, means for adjusting the position of said arresting means while said rotary means is in rotation to change the position in which said rotary means is brought to rest thereby, and means controlling said arresting means to initiate rotation of said rotary means.

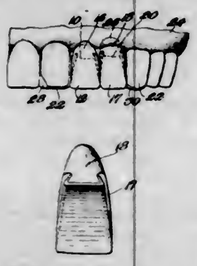
25. A receiving selector comprising a single magnet; a shaft and means for rotating the same, means controlled by the energization of said magnet for mechanically stopping the rotation of said shaft and by the de-energization thereof for permitting rotation of said shaft; means actuated by said shaft during the rotation thereof for successively setting a plurality of selector members; and means controlled by the energization of said magnet for interfering with the successive setting of said selector members by said shaft actuated means.

1,781,906. MINING MACHINE. LOUIS A. MAXSON, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Aug. 31, 1925, Serial No. 53,555. Renewed June 3, 1929. 17 Claims. (Cl. 262—30.)



1. In a mining apparatus, feeding means including a feed operating member adapted to cooperate directly with flexible feeding means, driving means for said feed operating member, an exclusively braking means for said feed operating member for holding said member against movement or to permit said member to rotate under frictional resistance when said member is disconnected from said

driving means, and separate transmission connections between said feed operating member and said braking and

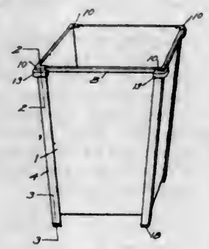


driving means respectively, the transmission connections between said feed operating member and said braking means comprising intermeshing gearing.

1,781,907. ATTACHMENT OF TOP LIFTS TO WOOD HEELS. DENNIS J. SULLIVAN, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 28, 1927. Serial No. 194,986. 6 Claims. (Cl. 12—147.)

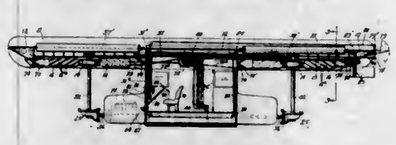
1. That improvement in methods of attaching top lifts to wood heels which comprises holding a top lift and a wood heel in assembled relation, making holes through the top lift into the wood of the heel with an awl having a chisel point positioned with its edge extending in a direction substantially normal to the edge of the heel, and inserting fastenings in the holes thus formed.

1,781,908. ARTIFICIAL TOOTH. ALFRED E. VONGUNTEN, Hamilton, Ontario, Canada, assignor, by direct and mesne assignments, to The Columbus Dental Manufacturing Company, Columbus, Ohio. Filed Dec. 18, 1923. Serial No. 681,371. 12 Claims. (Cl. 32—9.)



1. An artificial tooth having an integral root and comprising a metal backing, means for supporting the backing in proper position with the metal clear of the gum line arranged to have its incisal surface bear the entire biting stress, a facing adapted to simulate a natural tooth and having external grooves for engaging the backing and adapted to be cemented thereto, whereby the use of anchoring pins is eliminated.

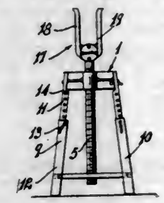
3. An artificial tooth comprising a facing having an integral root extension and a crown portion, said crown portion being provided with a labio-occlusally inclined surface, a tenon projecting from said inclined surface and having its vertical sides under cut; said tenon being of greater depth at the lingual end than at the labial end; a cusp plate, said cusp plate being provided with a mortise to fit said tenon.



10. A pontic comprising a root tooth and a cusp, a key integral with an on the occlusally directed surface of the tooth having sides sloping inwardly toward each other from the incisal end toward the lingual face of the tooth and wedgedly engaging the cusp portion, said key and cusp terminating short of the gum line of the tooth.

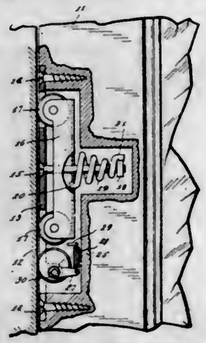
1,781,909. RECEPTACLE. JOB H. WILLSON, Erie, Pa., assignor to Penn Art Steel Works, Erie, Pa., a Corporation of Pennsylvania. Filed Jan. 27, 1927. Serial No. 163,966. 9 Claims. (Cl. 220—1.)

1. In a receptacle, the combination of the sides; panel strips along the sides; a corner cushion at the corner of the receptacle above the panel strip; and a securing plate having a downturned flange extending downwardly, the outer faces of the flange being in face contact with the inner faces of the panel strip and having upwardly extending serrations projecting into the cushion.



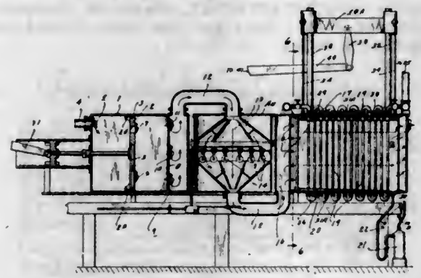
1,781,910. FLYING MACHINE. SEVERIN C. ANKERHOLTH, Los Angeles, Calif. Filed Sept. 25, 1928. Serial No. 308,230. 15 Claims. (Cl. 244—15.)

1. In a flying machine, a body, a cabin carried thereby, a propeller mounted therein to turn about a vertical axis, a motor for driving said propeller, shutters above said propeller and adjustable to regulate the suction of air downwardly by said propeller, and adjustable members to form pockets in horizontal alinement with said propeller, whereby air from said propellers laterally will impact in one of said pockets and move said flying machine horizontally.



1,781,911. ADJUSTABLE SCAFFOLDING. HOWARD BALL, Long Beach, Calif. Filed Dec. 4, 1929. Serial No. 411,486. 4 Claims. (Cl. 304—4.)

1. An adjustable scaffolding comprising a head formed as a metal casting, flanges on both sides of the head, pairs of legs depending from each side of the head, said legs being formed of structural angles, means pivotally securing the legs to the flanges, a post extending through the

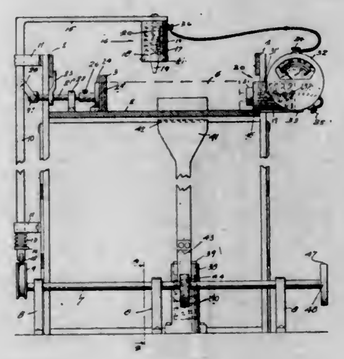


head and a latch pivotally mounted in the head, the inner end of said latch engaging the post, and a rest on the upper end of said post.

1,781,912. SASH HOLDER. STANLEY BARNES, Indianapolis, Ind., assignor to Barnes Sash Holder, Inc., Indianapolis, Ind., a Corporation of Indiana. Filed Aug. 7, 1925. Serial No. 48,698. 5 Claims. (Cl. 292—15.)

1. In combination with a window sash and its associated casing, the end face of such sash being provided with a recess, a plate bridging such recess and secured to said sash, a member located in such recess, a screw passing inward through said plate and said member, a nut on the inner end of said screw, rollers rotatably mounted on said member on opposite sides of said screw and adapted to engage said casing, and a coil spring surrounding said screw and acting between said nut and said member for forcing said rollers into engagement with said casing, the ends of said coil spring engaging said member and said nut to prevent relative rotation between them.

1,781,913. HEAT-EXCHANGE APPARATUS. FRANK BATTER, Linnton, Oreg. Filed July 14, 1925. Serial No. 43,544. 2 Claims. (Cl. 257—9.)

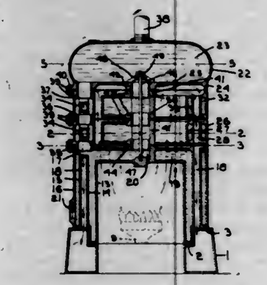


1. In a device of the class described, a warming chamber having openings disposed through its top and bottom,

conical shaped baffles attached within the chamber and in spaced relation, the upper baffle having its top side downwardly sloping and having an opening at the apex of the cone in registrable alignment with the top opening in the chamber, the lower baffle having its top side upwardly sloping and having an opening at the apex of the cone in registrable alignment with the bottom opening in the chamber, secondary baffles disposed within the primary baffles in spaced relationship with them and with each other, each baffle in similar position respecting the openings in the chamber and the primary baffles, heat radiating means disposed between these baffles in spaced relation, the upper group of baffles acting as diffusers, the lower group acting as concentrators, conduits removably secured to the openings in the chamber permitting the passing of air into and from the chamber.

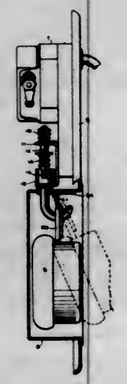
2. In a device of the class described, in an apparatus for extracting moisture from the air, a condensing chamber having a plurality of vertically extending tubes in spaced relationship with dividing walls disposed therebetween, U shaped tube connections removably secured to the upper and lower ends of the tubes, packing means associated therewith, wiping means for the tubes comprising a plurality of vertically extending bars having associated with each pair of bars a horizontally positioned group of wiping rings connected at the lower ends of the respective bars, the upper ends of such bars being attached to reciprocating means for imparting vertical movement to said bars.

1,781,914. ELECTRIC-CELL-TESTING MACHINE. VICTOR T. COMER, San Francisco, Calif. Filed Feb. 26, 1927. Serial No. 171,346. 9 Claims. (Cl. 175—183.)



2. In combination an electric cell, an inclined guide, an electrical measuring instrument related to the guide, means to block the movement of the cell, means to momentarily clamp the cell said clamping means comprising a stationary contactor, to be supported on the guide, a clamping disc slidably disposed on the guide opposite said contactor, a movable contactor operatively connected to said disc, means to reciprocate said disc and the movable contactor and to reciprocate said blocking means; and means to electrically connect said contactors to said instrument.

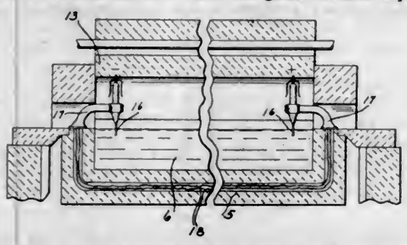
1,781,915. SECTIONAL LIQUID-HEATING APPARATUS. WILLIAM A. CROSS, East Milton, Mass. Filed May 7, 1928. Serial No. 275,603. 14 Claims. (Cl. 122—214.)



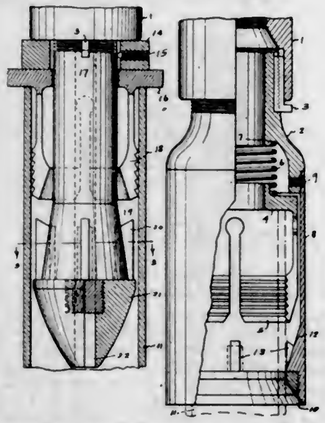
1. A sectional liquid heating apparatus comprising a fire-box having a water leg, conduits forming a spider, converging from the upper end of the water leg into a central hollow column, a wall section superimposed upon said water leg comprising inner and outer communicating chambered walls spaced apart to provide a flue therebetween,

conduits, communicating with said water leg and the chambers of said wall section, a chambered dome superimposed upon said wall section adapted to direct the products of

combustion downwardly into said flue, means respectively establishing communication between said dome and said central column and said water leg, and means to direct the products of combustion from said flue to a stack.



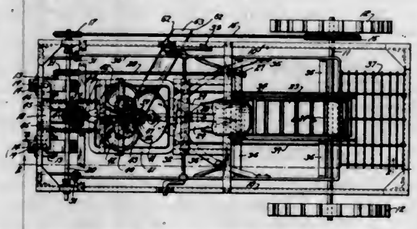
1,781,916. TELEPHONE SUBSTATION EQUIPMENT. JOHN A. DICKMAN, Rochester, N. Y., assigner to The Stromberg-Carlson Telephone Manufacturing Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 5, 1929. Serial No. 397,563. 5 Claims. (Cl. 179—161.)



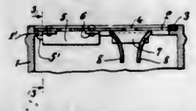
1. In telephone substation equipment, a support, electrical contacts mounted on said support, a switch-hook movably mounted in said support to actuate said contacts, a telephone receiver normally suspended from said switch-hook to move the same to its normal position, said receiver engaging said support to hold said switch-hook in its normal position, and means to move said switch-hook to its opposite position when said telephone receiver is removed therefrom.

1,781,917. HEATING MEANS FOR SHEET-GLASS APPARATUS. JOHN L. DRAKE, Toledo, Ohio, assignor to Libbey-Owens-Ford Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 17, 1926. Serial No. 148,789. 18 Claims. (Cl. 49—53.)

1. In glass apparatus, a receptacle adapted to contain a mass of molten glass, an electrical heat resistance element for heating said glass, and a plurality of electrodes acting to automatically lessen the heating effect of said heat resistance element when the glass reaches a predetermined temperature, said electrodes then functioning to effect a heating of the glass whereby to maintain it at such predetermined temperature.

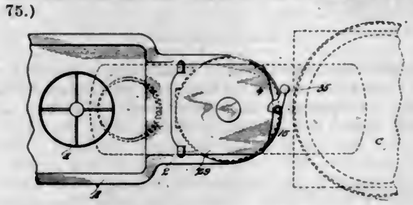


1,781,918. PIPE-PULLING MACHINE. CHARLES R. EDWARDS, Houston, Tex. Original application filed Feb. 20, 1923, Serial No. 620,240. Divided and this application filed Sept. 6, 1927. Serial No. 217,731. 37 Claims. (Cl. 294—96.)



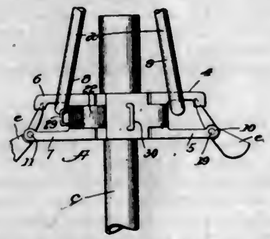
1. A releasable pipe puller including a member having a tapered slip seat, a slip support, a slip carried by said support and adapted to engage the pipe to be pulled and having a tapered seat, said member being movable into one position relative to said slip to bring said seats into cooperating relation whereby the slip is forced into secure engagement with the pipe, said member being movable into another position to carry said seats out of cooperating relation to permit said slip to release said secure engagement with said pipe.

1,781,919. BEET HARVESTER. LEWIS W. EVERSMAN, Julesburg, Colo. Filed Dec. 19, 1927. Serial No. 240,971. 4 Claims. (Cl. 55—9.)



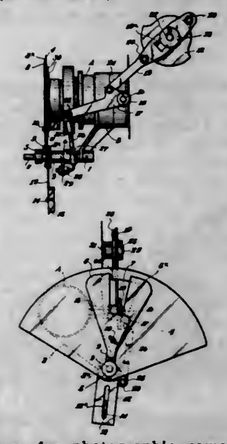
1. A beet digging and topping machine comprising a substantially rectangular fixed frame; guide wheels at the forward extremity of said fixed frame; power wheels adjacent the rearward extremity of said fixed frame, all of said wheels acting to support said fixed frame in a substantially horizontal position; a vertically hinged frame within said fixed frame, the hinge point being adjacent the forward extremity of both said frames; a floating frame positioned within said hinged frame, said latter frame being hinged from said fixed frame for both vertical and horizontal movement; digging means carried by said hinged frame; guiding means carried by said floating frame; and topping means carried by said floating frame.

1,781,920. SAVINGS BANK. EDWARD J. FISHER, Jackson Heights, N. Y., assignor to Lavender Line, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 8, 1929. Serial No. 398,126. 7 Claims. (Cl. 232—4.)



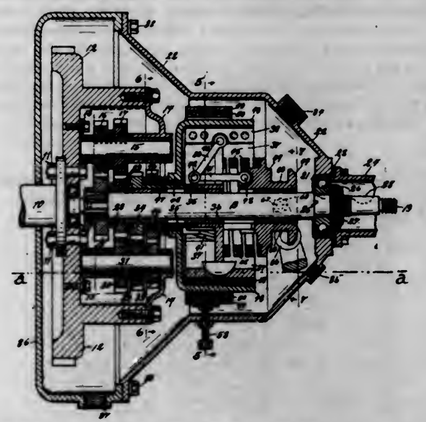
1. In a receptacle provided with an opening at the top for the admission of specified articles thereinto, a guard for said opening comprising two plates mounted within said receptacle under said opening for limited rotation about axes which are above the centers of gravity of said plates when said receptacle is in its upright position and having transversal cross sections curved away from said opening.

1,781,921. LAUNDRY APPARATUS. BENJAMIN E. GETZ, Morton, Ill. Substitute for application Serial No. 178,187, filed Mar. 25, 1927. This application filed Nov. 17, 1927. Serial No. 234,020. 15 Claims. (Cl. 210—75.)



1. In combination, a centrifugal extracting member, a casing for said member and a housing connected with said casing and arranged to receive water expelled from said member, said housing and casing adapted for manual and circumferential adjustment about said member, and a drain board connected with said housing and movable therewith whereby to selectively discharge water at different points about said extracting member.

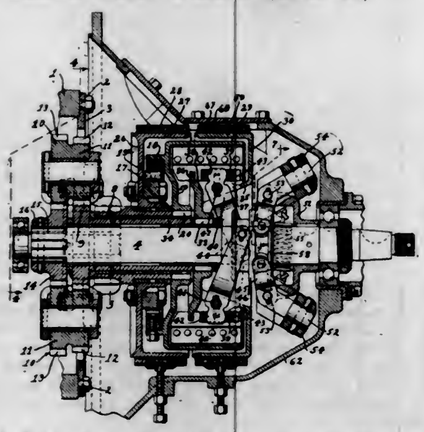
1,781,922. WELL ELEVATOR. JOHN GRANT, Los Angeles, Calif., assignor, by mesne assignments, to Byron Jackson Co., West Berkeley, Calif., a Corporation of Delaware. Filed Jan. 11, 1923. Serial No. 611,978. Renewed July 17, 1926. 4 Claims. (Cl. 294—90.)



1. A device of the character disclosed including suspension means, a member adapted to be applied to work and provided with spaced arms adapted to receive said suspension means; in combination with movably mounted means normally closing the space between said arms and adapted to move to open said space upon engagement by said retaining means with an object on the movement of said device in one direction; said last named means comprising a finger mounted upon one of said arms and provided with a projection for causing movement of the finger; further means being provided for releasably locking said finger in one position.

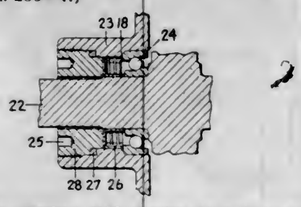
1,781,923. SHUTTER FOR PHOTOGRAPHIC CAMERAS. SIDNEY HIRSCH, New York, N. Y., assignor to Photomaton Inc., New York, N. Y., a Corporation of New York. Filed Mar. 29, 1928. Serial No. 265,616. 2 Claims. (Cl. 88—19.3.)

1. In shutters for photographic cameras, a primary shutter member formed with an intermediate image aperture and a lens shielding portion at each side of said aperture, a fan blade mounted on the shutter member for adjusting the size of the image aperture, a rotary shaft, a cam on the shaft, a cam arm, and lever and link connections intermediate the arm and the primary shutter member.



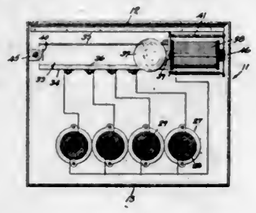
1,781,924. STRAIGHT-LINE TRANSMISSION. JAMES A. JOHNSON, Los Angeles, Calif., assignor to Annie W. Stimson, Los Angeles, Calif. Filed Aug. 20, 1927. Serial No. 214,338. 6 Claims. (Cl. 74—84.)

1. In a planetary transmission mechanism, the combination of a driving member, a planetary cage carried



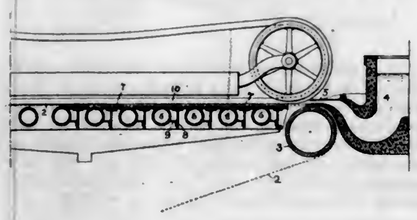
thereby with planetary gear wheels, two coaxial members mounted to rotate on a common axis of rotation with means for driving the same through said gears to rotate them respectively at different speeds on their axes, a weak friction connection associated with said coaxial members to resist first, and then prevent, without stopping their relative rotation, said friction connection including a drum rotating in unison with one of said two coaxial members and friction shoes mounted for rotation with the other of said two coaxial members, hand-controlled means for pressing the shoes against the drum with a constant force, and a driven shaft driven through said gears, said parts co-operating to drive the driven shaft at a reduced speed through the gears when the said friction connection permits relative rotation between the said shoes and the said drum, and operating to drive the shaft at the same speed as the driving member when said shoes lock with the drum and prevent relative rotation of said two coaxial members.

1,781,925. TRANSMISSION MECHANISM. JAMES A. JOHNSON, Los Angeles, Calif., assignor to Annie W. Stimson, Los Angeles, Calif. Filed Aug. 27, 1928. Serial No. 302,182. 17 Claims. (Cl. 74—34.)



1. In a transmission mechanism, the combination of a driving-member, a driven-shaft, a planetary reduction-gearing between the driving-member and the driven-shaft for driving the driven-shaft at a reduced speed-ratio, hand operated means capable of assuming a starting position to cause the planetary reduction gearing to drive the driven shaft at the reduced speed ratio in commencing the transmission of movement through the transmission mechanism, and automatic means controlled by the speed of the driven shaft operating while the said hand-operated means is maintained in said starting position, for ceasing the driving at the reduced speed ratio and effecting the driving of the driven shaft at a higher speed.

1,781,926. PACKING. BRYAN P. JOYCE, Davenport, Iowa. Filed July 16, 1927. Serial No. 206,210. 2 Claims. (Cl. 286—7.)



1. A packing member, said member having an annular sealing surface adapted to contact a polished, relatively movable part, said sealing surface consisting of large segments of tin between narrow radial bands of harder metal which extend entirely across the annular surface.

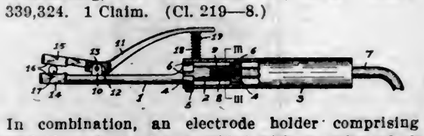
1,781,927. SIGNAL DEVICE. JOSEPH W. KLEIN, Los Angeles, Calif., assignor to The Electric Signal Company, Limited, Los Angeles, Calif., a Corporation of California. Filed May 21, 1929. Serial No. 364,817. 5 Claims. (Cl. 177—7.)

5. A signal device comprising in combination a track having a rail of conducting material and a rail of non-conducting material, a plurality of contact members on the non-conducting rail, a bridging piece on the track and movable therealong to bridge between said contact members and said conducting rail, said track being inclined relative to said bridging piece whereby said bridging piece is normally biased by gravity to one end of said track, electromagnetic means for producing an impact upon said bridging piece to move the same along the track against the force of gravity, a plurality of electromagnetically operated sound producing devices and circuits therefor each connected to one of said contact members.

1,781,928. PAPER-MAKING MACHINE. HARRY LIEBECK, Swarthmore, Pa., assignor to Scott Paper Company, a Corporation of Pennsylvania. Filed Sept. 27, 1928. Serial No. 308,698. 4 Claims. (Cl. 92—44.)

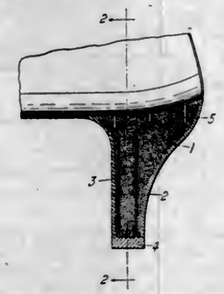
1. In a paper making machine of the Fourdrinier type, the combination with a wire apron, tube rolls, press roll and head-box, with a plurality of transversely arranged closure plates intermediate of adjacent tube rolls to provide obstruction to the flow of water through the apron and downward between the tube rolls, said closure plates formed of nonmetallic material and upon which the apron is supported and guided, and transversely arranged metallic frames sustained at their ends and forming an intermediate support for the nonmetallic closure plates.

1,781,929. UNDERGARMENT FOR WOMEN. MARY D. NEILSON, Minneapolis, Minn. Filed Apr. 20, 1927. Serial No. 185,167. 1 Claim. (Cl. 2—73.)



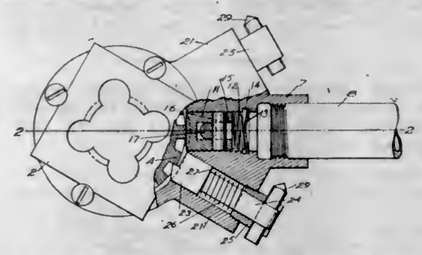
An undergarment slip for women comprising a single front piece having upwardly-converging upper side edges and substantially parallel lower side edges, an upper back piece narrower in width than the upper portion of the front piece with correspondingly converging side edges sewed to the upper side edges of the front piece and extending to a

point substantially at the hip line of the wearer, and a pair of lower back pieces each having an edge connected with



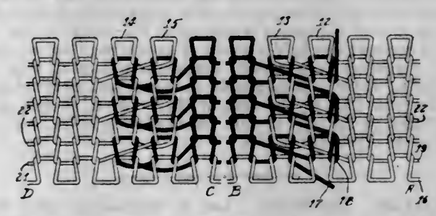
a lower side edge of the front piece and being sewed along their parallel upper edges in overlapping relation to the lower edge of the upper back piece.

1,781,930. ELECTRODE HOLDER. PAUL L. ORR, Wilkinsburg, Pa. Filed Feb. 12, 1929. Serial No. 339,324. 1 Claim. (Cl. 219—8.)



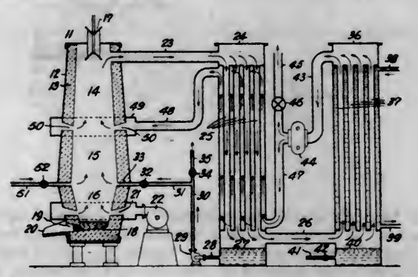
In combination, an electrode holder comprising an electrical conductor bar provided with an enlarged clamping jaw at the forward end thereof, the rear end of said conductor being formed to provide a connecting shank having a pair of circumferentially extending shoulders disposed at respective ends of the latter, a tubular insulating handle detachably mounted on said pair of shoulders and spaced from said connecting shank, a lever provided with a clamping jaw at its forward end and having an enclosed pivotal connection with said conductor bar, a spiral spring seating on said insulating handle and engaging said lever for normally shifting and maintaining the clamping jaw of the latter in the clamping position with the clamping jaw of the said conductor bar, means formed in said conductor bar for connecting the latter with the source of electrical supply, said pair of shoulders being provided with a plurality of transversely extending grooves establishing air passages to said insulating handle, the opposed faces of said clamping jaws being flat and roughed to augment their gripping action.

1,781,931. HEEL FOR FOOTWEAR. WILLIAM A. OWEN, Akron, Ohio. Filed Jan. 26, 1929. Serial No. 335,158. 2 Claims. (Cl. 36—35.)



1. A high heel for footwear comprising a body portion of hard, cellular rubber, a reinforcement comprising a metal tube extending down through the shank thereof, said tube being completely supported in said cellular rubber, an integral veneer of hard rubber about the body portion, and a lift of comparatively soft rubber vulcanized to the bottom of the heel.

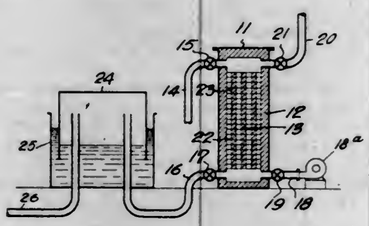
1,781,932. DIESTOCK. THORVALD PETERSEN, Erie, Pa., assignor to Reed Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed Apr. 14, 1928. Serial No. 270,106. 4 Claims. (Cl. 192—48.2.)



1. In a die stock, the combination of a carrier having a shank, said shank having a locking groove and ratchet teeth; a driving ring on the shank; a driving pawl socket in the ring; a driving pawl in the driving pawl socket operating on the ratchet teeth; a locking pawl socket in the ring; and a locking pawl in said locking socket operating in the groove.

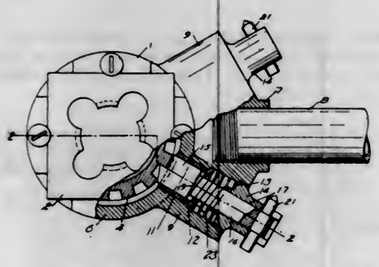
1,781,933. SUTURE. WALTER F. ROLSTON, Rockford, Ill., assignor, by direct and mesne assignments, of one-half to Burson Knitting Company, Rockford, Ill., a Corporation of Illinois. Filed Nov. 11, 1926. Serial No. 147,674. 6 Claims. (Cl. 66—179.)

1. A suture between two knit fabrics comprising two adjoining wales in which the yarn of one fabric alternates with the yarn of the other fabric, each yarn being crossed upon itself by being knit successively in said two wales but in opposite strokes.



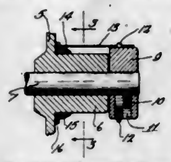
1,781,934. PROCESS OF DISTILLING MATERIAL AND CRACKING OIL. FREDERICK T. SNYDER, New Canaan, Conn. Filed June 8, 1925. Serial No. 35,804. 10 Claims. (Cl. 202—6.)

1. A process of obtaining volatiles from distillable solid carbonaceous material, which comprises, feeding an auto-



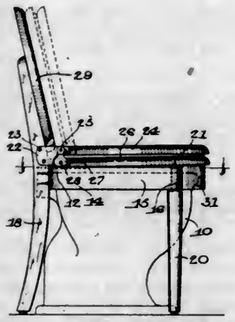
thermic retort with the solid material, distilling said material by passing in contact therewith hot non-oxidizing gas, burning the solid residue from said distillation in the base of said retort with a blast of air to supply said non-oxidizing gas and the heat required for distillation, fractionally condensing the vapours evolved by the distillation operation, injecting the heavier fractions at a point above the zone of combustion into the solid material undergoing distillation to act as part of a cooling fluid and to undergo cracking and distillation, heating the uncondensed gases and injecting them, at a point above the point of injection of said heavier condensate, into said solid material undergoing distillation to aid the distillation.

1,781,935. PRODUCTION OF HYDROGEN. FREDERICK T. SNYDER, New Canaan, Conn. Filed Dec. 16, 1925, Serial No. 75,795, and in Canada Mar. 12, 1925. 7 Claims. (Cl. 23—212.)



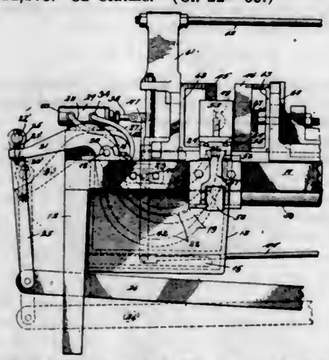
1. A process of making hydrogen by decomposing hydrocarbon gas, which comprises passing the gas in contact with refractory material of increasing temperature with exclusion of air, the maximum temperature of said material being above the decomposing temperature of said gas, and then of decreasing temperature, the decomposition being accompanied by deposition of carbon near the material of maximum temperature, subsequently burning said deposited carbon with heated air to re-heat said material, and absorbing part of the heat of the products of said combustion in the part of said material with which said gas initially came in contact.

1,781,936. DIESTOCK. LEO V. STOELTZLEN, Erie, Pa., assignor to Reed Manufacturing Company, Erie, Pa., a Corporation of Pennsylvania. Filed Apr. 14, 1928. Serial No. 270,101. 12 Claims. (Cl. 192—43.2.)



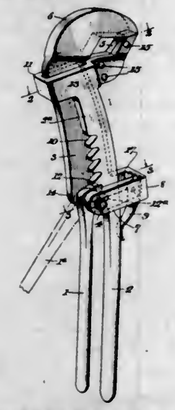
1. In a die stock, the combination of a carrier having a shank, said shank having ratchet teeth thereon and a locking pawl receiving groove; a handle ring on the shank; a locking pawl mounted in the ring and projecting into said pawl receiving groove; and a driving pawl carried by the ring and acting on said ratchet teeth.

1,781,937. FILM SPROCKET STRUCTURE. ALEXANDER FERDINAND VICTOR, New York, N. Y. Filed July 18, 1929. Serial No. 379,303. 7 Claims. (Cl. 74—31.)



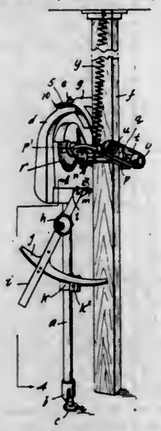
1. A device of the kind described comprising a rotatable spindle, a cylindrical body mounted thereon and provided with a plurality of radial teeth adapted to engage perforations in one margin of a motion-picture film, and a guide spaced from and independent of said body for supporting and guiding the opposite margin of the film.

1,781,938. CLOSET CHAIR. EUGENE A. ZUNDEL, Chicago, Ill. Filed Oct. 4, 1926. Serial No. 139,445. 8 Claims. (Cl. 4—134.)



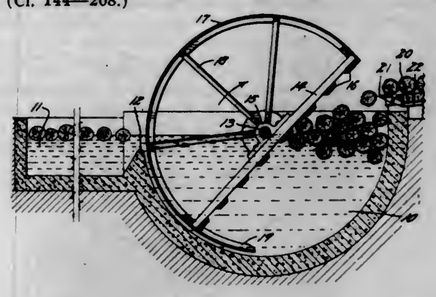
1. In a closet chair, the combination, with a closet bowl having apertures at its rear portion opening upwardly, of a chair frame disposed over said bowl and having supporting legs, and depending members at the rear portion of said frame entering said apertures to position said frame with respect to the bowl and to support said frame against lateral movement.

1,781,939. MULTIPLE-MIXTURE DIE-CASTING METHOD AND MACHINE. AXEL AKERS, Chicago, Ill., assignor to Quality Hardware & Machine Corporation, Chicago, Ill., a Corporation of Illinois. Filed Aug. 11, 1927. Serial No. 212,178. 32 Claims. (Cl. 22—69.)



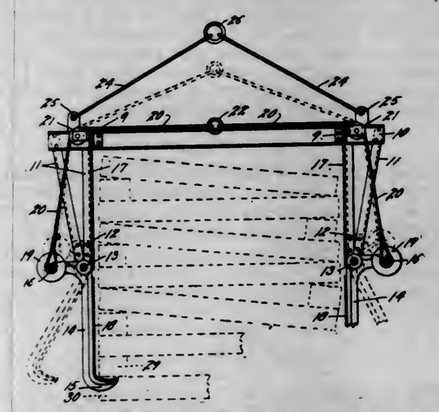
3. A die casing machine having a plurality of melting furnaces, each having movable metal containers, a mold having a cavity with means for successively enlarging the same, the containers being adapted to be simultaneously brought into position to inject different fluid metals from the furnaces into the cavity under pressure, said mold having separable parts, the joints between which are sealed by the metal upon the injection from the first container to expel air from the mold cavity whereby to establish a partial vacuum within the cavity and prevent oxidation of the exposed surface of the metal upon the enlargement of the cavity and the proper fusion of the second metal therewith.

1,781,940. WRENCH. LON DE MOSS ANDERSON, Cross Cut, Tex. Filed July 2, 1928. Serial No. 289,916. 2 Claims. (Cl. 81—86.)



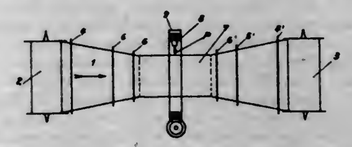
1. A wrench comprising a handle with toothed rack and an end jaw and a sleeved engagement with a movable jaw, a toothed lever pivoted on the movable jaw and engageable with the rack, the sleeved engagement being such as to permit a racked jaw to move into and out of engagement with the toothed lever and means for normally maintaining it in engagement therewith.

1,781,941. SAW GRINDER. EDWARD P. ARMSTRONG, Portland, Oreg. Filed May 28, 1927. Serial No. 195,007. 3 Claims. (Cl. 76—40.)



1. In combination with a saw-tooth grinder, a saw-blade support comprising, a supporting arm pivoted at one end to the floor, a post carried by the free end of said arm, an offset extension on said post to a point above the grinding wheel of the grinder, said extension having a lateral projection, a bracket to which the upper end of said extension is pivoted, the axes of the said two pivots coinciding, a pendent arm pivoted at its upper end to the said lateral projection, and means adjustable on said pendent arm for clamping the saw-blade thereon.

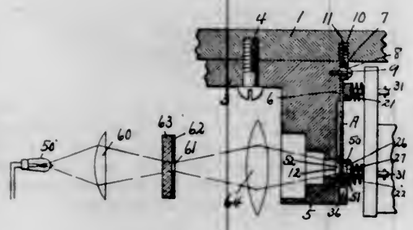
1,781,942. PROCESS AND APPARATUS FOR BARKING LOGS. ORLO A. BARTHOLOMEW, Kansas City, Mo. Filed Mar. 14, 1929. Serial No. 346,943. 7 Claims. (Cl. 144—208.)



1. A device for removing the bark from logs comprising: a tank adapted to contain water; a shaft extending longitudinally of said tank; cross members carried by said shaft; and means for oscillating said shaft so that said cross members will force said logs alternately below the surface in said tank at opposite sides thereof.

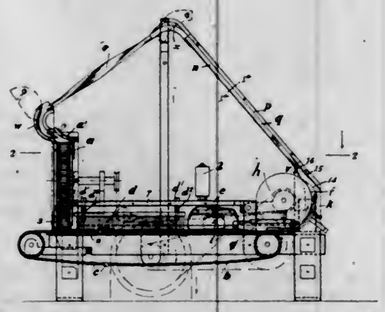
1,781,943. CRANE-OPERATED DEVICE. ORLO A. BARTHOLOMEW, St. Louis, Mo. Filed May 11, 1929. Serial No. 362,153. 5 Claims. (Cl. 294—63.)

1. A crane operated device for engaging piled material comprising: a top frame; sides depending downwardly from said top frame; and hook members hinged to the lower extremity of said sides and arranged to swing inwardly to support the load between said sides; and counterweights arranged to swing said hook members inwardly.



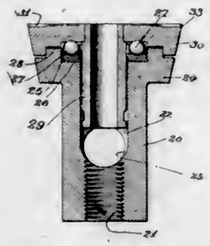
1,781,944. DEVICE FOR RECORDING DOCUMENTS TRANSMITTED BY RADIO. EDOUARD BELIN, Paris, France. Filed Nov. 2, 1929, Serial No. 404,458, and in France Nov. 10, 1928. 4 Claims. (Cl. 178—14.)

1. In a device for recording documents transmitted by radio the combination of a paper strip, means for impart-



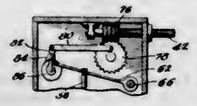
ing linear displacement to said strip, means for forming a cylindrical shape of a portion of said strip, a rotary ring surrounding said cylindrical portion, a stylus in said ring for said strip, and a worm for imparting rotary motion to said ring.

1,781,945. TALKING-PICTURE MACHINE. THEODORE WILLARD CASE, Auburn, N. Y., assignor to Case Research Laboratory, Inc., Auburn, N. Y., a Corporation of New York. Filed Mar. 14, 1928. Serial No. 261,611. 9 Claims. (Cl. 179—100.3.)



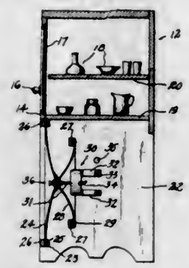
1. In an apparatus for producing or reproducing sound pictures in connection with a record element having or adapted to have a narrow sound record thereon, a body portion having a track upon which the film is adapted to ride, means for holding the record element in contact with the track and said track formed with a longitudinal channel underlying the portion of the record element which bears the sound record but positioned to one side of that portion of the record element which bears the picture.

1,781,946. MACHINE FOR CLEANING THE MATRICES FOR TYPE SETTING AND CASTING MACHINES. KARL CHRISTEL, Taucha, Germany. Filed Feb. 26, 1927, Serial No. 171,320, and in Germany Feb. 27, 1926. 8 Claims. (Cl. 15—77.)



1. A machine for cleaning matrices for type setting and casting machines, comprising a frame, a feeding channel at one end of said frame, means for cleaning the matrices including a rotatable disc at the other end of said frame, a conveyor to deliver matrices to said disc, to be cleaned, a gabled return channel for said matrices and guiding means to direct the matrices from the conveyor to the return channel, whereby said matrices upon being thrown by the centrifugal force of the rotating disc will travel through the return channel to the feeding channel.

1,781,947. POTTERY KICK-OUT ELEMENT. IRVEN F. DAINS, Monmouth, Ill., assignor to Western Stoneware Company, Monmouth, Ill., a Corporation of Maine. Filed Nov. 18, 1927. Serial No. 234,070. 24 Claims. (Cl. 25—28.)



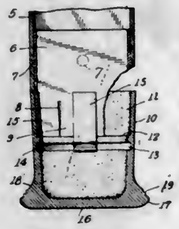
1. The combination with a pottery molding machine mold, of a rotatable core adapted to be projected therein, a kickout member positioned to be projected into said mold, and a rotatable head supported on said kickout member for co-action with said rotatable core to mold a material in said mold.

1,781,948. LUBRICATING SYSTEM. ERNEST W. DAVIS, Oak Park, Ill., assignor to Alemite Corporation, Chicago, Ill., a Corporation of Delaware. Filed July 16, 1925. Serial No. 43,993. 3 Claims. (Cl. 184—7.)

1. The combination with an automotive vehicle chassis comprising a frame and an axle movable with respect thereto, of a lubricating device mounted on said axle comprising resilient means for storing energy, a transmission for tensioning said resilient means and then suddenly releasing it, lubricant ejecting means actuated by the resilient means, said axle carrying rotatable parts, and a driving connection between said parts and said transmission, said driving connection including a pawl and ratchet for permitting reverse movement of the vehicle with the actuation of said transmission.

1,781,949. AEROPLANE-CLOTH SPEAKER. ULYSSES GRIER, New York, N. Y. Filed June 26, 1928. Serial No. 288,409. 2 Claims. (Cl. 181—31.)

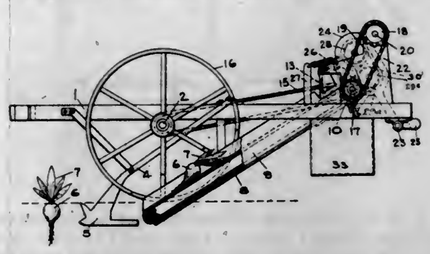
1. A device of the character described, including a cabinet, supporting means for the cabinet including a pair of side members, a main diaphragm of aeroplane cloth mounted at its edges on said side members and at its upper and lower ends on said cabinet, an auxiliary diaphragm to the rear of the main diaphragm, said main and auxiliary diaphragms being centrally perforated and connected together, and tensioned in opposite directions at the center, and being both stretched taut, along the elements thereof,



and means to transmit sound vibrations to the main diaphragm passing through the perforations in the diaphragms and engaging the same, there being a small fabric re-enforcement cemented to the main diaphragm about its perforation, said means including a pair of washers disposed at opposite sides of the diaphragms to clamp the same together and afford strong engagement therewith, said washers being perforated to permit the application of liquid cement therethrough to strengthen the diaphragms and to cement said re-enforcement to the main diaphragm as aforesaid.

1,781,950. TONGUE FOR SHOES. MATHEW HILGERT, New York, N. Y.; Lurelia Harper and Hazel M. Weiss administratrices of said Mathew Hilgert, deceased. Original application filed Feb. 15, 1923, Serial No. 619,131. Divided and this application filed Nov. 23, 1927. Serial No. 235,198. 6 Claims. (Cl. 36—54.)

1. A tongue for shoes having a stiffener comprising a sole leather base and a thin metallic strip secured to the outer side of the base by through-and-through fastenings and disposed so as to stiffen the tongue against bending laterally of the shoe.



1,781,951. FURNITURE SHOE. FRED JANTZEN, Bronx, N. Y. Filed May 7, 1928. Serial No. 275,568. 3 Claims. (Cl. 16—42.)

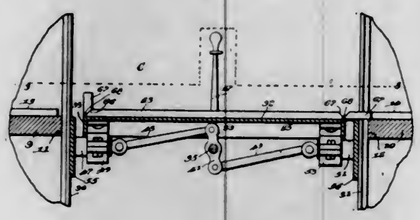
3. As a new article of manufacture, a shoe for the leg of a table or other piece of furniture, comprising an integral hollow one piece molded member provided with a downwardly tapering socket in the top of the same, whose walls have the roughness of the original molding to thereby wedge over and frictionally grip the surface of the furniture leg, said member having a wide flat continuous smooth bottom surface of substantially the full external dimensions of the article and thereby forming a continuous flat supporting surface equal to carrying the weight of the furniture without marring a floor surface of lineoleum or the like.

1,781,952. BEET HARVESTER. OTTIS M. MCGUIRE, Bridgeport, Nebr. Filed Apr. 5, 1928. Serial No. 267,642. 7 Claims. (Cl. 55—107.)

1. The combination with the rear end of a beet harvester conveyor on which beets are carried with their tops rearwardly disposed, of a topping mechanism, said topping mechanism comprising a constantly driven gear, a pivoted frame adjacent said gear, top gripping rollers carried by said pivoted frame, sprockets at opposite ends of the rollers, the sprockets at the ends of one of the rollers rotating therewith, the other sprockets being idly mounted, a drive gear carried by one of said rollers, sprocket chains extending over said sprockets, severing

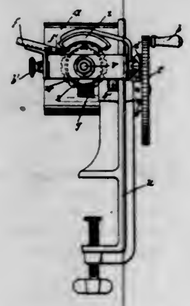
knives carried by the sprocket chains and means for driving said conveyor at a speed whereby the topping mechanism will be pivotally moved incident to the momentum of the beets projected against the same whereby the roller carried gear will be moved into mesh with the constantly driven gear for imparting movement to the knives and simultaneously rotating the rollers for gripping beet tops.

1,781,953. SHOE COUNTER. CHARLES MILLER, Long Island City, and MAX FEINSTEIN, Corona, N. Y. Filed Mar. 16, 1928. Serial No. 262,225. 13 Claims. (Cl. 36—68.)



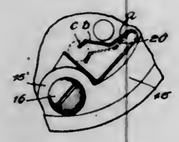
1. A counter for shoes, said counter being provided with a transverse cut extending from the bottom edge to a point substantially midway between the top and bottom, the adjacent edges of said counter at said cut being bevelled and in overlapping relation with each other when the counter is assembled in the shoe.

1,781,954. MANUFACTURE OF SULPHURIC ACID. HUGO PETERSEN, Berlin-Steglitz, Germany. Filed Feb. 24, 1927, Serial No. 170,663, and in Germany Mar. 20, 1926. 16 Claims. (Cl. 23—168.)



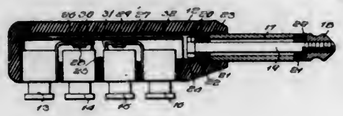
1. In the art of making sulphuric acid by the nitrogen-oxid method the step of oxidizing sulphurous acid gases which comprises passing said gases and nitrous vitriol of at least fifty-five degrees Bé. strength in the vertical direction in contact with each other and through packed reaction spaces, and regulating the flowing resistance through said spaces, so as to correspond to a pressure ranging from approximately one quarter millimeter to six millimeters water-column for each meter of said vertical flow, and keeping the nitrous strength of the vitriol at the bottom of said spaces within a limit of at least a quarter of the nitrous strength at the top of said spaces.

1,781,955. AUTOMOBILE DISPOSAL AND WITHDRAWAL STRUCTURE. WILLIAM J. PORTER, Spokane, Wash. Filed Nov. 14, 1928. Serial No. 319,281. 7 Claims. (Cl. 214—16.1.)



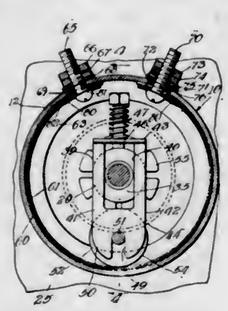
1. In an automobile storage disposal and withdrawal structure, opposed banks of floors spaced to form an intervening aisle therebetween, vertically disposed guide rails on the facing side of said floors, a car carrying platform movable in said aisle diagonally, vertically and horizontally thereof and having elongated shoes, and means for spreading said shoes against said rails to control or arrest said platform or contracting said shoes away from said rails to permit free movement of said platform between said rails.

1,781,956. HYGIENIC DENTAL BURR-CLEANING APPARATUS. ANDREAS RÜGAMER, Pforzheim, Germany. Filed Oct. 22, 1927, Serial No. 228,067, and in Germany Jan. 3, 1927. 1 Claim. (Cl. 15—21.)



A dental burr cleaning apparatus, comprising in combination, a cleaning brush journaled in a casing, a rest for the burrs to be cleaned, means to engage the burrs from their rest and feed them to said brush and means to rotate the burrs about their longitudinal axes when passing by the brush.

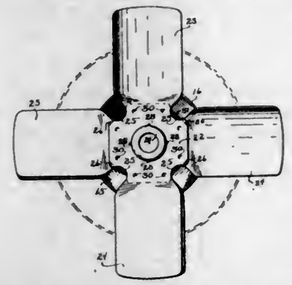
1,781,957. TUBE SOCKET. NEWTON C. SCHELLENGER, Elkhart, Ind., assignor to Chicago Telephone Supply Co., Elkhart, Ind., a Corporation of Delaware. Filed Mar. 13, 1925. Serial No. 15,224. 11 Claims. (Cl. 173—328.)



1. In combination, a mounting, a contact spring, a movable contact stud cooperating therewith, said spring including a pair of contact legs both of which are adapted to be engaged by said stud, and means on said mounting for holding one leg of the spring and forming an abutment for said leg, the other leg of the spring being free, the legs of the spring extending in the general direction of engaging movement of the contact stud and the free leg lying at an angle to the path of movement of the stud, said stud having means cooperating with said mounting for guiding the motion thereof with respect to said spring.

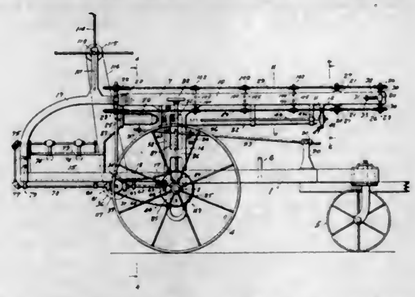
1,781,958. AUTOMATIC PLUG. NEWTON C. SCHELLENGER, Elkhart, Ind., assignor to Chicago Telephone Supply Co., Elkhart, Ind., a Corporation of Delaware. Filed Sept. 5, 1925. Serial No. 54,593. 7 Claims. (Cl. 173—361.)

1. In combination, a unitary housing having a centrally disposed opening and a plurality of openings offset from the central axis thereof, a plug assembly adapted for mounting in said centrally disposed opening, a plurality of jack members having sleeves adapted for mounting in the offset openings of said housing, clutch means wholly enclosed within said sleeves and adapted to act independently thereof, and means secured between the walls of said housing and said sleeves for electrically connecting said jacks with said plug assembly.



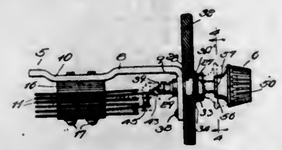
1,781,959. RHEOSTAT. NEWTON C. SCHELLENGER, Elkhart, Ind., assignor to Chicago Telephone Supply Company, Elkhart, Ind., a Corporation of Delaware. Filed Oct. 6, 1926. Serial No. 139,783. 12 Claims. (Cl. 201—55.)

11. In combination, an operating rod, a slotted collar on the rod, an arm disposed in the slot in the collar and slidable therein, a headed screw rigidly securing the collar to the rod, a lug on the arm, and a spring disposed between the lug and the head of the screw for yieldingly urging the arm away from the head of the screw.



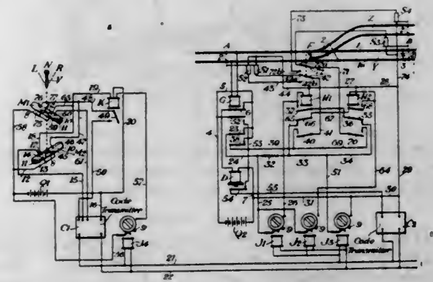
1,781,960. COMBINED FAN AND PULLEY. EDWARD SCHULTZ, Chicago, Ill., assignor to The Nagel-Chase Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 10, 1928. Serial No. 276,613. 6 Claims. (Cl. 170—159.)

1. In a device of the class described, two duplicate parts, each comprising a rectangular body portion, a fan blade formed on two opposite sides of said body portion, each having a width at a point where it joins said body portion less than the edge of said body portion to which it is formed; said part so proportioned that when the two duplicate parts are placed together the remaining sides



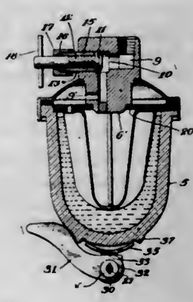
of the rectangular body portions without fan blades formed on them, each overlap and strengthen a portion of the fan blade adjacent to it.

1,781,961. BROOMCORN HARVESTER. AUGUSTUS SMITH, Denver, Colo., assignor to Catherine Teresa Daly and Mary Barbara Daly, Billings, Mont. Filed Dec. 13, 1926. Serial No. 154,621. 20 Claims. (Cl. 56—54.)



1. In a broom corn harvester adapted to operate upon a row of standing broom corn, a frame mounted upon road wheels, a cutter for removing the broom from the growing stalks of said broom corn, means for gathering said stalks and presenting them to said cutter, means for booting the stems of the cut brooms, means for passing the brooms progressively over the cutter and over the booter, means for gripping and holding said brooms erect while so passing, means for propelling the harvester along the row, and means for progressively varying the length of stem on the cut brooms, and means for operating the various elements of the machine in proper synchronism.

1,781,962. JACK SWITCH. JAMES A. STIRLING, Elkhart, Ind., assignor to Chicago Telephone Supply Company, Elkhart, Ind., a Corporation of Delaware. Filed Dec. 10, 1924. Serial No. 754,926. 25 Claims. (Cl. 200—1.)

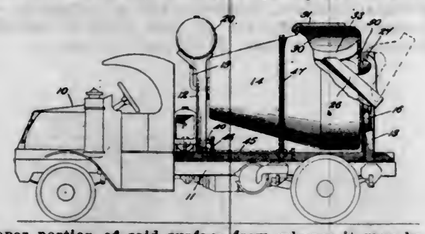


1. In a device of the class described, the combination of a jack and an operating element therefor, said element having rotary motion, and means for converting the rotary motion into longitudinal motion to move the element into and out of its operated position.

1,781,963. REMOTE-CONTROL APPARATUS. PAUL P. STOKER, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Feb. 19, 1929, Serial No. 341,067. Renewed Apr. 16, 1930. 27 Claims. (Cl. 246—5.)

25. In combination with a railway signal, a relay responsive to conditions adjacent said signal, a movable lever, a code transmitter controlled by said lever and by said relay, and means controlled by said code transmitter for operating said signal.

1,781,964. FILTER. GEORGE F. THOMAS, Berwyn, and OTTO J. HERB, Chicago, Ill., assignors to Alemite Corporation, Chicago, Ill., a Corporation of Delaware. Filed Nov. 30, 1925. Serial No. 72,243. 8 Claims. (Cl. 210—165.)

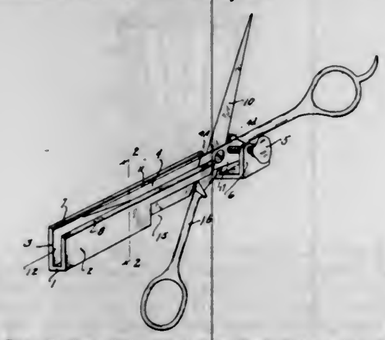


1. A filter comprising an open-ended receptacle, a cap for said receptacle comprising an annular sheet metal portion having means for making sealed connection with the edges of the open end of said receptacle, and a connection block extending through said annular portion and having inlet and outlet passageways therethrough, a filter element in said receptacle forming a filtering means between said inlet and outlet passageways, and means for securing said cap to said receptacle comprising a bail having its ends pivoted on said annular portion and its bight positioned below the bottom of said receptacle, a stirrup mounted upon said bail and movable transversely of said bail, a spring seat carried by said stirrup for engagement with the bottom of said receptacle, and a cam mounted on said bail between the sides of said stirrup, said cam having a flat edge for engaging the bottom of said stirrup.

1,781,965. CONCRETE MIXER AND AGITATOR. CHARLES F. BALL, Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 14, 1929. Serial No. 346,988. 12 Claims. (Cl. 83—78.)

1. In a transit concrete mixer and agitator, a receptacle having a discharge opening and a surface inclining down-

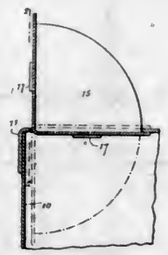
wardly toward said opening; and means for moving concrete material away from said opening and toward the



upper portion of said surface from whence it may be returned by gravitational action toward said opening, to effect agitation or mixing of said material.

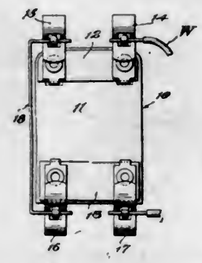
1,781,966. CARBAZOLE-INDOPHENOL COMPOUNDS AND PROCESS OF PREPARING THE SAME. FRITZ BALLAUF, FRIEDRICH MUTH, and ALBERT SCHMELZER, Elberfeld, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Original application filed Jan. 16, 1925, Serial No. 2,926, and in Germany Jan. 24, 1924. Divided and this application filed Nov. 6, 1926, Serial No. 146,842. 5 Claims. (260—46.)

1. In the process of preparing carbazoloic acid-alkylamido-indophenols the steps which comprise reacting with an aliphatic amine having a replaceable hydrogen atom linked to the nitrogen, in presence of an anhydrous halide condensation agent, upon a carbazole-carboxylic acid and condensing the so obtained carbazoloic-acid-alkylamide with a nitrosophenol.



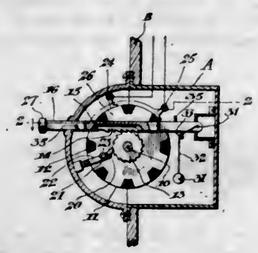
1,781,967. SHARPENING DEVICE. EDMUND A. BALTZELL, Portland, Oreg. Filed Jan. 12, 1929. Serial No. 332,102. 3 Claims. (Cl. 76—82.2.)

1. In a device of the class described, the combination of a body element having a base and side walls spaced apart and extending upwardly therefrom, there being case-hardened beveled surfaces terminating the upper edges of the side walls and in registrable alignment with each other, and an offset disposed in one of the side walls for permitting the blade to be sharpened to be brought into intimate contact with the inner surface of one of said walls and to accommodate the blade not being sharpened and means for clamping the device to be sharpened relative to the body element.



1,781,968. MEASURING DISPENSING DEVICE FOR CONTAINERS. MARION BARTIAENS, Elberon, N. J., assignor to Belle-Rea Corporation, Wilmington, Del., a Corporation of Delaware. Filed July 26, 1927, Serial No. 208,617. Renewed Apr. 5, 1930. 1 Claim. (Cl. 221—98.)

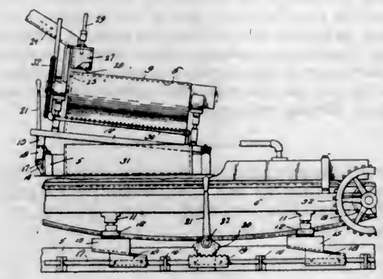
The combination with a container top having an opening therein, a trough-shaped measuring dispensing device mounted for limited tilting movement in the opening, said device including a V-shaped plate and spaced sector plates connecting the two sides thereof, said sector plates being



set in from the lateral edges of the V-plate and including bendable tongues projecting from their edges passed through slots in the V-plate and bent around against the back of the latter.

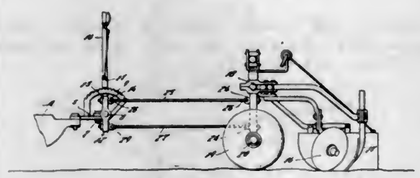
1,781,969. AUTOMATIC SAFETY CUT-OUT FOR TOY RAILWAYS AND THE LIKE. HARRY S. BECKER, River Forest, Ill., assignor to American Flyer Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 16, 1926. Serial No. 88,649. 3 Claims. (Cl. 200—133.)

1. An automatic safety cutout unit for electrical toys comprising an insulating base, conductor strips secured at opposite edges of said base, a pair of wire terminal clamping clips electrically connected to each strip, and a fusible member adapted to be detachably and positively connected to opposite clips of each pair.



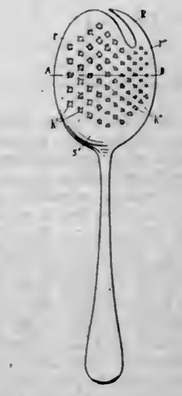
1,781,970. SWITCH. WALTER OTWAY BENJAFIELD, Regina, Saskatchewan, Canada. Filed Sept. 19, 1927, Serial No. 220,548. Renewed Apr. 1, 1930. 4 Claims. (Cl. 200—156.)

1. A switch comprising a casing, a rotatably mounted shaft in the casing, a contact member on the shaft formed



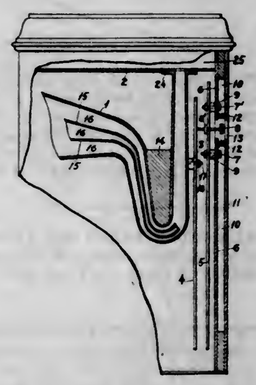
with peripherally spaced insulated portions, spaced terminals associated with said member, a ratchet wheel on the shaft, a push rod operable from without the casing and formed with an intermediate rack portion to engage with the ratchet wheel, means associated with the rod for continuously exerting pressure outwardly thereon.

1,781,971. CONCENTRATING MACHINE. CLAUDE N. BIELENBERG, Deer Lodge, Mont. Filed May 31, 1928. Serial No. 281,937. 1 Claim. (Cl. 209—508.)



In an ore concentrating machine, the combination of a base frame and a supplemental frame, a concentrating table mounted on the base frame, and means associated with the base frame and the table for adjustably laterally tilting said table, said supplemental frame having legs, transverse bars upon which the lower ends of said legs are secured, said transverse bars having corresponding ends pivotally resting upon a longitudinal member of the base frame at one side of the machine, said second named longitudinal member of the base frame having pairs of spaced upwardly projecting pins, and cross pieces on the adjacent ends of said transverse bars having apertures through which said pins loosely project.

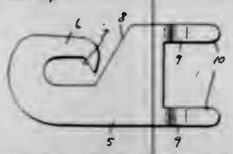
1,781,972. CULTIVATOR HITCH. ALBERT BLECHA, Benkelman, Nebr. Filed June 18, 1929. Serial No. 371,818. 4 Claims. (Cl. 97—143.)



1. A tractor hitch for cultivators comprising a shaft rotatably mounted at the rear of the tractor, means for rotating the shaft, upwardly and downwardly projecting members on the shaft, a gauge wheel mount, means for securing a cultivator to said mount, and link members connecting the said mount to the upwardly and downwardly extending members on the shaft.

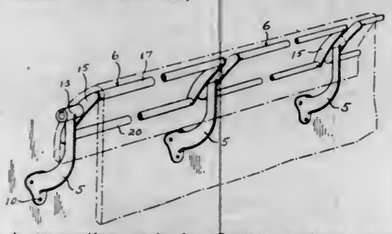
1,781,973. SPOON. EDITH MARY BOLTON, Gerrard's Cross, England. Filed May 27, 1929, Serial No. 366,369, and in Great Britain Jan. 28, 1929. 4 Claims. (Cl. 146—180.)

1. A culinary utensil including a spoon like bowl having one side edge abruptly curved and the remaining side edge substantially flat, said bowl having grater punchings extending from the convex surface of the bowl and increasing in size by regular gradation from the flat to the curved side of the bowl.



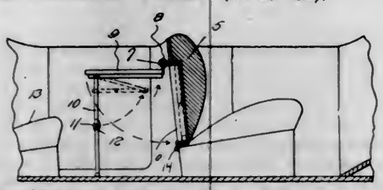
1,781,974. GRAMOPHONE, MEGAPHONE, OR THE LIKE. ALFRED HERSLEB BORDQVIST, Copenhagen, Denmark. Filed May 31, 1928, Serial No. 281,938, and in Denmark Sept. 6, 1927. 5 Claims. (Cl. 181—27.)

1. In sound amplifying apparatus, a horn formed with a sharp goose-neck bend, in combination with a heavy mass disposed exteriorly of said horn between and engaging the opposing inner walls of said sharp bend thereof and serving to dampen the vibrations of the walls of said horn.



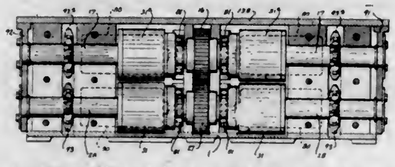
2. In sound amplifying apparatus, a horn formed with a sharp goose-neck bend, and a sound board, in combination with a plurality of resonance plates, one of said resonance plates being mounted on said horn in spaced relation thereto to receive vibrations from the wall thereof, and another of said resonance plates being mounted on said sound board in spaced relation thereto, and an adjusting screw mounted in the latter resonance plate and adjustable therethrough to engage and exert varying degrees of pressure on the resonance plate mounted on the horn.

1,781,975. HAME HOOK. LITTLE B. BRAY, Bonaire, Ga. Filed June 9, 1930. Serial No. 460,004. 1 Claim. (Cl. 24—230.5.)



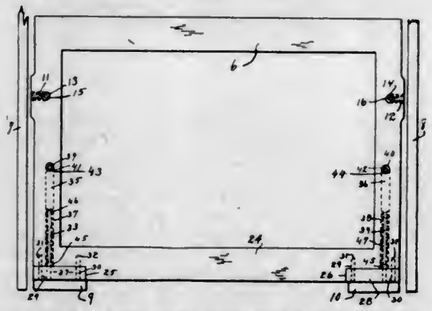
A hame hook formed from a single length of material and comprising a relatively flat plate like body portion provided with an L-shaped notch opening inwardly from one side edge of the plate, intermediate the ends of the plate, and having an inner portion extending parallel to the longitudinal axes of the plate, and a second portion extending substantially obliquely to the longitudinal axes of the plate whereby to provide a substantially circuitous passage for the admission of the eye of a trace, spaced parallel coextensive arms integral with said body and projecting therefrom adjacent one end of the body, said arm being offset inwardly relative to the plate, and said arms merging into hooks, said last mentioned hooks being arranged in transverse alinement relative to said body and having their planes at right angles to the plane of said body, said last mentioned hooks adapted to engage the staple of a hame.

1,781,976. RACK. WALTER G. BROWN, Balboa, Canal Zone, Panama. Filed Nov. 15, 1928. Serial No. 319,680. 4 Claims. (Cl. 211—89.)



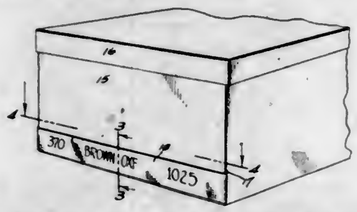
1. A supporting rack for flexible articles, including mounting brackets for attachment upon a vertical surface, and a frame pivotally mounted at its ends between the brackets and having a grip rod engageable with the face of the vertical surface below the pivot axis of the frame and above the point of attachment of the brackets.

1,781,977. COLLAPSIBLE TABLE FOR AUTOMOBILES. LEON H. CUMMINGS, Ware, Mass. Filed Apr. 28, 1928. Serial No. 273,630. 1 Claim. (Cl. 45—51).



In combination, an automobile seat including an upright back portion having a comparatively shallow open compartment therein, a horizontal rod secured to the rear surface of the back portion of said seat in spaced relation therefrom and adjacent the upper end of the compartment, a table top and suspension means for one edge of the table top adapted for supporting the same in either a vertical position in the compartment or a horizontal position and comprising a plurality of hooks extending laterally and upwardly above the upper surface of the top, from one edge thereof and adapted for detachable engagement with said rod.

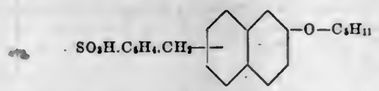
1,781,978. MACHINE FOR HANDLING LOOSE MATERIALS. KENNETH DAVIS, Ebensburg, Pa., assignor to Rembrandt Peale, W. Sanders Davies, and William S. Wallace, Trustees. Filed June 22, 1926. Serial No. 117,673. 5 Claims. (Cl., 180—9.2.)



1. An automobile machine for handling loose materials, including in combination a motor on the machine, an endless traction tread at either side of the machine, and two reversely operating sprocket wheels meshing with either traction tread, continuously driven driving connections from the motor to the sprocket wheels, and clutches for connecting and disconnecting the various sprocket wheels and their driving connections.

1,781,979. ADJUSTABLE PLATEN-PRESS CHASE. GEORGE A. DICKLEY and EARL B. GROFF, Long Beach, Calif. Filed Dec. 24, 1928. Serial No. 328,110. 4 Claims. (Cl. 101—391.)

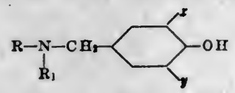
1. A platen press chase comprising a substantially rectangular frame adapted to have the type form locked therein, the lower corners of said frame being cut away to form recesses opening downwardly and outwardly, plungers slidably mounted in the side members of said frame longitudinally thereof to slide lengthwise of said side members, an adjusting block rigidly secured to the lower end of each of said plungers normally resting within said recesses; resilient means to normally hold said plungers and adjusting blocks in their innermost positions; and means to move said plungers and blocks outwardly.



1,781,980. BOX LABEL. ABRAHAM ISAACSON, Los Angeles, Calif. Filed Oct. 10, 1928. Serial No. 311,568. 7 Claims. (Cl. 40—7.)

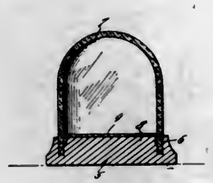
1. In combination, a box having openings therein, a label extended through the openings so as to have a portion of the label presented to the outer side of the box, and means for detachably securing the label to the box.

1,781,981. PROCESS FOR THE MANUFACTURE OF ARYLALKYLETHERS WHICH ARE ARALKYLATED IN THE NUCLEUS AND OF THEIR SULPHONIC ACIDS. MYRTIL KAHN, Cologne-Deutz-on-the-Rhine, and ALFRED THAUSS, Cologne-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed June 21, 1926, Serial No. 117,616, and in Germany June 27, 1925. 3 Claims. (Cl. 260—159.)



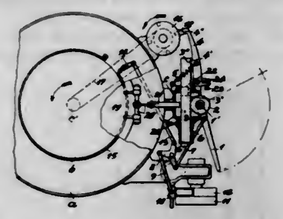
3. As a new product the herein described compound having probably the formula:

being in the form of its alkali metal salt a light colored amorphous substance of soap-like appearance, easily soluble in water to a substantially colorless solution and having an extraordinarily high wetting action on textile fibres in neutral alkaline and acid solutions.



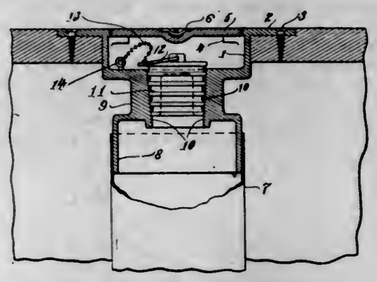
1,781,982. AROMATIC METHYLENEAMINO COMPOUNDS AND PROCESS OF PREPARING THE SAME. MYRTIL KAHN, Cologne, WILHELM SCHEPSS, Leverkusen-on-the-Rhine, and LUDWIG ZEH, Wiesdorf-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a Corporation of Delaware. Filed June 23, 1927, Serial No. 201,017, and in Germany Aug. 19, 1926. 4 Claims. (Cl. 260—129.)

2. The new products being condensation products of the aromatic series, being whitish powders soluble in dilute alkalies producing azo dyes with diazocompounds and having most probably the following general formula:



R stands for a benzene or naphthalene nucleus which may contain further substituents, R_1 stands for hydrogen, alkyl or aryl, x means hydrogen or a substituent and y hydrogen or the carboxylic group.

1,781,983. DICE BOX. EDWIN W. KOCH, Tremont, Ill. Filed Jan. 14, 1930. Serial No. 420,727. 1 Claim. (Cl. 273—145.)

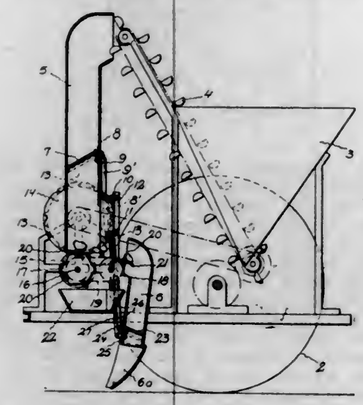


A dice box comprising a receptacle of transparent material closed at its top and open at its bottom, a supporting base for said receptacle normally closing the opened bottom of the receptacle, said bottom being of substantially relatively flat disk like formation and having on the top face thereof an annular groove inwardly of the peripheral edge thereof for receiving the lower edge of said receptacle, and a disc of relatively soft material covering the top face of said base and having its peripheral edge arranged within the groove, said disc presenting a sound deadening surface for the base.

1,781,984. CENTRIFUGAL EXTRACTOR. HUBERT KRANTZ, Aachen, Germany. Filed Aug. 18, 1928, Serial No. 300,564, and in Germany Feb. 24, 1928. 5 Claims. (Cl. 210—72.)

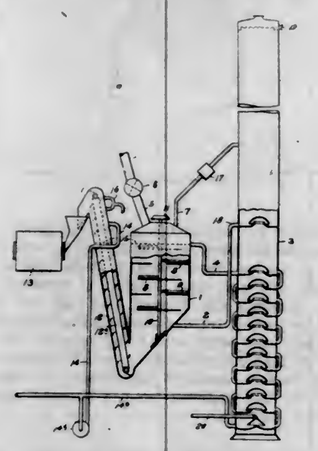
1. In a centrifugal extractor, a rotatable basket, a mechanism for starting and stopping the rotation of the basket, latching means for locking this mechanism during the starting and working of the extractor, power means for automatically moving the said mechanism into stopping position when released, a continuously one way rotatable timing member actuated by the basket drive and designed to make not more than one revolution at each operation of the extractor, at least one releasing element carried by the timing member for delimiting the amount of rotation of this member and the length of each operation of the extractor, said element being adapted to actuate the said latching means for releasing the starting and stopping mechanism at the end of each section of rotation of the timing member and to assume the starting position of the section of rotation for the succeeding operation.

1,781,985. TAP. JOSEPH M. LE GRAND, Baltimore, Md., assignor to Carrier Engineering Corporation, a Corporation of New York. Filed June 8, 1926. Serial No. 114,586. 7 Claims. (Cl. 137—76.)



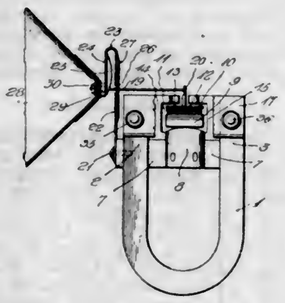
1. An outlet for exhaust systems comprising a shell having an external peripheral flange at one end to enable the shell to be set approximately flush into a wall at the flanged end and also having a chamber opening outwardly through the flanged end and at its inner end restricted into a tapered passage tapering away from said chamber, said shell at its end opposite the flanged end being formed for attachment to an exhaust conduit, a movable closure mounted approximately flush in the outer end of said chamber, and a tapered plug fitting said tapered passage.

1,781,986. POTATO-SETTING MACHINE. JANNE FREDRIK LJUNGDAHL, Stockholm, Sweden. Filed Nov. 25, 1929. Serial No. 409,699. 2 Claims. (Cl. 221—128.)



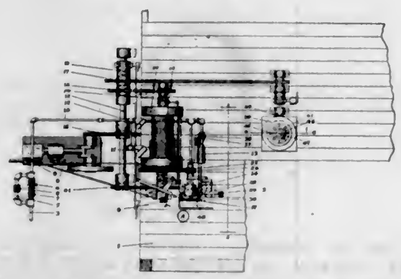
1. A potato setting machine comprising a container for the potatoes to be set, two drop tubes for each

furrow, means for covering the potatoes from said container into the drop tubes, a drop damper in each drop tube, an intermittently movable conveyor means positioned beneath the lower open end of each drop tube, driving means for both of the conveyors and adapted for driving them alternately, a setting tube positioned at the discharge end of each conveyor, a setting damper in each setting tube, a common setting chute leading from the



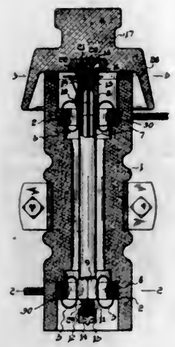
discharge ends of both setting tubes into the furrow to be set, driving means for opening and closing of all of the dampers, and interconnection means between said dampers adapted for performing an opening and closing of the drop damper belonging to one of the setting devices simultaneously with the opening and closing of the setting damper belonging to the other setting device, and vice versa.

1,781,987. PROCESS OF TREATING AMMONIACAL LIQUORS. DWIGHT R. MEANS, Madena County, Ohio, assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Sept. 20, 1926. Serial No. 136,542. 7 Claims. (Cl. 202—57.)



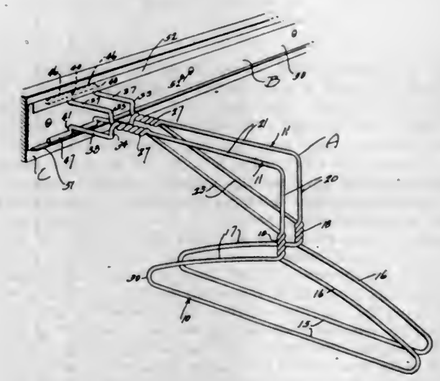
1. The process of recovering ammonia from liquor containing fixed ammonium compounds including ammonium chloride comprising supplying at one end of a mixer a quantity of unpulverized quick lime containing unburned lime stone in an amount necessary to decompose the fixed ammonium compounds, supplying countercurrently at a remote portion of the mixer ammoniacal liquor, allowing the unpulverized quick lime containing the unburned lime stone to gradually work downwardly and be suspended in the ammoniacal liquor and the unburned lime stone to settle and segregate in the lower portion of the liquor, removing the unburned lime stone from the liquor, and subjecting the liquor containing the lime suspension to distillation to recover ammonia therefrom.

1,781,988. ACOUSTIC DEVICE. PHILIP A. MICHELL, New Brighton, N. Y., assignor to Brandes Laboratories, Inc., Newark, N. J., a Corporation of New Jersey. Filed Apr. 26, 1929. Serial No. 358,216. 5 Claims. (Cl. 179—115.)



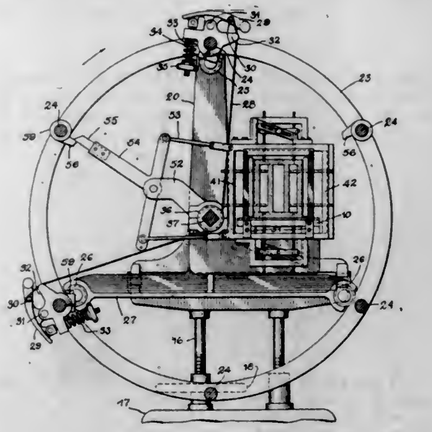
1. In an electromagnetic sound reproducer, a vibratory armature member, a sound reproducing diaphragm, a drive pin interconnecting said armature member with said sound reproducing diaphragm, and means for suspending said drive pin comprising a resilient strip of material bent upon itself, said drive pin passing through one portion of said resilient strip and being connected to another portion thereof.

1,781,989. APPARATUS FOR WELL DRILLING. GEORGE D. PARKER, Riverside, Calif.; Clara B. Parker executrix of will of said George D. Parker, deceased. Filed Aug. 18, 1923. Serial No. 658,152. 8 Claims. (Cl. 255—19.)



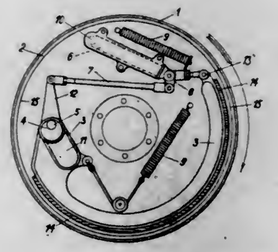
5. A controlling device for a drum of a drilling machine comprising driving mechanism driven by an engine and adapted to drive said drum; and a piston and cylinder responsive to the pressure of the operating medium of the engine for operating and controlling said driving mechanism.

1,781,990. COMBINED ELECTRIC FUSE AND SWITCH. JAMES R. TATE, Toronto, Ontario, Canada, assignor to Dominion Cutout Company Limited, Toronto, Canada. Filed Aug. 13, 1928. Serial No. 299,347. 16 Claims. (Cl. 200—129.)



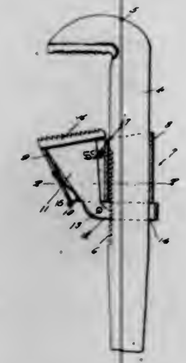
13. In a combined fuse and switch, the combination of a fuse cartridge having spaced contact members thereon to which a fusible element is connected; a hollow body of insulating material in which the fuse cartridge is slidably received; spaced contacts within the body with which the contacts on the fuse cartridge are adapted to engage, the upper contact member on the fuse cartridge having a threaded recess formed thereon to receive the end of the fusible element; a cap of insulating material; a plug carried by the cap and adapted to be screwed into said recess; a spring on said upper contact member, said upper contact member having a hole formed in its side; a tongue on said spring extending through said hole, said plug having a shoulder formed thereon with which said tongue is adapted to engage to prevent the removal of the plug, said plug having a pocket formed therein; a plunger slidable in said pocket; and a spring in said pocket tending to move the plunger into projected position.

1,781,991. GARMENT HANGER. HOWARD L. STOVER, Williamsport, Pa. Filed July 5, 1928. Serial No. 290,587. 5 Claims. (Cl. 223—61.)



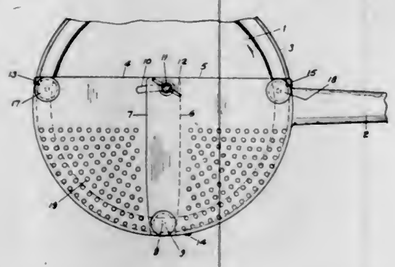
1. As an article of manufacture a garment hanger supporting rail consisting of an elongated supporting body having a lower substantially right angled transverse flange and an upper socket flange with a socket opening directly facing the lower flange.

1,781,992. APPARATUS FOR MAKING TILES. JOHN W. THOMAS, Daisy, Tenn., assignor to B. Mifflin Hood Brick Company, Daisy, Tenn., a Corporation of Tennessee. Filed July 24, 1928. Serial No. 295,101. 14 Claims. (Cl. 25—17.)



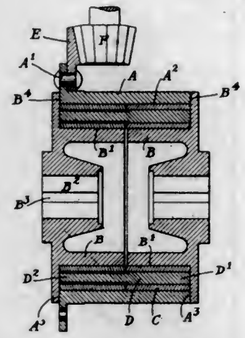
1. In a tile making machine, the combination with a die shaped to form a substantially rectangular tubular structure having vertical partitions parallel with opposite side walls, the structure partially separated at the junction of the partitions and the side walls with the top and bottom walls to enable easy separation of the walls and partitions into individual tiles after baking, means moving with the structure for cutting it transversely into similar lengths, and means moving therewith for perforating all of the walls and partitions to provide openings for nail holes.

1,781,993. BRAKE MECHANISM WITH BRAKE BLOCK FOR MOTOR VEHICLES. EMANUEL WIECZOREK, Breslau, Germany, assignor to Rudolf Kandt, Leipzig, Germany. Filed Sept. 28, 1928, Serial No. 308,945, and in Germany Oct. 5, 1927. 1 Claim. (Cl. 188—78.)



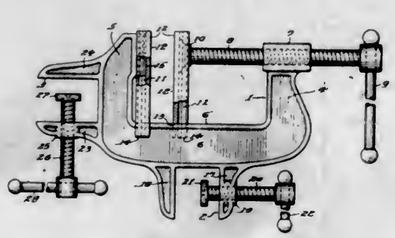
A brake mechanism for motor vehicles, comprising in combination with the brake drum, one single brake block having an oblong slot in one end, a piston linked to one end of said brake block and adapted to press said brake block against said brake drum, an eccentric engaging with said oblong slot for guiding obliquely said brake block and adapted to press said brake block against said brake drum, a lever carrying said eccentric, a rod hingedly connected to said lever, and a link connecting said rod to said piston.

1,781,994. WRENCH. FORD M. WILSON, Liberal, Kans., assignor of one-half to Henry E. Snyder, Liberal Kans. Filed May 28, 1929. Serial No. 366,668. 1 Claim. (Cl. 81—92.)



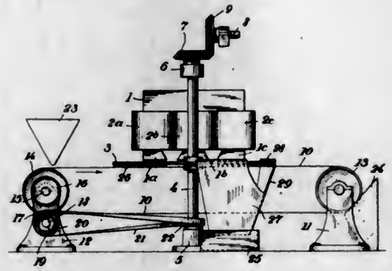
In a wrench of the class described, a shank having a longitudinal rack on one edge and provided at its outer end with a right angularly disposed stationary jaw, a movable jaw unit slidable on said shank and comprising a mounting including a sleeve portion snugly embracing and slidable on said shank, and a sheath projecting outwardly in substantial parallelism with said stationary jaw, a pawl loosely disposed in said sheath having its upper end projecting beyond the upper end of the sheath and formed into a toothed jaw and having its lower end projecting below the corresponding end of the sheath, directed laterally and formed with teeth for engaging the rack teeth, sping means in said sheath acting on said pawl to tip said teeth into engagement with said rack, an operating element for the pawl embracing the shank, the operating element comprising a yoke, and a thumb hook depending from the outer wall of the sheath in opposed relation to the yoke to facilitate operation of said elements.

1,781,995. STRAINING ATTACHMENT FOR PANS AND KETTLES. ROY W. ALEXANDER, Newark, N. J. Filed Mar. 22, 1930. Serial No. 438,028. 3 Claims. (Cl. 53—8.)



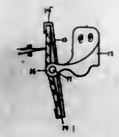
1. A straining attachment for pans, kettles and the like comprising two sector-shaped metal pieces pivoted together in overlapping relationship, the pivot being near the arcuate edges of said pieces, said pieces being provided with means located substantially diametrically opposite to said pivot for changing the amount of overlap for the purpose described, a plurality of clips positioned on one side of said sectors for engaging the rim of a pan, kettle or the like, and knobs on the opposite side of the sectors from said clips for manipulating the attachment, said sectors having a plurality of drain holes therein.

1,781,996. DIFFERENTIAL. CIPRIANO ANDRADE, Jr., New York, N. Y. Filed Sept. 28, 1926. Serial No. 138,157. 2 Claims. (Cl. 74—7.)



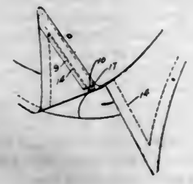
1. In a differential; a first set of locking rollers; a second set of locking rollers; a driving member outside of said locking rollers; a first driven member inside of said first set of locking rollers; a second driven member inside of said second set of locking rollers; said driving member being supported only by said locking rollers.

1,781,997. CLAMP. JOHN BEREZOWSKI, Philadelphia, Pa., assignor of one-half to Peter Berezowski, Philadelphia, Pa. Filed Oct. 23, 1929. Serial No. 401,732. 3 Claims. (Cl. 144—304.)



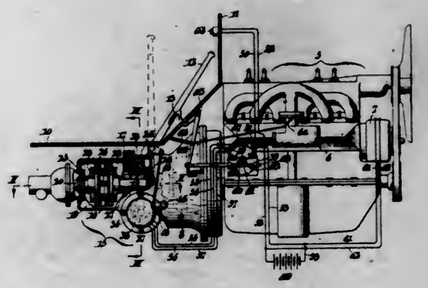
1. A tri-dimensional clamping device comprising the combination with a main generally C-shaped clamp consisting of two main stationary jaws, a connecting portion integral therewith and a clamping screw, threaded through one main jaw and longitudinally movable toward and away from the other main jaw, of an auxiliary clamp comprising two substantially parallel auxiliary jaws and a connecting portion integral therewith and comprising said main connecting portion of said main clamp, said auxiliary jaws extending in a direction opposite to that in which said main jaws extend, a clamping screw through one of said auxiliary jaws movable longitudinally toward and away from the other of said auxiliary jaws, and a second auxiliary clamp also comprising two substantially parallel stationary jaws and a connecting portion integral therewith, said connecting portion being that main jaw toward and away from which said main clamping screw moves longitudinally, said second auxiliary clamping jaws projecting outwardly from said main jaw in a direction at right angles to that in which said main and first auxiliary jaws extend and a clamping screw threaded through one of said second auxiliary jaws and movable longitudinally toward and away from the other of said second auxiliary jaws.

1,781,998. MAGNETIC SEPARATOR. JULIUS BING, Eisenach, Germany, assignor to the Firm Magnet-Werke G. m. b. H., Eisenach Spezialfabrik für Elektromagnet-Apparate, Eisenach, Germany. Filed Aug. 8, 1928. Serial No. 298,354, and in Germany Aug. 9, 1927. 7 Claims. (Cl. 209—227.)



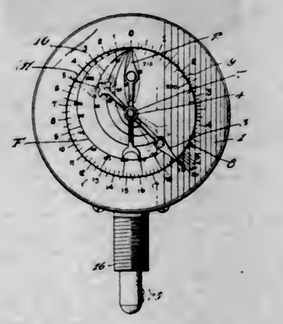
1. In a magnetic separator, an alternating current electro-magnet provided with downwardly extending free poles, a rotary disc being partly arranged below said poles and adapted to be moved in close proximity of said poles, means for feeding the material to be separated into the active zone of the field of said poles below said disc the same having such a circular velocity that the magnetic particles of the material brought by the magnet into adhesion with the disc are centrifuged from said disc outside of the active zone of the field of said poles, said disc being revolved by the alternating current magnet consequently to the magnetic field produced thereby.

1,781,999. REAR-VIEW MIRROR. CHARLES BITTINGER, Brookline, Mass. Filed Mar. 16, 1929. Serial No. 347,512. 4 Claims. (Cl. 88—1.)



1. A combined night and day driving mirror for motor vehicles, comprising a plurality of mirror surfaces having sharply different factors of reflection, means for supporting said mirror surfaces in obtuse angular relation, means for supporting the assembly in such manner that slight angular movement of the unit changes the disposition of the mirrors so as to vary the reflections to a given point.

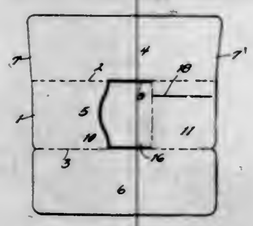
1,782,000. COLLAR. JOHN N. COLLINS, Rosedale, N. Y. Filed Apr. 2, 1929. Serial No. 351,900. 4 Claims. (Cl. 2—132.)



1. A collar including an outer ply, an inner ply, and an interlining ply together with a pocket ply interposed between said inner and outer plies and adjacent said interlining ply, all of said plies being stitched together by a common seam at the extreme edge of the collar, said pocket ply extending around the extreme outer edge of said inner ply and extending rearwardly thereof, and all of said plies being stitched together by a common seam substantially parallel to said first mentioned seam and lying at the rear edge of said pocket ply.

1,782,001. VARIABLE-SPEED MECHANISM. JAMES V. CRICHTON, Philadelphia, Pa., assignor of one-half to Karl Salberg, Philadelphia, Pa. Filed Nov. 29, 1929. Serial No. 410,418. 12 Claims. (Cl. 74—34.)

1. In variable speed drive mechanism, a differential interposed between the drive shaft of a source of power and an aligned shaft to be driven; independent means to drive the floating member of the differential; and a common means operative to control the source of power and for controlling the speed of said independent drive means to govern the floating member of the differential and thereby effect variation in the induced speed of the driven shaft.



1,782,002. GAUGE. HENRY W. CROWELL, Glen Ridge, N. J. Filed July 2, 1926. Serial No. 120,084. 6 Claims. (Cl. 73—151.)

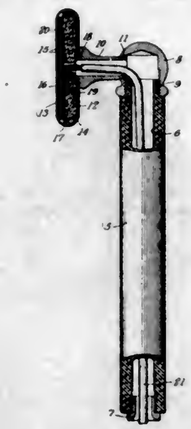
1. A gauge for indicating air content in a mixture of water vapor and air, comprising means movably responsive to variations in temperature of said mixture, means movably responsive to variations in the pressure of said mixture and having normally a definite relation to said temperature responsive means, whereby changes in said relation indicate variations in the amount of air in said mixture, said responsive means each including a movable indicating member, and the gauge being provided with a dial or chart having a scale to cooperate with both said members and containing temperature graduations and pressure graduations arranged in relations corresponding to those of the actual respective temperatures and

pressures of a pure water vapor, said dial or chart also having a plurality of curves each representing a certain percentage of air content in a mixture of water vapor and air so that the curve nearest the point on one of said indicating members at a distance from said scale equal to the distance between said two indicating members is indicative of the approximate percentage of air in the mixture.

1,782,003. COMBINATION POCKETBOOK. BARNETT EPSTEIN, New York, N. Y. Filed Oct. 11, 1929. Serial No. 398,894. 3 Claims. (Cl. 150—38.)

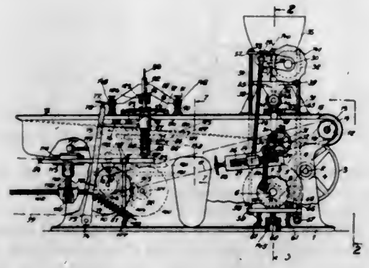
2. In combination, a pocket book consisting of a plurality of sections arranged in parallel relation to define a plurality of pockets and provided with an opening, and further provided with a slit contiguous to said opening, and a memorandum pad having a portion inserted through said slit to have a detachable interlocking engagement with the pocket book, said opening communicating with a pocket directly in the rear of said memorandum pad.

1,782,004. MESH CHAIN AND METHOD OF MAKING SAME. WILLIAM FORSTNER, Irvington, N. J., assignor to Forstner Chain Corporation, Irvington, N. J. Filed May 29, 1929. Serial No. 366,830. 2 Claims. (Cl. 245—10.)



1. The method of manufacturing ornamental flexible band chains, which consists in weaving a web of solder-filled wires and uniting to the marginal edges thereof ornamental border chains consisting of a flexible series of hollow spheres connected by uniformly spaced links, and passing the said band chain and border chains when disposed in close proximity together over a zone of heat sufficient to cause the solder to flow from the wires to the links and spheres of the border chains throughout the passage thereof through the heat zone.

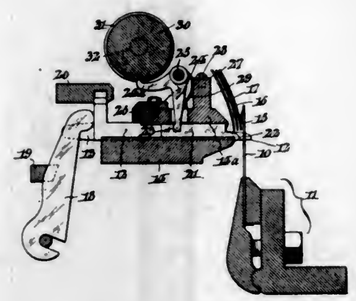
2. An ornamental flexible mesh chain comprising a woven body formed of solder-filled wires, and ornamental border chains consisting of a flexible series of hollow spheres connected by uniformly spaced links and united to the edges of the said woven body by the melted solder contained in the said wires.



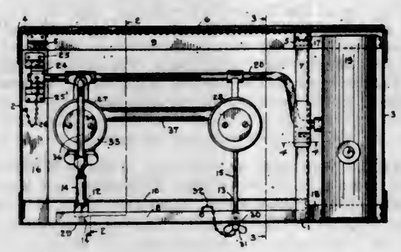
1,782,005. MASSAGING DEVICE. JOSEPH GRISON, New York, N. Y. Filed Apr. 30, 1930. Serial No. 448,476. 1 Claim. (Cl. 128—62.)

A massaging device, comprising a flat metal casing, a plurality of disks of insulating material positioned in the casing, a plurality of interrupted bands of conducting material deposited on one of the disks, each of said bands being connected at its ends to adjacent bands, means for supplying electrical current to the bands, said bands being distributed to apply heat evenly to one flat wall of the

casing, and a packing of insulating material interposed between the discs and the opposite wall to maintain the discs firmly against the wall being heated.



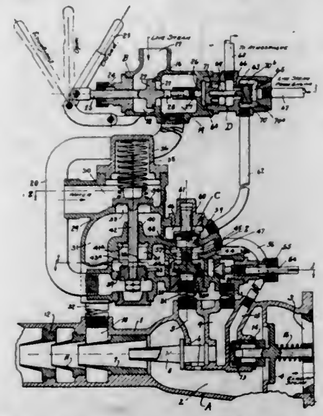
1,782,006. AUTOMATIC DOUGH DIVIDING AND WORKING MACHINE. OTTO KREMMLING, Hamersleben, near Oschersleben, Germany. Filed July 10, 1926, Serial No. 121,561, and in Germany July 11, 1925. 10 Claims. (Cl. 107—9.)



7. A machine of the class described, comprising a traveling conveyer, means for delivering dough portions to said conveyer successively, a dough-working mechanism arranged adjacent to a different portion of the conveyer to co-operate with such conveyer portion in working the dough portions thereon, and movable bodily with the conveyer during the working period of such dough-working mechanism, and means for moving said mechanism, at the end of such period, first away from the conveyer and then lengthwise thereof in a direction opposite to the movement of the conveyer.

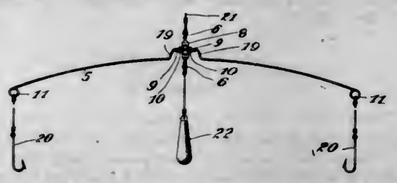
1,782,007. KNITTING MACHINE. JEAN LOUIS LE GORRE, York, Pa. Filed Apr. 6, 1928. Serial No. 267,816. 10 Claims. (Cl. 66—89.)

1. In a flat knitting machine, a series of spring beard needles, individually associated independently-slidable pressers to close the needle beards incidental to loop formation, pivoted actuating fingers articulated to the pressers instrumental in moving the same into and out of active position, and a rotary cylinder with surface variations adapted to be over-travelled by the fingers in selectively controlling the pressers and thereby governing the performance of corresponding needles for fashioning purposes.



1,782,008. PORTABLE HYDROCARBON STOVE. WALTER C. LINDEMANN, Milwaukee, Wis., assignor to A. J. Lindemann & Hoverson Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 22, 1927. Serial No. 207,651. 4 Claims. (Cl. 126—38.)

1. The combination of a supporting frame comprising longitudinal and lateral members having open recesses therein, a fuel supply tank, a fuel supply conduit, a burner connected with said conduit and valve carrying structure all rigidly connected to form a unit and removably supported in said recesses by said frame, one of said lateral members forming a partition to isolate the tank from the burner and intercept the radiation of heat from the latter to the former.



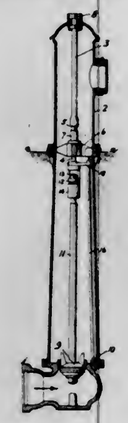
1,782,009. EXHAUST-STEAM INJECTOR. NEAL T. MCKEE, Bronxville, N. Y., assignor to The Superheater Company, New York, N. Y. Filed Mar. 3, 1927. Serial No. 172,367. 13 Claims. (Cl. 103—265.)

1. An exhaust steam injector control system of the type wherein a main control valve located at a point remote from the injector governs the admission of live steam to a plurality of fluid pressure actuated valves for admitting water, exhaust steam, and live steam to the injector, said valves including an automatic valve governing the admission of auxiliary live steam to the injector, characterized by the provision of a single conduit leading from said main control valve and terminating at said injector for supplying live steam to operate both the injector and said valves, a branch conduit leading from said single conduit for supplying supplementary live steam to the injector, a manually adjustable valve located in said branch conduit, a second branch conduit controlled by said automatic valve leading from said single conduit to the injector, and a third branch

conduit leading from said single conduit to the fluid pressure actuated valve controlling the admission of exhaust steam.

1,782,010. FISHHOOK SPREADER AND METHOD OF MAKING THE SAME. HAROLD W. MEYER, Brooklyn, N. Y. Filed Jan. 24, 1929. Serial No. 334,627. 3 Claims. (Cl. 43—28.)

1. A fish hook spreader comprising a length of wire having fish hook attaching means on its opposite ends and provided with an offset loop in the central portion thereof, a line attaching member loosely engaged upon the bight portion of said loop for free rotation thereon, and sleeves loosely engaged on the bight portion of said loop at opposite sides of said member for free rotation with or independently of said member and to prevent axial shifting of said member from its centered position with respect to the loop.



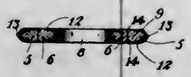
1,782,011. METHOD FOR PRESERVING EMULSIONS. ALBERT MUSHER, Washington, D. C. Filed Oct. 26, 1928. Serial No. 315,349. 2 Claims. (Cl. 99—11.)

1. A method of stabilizing packaged emulsified food products of the salad dressing type comprising substantially filling the remaining space between the surface of the food product and the closure with relatively inert material having relatively the same properties as wax.

1,782,012. HYDRANT. EDWIN D. RATTIGAN, Philadelphia, Pa. Filed May 5, 1928. Serial No. 275,268. 2 Claims. (Cl. 137—18.)

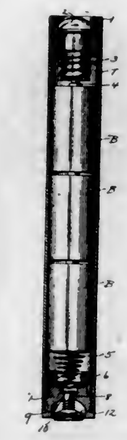
1. A hydrant comprising a sectional housing, a sectional valve rod having between its sections a detachable coupling, a rod guide clamped between the flat faces of flanges provided on the sections of the housing, main valve mechanism, the lower section of the valve rod attached at one end to the main valve and guided at the other end by the rod guide, a lost motion connection for

vertical movement between the lower and the adjacent section of the rod, an auxiliary valve having a stem guid-



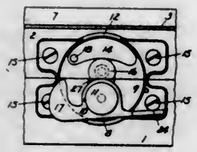
ed in said rod guide, and a connection for actuating said auxiliary valve attached to said adjacent section of the valve rod above the lost motion connection.

1,782,013. ARRANGEMENT OF ENGINES ON AIRCRAFT. ADOLF ROHRBACH, Berlin-Wilmersdorf Germany, assignor to Rohrbach Patents Corporation, a Corporation of Delaware. Filed Sept. 4, 1926, Serial No. 133,652, and in Germany Sept. 18, 1925. 23 Claims. (Cl. 241—31.)



21. In an airplane, the combination of a lifting wing and an engine supporting frame suspended from said wing including a multi-point connection with the wing including a three-point connection with the wing bottom surface and at least one other connection at a higher level, together with a streamlined covering for the engine which merges into the wing surface.

1,782,014. PACKING GASKET. JOSEPH RIMMELSPACHER, Newark, N. J. Filed Aug. 10, 1927. Serial No. 211,916. 1 Claim. (Cl. 288—1.)

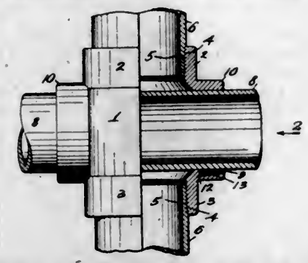


A packing gasket consisting of two flexible strips of packing material of circular form nested one within the other, and each having its ends in abutting contact, and the abutting ends of the packing strips being disposed out of radial alignment with each other, and annular sheet metal casing members of substantially semicircular form in cross section, each open at one circumferential side thereof, and receiving a portion of one of the packing strips at the inner and outer edges respectively of the gasket, the side walls of said sheet metal members extending upon the opposite side faces of the respective packing strips, the opposed edges of the inner and outer members being spaced apart and embeded in the packing material of the respective strips, the exposed portions of the packing strips at opposite sides of the gasket having their surfaces disposed in substantially the same plane as the faces of the side walls of said sheet metal members.

1,782,015. FLASH LIGHT. WILLIAM B. SACHS, Jamaica, N. Y. Filed Apr. 3, 1929. Serial No. 352,075. 3 Claims. (Cl. 240—10.5.)

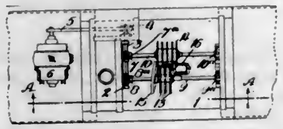
1. A flashlight device comprising a casing having a first insert located therein and also having a second insert located therein and spaced from said first insert, a bulb located in the first insert and provided with contacts, a spring located adjacent the second insert and adapted to hold a battery so that one of the contacts of said battery touches one of the contacts of said bulb and the other of said contacts is electrically connected to said holding spring, and a plunger movably located in the second insert and adapted to contact with the adjacent end of the holding spring, the second insert being electrically connected to the other contact of said bulb.

1,782,016. WINDOW FASTENER. ARTHUR N. SANDERSON and FRANK H. DANA, West Springfield, and KARL G. VOGEL, Mittineague, Mass. Filed Jan. 26, 1929. Serial No. 335,289. 7 Claims. (Cl. 292—241.)



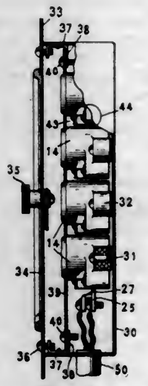
1. The combination, in a window fastener, with a base attachable to the meeting-rail of an upper window sash, and provided with a post, of a base attachable to the meeting-rail of the associated lower window sash, a guard plate movable on said second-named base, a latch pivotally connected with said second-named base, and having a part to engage and release said post, and cam-operating means to move said plate toward and away from said first-named base as said latch is swung into operative and inoperative position.

1,782,017. RAIL FITTING. WILLIAM SHANKS, Brooklyn, and WILLIAM B. CATER, Douglaston, N. Y., assignors to Vulcan Rail and Construction Company, Maspeth, Long Island, N. Y., a Corporation of New York. Filed Dec. 18, 1925. Serial No. 76,138. 1 Claim. (Cl. 287—54.)



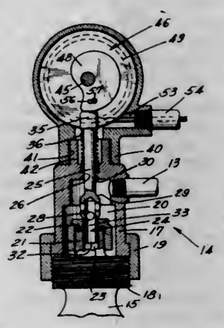
In a rail fitting, the combination of a coupling member having a longitudinal sleeve capacitated to receive a

rail and means for supporting the coupling, a rail positioned in the longitudinal sleeve, a relatively narrow recess extending longitudinally of the rail sleeve and having a bottom inclined toward the vertical axis of the cou-



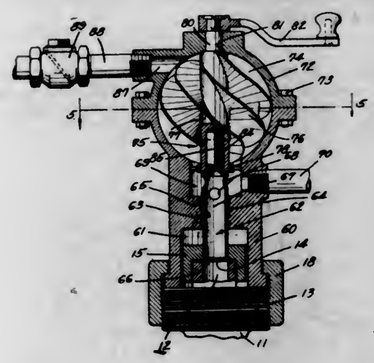
pling and inwardly diverging side walls, and a rail locking member comprising a single piece of deformable metal dimensioned to substantially fill the recess and driven therein and engaging the rail and sleeve to lock the rail in its sleeve.

1,782,018. DEVICE FOR CLEANING AND WASHING CROCKERY AND THE LIKE. FRANK STAINES, London, England. Filed Oct. 4, 1927, Serial No. 223,894, and in Great Britain Nov. 6, 1926. 5 Claims. (Cl. 15—74.)



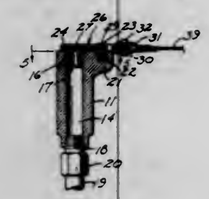
1. A device for washing crockery and the like, comprising a tank, rotary cleaning members in said tank, to engage the opposite faces of an article, means for supporting and rotating the article including a revolving cam member for imparting a reciprocating motion to said article transversely to the acting surfaces of said cleaning members.

1,782,019. FUSE CABINET OR PANEL BOARD. FRANK T. WHEELER, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Mar. 25, 1926. Serial No. 97,196. 7 Claims. (Cl. 175—183.)



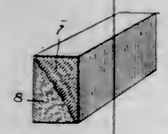
1. A panel board unit including a base of insulating material having channels in the back to receive and to cover co-operating bus bars, fuse contacts mounted on said base each including a terminal at one edge of each end of the base, a shoulder on said base between said terminals and at a higher plane than said terminals and a bus bar terminal on said shoulder, the said shoulder co-operating with one side of a similar unit to form a channel for wires between the fuse receptacle and the said similar unit.

1,782,020. HEAD FOR PUNCTURING CLOSURE DISKS. SCOTT E. ALLEN and OZRO N. WISWELL, Los Angeles, Calif., assignors, by mesne assignments, to C-O-Two Fire Equipment Company, Los Angeles, Calif., a Corporation of California. Filed Jan. 30, 1929. Serial No. 336,156. 7 Claims. (Cl. 221—73.5.)



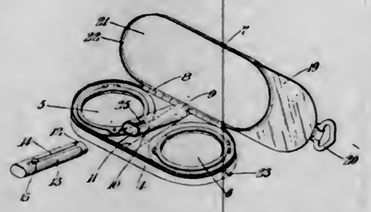
4. A device for use on a container having an outlet closed by a closure including, a body, a member carried by the body operable to open the closure, and a unit detachably connected with the body and said member including a cam operatively engaging said member and a pulley for operating the cam.

1,782,021. GAS-OPERATED SCREW-TYPE HEAD FOR PUNCTURING CLOSURES. SCOTT E. ALLEN and OZRO N. WISWELL, Los Angeles, Calif., assignors, by mesne assignments, to C-O-Two Fire Equipment Company, Los Angeles, Calif., a Corporation of California. Filed Jan. 30, 1929. Serial No. 336,157. 9 Claims. (Cl. 221—73.5.)



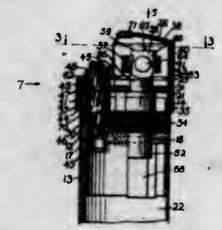
1. In a device for use in connection with a container having a closure for closing the opening thereof, the combination of: a puncturing member, means whereby said puncturing member is adapted to be advanced by rotation to puncture said closure; and a fluid-operated rotor for causing operation of said means.

1,782,022. GAS-PRESSURE MEANS FOR RELEASING CONNECTIONS. SCOTT E. ALLEN and OZRO N. WISWELL, Los Angeles, Calif., assignors, by meane assignments, to C-O-Two Fire Equipment Company, Los Angeles, Calif., a Corporation of California. Filed May 20, 1929. Serial No. 364,523. 9 Claims. (Cl. 74—93.)



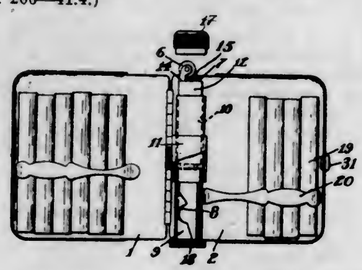
1. In a fluid pressure operating device, the combination of: a body having a fluid opening formed therein; a releasable member to be moved by a jet of fluid issuing from said fluid opening; a primary holding member on said body; and a secondary holding member on said member adapted to engage said primary holding member to form a releasable connection therewith, said connection being releasable by the movement of said member.

1,782,023. REFRACTORY STRUCTURE. FRANCIS L. ARENSBERG, Pittsburgh, and ARTHUR J. JACKMAN, Forest Hills, Pa., assignors to Vesuvius Crucible Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Feb. 8, 1929. Serial No. 338,459. 12 Claims. (Cl. 72—36.)



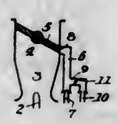
1. A refractory structure comprising materials of different degrees of susceptibility to spalling, one face of the structure being predominantly of material of relatively less susceptibility to spalling, the ratio of such material to material of relatively greater susceptibility to spalling decreasing progressively and substantially continuously throughout a substantial portion of the structure in the direction of its depth.

1,782,024. VANITY CASE. LOUIS V. ARONSON, Newark, N. J., assignor to Art Metal Works, Inc., a Corporation of New Jersey. Filed Apr. 26, 1928. Serial No. 272,903. 13 Claims. (Cl. 132—83.)



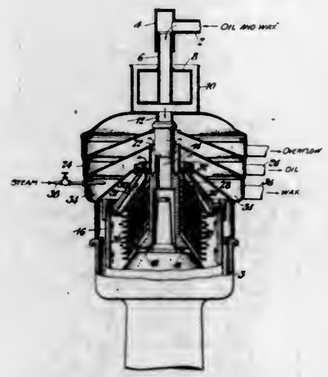
1. A vanity case having cosmetic holding means therein and a cover hinged thereto, said cover having a thin compartment therein with an opening to the compartment at the edge of the cover, a mirror removably inserted in said compartment, and latching means having one part attached to the mirror and a cooperating part attached to the body of the case.

1,782,025. CIGAR AND CIGARETTE LIGHTER. LAWRENCE D. BELL, Los Angeles, and JOHN C. ROMBACH, Glendale, Calif.; said Rombach assignor to said Bell. Filed July 31, 1928. Serial No. 296,538. 17 Claims. (Cl. 67—7.1.)



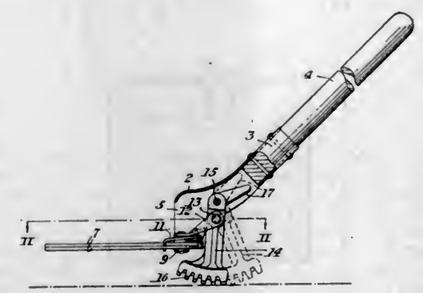
7. A lighter comprising in combination a container having a top, a wick tube extending therethrough having a wick therein, a snuffer tube slidably mounted thereon, a flint wheel mounted above the top, a flint holder adjacent thereto, a cover having a fixed inner section with a portion partly cylindrical having an opening at one side to expose the wick and an outer rotatable cover connected thereto on an axis parallel to the wick tube, the outer cover having a partly cylindrical section adapted to fit over the fixed cover or to form a closure for the wick, and a cam interconnecting the rotatable outer cover and the snuffer tube to slide said tube longitudinally on the rotation of the rotatable cover.

1,782,026. COMBINATION CIGARETTE CASE, LIGHTER, AND ASH TRAY. DAVID S. BEYER, Boston, Mass. Filed Mar. 16, 1929. Serial No. 347,580. 4 Claims. (Cl. 206—41.4.)



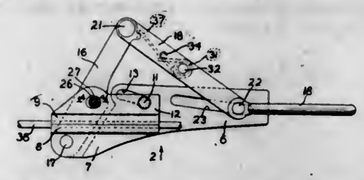
1. A combination smoking unit including a casing comprising a pair of hinged covers having portions of their adjacent edges cut away to form openings on opposite edges of the casing, and a member mounted in said casing and aligned with said opposite openings and comprising at one end a lighting unit and at the other end an ash receiving unit each exposable through its adjacent opening, said casing members comprising independent cigarette retaining chambers.

1,782,027. CARBURETOR. ANTONIN BOULADE, Lyon, France, assignor to Societe du Carburateur Zenith, Lyon, France, a Corporation of France. Filed Aug. 31, 1926, Serial No. 132,692, and in France Sept. 18, 1925. 1 Claim. (Cl. 123—179.)



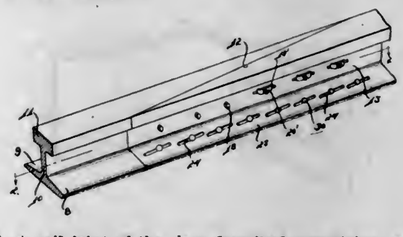
A carburetor having a slow speed channel with a nozzle therein, an auxiliary channel connected to the slow speed channel, and an independent nozzle adapted to supply fuel to the auxiliary channel, both of said nozzles being above the fluid lever in the carburetor.

1,782,028. PROCESS AND APPARATUS FOR DEWAXING OILS. ELI F. BURCH, Laurel Springs, N. J., assignor to Crew Levick Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 14, 1927. Serial No. 175,022. 11 Claims. (Cl. 233—11.)



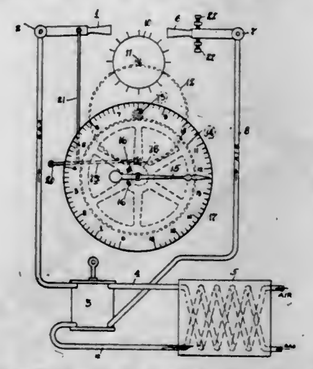
1. The process of separating wax from chilled mineral oil containing wax in suspension, which comprises continuously introducing the mixture of oil and wax into a centrifugal separator bowl whereby the wax is separated from the oil in an outer layer surrounding the oil, applying gaseous heating medium to the outer surface of the separator bowl whereby said layer of wax is melted and separately discharging said separated oil and melted wax from said separator.

1,782,029. GARDEN SHEARS. HAROLD W. CLARK, Alliance, Ohio, assignor to The Alliance Manufacturing Company, Alliance, Ohio, a Corporation of Ohio. Filed Oct. 12, 1929. Serial No. 399,267. 9 Claims. (Cl. 56—241.)



1. A garden shear comprising a shear blade and a pivoted foot adapted to engage the ground, the foot being operatively connected to the shear blade so as to actuate the same on forward movement of the shear.

1,782,030. GRIPPING DEVICE. ODIE OSON COLLINS, Riverside, Calif. Filed July 15, 1929. Serial No. 378,518. 10 Claims. (Cl. 24—134.)

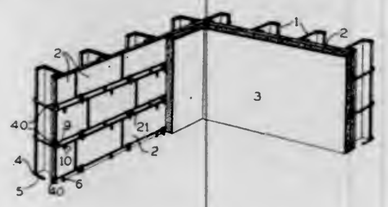


1. In a gripping device, a pair of jaws movable relatively to each other, actuating means associated with said jaws, and means operable by said actuating means for initially moving one of said jaws perpendicularly and subsequently in arcuate motion away from the other jaw.

1,782,031. RAIL. GEORGE R. DOUGLAS, Detroit, Mich. Filed Oct. 12, 1929. Serial No. 399,380. 3 Claims. (Cl. 238—237.)

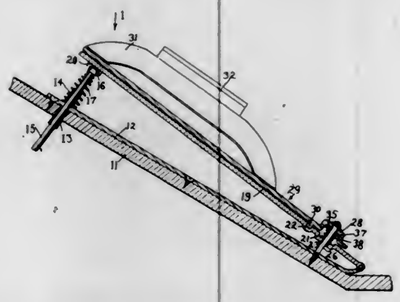
2. A rail joint of the class described comprising: a pair of overlapping rails, each of said rails having at its overlapped portion a diagonally extended face lying in a vertical plane engaging the diagonally extending face of the cooperating rail; a base flange projecting outwardly from the outer side of each of said rails at said overlapping portion; and means operable on the base flange of said rails inwardly of the outer edges thereof for moving the same laterally of each other upon expansion and contraction.

1,782,032. METHOD OF AND APPARATUS FOR GAS ANALYSIS. HERBERT H. DOW, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed July 28, 1926. Serial No. 125,559. 22 Claims. (Cl. 265—44.)



1. In a method of indicating variations in density of a certain gas, the steps which consist in directing alternating opposing blasts of said gas and of another gas of substantially unvarying density upon an element movable in either direction, and employing the movements of said element to indicate the density of said certain gas.

1,782,033. MAGNETIC RAZOR-CONDITIONING DEVICE. JOHN S. FORBES, Philadelphia, Pa., assignor, by mesne assignments, to Yates & Grant, Inc., Detroit, Mich., a Corporation of Michigan. Filed Mar. 17, 1927. Serial No. 176,195. 8 Claims. (Cl. 132—80.)

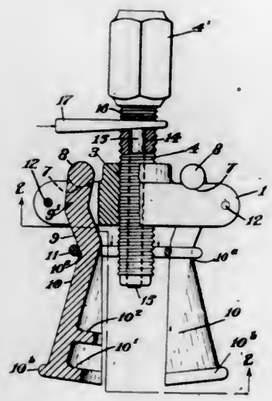


1. A device of the character described comprising a bar magnet with engagement means for coacting with a safety razor mounting extending alongside thereof to maintain the blade of said razor in magnetic treating position with respect to said magnet.

1,782,034. WALL. OSCAR L. GENT, Tulsa, Okla. Filed Nov. 21, 1928. Serial No. 320,946. 5 Claims. (Cl. 72—46.)

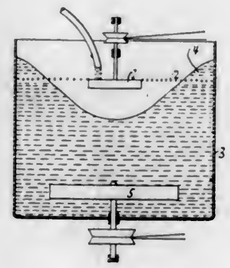
2. A wall consisting of a series of vertical studs, sheets of plaster board placed against the studs, reinforcing members running horizontally between the sheets of plaster board and contacting with the studs; flexible integral wire clips formed of body portions and oppositely extending prongs, said body portions partly encircling the vertical studs and said prongs extending in parallelism with the studs whereby the plaster boards sheets and the reinforcing members may be placed between the prongs and the studs and thereby held in position without any mutilation thereof and regardless of the positions of the several joints between the sheets of plaster board.

1,782,035. FOOT THROTTLE. PETER A. GIANERA, Torrance, Calif. Filed July 2, 1928. Serial No. 289,995. 8 Claims. (Cl. 74—81.)



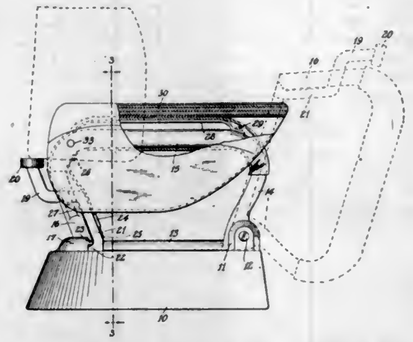
1. A foot throttle having in combination a movable under pedal with means connected therewith to actuate a throttle, an upper pedal mounted thereon to move in a direction transverse to that of the under pedal, and means actuated by the upper pedal to operate the lower pedal to actuate the throttle.

1,782,036. HEAT PLASTIC COMPOSITION. HAROLD GRAY, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Apr. 27, 1927. Serial No. 187,112. 5 Claims. (Cl. 106—23.)



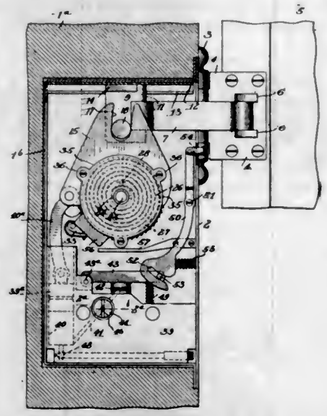
1. A composition of matter comprising a heat plastic rubber isomer having a less chemical unsaturation than rubber and lead salt of a higher fatty acid.

1,782,037. WHEEL PULLER. GEORGE W. GREBENSTEIN, Newtonville, Mass. Filed May 2, 1929. Serial No. 359,828. 4 Claims. (Cl. 29—85.)



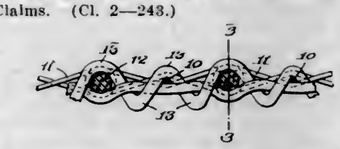
2. A wheel puller or the like comprising a frame having a central threaded bearing and a pair of jaw supports on each side thereof said supports having trunnion bearings on their upper faces, a pair of jaws each having a trunnion at its upper end and supported in said bearings, said jaws having tapered outer faces and flange engaging inner faces, a closing ring slidably retained about said jaws, a thrust screw threaded in said bearing, a drive pin axially of said screw and a driving key disposed through said screw and having a driving contact with said pin.

1,782,038. CONVERSION OF SALTS INTO GLOBULAR OR SIMILAR SHAPED BODIES. BODO HAAK, Neuroessen, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Nov. 19, 1928, Serial No. 320,445, and in Germany Dec. 13, 1927. 12 Claims. (Cl. 23—102.)



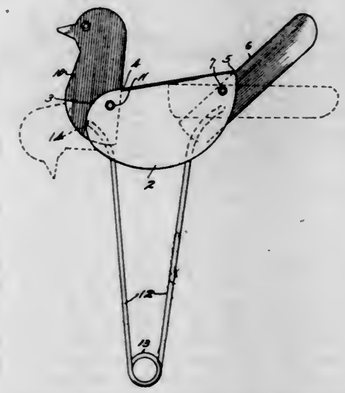
1. The process for the conversion of salts into globular or similar shaped bodies, which comprises dropping the fused salt into a cool liquid not dissolving said salt and set into rotation around a vertical axis within the liquid.

1,782,039. FLATIRON. WILLIAM H. HAWKES, New York, N. Y. Filed Mar. 26, 1929. Serial No. 349,929. 3 Claims. (Cl. 68—26.)



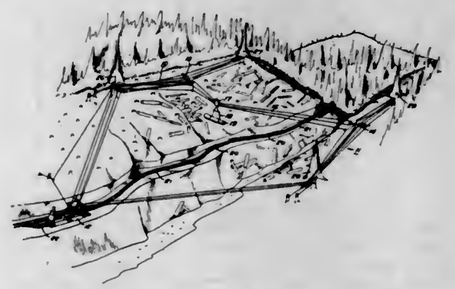
1. The combination with a flat iron having a body, a handle pivoted at one end thereto, and a lever carried by the handle to engage the opposite end, of a cushion pad pivoted to said handle, means for releasing said lever when the pad is turned upon its pivot, and a single flat spring intervening the upper surface of the handle and pad throughout their length.

1,782,040. DOOR-CONTROL APPARATUS. REUBEN HILL, Detroit, Mich., assignor to Sargent & Greenleaf, Inc., Rochester, N. Y., a Corporation of New York. Original application filed Aug. 23, 1927, Serial No. 214,969. Divided and this application filed Aug. 31, 1928. Serial No. 303,299. 16 Claims. (Cl. 16—66.)



1. A door control device, comprising a casing, an element pivotally mounted in said casing and having a spring connected therewith through which force is transmitted to close the door, an operating member for said element arranged to slide thereon during operation thereof, a supporting guide for the operating member on which the latter is free to slide, a second spring in said casing having a contact surface, and a lug on said element adapted upon rotation of said element to engage said surface whereby said second mentioned spring will operate to oppose or retard the rotation of said element during a portion of its movement through engagement of the lug and will quicken the action for the rest of its movement to effect a quickened movement of the door when approaching extreme closed position.

1,782,041. ELASTIC WEBBING. JOSEPH HIRSCH, Yonkers, N. Y., assignor to Kops Bros. Inc., a Corporation of New York. Filed Jan. 22, 1927. Serial No. 162,698. 3 Claims. (Cl. 2—243.)

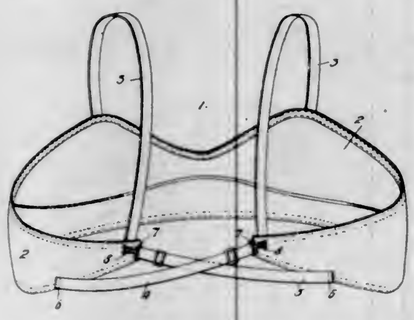


1. In an elastic webbing, inelastic threads forming the body of the webbing, spaced elastic strands at intervals between the inelastic threads, and a line of lock stitches binding a portion of each elastic strand on both sides thereof to adjacent portions of the inelastic threads to prevent the elastic strands from pulling through the inelastic threads.

1,782,042. TOY BIRD. VICTOR V. KUNKEL, Los Angeles, Calif. Filed Feb. 4, 1929. Serial No. 337,335. 3 Claims. (Cl. 46—40.)

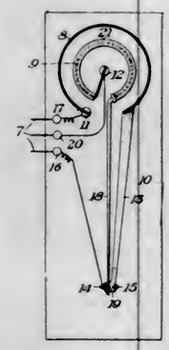
1. An animated toy, simulative of a natural creature, including a main body, appendages pivoted on the body, and a spring forming a yoked handle and having a plurality of shanks having ends directly and operatively connected to respective appendages; the appendages and the shanks being pivoted one on the other.

1,782,043. LOGGING SYSTEM. DAVENPORT LAWSON, Elk, Calif., assignor to Goodyear Redwood Co., Elk, Calif., a Corporation of Maine. Filed July 24, 1926. Serial No. 124,570. 7 Claims. (Cl. 214—19.)



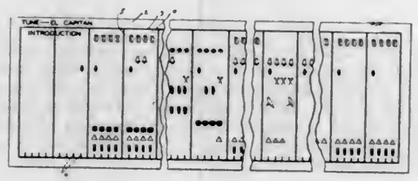
1. In a system of the class described, a traversing carriage comprising a frame, a sheave journaled within said

frame for tracking the same on a cable, a triangle pivotally secured to one end of said frame, and blocks secured to the corners of said triangle.



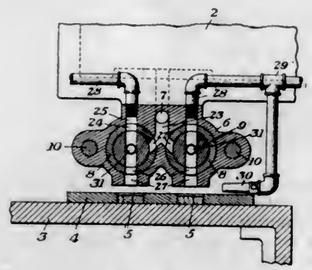
7. In a logging system, a yarder having a plurality of winding drums, horizontally spaced tracking cables, a pair of traversing carriages engaging the tracking cables, haul cables for effecting movement of said traversing carriages, one of said carriages being a lead carriage comprising a frame having a tracking sheave, a beam pivotally secured to said frame, sheaves carried by said beam and means for stabilizing the movement of said beam, a hoist carriage, and a hoist cable for controlling said hoist carriage engaging the sheaves in said beam.

1,782,044. BRASSIÈRE. BERNARD LUSTGARTEN, New York, N. Y. Filed Mar. 6, 1929. Serial No. 344,637. 1 Claim. (Cl. 2—42.)



In an article of the class described, a band with ends at the back shoulder straps connecting the ends at the back with the front, elastic bands at the lower edge of the band one near each rear end, each elastic band having a hook at its free end and an eye secured to the band adjacent to each of the rear shoulder strap ends and adapted to engage a hook on the elastic band secured to the other end of the band so that when the brassière is in use, it will be held firm and true in place and an upward thrust of the breasts of the wearer is accomplished.

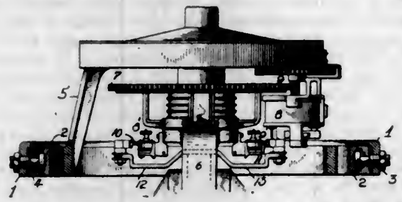
1,782,045. THERMOSTAT AND SIMILAR CONTROL MECHANISM. MAX MASON, Chicago, Ill., assignor of thirty per cent to Louis B. Slichter, thirty per cent to Donald L. Hay, and ten per cent to Donald C. Slichter, Madison, Wis. Filed Apr. 20, 1926. Serial No. 103,394. 8 Claims. (Cl. 236—1.)



1. A thermostat comprising two sensitive thermo-responsive elements connected so that each tends to neutralize the effect of the other, the elements, however, having unequal effects in the operation of the thermostat for a given temperature change of whatever rapidity to which both elements may be subjected, whereby the thermostat responds to any variation in temperature whether rapid or slow, the element having the lesser effect being heat-insulated whereby its counteracting effect is less and the thermostat's response therefore greater for rapid than for slow variations in temperature to which the thermostat is subjected.

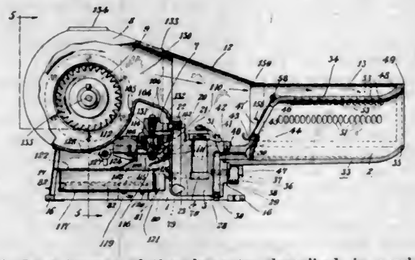
1,782,046. RHYTHMIC CHART FOR CHILD ORCHESTRATION. MARY E. MAYBERRY, Burlingame, and EDITH A. HILL, San Francisco, Calif. Filed Nov. 5, 1927. Serial No. 231,279. 5 Claims. (Cl. 283—47.)

1. As an article of manufacture a rhythmic chart comprising an elongated sheet inscribed with spaced marks designating measures of a piece of music, said measures uniformly graduated with spaced sub-marks designating the beats of the measures, and aligned with said sub-marks a series of symbols of various sound instruments.



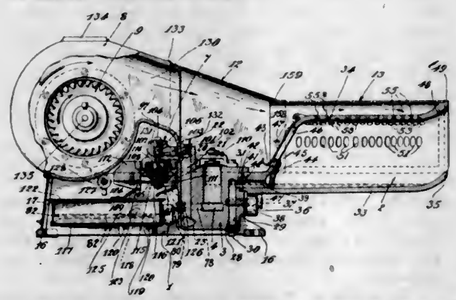
1,782,047. SLUG-CASTING MACHINE. JOHN A. MCGINNIS, Wheeling, W. Va., assignor to Wheeling Stamping Company, Wheeling, W. Va., a Corporation of West Virginia. Filed May 27, 1927. Serial No. 194,680. 10 Claims. (Cl. 22—209.)

1. In a slug casting machine, a hot metal holder, a casting valve having a hot metal receiving opening therein for intermittently dispensing a measured quantity of metal from the holder, and means for supplying a non-oxidising gas to the opening in the valve.



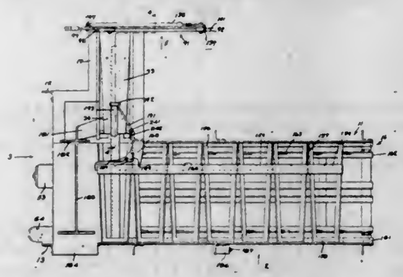
CARNEGIE LIBRARY OF ATLANTA

1,782,048. GYROCOMPASS REVERSING CONTACT. CHESTER B. MILLS, Brooklyn, N. Y., assignor, by mesne assignments, to Sperry Gyroscope Company, Inc., Brooklyn, N. Y., a Corporation of New York. Original application filed Mar. 15, 1921, Serial No. 452,505. Divided and this application filed Dec. 27, 1922. Serial No. 609,329. 5 Claims. (Cl. 200—52.)



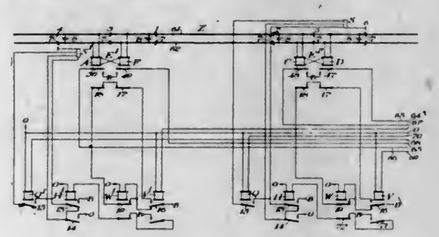
1. An electrical contact wheel composed of an aluminum hub and web, the former having a German silver bearing block and a bracket supporting the wheel having Monel metal bearing pins thereon for the wheel.

1,782,049. BURNER FOR PRODUCING HEAT FROM LIQUID FUEL. MILTON A. POWERS, New York, N. Y., assignor, by mesne assignments, to The Timken-Detroit Company, Detroit, Mich., a Corporation of Michigan. Filed Aug. 25, 1927. Serial No. 215,494. 29 Claims. (Cl. 158—92.)



1. In a burner of the character described, in combination, a tray for liquid fuel, means for maintaining a pool of liquid fuel on said tray, means for sweeping a stream of air first downwardly to the edge of said fuel pool and then inwardly across said fuel pool, to entrain fuel vapor from the pool, and means for igniting the mixture of air and vapor.

1,782,050. METHOD OF LIQUID-FUEL HEATING. MILTON A. POWERS, New York, N. Y., assignor, by mesne assignments, to The Timken-Detroit Company, Detroit, Mich., a Corporation of Michigan. Original application filed Aug. 25, 1927, Serial No. 215,494. Divided and this application filed Feb. 1, 1928. Serial No. 251,202. 23 Claims. (Cl. 158—117.5.)

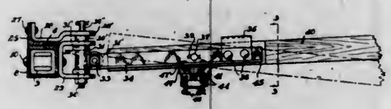


1. The method of burning liquid fuel which includes first bathing all exposed interior portions of the combustion chamber with entering air, and then rolling said air against the surface of a pool of liquid fuel transverse to the fuel flow in the presence of a flame to produce a flaming combustible mixture of vapors from the fuel pool and said air.

1,782,051. TILE MACHINE. BURT R. SIMMONS, Palms, Calif. Filed Jan. 26, 1929. Serial No. 335,219. 20 Claims. (Cl. 25—42.)

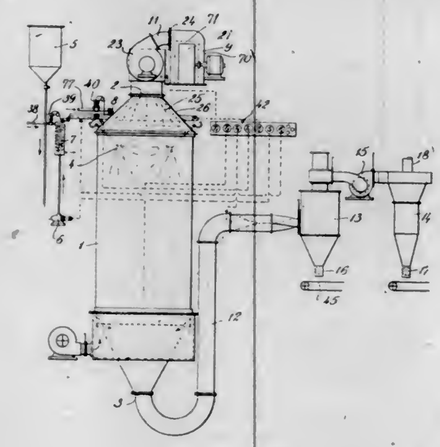
1. A tile machine comprising a pallet adapted to receive an end of a ribbon of plastic tile forming material, means for severing a predetermined length of said material on said pallet from the ribbon, a tray, means for moving said pallet to deposit said severed length of material thereon, and means for returning said pallet to receiving position.

1,782,052. TRAIN-COUNTING APPARATUS. PAUL P. STOKER, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Jan. 16, 1930. Serial No. 421,145. 4 Claims. (Cl. 246—21.)



1. In combination, a stretch of railway track, a signal governing traffic into said stretch, a plurality of normally energized counting relays, means for successively deenergizing said relays in one order as successive trains enter said stretch, means for successively re-energizing said relays in the reverse order as successive trains leave the stretch, a main relay and a proceed relay for said signal, a circuit for said main relay including front contacts of all of said counting relays in multiple, a circuit for said proceed relay including a front contact of only the first of said counting relays, a caution indication circuit for said signal controlled by said main relay, and a proceed indication circuit for said signal controlled by both said main and said proceed relays.

1,782,053. MANURE SPREADER. HENRY SYNCK, Coldwater, Ohio, assignor to The New Idea Spreader Company, Coldwater, Ohio, a Corporation of Ohio. Original application filed Mar. 14, 1924, Serial No. 699,385. Divided and this application filed Mar. 19, 1927. Serial No. 176,780. 4 Claims. (Cl. 280—103.)



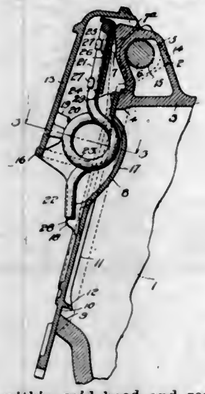
1. In a structure of the character described, an axle, wheel spindles pivotally connected with said axle, a pair

of angle iron draft members pivotally connected with said axle by a vertical pivot, a tongue connected with said draft members, a metal bracket extending across and

connected with said draft members, connections pivotally connected with said spindles and with said bracket, the ends of said bracket being extended beyond said draft members to cooperate with said axle to form stops.

1,782,054. METHOD AND APPARATUS FOR PROCESSING MATERIALS BY MEANS OF GASES. BEN FOREST UHL, Richmond Hill, New York, N. Y., assignor to Industrial Spray-Drying Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 1, 1927. Serial No. 216,809. 21 Claims. (Cl. 159—4.)

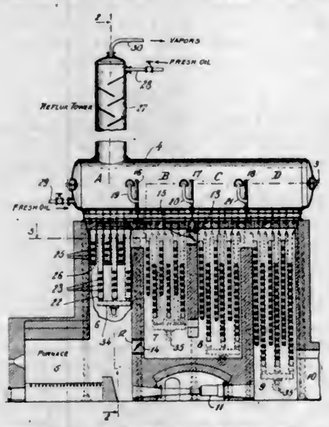
1. In a spray processing apparatus the combination with a treating chamber wherein a flow of treating gas in one general direction is maintained, of means for continuously delivering a current of treating gas to said chamber, and means comprising a plurality of gas conducting passages of substantial length and substantially free from abrupt changes in direction or in cross sectional area for receiving the incoming treating gas, conducting said gas in a plurality of separate streams to specified discharge areas arranged across a section of the treating chamber substantially transversely to the general direction of flow through said chamber, which areas combined are substantially larger than the cross sectional area of the incoming gas current at the point where it is divided into said plurality of streams, and discharging said plurality of gas streams substantially transversely of said respective discharge areas, whereby a positive distribution of the said gas is effected across the treating chamber and a flow of said gas having no substantial component at right angles to the general direction of flow through the chamber is obtained.



9. Material processing apparatus of the general class described which comprises a treating chamber, means for continuously introducing materials to be processed into said chamber in finely divided condition, means for heating treating gas for introduction into said chamber, a fan for passing a continuous current of said heated treating gas into said chamber, substantially independently of the operation of the other parts of the apparatus, means for controlling the amount of treating gas delivered by said fan so that any desired quantity at any desired gas temperature may be supplied to the treating chamber, a fan for positively withdrawing from said heating chamber a current of spent gas, means for controlling the amount of gas handled by said fan, inlet means for admitting additional gas to said treating chamber at a point other than the principal inlet for heated treating gas, said treating chamber and other gas conducting parts of the apparatus being substantially gas tight to thereby prevent substantial admission or discharge of gas at points other than the intended points of admission and outlet, whereby the amount of said additional gas may be controlled by controlling the difference in the amounts of gas handled by the discharge and the inlet fans.

20. In a spray processing apparatus comprising a treating chamber and means for delivering treating gas to said treating chamber, a liquid supply system which comprises means for spraying into said chamber liquid material to be treated, a heater for heating said liquid prior to its introduction into the chamber and while it is flowing in a continuous current on its way to said chamber, a temperature control for automatically controlling the temperature of the liquid discharged from said heater to a desired substantially constant value, a steam jacketed liquid line between said heater and said treating chamber for delivering the liquid to said treating chamber at substantially the said desired temperature value, means for supplying heating steam to said line and pressure regulating means for controlling the pressure of said steam whereby the said steam may be controlled to such a pressure that the condensation temperature of said steam is substantially equal to the said desired temperature of the liquid discharged from said heater, the steam supply means being such that the said steam is furnished in ample quantity to insure presence of uncondensed steam in said line at all times.

21. The method of treating materials in finely divided condition by means of gases which comprises establishing a continuously flowing current of treating gas, dividing the said incoming unexpanded current of treating gas into a plurality of separate streams, independently but simultaneously and gradually expanding said several gas streams to larger cross sectional areas of flow, restricting the whirling motion of the gas in each of said expanding streams to effect a substantially straight flow of gas in each of the several streams, discharging said several expanded streams of treating gas into contiguous areas to form a combined resultant continuous current of treating gas of enlarged cross sectional area flowing in a straight, orderly manner without substantial whirling or confusion of flow, dispersing the material to be treated in finely divided condition across said resultant flowing current of treating gas without substantially altering the character of flow of said gas current whereby said material is carried along in finely divided form entrained in dispersed condition in said gas current, and then separating and collecting the material from the gas after a predetermined interval of treatment.



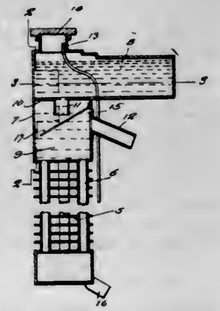
1,782,055. JOURNAL BOX. DONALD S. BARROWS, Rochester, N. Y., assignor, by mesne assignments, to The Symington Company, a Corporation of Maryland. Filed Oct. 30, 1924. Serial No. 746,795. 5 Claims. (Cl. 308—47.)

1. The combination with a journal box having a pivot lug thereon, of a lid pivotally connected thereto, said lid having an imperforate portion completely closing the opening of said journal box, a hood integrally formed on said lid and adapted to partially enclose said pivot lug, said hood serving as pivot means for said lid, a torsion

spring housed within said hood and reacting at opposite ends against the lug and lid and a lug on said lid cooperating with said spring to prevent undesired displacement thereof.

1,782,056. ART OF CRACKING HYDROCARBONS. JOHN E. BELL, Brooklyn, and EDWARD W. ISOM, Locust Valley, N. Y., assignors to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed Nov. 12, 1924. Serial No. 749,402. 8 Claims. (Cl. 196—49.)

3. A process of cracking hydrocarbon oil, consisting in passing the oil through a heating coil wherein it is subjected to a conversion temperature, in discharging the heated oil into an enlarged conversion chamber, in passing the vapors issuing from said conversion chamber to a dephlegmator, in returning reflux condensate from the dephlegmator to said heating coil, in condensing the vapors issuing from the dephlegmator and in collecting the resulting distillate, in circulating the unvaporized oil from said conversion chamber through an independent heating element wherein it is subjected to a lower temperature than the oil in said coil and back to the conversion chamber, and in maintaining a superatmospheric pressure on the oil undergoing conversion.

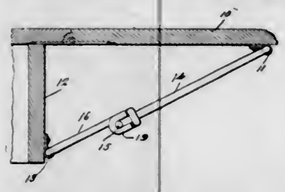


1,782,057. SLEEVE HOLDER. JOHN C. BOLLINGER, Olympia, Wash. Filed Mar. 26, 1929. Serial No. 350,091. 1 Claim. (Cl. 24—137.)

A device of the character specified including elongated members having jaws at corresponding ends and handles at opposite corresponding ends, a loop connected to one of said handles, a ring carried by the loop and adapted to receive an elastic strip, the loop being flexible whereby the ring and strip may partake of a twisting movement relative to the members, said members having transverse grooves in their inner faces forming mating seats, and having corresponding grooves in the outer faces of the

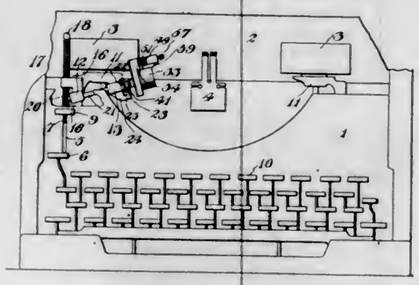
jaws, there being an interengaging rib and groove in the inner faces of the jaws adjacent their outer ends, a coil spring snugly fitted in the mating seats, and arms projecting in the same direction from the ends of the coil spring and extending along the sides of the jaws and having their ends bent laterally, thence rebent to engage the grooves formed in the outer faces of the opposite jaws.

1,782,058. RADIATOR TANK. WALLACE G. CAMPBELL, Lockport, N. Y. Filed Oct. 31, 1928. Serial No. 316,325. 4 Claims. (Cl. 257—25.)



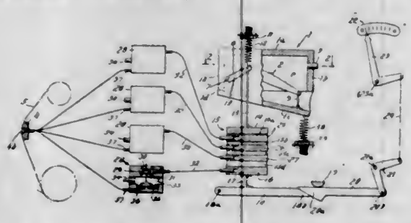
1. A radiator tank having a horizontal partition formed therein whereby to provide upper and lower chambers within the tank, said upper chamber being provided with a filler cap and said lower chamber being interposed in the fluid circulation system of the radiator and a neck depending from said partition with its lower edge terminating in said lower chamber below the horizontal plane of the partition whereby to provide an air space in the upper portion of said lower chamber at the under side of the partition, for trapping the vaporized fluid created in said lower chamber.

1,782,059. TABLE-LEAF SUPPORT. FRANK L. CASPER, Howes Cave, N. Y. Filed Sept. 12, 1927, Serial No. 219,149. Renewed Nov. 22, 1929. 3 Claims. (Cl. 45—47.)



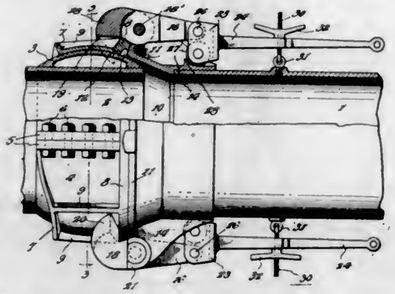
1. The combination with a hingedly mounted member and a support therefor, of a brace comprising companion

sections, and pivotally mounted on said member and support, loops formed on the limbs of one section, and adapted to slidably receive the limbs of the other section, offset extremities formed on the limbs of the last mentioned section and both slidably and pivotally received by said loops, whereby said sections can be arranged in end to



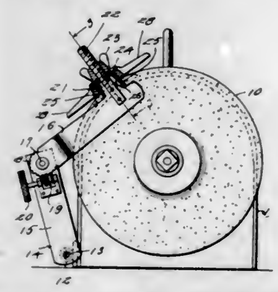
end relation or folded substantially parallel, and each loop having a portion curved inwardly to provide oppositely disposed cam surfaces cooperating with the limbs of the second mentioned section, whereby said sections are effectively latched when swung into end to end relation, and adapted to be unlatched by force in a direction perpendicularly to said offset extremity.

1,782,060. ERASER ATTACHMENT FOR TYPEWRITERS. STEPHEN A. CROSBY, Philadelphia, Pa. Filed May 11, 1928. Serial No. 276,934. 10 Claims. (Cl. 197—181.)



8. An attachment for typewriters comprising a pivotally mounted arm, an eraser shaft slidably and rotatably mounted on the free end of said arm, means for swinging said arm to carry the eraser shaft to and from an erasing position, means on the arm to rotate the shaft, means to normally restrain the rotating means, and means on the shaft to release said restraining means when the shaft is moved endwise by impact at erasing position with material to be erased.

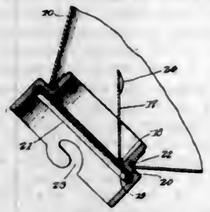
1,782,061. EXPRESSION DEVICE FOR AUTOMATIC PIANOS. JOSEPH H. DICKINSON, Larchmont, N. Y., assignor to The Aeolian Company, a Corporation of Connecticut. Filed May 17, 1927. Serial No. 192,006. 4 Claims. (Cl. 84—41.)



4. In a player piano, the combination of a regulator and its valve, said valve being adjustable both by the regulator and independently thereof; music-sheet controlled means operatively connected with said regulator valve to adjust it independently of the operation of said valve by the regulator; and a hand controlled device operable to adjust the position of said music-sheet controlled means bodily as an entirety and thereby adjust the connected regulator valve while said means is in operation.

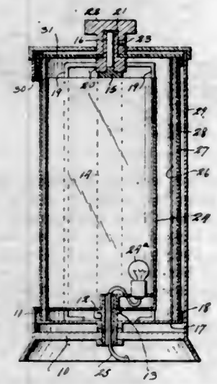
1,782,062. UNIVERSAL JOINT FOR PIPE COUPLINGS. OLE P. ERICKSON, Chicago, Ill. Filed Apr. 5, 1928. Serial No. 267,634. 3 Claims. (Cl. 285—91.)

2. In a pipe coupling, the combination of a socket member, a ball member, a gland secured around the ball member and having a flange presented to the socket member, a lever fulcrumed upon the socket member and having a head engaging behind the flange on the gland, an operating lever pivotally connected to the free end of the first-mentioned lever and having a traveling fulcrum engaged with the socket member, and means whereby the power lever may be locked in operative position.



1,782,063. GRINDING APPARATUS. CARTER C. GIBSON, Hamburg, Iowa, assignor to The Two-Way Electric Grinder Company, Hamburg, Iowa, a Corporation of Iowa. Filed Apr. 30, 1929. Serial No. 359,380. 2 Claims. (Cl. 51—220.)

1. In combination with a rotating grinding disc, a shaft axially paralleling the disc and mounted for rotation and longitudinal shifting, an arm carried by the shaft, said arm being formed in two sections, one of which is provided with a worm gear and the other of which is provided with a worm for coaction with the gear, the outer end of the outer section of the arm having a flat tapered extension provided with a stud, and a thumb nut mounted upon said stud.



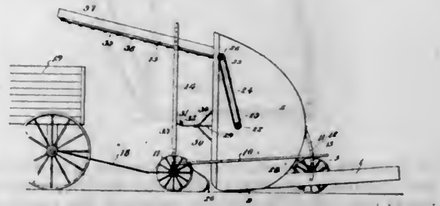
1,782,064. VALVE FOR VACUUM-CLEANER DUST BAGS. ROSE E. GRAY, Sacramento, Calif. Filed Apr. 16, 1929. Serial No. 355,637. 5 Claims. (Cl. 183—40.)

5. The combination of a dust bag connector, having a central bore, means for attaching a dust bag to said connector, a removable washer in said central bore, a ring member secured between said washer and connector, an

inlet valve for the bag pivoted on said member, and a counterweight on said valve at a point remote from the pivotal center of the latter.

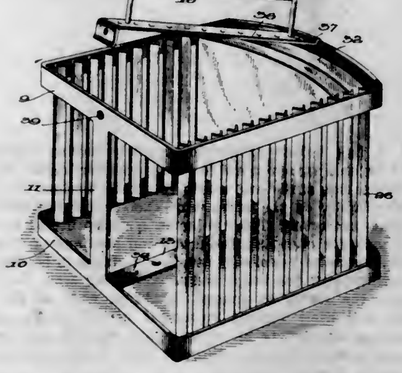
1,782,065. RADIO LOG. ALBERT R. GWYNN, Los Angeles, Calif. Filed Mar. 25, 1930. Serial No. 438,815. 4 Claims. (Cl. 40—77.)

1. A radio log of the character described, comprising a base, a fixed shaft extending upward from the base, a frame supported by said shaft, the shaft extending upward from the upper end of the frame, a frame rotatably mounted upon the base, a transparent drum mounted upon said frame for rotation therewith and having vertical columns of radio indicia, the drum at its upper end having a sleeve surrounding the shaft at the upper end of the frame, a knob carried by said sleeve whereby the drum may be rotated, and a reflector disposed within the frame and within the drum and held from rotation, the reflector having its side edges extended nearly to the drum and having a width at this point approximately equal to one of the columns of indicia on the drum, and a lamp disposed within the reflector.



1,782,066. SHOE-LACE KNOTTER. DONOVAN H. HARDY, Manila, P. I., assignor of one-half to Elbert E. Grubbs, Manila, P. I. Filed Dec. 10, 1929. Serial No. 413,106. 6 Claims. (Cl. 24—140.)

1. A shoe having an upper including a securing flap, a fastener element carried by said flap and having a shank,

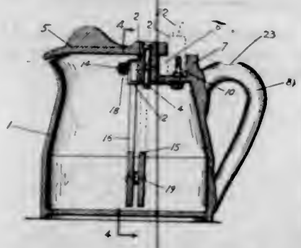


and a lace carried by a portion of the upper overlapped by said flap and passed through the flap at opposite sides of the shank of said fastener, and adapted to be tied across the shank.

1,782,067. CORN GATHERER. EDWARD HASSMAN, Fleming, Colo. Filed June 12, 1928. Serial No. 284,735. 10 Claims. (Cl. 56—344.)

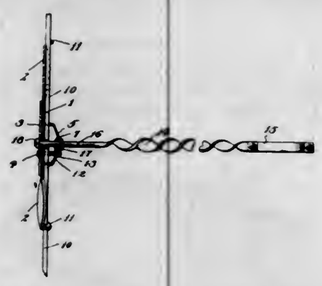
10. An apparatus for the purpose set forth comprising a traveling frame, a housing mounted on the front end of the frame and having an open front and bottom and a closed back and top, a transfer wheel mounted within the frame concentric with the back of the same, and a conveyer having its rear end supported by and within the housing at the upper forward corner thereof, the conveyer extending forwardly from the housing and being disposed to receive material thrown forwardly by the transfer wheel.

1,782,068. NEGATIVE HOLDER. JOSEPH W. HAZELL, Washington, D. C. Filed Dec. 21, 1926. Serial No. 156,124. 2 Claims. (Cl. 95—100.)



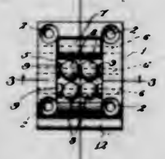
1. A holder for flexible negatives including a pair of parallel side members provided with opposed negative supporting portions, each portion being grooved, the sides of each groove diverging from each other at an angle of substantially ninety degrees, said opposed negative supporting portions being spaced apart a distance less than the corresponding dimension of the negative to be supported thereby, and means for preventing relative movement of one of said side members with respect to the other.

1,782,069. ELECTRIC HEATING APPARATUS FOR LIQUIDS. HENRY HERBERT HENNING, Pymble, near Sydney, New South Wales, Australia. Filed Nov. 17, 1928, Serial No. 320,162, and in Australia Feb. 2, 1928. 6 Claims. (Cl. 219—40.)



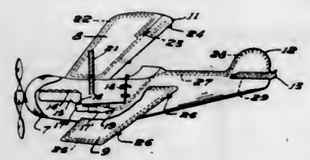
1. Electric heating apparatus for liquids comprising an electrically insulated receptacle for the liquids, a lid for said receptacle openable horizontally from the mouth

of such receptacle, a recess in the head of such receptacle rearwardly of such lid, electric conductive means associated with said recess to which an electric current conducting coupling is attachable to prevent opening of the



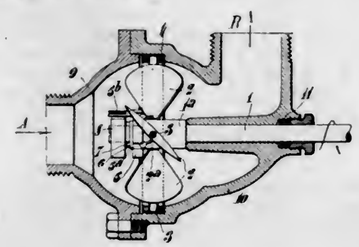
lid from the receptacle when the coupling is so attached, and electrodes associated with said electric conductive means and located in the said receptacle, the electric circuit of which is only completable through liquid contained in said receptacle.

1,782,070. FLAG HOLDER. REX H. LAZARUS, Jackson, Mich. Filed May 2, 1929. Serial No. 359,899. 4 Claims. (Cl. 46—14.)



4. A flag holder comprising a body having radiating arms twisted transversely to form propeller blades, means to engage flag staffs and retain the staffs against the body longitudinally of the arms with their outer flag-carrying portions projecting from the arms, a clamp fitting against said body for engaging the inner end portions of the flag staffs, means to releasably secure the clamp in binding engagement with the body, means extending from the body within the clamp to engage the inner ends of the flag staffs and limit inward movement of the staffs, and a mounting adapted to be secured to a support and having a stem passed centrally through the clamp and body to rotatably mount the body.

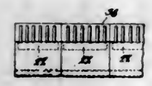
1,782,071. DOORLATCH STRIKER. FRANK J. MCGUINNESS, Webster, Mass. Filed Oct. 24, 1928. Serial No. 314,754. 1 Claim. (Cl. 292—340.)



A striker comprising a block adapted to be secured against a door jamb and having a flat inner end face and an outer side face extending from the end face, the block being reduced in thickness towards its other end to facilitate movement of a latch plunger along the block, said block having a pocket opening through its outer side face and spaced from its inner end, pins extending transversely through said pocket in spaced relation to each other longitudinally thereof, a roller in the inner end portion of said pocket rotatably mounted upon one pin, and a plurality of balls rotatably carried by each of the remaining pins between the roller and the outer end of the pocket, the balls closest to the outer end of the pocket being of reduced diameter and said roller and balls projecting out of the pocket an equal distance and adapted to engage a latch plunger and facilitate movement of the plunger along the block into position to engage the said inner end face of the block in overlapping relation thereto and retain a door closed.

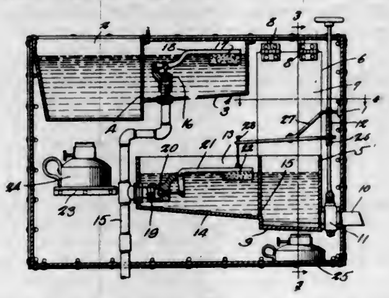
1,782,072. SYSTEM FOR PREVENTING THE FORMATION OF ICE ON AIRCRAFT. FRANK MCKINSTRY, Nashville, Tenn. Filed June 19, 1928. Serial No. 286,681. 2 Claims. (Cl. 244—31.)

1. The combination with an airplane, exhaust manifold of an engine within the airplane and a heating system for distributing exhaust from the manifold throughout the plane, of a guide located at one side of the exhaust manifold, a movable distributor head telescopically engaged in the system and communicating with the exhaust manifold, a slider supporting the head, and means within reach of an operator of the plane to permit the head to be shifted with respect to the manifold, said manifold being superposed relative to said head, whereby the latter can travel beneath the manifold.



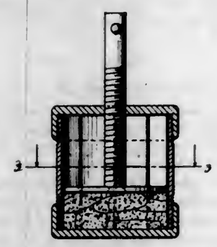
1,782,073. PUMP OUTFLOW REGULATING DEVICE. EMILE PIQUEREZ, St. Cloud, France, assignor to Société Anonyme des Etablissements Técalémit, Paris, France, a Joint-Stock Company of France. Filed May 18, 1929, Serial No. 364,265, and in France May 26, 1928. 1 Claim. (Cl. 103—37.)

In a centrifugal pump, the combination of a casing having a delivery port, a cover of this casing having an inlet port, a driving shaft journalled in a hub extending within the casing and integral with the same, a fluid-tight joint between the shaft and the casing, radial axes on the said shaft, blades respectively pivoted on each of the said axes, a crown surrounding the said blades and peripherally staying the said axes, a ring rotating on the said shaft and having peripheral side grooves, fingers respectively secured on each blade and fitting in the corresponding groove of the said ring, a finger secured on the periphery of the said ring and having a longitudinal groove,



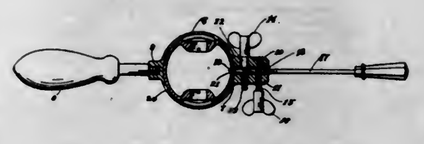
and a thermostat in spiral form, held, at one end, in the groove of the finger integral with the ring and, at the other end, in a side groove of the driving shaft, this thermostat being constituted by the superposition of two sheets of metals having different coefficients of expansion.

1,782,074. MATCH PACKET. RODNEY S. PULLEN, Philadelphia, Pa., assignor to Pullenlite Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 24, 1928. Serial No. 321,597. 14 Claims. (Cl. 206—34.)



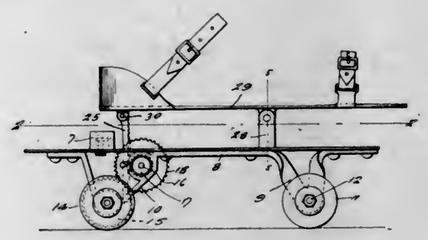
1. In manufacturing a plural section match packet the method of procuring a stiff but readily broken connection between the sections of the packet which consists in separating the outside surfaces of the adjacent sections and in providing a weakened connection between the sections intermediate the thickness of the packet.

1,782,075. STOCK WATERER. JOSEPH RUSKAMP, Dodge, Nebr. Filed Dec. 10, 1928. Serial No. 324,987. 1 Claim. (Cl. 119—73.)



A stock waterer including a casing, a watering trough therein, a drain pipe leading from the trough and casing, a valve for controlling said pipe, a water supply pipe opening into the trough, a float actuated lever in the trough, a valve actuated thereby adapted to close when the float is raised, a threaded rod for actuating the drain valve, a slidable member actuated thereby, and means operated by said member when raised by the complete opening of the drain valve, for supporting the float lever and holding the supply valve closed.

1,782,076. DEVICE FOR PRESSING SOAP. HENRY T. SAFFORD, Sr., El Paso, Tex. Filed Aug. 27, 1929. Serial No. 388,768. 1 Claim. (Cl. 25—10.)

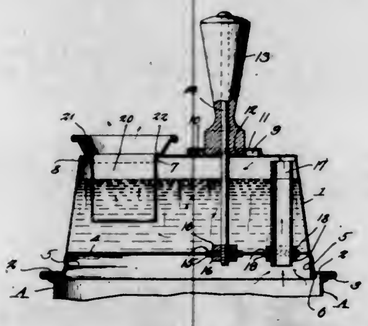


A soap press of the character described comprising a cylindrical casing open at each end, a cap threadedly engaging over and closing each end of the casing, one of said caps having a threaded aperture through the center thereof, a follower designed to snugly position in the casing to reciprocate therein, a threaded shaft attached at one end to said follower and extending through and engaging in the threaded aperture, and lateral arms carried by said shaft at its outer end to facilitate its rotation, said casing having the inner face of the wall provided with a series of longitudinally extending grooves extending throughout from one end to the other.

1,782,077. APPARATUS FOR RESIZING PISTONS. FRED H. SHARP, Salina, Kans. Filed July 15, 1926. Serial No. 122,714. 5 Claims. (Cl. 153—79.)

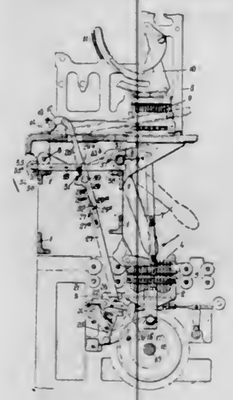
1. A piston sizing device comprising a slitted piston-encircling sleeve, means connecting the portions on opposite sides of the slit for expanding and contracting the sleeve, and a piston expanding wedge that passes through the slit of the sleeve.

1,782,078. SKATE. SYLVESTER J. STIVER, New Bethlehem, Pa. Filed Oct. 12, 1929. Serial No. 399,254. 1 Claim. (Cl. 208—174.)



A skate comprising a supporting plate, a rockable foot plate mounted on said supporting plate, a longitudinally extending bar secured to the under side of the supporting plate and having depending substantially V-shaped front and rear portions and shaft bearings in the upper forward part of the said rear portion, axle shafts journaled in the bottoms of the V-shaped front and rear portions of said bar, rollers fixed on the said axle shaft, a driving shaft journaled in the said bearings in the upper forward part of the rear V-shaped portion, a driving connection between said driving shaft and the rear axle shaft, said driving connection operable to rotate the axle in only one direction of rotation of the driving shaft, and means operatively connecting the said rockable foot plate to the said driving shaft for rotating the latter in alternate directions upon rocking movement of said foot plate.

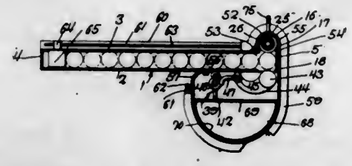
1,782,079. COVER FOR COOKING UTENSIL. LAWRENCE HENRY TAYLOR, Iola, Kans. Filed Aug. 13, 1929. Serial No. 385,564. 6 Claims. (Cl. 53—1.)



1. A cover for cooking utensils and the like, including a body constituting a water container, a steam outlet

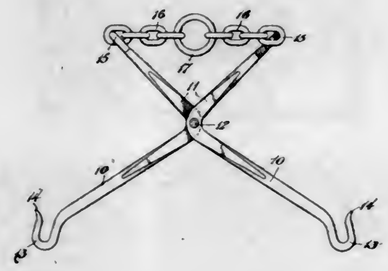
tube opening through the bottom of said body into the upper portion thereof, a water tube opening through the top of the body downwardly into the lower portion there-

of, said body having an opening in the top thereof, a cap for closing the opening, and means extending upwardly within the body for detachably connecting the bottom of the body and the cap.



1,782,080. LOCKING DEVICE. ARTHUR THOMAS, Thornton Heath, and FREDERICK EDWARD HALLAHAN, Southend-on-Sea, England, assignors to the Accounting & Tabulating Corporation, of Gt. Britain, Limited, London, England. Filed Mar. 22, 1928. Serial No. 263,851. 12 Claims. (Cl. 235—130.)

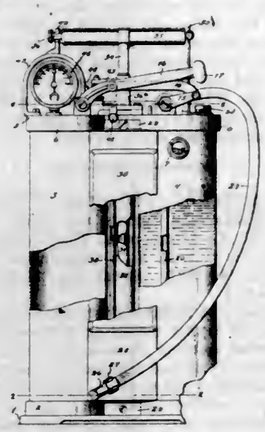
1. The combination in a machine of the class described, of a base frame, total controlling and sensing mechanisms mounted on said base frame, a head frame movable in relation to said base frame, calculating mechanisms mounted on said head frame, crippiable movement-transmitting means interconnecting said mechanisms on said base and head frames, means for moving said head frame in relation to said base frame, together with means to prevent movement of said head-frame from an operative to an inoperative position without rendering said interconnecting means inoperative.



1,782,081. COMBINATION CIGARETTE CONTAINER, IGNITER, AND EJECTOR. VERNON S. WERNER, Morris, Ill. Filed May 28, 1928. Serial No. 281,234. 8 Claims. (Cl. 312—86.)

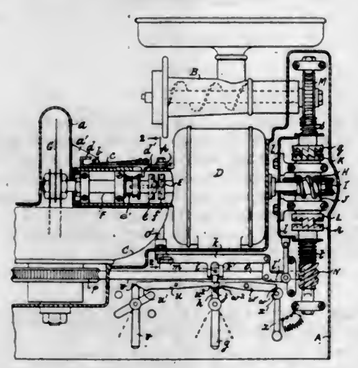
1. In a cigarette container and dispenser, a longitudinal cigarette storage compartment to accommodate a row of cigarettes to be dispensed, a follower movable longitudinally in said compartment and engageable with one end of a row of cigarettes arranged therein, means yieldably urging the follower to effect movement of the cigarettes toward one end of the compartment upon displacement of the respective endmost cigarette of the row from the row, a receiving chamber in communication at one side with the last mentioned end of the compartment, a displacing member operable to effect transfer of a

cigarette from the said storage compartment into the receiving chamber and comprising a cylindrical engaging member supported for swinging movement, an ejecting member movable in the receiving chamber to eject therefrom a cigarette transferred thereto from the storage chamber, the said ejecting member being manually operable, and means actuated through movement of the ejector and operable upon initial movement of the ejector for effecting swinging movement of the displacing member.



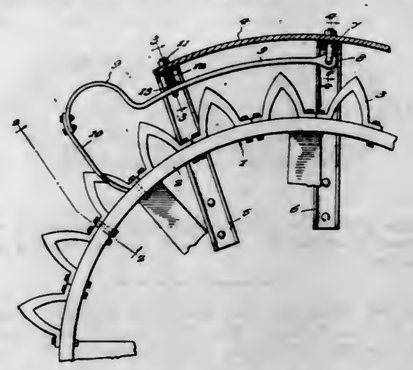
1,782,082. GAMBREL. KARL WICHTENDAHL, Gotha, Fla. Filed Dec. 12, 1929. Serial No. 413,553. 1 Claim. (Cl. 294—79.)

A gambrel comprising a pair of substantially C-shaped arms forged out of round metal bars pivoted together at their elbows and having flattened portions adjacent to the pivot to permit limited opening movement; hooks having outwardly extending, deep bight portions formed on the lower ends of said arms; eyes on the upper ends of the arms; a chain connected to the eyes limiting the closing movement of hooked arms; and a hook-receiving ring in said chain whereby it may be suspended and the weight of the carcass will automatically open the hooked arms.



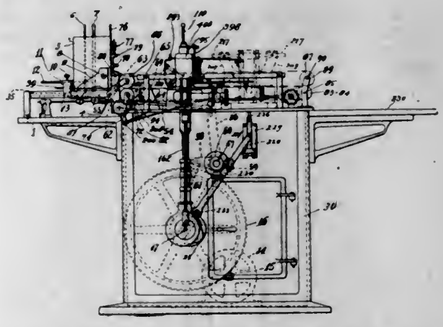
1,782,083. FIRE EXTINGUISHER. FRANK T. WILCOX, Norwalk, Ohio, assignor to The Firex Extinguisher Company, Norwalk, Ohio, a Corporation of Ohio. Filed Oct. 11, 1927. Serial No. 225,474. 5 Claims. (Cl. 299—96.)

1. In a fire extinguisher, air and chemical cylinders, an integral head closing the upper end of said cylinders, valve housings forming a part of said head, valves in said housings for controlling air from the air cylinder to said chemical cylinder and the discharge of chemical from said chemical cylinder, a pump for delivering air to the air cylinder, means for connecting said air cylinder with an external source of pressure, and a valve for controlling the air from said source and said pump to the air cylinder.



4. In a fire extinguisher, vertically disposed air and chemical cylinders arranged in parallelism beside each other, an integral head casting closing the upper ends of said cylinders, said casting comprising valve housings and fluid passageways establishing communication between the interior of said cylinders and also between the interior and exterior of said chemical cylinder, rotatably mounted valves in said housings to control said respective passageways whereby to control the discharge of air from said air cylinder to the chemical cylinder and the discharge of chemical from said chemical cylinder, and means for simultaneously rotating said valves.

1,782,084. MEAT-MINCING AND SAUSAGE-MEAT-MAKING MACHINE. FREDERICK HURSH WRIGHT and EDMUND WOODWARD LEWIS, London, England. Filed Jan. 12, 1927, Serial No. 160,725, and in Great Britain Apr. 16, 1926. 15 Claims. (Cl. 192—135.)

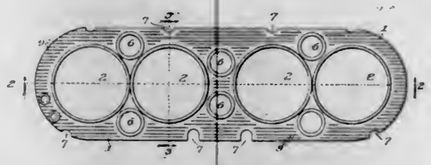


1. A machine for preparing sausage-meat and of the kind described, comprising a safety device consisting of a movable cover fitting over the bowl and knives, a lug or pin on the cover, a spring member depressible by the lug or pin when the cover is closed, a clutch on the knife spindle, and a hand-operated sliding bolt which in one position engages the lug or pin to lock the cover in place and effects engagement of the clutch on the knife spindle, and in the other position disengages the clutch and is automatically locked by the spring member when the cover is opened.

1,782,085. WHEEL SCRAPER. FRANK T. ZERWIG, Ste. Genevieve, Mo. Filed Sept. 25, 1929. Serial No. 395,110. 1 Claim. (Cl. 280—158.)

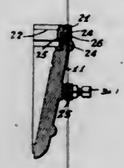
The combination with a traction wheel, and braces at the side thereof having portions extending across the rim of the wheel in spaced relation thereto, of an arm disposed between the rim of the wheel and the overhanging portions of the braces and pivoted at one end to one of the braces, and having its opposite end curved outwardly, thence inwardly, a scraping blade attached to the recurved end of the arm and engaging the rim of the wheel, a U-bolt having its closed end engaging under and its arms embracing the sides of the pivoted arm and passing through the overhanging portion of the other brace, a plate loosely mounted on the arms of the U-bolt and engaging the outer side of the pivoted arm, and springs on the arms of the U-bolt between the brace and plate to yieldably hold the scraper blade in contact with the rim of the traction wheel.

1,782,086. TAG-MAKING MACHINE. SAMUEL E. ALLEN, Pittsburgh, Pa. Filed July 13, 1928. Serial No. 292,455. 10 Claims. (Cl. 93—87.)



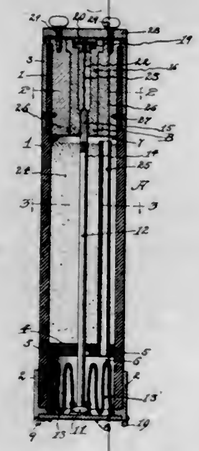
1. In a tag making machine, a patch punching and pressing device; an eyeleting device; a system of conveyor belts adapted to convey tag-blanks to said devices, and means for operating said devices and conveyor-belts in proper speed relation.

1,782,087. GASKET. CLAUDE B. BAILEY, Wyandotte, Mich., assignor to McCord Radiator & Mfg. Co., Detroit, Mich., a Corporation of Maine. Filed May 7, 1926, Serial No. 107,323. Renewed Jan. 11, 1929. 3 Claims. (Cl. 288—1.)



1. A cylinder-head gasket having a body portion of a single layer of sheet metal with a plurality of openings

therein, means carried by the body layer immediately about each of the openings to provide the pressure receiving and joint sealing sections of the gasket, and corru-

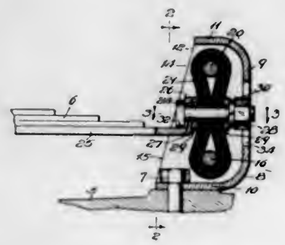


gations provided in the body layer entirely outside of said sections to stiffen the body layer against bending and distortion.

1,782,088. BAKING AND MOLDING DEVICE. JAMES L. BALTON, Baltimore, Md. Filed Apr. 12, 1929. Serial No. 354,677. 12 Claims. (Cl. 107—58.)

1. In an apparatus of the character stated, an aluminium female mold having molding cavities closed except at the mouths of the cavities and having rings of heavier metal embedded in the aluminium near the open end of the cavities, aluminium cores adapted to enter and partly fill the molding cavities, said cores having rings of heavier metal secured around the upper large end, the rings adapted to rest upon the ring in the female molds when the cores are inserted into the molds.

1,782,089. PROTECTIVE DEVICE FOR ELECTRIC CIRCUITS. HARRY W. BAUMER, Chicago, Ill. Filed June 13, 1925. Serial No. 36,853. 20 Claims. (Cl. 200—127.)

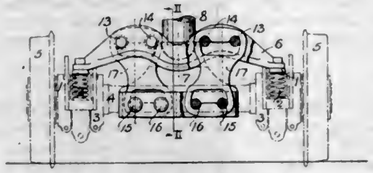


1. A protective device for electric circuits, comprising a non-conductor housing having a removable conductor member on one end and a hinged conductor member on the other end, a movable conductor member slidably mounted within the housing and electrically connected at one end with the hinged conductor member, a removable extension on the other end of the movable conductor, a non-conductor, removable cartridge member interiorly provided with a motor element, and a fuse connected at one end with said extension member and electrically connected at its other end with the housing conductor member, so located in the cartridge that upon being blown its arc will actuate the motor element.

1,782,090. MERCURY COMPOUND OF META CRESOL. DUNCAN MACDONALD COPLEY and JOHN PAUL SNYDER, Norwich, N. Y., assignors to The Norwich Pharmacal Company, Norwich, N. Y., a Corporation of New York. Filed Sept. 14, 1927. Serial No. 219,558. 6 Claims. (Cl. 260—13.)

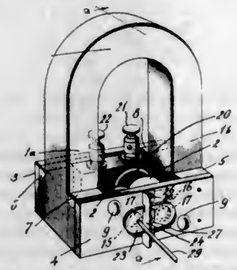
1. The process of producing the organic mercury derivatives of a cresol isomer consisting in filtering into the isomer an alcohol solution of potassium hydroxide, slowly adding thereto an alcohol solution of a mercuric salt, and meanwhile agitating the mixture, then concentrating same and promoting reaction by low heat, cooling, filtering, and washing until only very faint traces of chlorides appear, and finally drying same.

1,782,091. SPRING SHACKLE. THOMAS L. FAWICK, Racine, Wis. Filed Dec. 20, 1923. Serial No. 681,766. 7 Claims. (Cl. 248—14.2.)



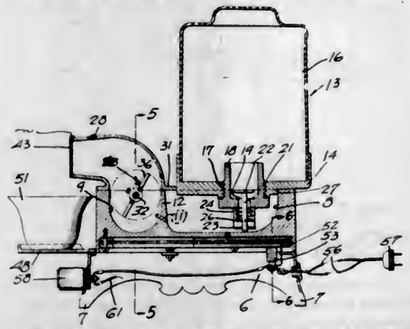
1. The combination with a supporting-frame and a motor of a support for supporting the forward end of the motor on said frame, said support comprising a flexible band looped in a vertical direction, supports between opposite sides of the rear of the motor and said frame, one of said last supports comprising a flexible band looped in a vertical direction and the other comprising a flexible band looped in a horizontal direction.

1,782,092. ARTICLES HAVING TARNISH-RESISTING SURFACE AND PROCESS OF MAKING SAME. DANIEL GRAY and RICHARD O. BAILEY, Oneida, and WILLIAM S. MURRAY, Utica, N. Y., assignors to Oneida Community, Limited, Oneida, N. Y., a Corporation of New York. Filed May 16, 1923, Serial No. 639,447. Renewed Dec. 13, 1926. 2 Claims. (Cl. 204—2.)



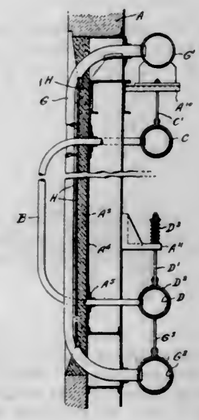
1. The process of providing an article with a tarnish-resisting coating comprising a mixture of silver and chromium, which consists in preparing an aqueous bath containing at least 3 per cent chromic acid, and a compound of the silver, using the article to be coated as a cathode, passing a plating current through the solution by means of a suitable anode, and maintaining an excess of said silver salt in contact with the bath.

1,782,093. TRUCK FOR RAILWAY ROLLING STOCK. ROBERT F. HALL, Schenectady, N. Y. Filed July 10, 1929. Serial No. 377,164. 8 Claims. (Cl. 105—189.)



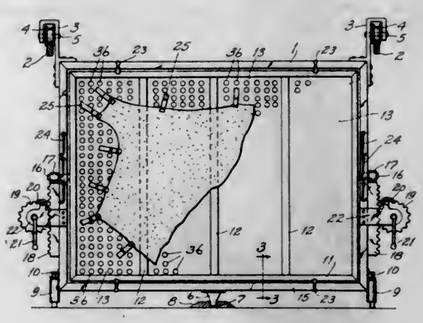
1. A swing hanger link for lateral motion railway trucks, having two upper and two lower bearings, the upper bearings being disposed on opposite sides of the middle line of the link at unequal distances from the lower bearings.

1,782,094. ELECTRICAL MOVEMENT FOR LOUD-SPEAKERS. MARCUS C. HOPKINS, Washington, D. C., assignor, by mesne assignments, to Hopkins Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Jan. 7, 1927. Serial No. 159,552. 5 Claims. (Cl. 175—339.)



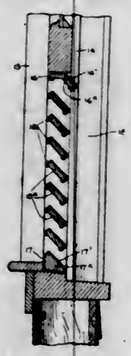
1. A telephone instrument comprising a permanent magnet, a pole piece connected to each pole of the permanent magnet, the pole pieces being arranged substantially parallel to each other, a pair of reversely wound coils arranged between said pole pieces, core elements for said coils, said core elements being connected to one of said pole pieces to form a portion of the path for the magnetic flux, and being spaced from the other pole piece, and an armature carried by said second pole piece in operative relation with the ends of said core members.

1,782,095. LIQUID-WHIPPING APPARATUS. WILLIAM JENSEN, Pasadena, Calif. Filed Feb. 11, 1929. Serial No. 339,207. 8 Claims. (Cl. 259—10.)



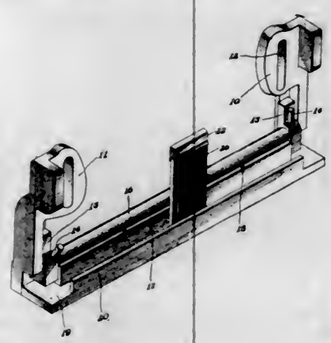
1. A liquid whipping apparatus comprising a base; a partition to divide the base into two communicating vessels; means common to both vessels to heat the same; a container for said liquid communicating with one of said vessels; and means for beating the liquid into a foam in the other vessel.

1,782,096. SUPERHEATER BOILER. WALTER F. KEENAN, Jr., Pelham, N. Y., and HAROLD F. EDDY, Jackson, Mich., assignors to Foster Wheeler Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 10, 1928. Serial No. 268,908. 9 Claims. (Cl. 122—481.)



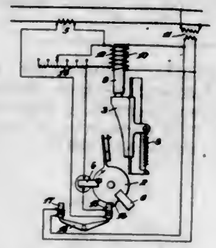
1. The combination with the combustion chamber wall of a boiler furnace, of thin walled radiant heat superheater tube elements adjacent said wall at the furnace chamber side of the latter and freely exposed to heat radiation from the portion of the combustion chamber in front of said elements, said elements being spaced apart from one another and from said wall to avoid slag bridging action between said elements and between the latter and said wall, and to permit of substantial radiant heat absorption from gases between said elements, and between said elements and said well as well as from the latter.

1,782,097. MECHANISM FOR STRETCHING AND DRYING HIDES AND LEATHER. ERNEST G. LOWE, Hartford, Ill. Filed Nov. 16, 1928. Serial No. 319,834. 1 Claim. (Cl. 149—21.)



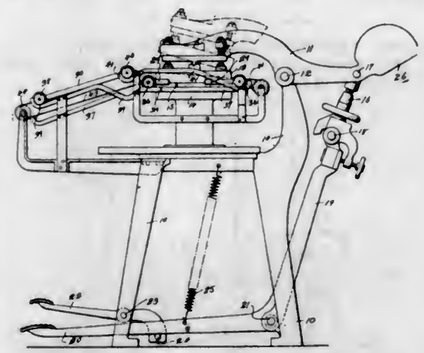
Mechanisms for stretching and drying hides and leather, comprising a transportable outer frame, a rotatable inner frame mounted within said outer frame, tracks for transporting said frames, means for transportably suspending said frames from said tracks, means for shifting the axis of rotation of said inner frame in said outer frame, means for holding said inner frame in adjusted positions, means for holding hides and leather under tension within said inner frame, means for holding said frame and said mechanisms against longitudinal movement.

1,782,098. WINDOW VENTILATOR. JOSEPH MAJUSCHAK, Lyndhurst, N. J. Filed July 12, 1928. Serial No. 292,112. 2 Claims. (Cl. 98—99.)



1. A ventilator comprising a pair of mating members, each of said members including a vertical side element, and further including top and bottom horizontally extending elements, each of said top extending elements being formed to have a portion of its upper face substantially horizontal and a further portion of its top face inclined downwardly, each of said members further including horizontally extending elements disposed intermediate said top and bottom horizontally extending elements spaced from one another and fixedly secured at one side with its said vertical side element, said intermediate horizontally extending elements having their upper faces substantially parallel to said downwardly inclined upper face portion of its said top extending element, the said intermediate horizontally extending elements of one of said mating members being hollow and dimensioned to receive the corresponding said intermediate horizontally extending elements of the other mating member, and a vertically extending element for each mating member fixedly inter-connecting the said intermediate horizontally extending elements and disposed intermediate the sides of said member.

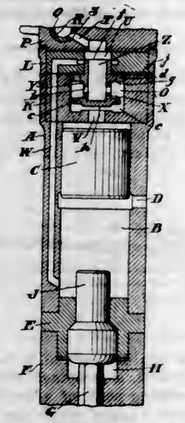
1,782,099. ATTACHMENT FOR LOOMS. ROBERT PORMANN, Union City, N. J. Filed Aug. 15, 1928. Serial No. 299,662. 1 Claim. (Cl. 139—188.)



In a loom, a pair of spaced apart brackets adapted to be supported on the lay of the loom, blocks mounted rigidly on said brackets, a spindle rotatably mounted in said blocks for supporting the warp strings being fed to the loom, a platform connecting said brackets and being attached ot the latter, a reed supported on said platform, a beam mounted on said platform, said beam having grooves traversing said channel, and a felt layer projecting from said grooves serving as a support for said spindle, said beam having a longitudinal channel therein receiving one-half the periphery of said spindle, said spindle resting upon said felt layer, said felt projecting above the channel surface.

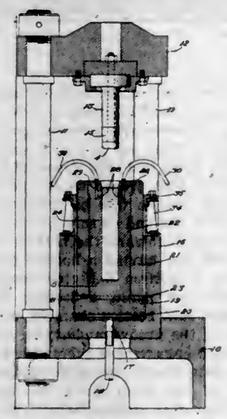
1,782,100. RELAY. MANFRED SCHLEICHER, Berlin-Charlottenburg, and PAUL CARIO, Berlin-Grunewald, Germany, assignors to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed July 13, 1927, Serial No. 205,307, and in Germany June 24, 1926. 8 Claims. (Cl. 200—97.)

1. A protective relay comprising means for automatically cutting out part of a line system after a predetermined time interval, which interval increases in proportion to an increase of voltage and decreases in proportion to an increase in current, and means for setting said relay to operate after a predetermined time interval, with a predetermined value of the quotient of voltage and current, without affecting the increase of the time interval for the operation of the relay in the event the predetermined value of said quotient should be exceeded.



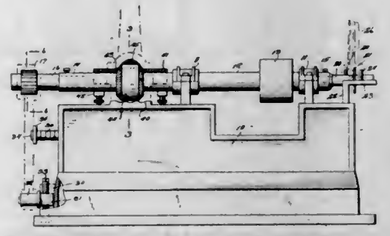
1,782,101. GARMENT OR IRONING PRESS. EDWARD J. SCHREMP, Beechhurst, and PHILIP N. BRAUN, Syracuse, N. Y., assignors, by mesne assignments, to the Prosperity Company, Inc., Syracuse, N. Y., a Corporation of New York. Filed Apr. 19, 1924, Serial No. 707,576. Renewed Apr. 11, 1930. 11 Claims. (Cl. 68—9.)

1. A conveyor press comprising a heating zone into which the work is conveyed for treatment, a pair of tray receptacles supported one above the other, guiding means on which each tray travels in opposite directions, means for bringing the trays to rest in predetermined position in spaced relation, one end of the guiding means being bent downwardly and so constructed and including means as to cause the tray to assume an angular position outside the heating zone by which work may be conveniently



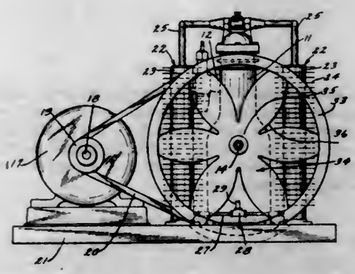
placed thereon, the other end of the guide means arranged and including means to bring the tray to rest in place for treatment inside the heating zone.

1,782,102. VALVE FOR ROCK DRILLS. WILLIAM A. SMITH, Jr., Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Dec. 12, 1929. Serial No. 413,534. 3 Claims. (Cl. 121—19.)



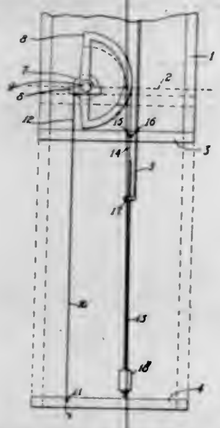
1. In a fluid actuated rock drill, the combination of a cylinder and a hammer piston therein, a valve chest having a valve chamber, inlet passages leading from the valve chamber to the cylinder, a valve in the valve chamber to control the inlet passages and having opposed differential pressure surfaces against which pressure fluid acts to throw the valve, a passage in the valve through which pressure fluid flows into the valve chamber, a head on the valve over which pressure fluid flows to one inlet passage, and an actuating surface on the valve intermittently exposed to compression to assist the pressure fluid acting against the pressure surface of smaller area to throw the valve.

1,782,103. HIGH-PRESSURE HYDRAULIC PRESS. JOHN C. SOLBERG, Arlington, and FREDERICK C. LANGENBERG, Watertown, Mass., and EDMUND M. SAWTELLE, New York, N. Y., assignors to Oneida Community, Limited, Oneida, N. Y., a Corporation of New York. Filed May 4, 1928. Serial No. 275,228. 3 Claims. (Cl. 138—10.)



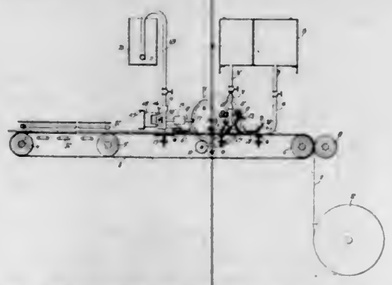
1. The improved pressure applying apparatus comprising a ram and cylinder cooperating with each other and capable of movement to cause the ram to enter or to be withdrawn from the bore of the cylinder, said ram having a packing thereon, said cylinder being provided with a port entering the side of the bore at a point distant from the mouth of the bore greater than the length of the packing on the ram.

1,782,104. BEARING GROOVING AND POCKETING MACHINE. CLIFFORD T. SONDLEY, Newberry, S. C. Filed Oct. 4, 1928. Serial No. 310,424. 13 Claims. (Cl. 90—11.)



1. In apparatus for forming a diagonal oil groove in bearings which are formed in sections each of which has a pair of apertured ears disposed in a plane at right angles to the bearing for the reception of securing elements holding the sections in assembled relation, said apparatus comprising a shaft, means for rotating the shaft, a cutter carried thereby, and a pair of pins diagonally disposed with reference to each other and to the shaft, said pins being arranged at opposite sides of the shaft and at opposite sides of the cutter adapted to engage in the apertures of the ears and guide the bearing section for engagement with the cutter.

1,782,105. REFRIGERATION. CHARLES C. SPREEN, Detroit, Mich., assignor to Kelvinator Corporation, Detroit, Mich., a Corporation of Michigan. Filed Mar. 12, 1927. Serial No. 174,883. 1 Claim. (Cl. 257—39.)

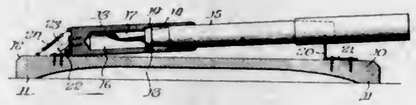


A condenser for refrigerating apparatus comprising a pair of closed spaced cylinders, said cylinders extending in parallel relation in a vertical plane, spaced circular fins extending in a horizontal plane from said cylinders, a common inlet connection for said cylinders, a common outlet connection for said cylinders, a common horizontally disposed support for said cylinders, and means for securing the bottom portions of the latter rigidly to the support.

1,782,106. MEAN-TEMPERATURE INDICATOR. MARSHALL TAYLOR, Wilkinsburg, Pa. Filed June 24, 1929. Serial No. 373,135. 6 Claims. (Cl. 73—118.)

1. A temperature measuring device comprising the combination with the escapement lever of a clock mechanism, of means responsive to temperature changes for varying the rate of such mechanism, said means being adapted to exaggerate the variations in the rate of the clock mechanism.

1,782,107. METHOD AND APPARATUS FOR MAKING INLAID SHEET MATERIAL. MERWYN C. TEAGUE, Elmhurst, N. Y., assignor to The Mechanical Rubber Company, Cleveland, Ohio, a Corporation of New Jersey. Filed Jan. 26, 1924. Serial No. 688,696. 36 Claims. (Cl. 154—21.)



22. An inlaying machine for plastic material comprising means for supporting a backing, and means laterally movable relatively to each other for distributing plastic material of different colors in predetermined inlaid arrangement on the backing by relative movement of the backing and distributing means.

1,782,108. DESK STAND AND HOLDER FOR FOUNTAIN PENS. JOHN C. WAHL, Chicago, Ill., assignor, by mesne assignments, to Pen Desk Set Company, a Corporation of Illinois. Filed July 11, 1925. Serial No. 42,900. 27 Claims. (Cl. 120—108.)

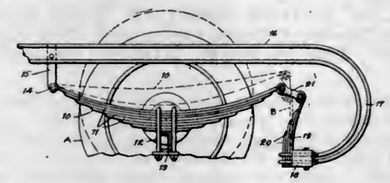
1. A fountain pen desk set comprising a relatively shallow base adapted to rest on a flat surface, a supporting member on said base, an open-mouthed holder adapted to removably receive the writing end of a fountain pen, the lower end of said holder being swingably mounted directly in the supporting member, and resilient means to cause the holder to remain at any angle to which it may be adjusted until pressure is applied to move it to a different angle, the holder being swingable from a position substantially parallel with the base to well beyond the vertical whereby the holder and its contained pen can be laid down close to the base to facilitate storing and readily swung from an angle on one side of the vertical to an angle on the other side of the vertical.

1,782,109. FOUNTAIN-PEN DESK STAND. JULES A. FREMON and AVERY S. DE HAVEN, Leeper, Mo., assignors, by mesne assignments, to Pen Desk Set Company, a Corporation of Illinois. Filed Sept. 17, 1926. Serial No. 136,073. 7 Claims. (Cl. 120—108.)

1. In a fountain pen desk stand, a base adapted to be placed on top of a desk, a receptacle having a closed end for receiving the writing point of a fountain pen, a shoulder in said receptacle against which the end of said fountain pen is urged by its own weight to seal substantially the ink-feeding mechanism, means directly secured to said closed end and said base whereby said receptacle is movably mounted on said base, and means whereby said pen when in said receptacle is prevented from movement below a position wherein the ink in said pen flows toward the writing point thereof.

1,782,110. BOX. ARNOLD WETZLER, Far Rockaway, N. Y. Filed Jan. 26, 1929. Serial No. 335,258. 3 Claims. (Cl. 217—62.)

1. A box construction, comprising side, end and bottom walls, and a flexible slidable cover, said side walls each having a substantially straight groove therein terminating a distance from one end wall, said grooves adapted to receive said cover and said cover adapted to slide substantially out of said groove so the portion of the cover beyond the said groove will be relatively free, an upper deflector opposite the end of said groove for deflecting the cover in a direction toward the bottom wall after leaving the groove, said box having a bottom chamber for receiving the cover, a bottom deflector cooperating with the upper deflector for again deflecting the flexible cover toward and into said bottom chamber, and a member adjacent the end of the groove underlying the said cover and having a limited engagement therewith for aiding re-entry of the cover into the groove with minimum restriction of the freedom of the cover when slid out of the groove, whereby the cover is substantially free and unrestricted outside of the groove and the restricted portion is entirely within a straight groove.



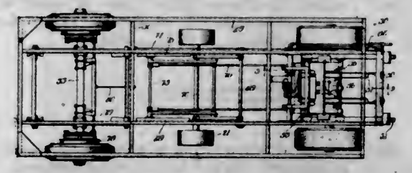
1,782,111. METHOD OF MANUFACTURING TETRA-ALKYLATED THIURAMDISULPHIDES. HAROLD S. ADAMS, Larchmont, N. Y., and LUDWIG MEUSER, Bound Brook, N. J., assignors to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Aug. 4, 1925. Serial No. 48,069. 3 Claims. (Cl. 260—16.)

1. A process for making tetra alkylated thiuramdisulphides which comprises treating a secondary amine with an excess of carbon disulphide, oxidizing the dithiocarbamate thus formed to a thiuramdisulphide and causing the liberated secondary amine to react with the excess carbon disulphide to form additional dithiocarbamate, oxidizing the dithiocarbamate as it forms into further thiuramdisulphides and recovering the thiuramdisulphide from the reaction mixture.

1,782,112. METHOD OF TREATING MIXTURES OF AMINES. HAROLD S. ADAMS, Larchmont, N. Y., and LUDWIG MEUSER, Bound Brook, N. J., assignors to The Naugatuck Chemical Company, New Haven, Conn., a Corporation of Connecticut. Filed Aug. 4, 1925. Serial No. 48,070. 19 Claims. (Cl. 260—16.)

1. A process for treating a mixture of amines which comprises reacting with carbon bisulphide on the primary and secondary amines therein, oxidizing the reaction products in the presence of an acid to thereby form an insoluble material, removing the insoluble material from the solution, and recovering tertiary amine from the solution.

1,782,113. SHOCK ABSORBER. WALTER J. ALBERSHEIM and HARVEY S. KONHEIM, New York, N. Y. Filed Sept. 2, 1926. Serial No. 133,182. 3 Claims. (Cl. 267—46.)

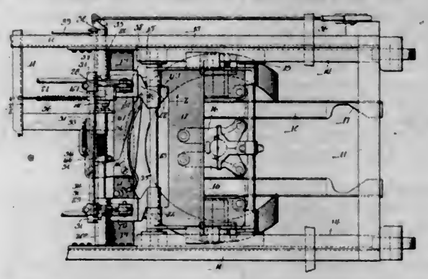


1. The combination with a vehicle frame, of an axle, a laminated spring supported intermediate its ends by said axle, cushioning means connected between one end of said laminated spring and said frame, said means comprising a vertical laminated spring member, a link pivoted to said last mentioned spring member, said link lying normally in a substantially horizontal plane and said link being connected to said first mentioned laminated spring, whereby said link and said vertical spring are brought into substantially vertical alignment before the said first mentioned spring is substantially strained by variations in pressure between said axle and said frame.

1,782,114. SUNDIAL. GONZALO ANCIRA, Houston, Tex. Filed Nov. 22, 1927. Serial No. 235,096. 3 Claims. (Cl. 33—62.)

2. A device of the character described comprising a disk, a pointer pivotally connected at one end to said disk centrally thereof, said disk being provided over one semi-circle with an arcuate scale concentric with the pivot of said pointer, the opposite semi-circle of said disk being provided with a straight radial slot adapted to be alined with the sun.

1,782,115. TRAILER VEHICLE. ADDI BENJAMIN CADMAN, Beloit, Wis., assignor to Warner Mfg. Co., South Beloit, Ill., a Corporation of Michigan. Filed Mar. 5, 1926. Serial No. 92,428. 62 Claims. (Cl. 280—33.1.)



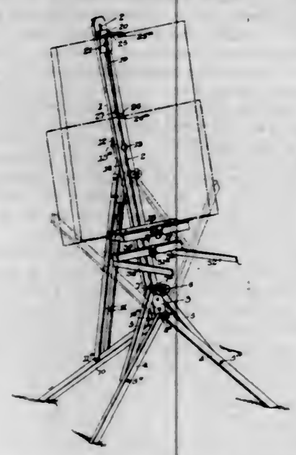
1. A trailer having, in combination, a frame, a clutch rotatably mounted on said frame comprising a driving element and a driven element, manual means for oscillating said driving element, brakes arranged to be set by oscillation of said driven element in one direction, and means for effecting disengaging movement of one of said elements only when said brakes are in set position, said last mentioned means while in brake-releasing position being ineffective to prevent subsequent setting of the brake.

10. A vehicle having, in combination, a tractor, a trailer, and means for coupling the tractor and trailer together for combined operation comprising a carriage mounted to slide on said trailer during coupling and uncoupling, means on said carriage arranged to engage a part on said tractor whereby to lock the carriage to the tractor automatically during coupling and to disengage said part automatically at the end of the uncoupling operation whereby to unlock said carriage and tractor, movable latches pivoted on said carriage and arranged to lock the carriage to the trailer automatically at the completion of the coupling operation, and manually operable means on the trailer for releasing said latches to permit uncoupling.

61. A combined vehicle of the character described comprising, in combination, a tractor section, a trailer section, a king pin on one of said sections, means providing a socket for said king pin including a pair of coacting members mounted on said other section to be spread apart and permit the entry of said king pin during coupling of said sections, and a device mounted for movement independent of said members and arranged to be moved into and out of locking engagement with the members by a camming action of said king pin in leaving and entering said socket whereby to maintain said members spread apart while the sections are disconnected.

1,782,116. TRAILER VEHICLE. ADDI BENJAMIN CADMAN, Beloit, Wis., assignor to Warner Mfg. Co., South Beloit, Ill., a Corporation of Michigan. Filed Aug. 16, 1926. Serial No. 129,393. 5 Claims. (Cl. 280—33.1.)

2. A trailer vehicle having, in combination, a frame, a rock-shaft carried by said frame, a pair of crank arms fixed

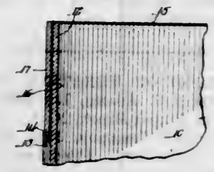


to said shaft, locking pins pivoted on said arms, an element slidably mounted on said frame and having openings to receive said pins, means on said frame for guiding said pins, and cam means for controlling the oscillation of said shaft whereby to move said pins into and out of said openings.

1,782,117. METHOD OF MOUNTING PIEZO-ELECTRIC RESONATORS FOR THE EXCITATION OF VARIOUS OVERTONES. WALTER G. CADY, Middletown, Conn., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Oct. 1, 1925. Serial No. 59,751. 10 Claims. (Cl. 171—327.)

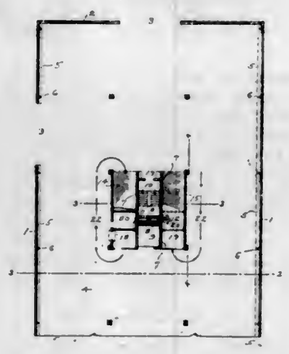
1. The method of stimulating a piezo-electric body to vibrate at a frequency higher than the fundamental frequency of said body which comprises, subjecting only a fractional portion of said body to an alternating electric field of suitable frequency.

1,782,118. ARTIST'S EASEL. GEORGE W. CAHALL, Philadelphia, Pa. Filed Mar. 26, 1928. Serial No. 264,787. 11 Claims. (Cl. 45—129.)



4. In an easel, the combination of a standard slotted throughout its length, a series of legs pivotally connected to the lower end of said standard and foldable in parallel relation thereto, adjustable connections between said legs and the standard movable in the slotted portion of the latter, a stretcher shelf or support carried by said standard, and an adjustable retaining member carried at the upper end of the slotted standard and movable in the slot of the same for engagement with objects mounted on said stretcher shelf.

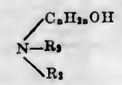
1,782,119. KNOCK DOWN SHELVING. PHILIP DEAN, Madison, Wis. Filed Oct. 6, 1927. Serial No. 224,431. 1 Claim. (Cl. 248—19.)



In a shelving structure the combination of a pair of uprights having opposed faces with openings formed therein, a shelf-supporting stirrup between said uprights said stirrup comprising a horizontal shelf-supporting web having upwardly inclined end portions, down turned hook portions on said end portions for interlocking engagement within said openings in said uprights, and an upright flange extending throughout the length of said web and connecting said end portions.

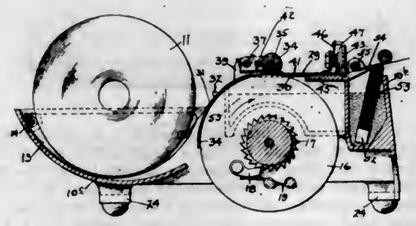
1,782,120. CONTAINER. FRANK J. FUNKE, La Crosse, Wis. Filed Nov. 7, 1927. Serial No. 231,577. 3 Claims. (Cl. 206—44.)

3. A container having an inner wall reaching to the top of the container and an outer wall reaching a portion of the way upwardly to leave a shoulder, a transparent membrane extending across the opening of the container and down the sides of the container, and a band snugly fitting the outer face of the downwardly extending portion of the membrane, said band being thinner in cross section than the thickness of the outer wall, and a cover fitting down over the outer face of the outer wall.



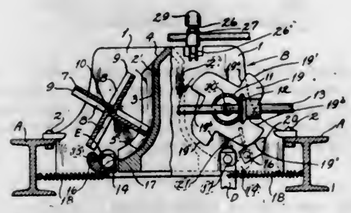
1,782,121. BUILDING STRUCTURE. WILBUR R. HERBY and RAYMOND J. UNGER, Dayton, Ohio. Filed Apr. 25, 1927. Serial No. 186,289. 2 Claims. (Cl. 20—1.13.)

1. In a building structure including superposed floors located at full story intervals, a hollow vertical column having therewithin means of access to the several floors, and two series of inclined cantilever ramps, each leading from one floor to another, one series located on each side of the hollow vertical column and supported thereby at their adjacent margins, the outer margins of the ramps being located in spaced relation with the walls of the building to permit travel of vehicles beside each series of ramps from the outlet of one ramp to the inlet of the next ramp of the respective series.



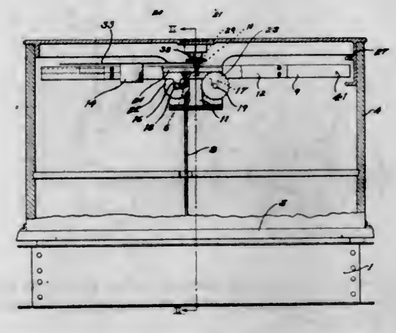
1,782,122. VAT ASSISTANT FOR USE IN DYEING. JEAN GEORGES KERN and CHARLES J. SALA, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Aug. 4, 1927. Serial No. 210,715. 14 Claims. (Cl. 8—5.)

3. The process of improving a vat color paste, the step which comprises incorporating with the vat color paste a compound having the structural formula:



wherein $C_nH_{2n}OH$ represents an aliphatic radical, substituted or not, and R_1 and R_2 represents either hydrogen or an aliphatic radical or a hydroxy-aliphatic radical.

1,782,123. PACKAGE SEALER. THEODORE H. KRUEGER, New York, N. Y. Filed May 12, 1925. Serial No. 29,715. 31 Claims. (Cl. 91—14.5.)

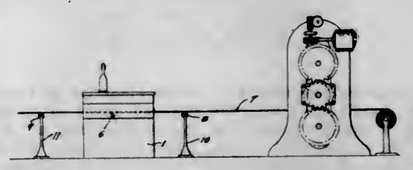


1. In a gummed tape serving device an unguided path for the tape through the machine, a tape feeding means adapted to engage the middle portion only of the tape to center and project the same through the machine, and a brush moistening element to uniformly apply a liquid to the tape as it emerges from the machine.

1,782,124. FEEDING MECHANISM FOR NUT-CRACKING MACHINES AND THE LIKE. LEO J. MEYER, St. Louis, Mo., assignor of one-half to John A. Schuler, St. Louis, Mo. Filed Feb. 1, 1928. Serial No. 250,975. 9 Claims. (Cl. 146—12.)

1. Feeding mechanism comprising a rotary element, feeding means for conducting articles to be fed to said rotary element, a member arranged to receive articles from said rotary element, the last mentioned member being trippably supported to effect the discharge therefrom of articles being fed, and means for tripping said member.

1,782,125. WEIGHING SCALE. LOUIS A. OSGOOD, Hartford, Conn., assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Oct. 10, 1924. Serial No. 742,831. 5 Claims. (Cl. 265—49.)

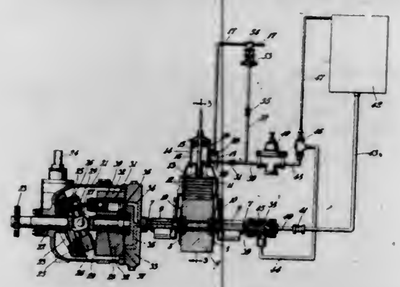


1. In a device of the class described, in combination, a beam, a poise slidably mounted thereon, a graduated member fixed to and movable with said poise, and magnifying means for rendering a portion of said graduated member visible.

1,782,126. PROCESS FOR PREVENTING SPONTANEOUS COMBUSTION. EARLE C. PITMAN, Princeton, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed July 13, 1928. Serial No. 292,604. 3 Claims. (Cl. 169—1.)

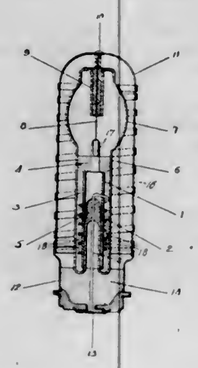
1. Process for preventing the spontaneous combustion of the spray residue of coating compositions containing oxidizable matter, which comprises treating said spray residue with a suitable anti-oxidant.

1,782,127. TESTING DEVICE. JOHN L. THEOBALD, Dayton, Ohio, assignor to Toledo Scale Company, Toledo, Ohio, a Corporation of New Jersey. Filed Oct. 27, 1926, Serial No. 144,436. Renewed Apr. 25, 1930. 5 Claims. (Cl. 265—58.)



1. In a device of the class described, in combination, means adapted to support a movable strip of material, means whereby such support is continuously subjected to a definite length of such material; means for coating said moving strip of material, and counterbalancing means for such material including a series of selectively replaceable unit weights corresponding to the width of the material to be tested.

1,782,128. GRINDING OR CUTTING APPARATUS. LOUIS H. THULLEN, East Orange, N. J. Filed Nov. 29, 1926. Serial No. 151,306. 12 Claims. (Cl. 83—75.)

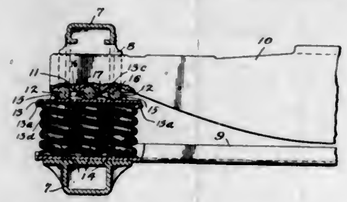


1. Grinding apparatus having in combination a grinding member, a fluid pressure pump for operating said grinding member, means for holding the material being ground, means whereby operation of the grinding member builds up

a fluid pressure varying with the load encountered by the grinding member, and means tending to decrease the

pressure with which the material being ground is pressed against the grinding member responsive to increases in said fluid pressure.

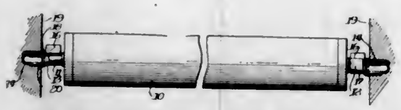
1,782,129. UNILATERAL CONDUCTOR FOR RECTIFYING ALTERNATING CURRENT. HENRI GEORGES ANDRÉ, Paris, France. Filed Apr. 29, 1925, Serial No. 26,748, and in France Dec. 26, 1924. Renewed Apr. 11, 1930. 10 Claims. (Cl. 175—318.)



1. In electrical apparatus, the combination of a sealed tube containing a centrally disposed anode in colloidal form, a cathode mounted so that substantially all of its surface is presented to said anode and means including a mixture of sulfuric acid and anhydride for maintaining the colloids in suitable proportions.

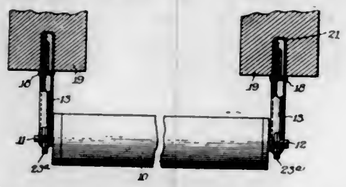
2. As an article of manufacture, a helical element of nickel alloy, the convolutions of which contain particles of silver.

9. In electrical apparatus, the combination of a subdivided anode subject to agglomeration, an electrolyte associated therewith and means comprising an intersticed cathode, for permitting flow through the agglomeration of the gas formed by electrolysis.



1,782,130. LATERAL-MOTION ROLLER BEARING FOR CARS. FRANKLIN L. BARBER and EDWIN W. WEBB, Chicago, Ill., assignors to Standard Car Truck Company, Chicago, Ill., a Corporation of New Jersey. Filed Feb. 15, 1929. Serial No. 340,240. 3 Claims. (Cl. 105—186.)

1. A lateral motion roller bearing device for car trucks and cars, which device comprises a set of several rollers and a pair of bearing plates, one below the rollers and the other above and resting on the rollers, and which

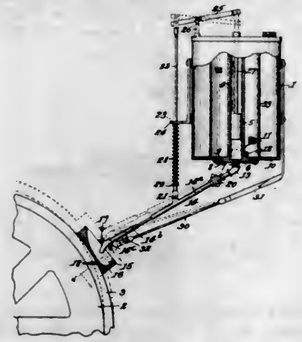


plates have cooperating stops applicable to only one of the said set of several rollers, substantially as described and for the purpose stated.

1,782,131. SHADE-ROLLER BRACKET. ELMER BROBERG, Rockford, Ill., assignor to Elco Tool and Screw Corporation, Rockford, Ill., a Corporation of Illinois. Filed Dec. 14, 1927. Serial No. 239,852. 8 Claims. (Cl. 156—24.)

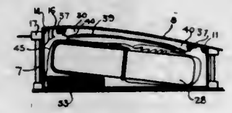
1. A shade roller bracket comprising a substantially tubular socket portion having a longitudinal slot therein, a pair of outwardly extending flanges integrally connected to said socket portion at the margins of said slot, a tubular anchoring stem having a tapered outer end, an annular bead intermediate said socket portion and said tubular stem and integrally connecting one to the other, and one or more ribs projecting outwardly from the surface of said tubular stem.

1,782,132 SHADE-ROLLER BRACKET. ELMER BROBERG, Rockford, Ill., assignor to Elco Tool & Screw Corporation, Rockford, Ill., a Corporation of Illinois. Original application filed Dec. 14, 1927, Serial No. 239,852. Divided and this application filed July 19, 1929. Serial No. 379,353. 6 Claims. (Cl. 156—24.)



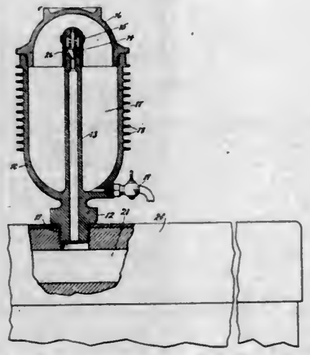
1. A shade roller bracket comprising a socket portion having a substantially tubular stem, an outwardly extending lug integrally connected to said stem and notched to receive the end of a shade roller, and a tubular anchoring portion formed integral with said stem.

1,782,133. WHEEL-FLANGE OILER. JOHN S. CHILDS, McMechen, W. Va., assignor of one-third to Roy A. Nease, McMechen, W. Va., and one-third to Claude B. Harrington, McMechen, W. Va. Filed Dec. 7, 1929. Serial No. 412,438. 6 Claims. (Cl. 184—3.)



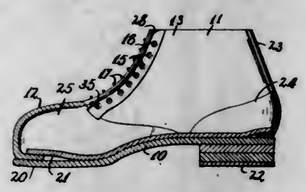
1. In a wheel-flange oiler, a stationarily mounted oil container, a pump cylinder to which oil is supplied from said container, a plunger within said cylinder, a saddle-like member mounted to ride on the wheel flange, said member having therein a reservoir and ports leading from the

reservoir, a flexible telescoping feed pipe leading from said pump cylinder to said member and having connection with the latter, and connections intermediate said feed



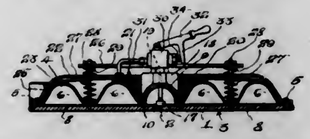
pipe and said plunger whereby vertical movements imparted to the former are communicated to the latter for forcing oil to said feed pipe.

1,782,134. SAFETY EQUIPMENT FOR AIRCRAFT. DONALD G. COPLEN, Seattle, Wash. Filed Aug. 8, 1928. Serial No. 298,280. 5 Claims. (Cl. 244—21.)



1. In an airplane or the like, a parachute compartment having a lid that will be outwardly displaced from the plane when released, holding means for normally retaining the lid in closed position, a main parachute collapsed within the compartment and having connection with the airplane for sustaining the latter when the parachute is open, a pilot parachute collapsed within the compartment and having connection with the main parachute for withdrawing the latter from the compartment to a position for opening, means releasably supporting the pilot parachute from the under side of the lid for carrying it therewith from the compartment to a position for opening when said lid is displaced and means for actuating said holding means to release the lid.

1,782,135. LUBRICATING DEVICE. WALTER H. COTTON, Chicago, Ill. Filed Oct. 31, 1924. Serial No. 747,030. 2 Claims. (Cl. 184—51.)

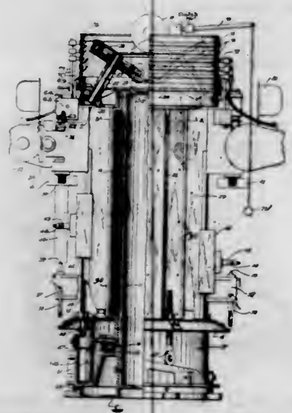


2. A lubricating device comprising a container provided with a threaded nipple extending outwardly therefrom and a tube extending upwardly therein, said tube and nipple being provided with a bore, a spring pressed valve for closing the upper end of said bore, a cap for enclosing said valve, said cap having an aperture through its side wall, a closure for said container for enclosing said tube, cap and valve, a pet cock in communication with the lower portion of said container, and heat radiating ribs on the exterior of said container.

1,782,136. WATERPROOF SHOE. ARON CSONT, Coraopolis, Pa. Filed Mar. 5, 1930. Serial No. 433,238. 4 Claims. (Cl. 36—50.)

1. A waterproof shoe, comprising a waterproof sole and heel structure connected with a waterproof shoe upper structure, said shoe upper comprising a vamp portion connected with an ankle portion having an opening extending from the vamp portion to the top of the ankle portion, eyelets thru apertures along the opposite sides of said openings and formed with bayonet slots, a shoe lace thru said eyelets, a waterproof closure member behind the opening in said ankle portion and held in place at the bottom on said lace, and prongs demountably engaged in said bayonet slots and engageable against the face of said closure member to hold it in place against one's foot upon a tightening of said lace.

1,782,137. PRESSING ELEMENT FOR PRESSING MACHINES. ERNEST DAVIS, Syracuse, N. Y., assignor to The Prosperity Company Inc., Syracuse, N. Y., a Corporation of New York. Filed Jan. 18, 1929. Serial No. 333,444. 7 Claims. (Cl. 68—9.)



1. A platen pressing element for pressing machines comprising a pressing plate having perforations therethrough and opening through its pressing face, a conduit for a fluid to be projected through the perforations, the conduit being mounted on the plate and communicating with said perforations and means extending transversely through the conduit and into the plate to secure the conduit to the plate.

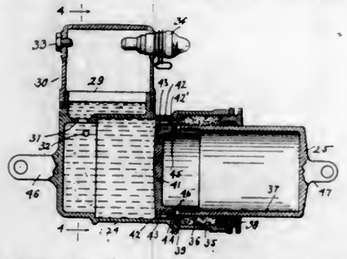
1,782,138. CONTINUOUSLY-OPERATING MULTIPLE LATHE. FRANK M. DAVIS, Milwaukee, Wis., and ALBERT C. HOEH, Pontiac, Mich., assignors to Davis & Thompson Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 22, 1926. Serial No. 103,839. 11 Claims. (Cl. 29—38.)

1. In combination, a base and a central column secured thereto, a rotatable carrier surrounding said column and having a guide member at its lower end rotatable therewith, vertical guide-ways formed in said guide member, a cam ring secured to said base and surrounding said guide member, a plurality of spindle units mounted about said carrier for rotation therewith, a vertically reciprocable carriage for each spindle unit, a connecting rod depending

from each carriage and having its lower end guided for vertical movement in said guide-ways, and a roller mounted at the lower end of each connecting rod and riding on the

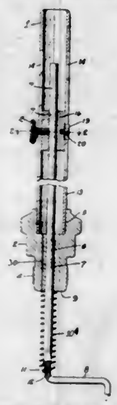
cam ring surrounding the guide-ways, said cam ring being capable of removal and replacement without dismantling other mechanism.

1,782,139. SOUNDING DEVICE. DAVID G. DEDRICK, Groton, Conn. Filed Sept. 12, 1929. Serial No. 392,152. 6 Claims. (Cl. 137—18.)



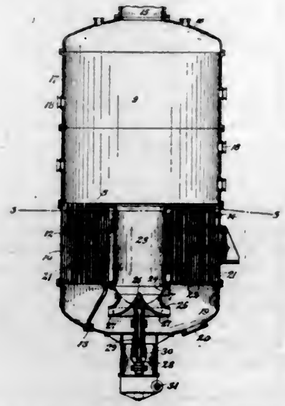
1. A sounding lead having in its bottom face a recess, a closure cup mounted to turn within said recess and provided with a beveled closing edge, resilient means normally acting to close said cup, means arranged to hold said cup in open position in opposition to said resilient means, and a trip-rod adapted to release said resilient means and close said cup.

1,782,140. RUBBER DERIVATIVE AND METHOD OF MAKING SAME. HARRY L. FISHER and HERBERT A. WINKELMANN, Akron, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Dec. 29, 1926. Serial No. 157,867. 6 Claims. (Cl. 260—1.)



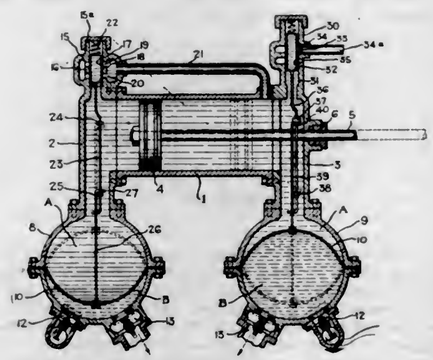
1. The method of producing heat-plastic rubber derivatives which comprises incorporating into rubber a dialkyl sulfate, and heating the mix under conditions causing it to be changed to a thermoplastic product.

1,782,141. SHOCK ABSORBER. LOUIS WILLIAM GREVE, Cleveland, Ohio, assignor to The Cleveland Pneumatic Tool Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed Apr. 30, 1928, Serial No. 273,929. Divided and this application filed July 26, 1929. Serial No. 381,178. 2 Claims. (Cl. 267—64.)



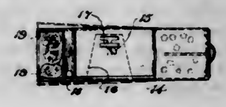
1. In a shock absorbing strut for aircraft, a cylinder, a piston therefor, means for mounting said cylinder and piston to have a substantially horizontal operative position, a dome extending upwardly from said cylinder in the operative position of the latter, said dome being in communication with the cylinder near the closed end thereof beyond the innermost position of the piston, said strut containing a quantity of liquid sufficient to fill a portion of the dome and all of the cylinder in the expanded position of the strut, and containing also a quantity of compressed air, said piston behind the piston head being shaped to provide an annular chamber between the piston and cylinder, and means for permitting relatively free flow of liquid into said annular chamber upon the forward stroke of the piston and restricted flow out of said chamber when the piston moves in the opposite direction.

1,782,142. TIMING INDICATOR FOR INTERNAL-COMBUSTION ENGINES. WILLIAM D. HAVENS, Schenectady, N. Y. Filed Feb. 12, 1929. Serial No. 339,372. 1 Claim. (Cl. 33—180.)



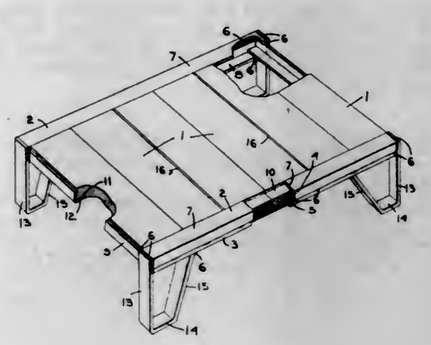
In a timing indicator for internal combustion engines, the combination of a hollow plug adapted to screw into a spark plug opening, a tube screwed to the plug and provided with two slots, said tube being provided with a scale, a hollow block mounted to slide freely in said tube, an indicator mounted on said block and adapted to slide in one of the slots, and to co-operate with the scale on the tube, an indicating rod mounted to slide within the plug, tube and block, a set screw carried by the hollow block and adapted to slide in the other slot of the tube to adjustably connect the indicator rod to the hollow block, an offset foot carried by the indicator rod to engage a piston out of line with the plug, and a spring normally pressing the offset foot away from the plug.

1,782,143. EVAPORATOR. HARLAN W. HOW, Buffalo, N. Y., assignor to Buffalo Foundry & Machine Company, Buffalo, N. Y., a Corporation of New York. Filed Jan. 12, 1927. Serial No. 160,748. 1 Claim. (Cl. 259—96.)



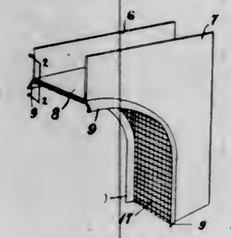
A circulator for evaporators of the character described, comprising an upright conduit having an upper section having a cylindrical wall of comparatively large diameter, an intermediate section having a tapering wall which reduces downwardly from the lower end of said cylindrical wall and a lower section having a flaring wall which enlarges downwardly from the lower small end of the wall of said intermediate section and extends with its lower edge laterally beyond the wall of the upper section; and a rotary impeller having a conical body arranged below said conduit and axially in line therewith and having its point projecting upwardly into the lower and intermediate sections of said conduit and having its wall flaring downwardly from said point at a distance from the wall of said lower conduit section and forming between the latter and the body of said impeller an annular outlet passage which in radial section is wide at the top and gradually reduces downwardly toward the narrow lower end thereof; and blades arranged on the upper side of said impeller body and in the downwardly reducing space between the marginal part thereof and the inner side of the wall of said lower conduit section.

1,782,144. PUMP. FREDERICK H. JENSEN, Seattle, Wash. Filed Nov. 7, 1928. Serial No. 317,729. 6 Claims. (Cl. 103—44.)



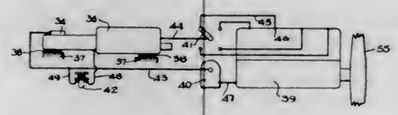
1. In a pump comprising a cylinder, a piston reciprocally operable in the cylinder, pumping chambers connected with opposite ends of the cylinder, flexible diaphragms dividing the pumping chambers, said chambers having valved inlets and valved outlets at one side of the diaphragm, and a liquid pumping medium filling the cylinder and chambers between the piston and the other sides of the diaphragms, and means associated with the cylinder for automatically maintaining a predetermined amount of pumping medium in the cylinder, and means for automatically maintaining a predetermined amount of the medium at the opposite sides of the piston.

1,782,145. COMBINED CIGARETTE-PACKAGE HOLDER AND MATCH BOX. SAMUEL A. KORNSWEET, Venice, Calif. Filed Jan. 30, 1928. Serial No. 250,515. 4 Claims. (Cl. 206—38.)



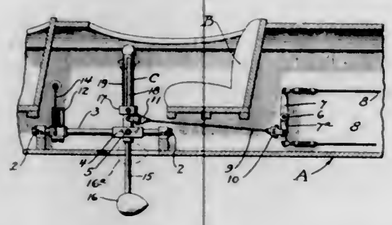
1. In a device of the character described, a cigarette package holder formed from a single piece of sheet metal bent to form side walls, a rear wall and overlying top members, connections between said overlying top members whereby the same may move past each other to permit the free edges of the side walls to move toward and away from each other, inwardly projecting flanges on the free edges of the side walls of said holder, and inwardly projecting flanges on the lower edges of side walls and the rear wall of said holder.

1,782,146. PORTABLE PLATFORM. ARTHUR LEM LEWIS, Newton Center, Mass., assignor to Lewis-Shepard Company, Watertown, Mass., a Corporation of Massachusetts. Filed Nov. 17, 1926. Serial No. 148,913. 10 Claims. (Cl. 248—41.)



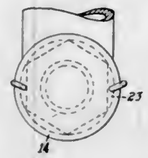
1. A portable platform comprising floor members, side members of channel shape fabricated from associated angle bars having their vertical flanges welded together longitudinally in such manner as to cause the horizontal flanges thereof closely to engage the upper and under faces of the end portions of the floor members and transverse metal girders welded to the respective ends of the channel bars to provide an integral frame and to protect the ends of the floor.

1,782,147. METAL ARCH MEMBER FOR OPENINGS. THOMAS MERRYWEATHER, Akron, Ohio. Filed July 18, 1929. Serial No. 379,106. 9 Claims. (Cl. 72—116.)



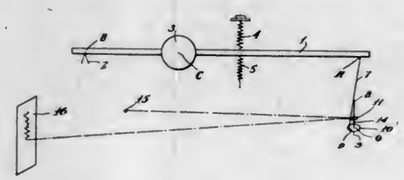
1. In a device for forming an arched plastering base for the construction of plastered openings, parallelly disposed side walls of sheet material, each side wall having an inwardly arched edge and a correspondingly arched wall connecting said side walls, said side walls and end walls joining in flanges forming plastering grounds.

1,782,148. SYNCHRONIZED MACHINE GUN. OSCAR A. ROSS, New York, N. Y. Filed Oct. 26, 1927, Serial No. 228,859. Renewed Oct. 29, 1928. 12 Claims. (Cl. 89—28.)



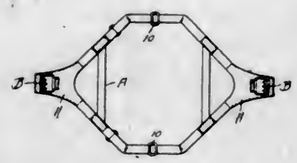
11. In combination with an internal combustion motor having an ignition system for ignition of the explosive charges therein and a machine gun arranged to fire electrically fired ammunition, of means for firing the ammunition in synchronism with the ignition of the explosive charges in the motor.

1,782,149. STABILIZER FOR AEROPLANES. HERVEY M. SALISBURY, Walnut Grove, and ARTHUR E. MILLER, Sacramento, Calif. Filed Jan. 31, 1928, Serial No. 250,760. Renewed Jan. 9, 1929. 5 Claims. (Cl. 244—20.)



1. In an aeroplane, an operating lever whereby the position of the ailerons and the elevator is controlled, a pivotal mounting for the lower end of the lever, a rod carried by the operating lever, a weight on the lower end of the rod, manual actuated means whereby the rod may be raised to a point where the weight will assume an inoperative position, or conversely lowered to a point where the weight will gravitationally function to maintain the operating lever in a vertical position, and means whereby the angle formed by said rod and operating lever may be varied.

1,782,150. VALVE PROTECTOR. PETER J. SHRUM, Monaca Heights, Pa., assignor to Pittsburgh Screw and Bolt Corporation, a Corporation of Pennsylvania. Filed Mar. 1, 1928. Serial No. 258,356. 1 Claim. (Cl. 137—91.)

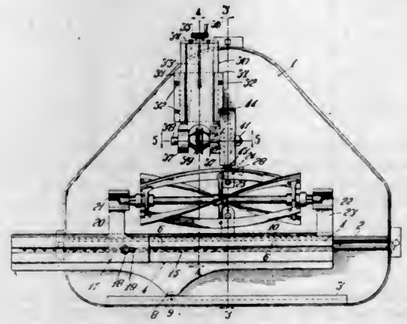


The combination with a valve having an opening therein, said opening terminating in a hexagonal flange, said opening being internally threaded, of a cup-shaped protector whose diameter corresponds to the maximum diameter of the hexagonal flange and being formed to fit over said flange, said cup-shaped protector having openings adjacent its inner circumference and the smallest diameter of said hexagonal flange, and means for engaging said openings for fastening said protector to the valve.

1,782,151. MEASURING OR DETECTING DEVICE. WILLIAM JAMES STALLAN, Cambridge, England, assignor to Cambridge Instrument Company, Limited, London, England, a Corporation of Great Britain. Filed Dec. 9, 1929, Serial No. 412,671, and in Great Britain June 6, 1929. 6 Claims. (Cl. 234—1.)

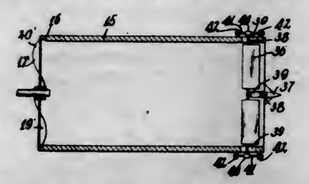
1. An instrument for detecting very small movements of a point having, in combination, means connecting the point with another point that is constrained to move in a path that is not parallel to the path of movement of the first-named point, and means for detecting the movement of the second-named point.

1,782,152. SANITARY-NAPKIN BELT. ESTELLA STATTER, Sioux City, Iowa. Filed Mar. 9, 1929. Serial No. 345,680. 2 Claims. (Cl. 128—291.)



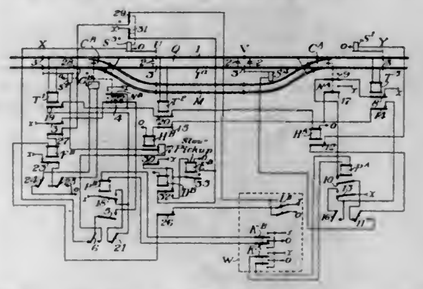
1. In a sanitary napkin belt, in combination with a pad, a hinge sleeve secured thereto and positioned substantially horizontally when the belt is being worn, and a buckle comprising a closed loop having spaced portions, one of which is received in the hinge sleeve, prongs formed integrally with the other portion and extending into the space within the loop, substantially in the plane of the loop, each of said prongs having a rounded tip and a laterally projecting lug spaced from said tip.

1,782,153. RAIL TIE. LUDOVIC SZEPSY and IONACZ WINDISCH, Arad, Rumania. Filed Apr. 11, 1930. Serial No. 443,303. 7 Claims. (Cl. 238—62.)



1. A rail tie, comprising a body member for extending transversely beneath a pair of rails and formed with a pair of end elements for engaging the outer sides of said pair of rails, a pair of bosses positioned adjacent the inner sides of said rails, and side walls connecting said end elements, plates extended across said side walls and over said bosses, jaw plates on said plates and abutting against the inner sides of said rails, means for holding said jaw plates in place, pegs projecting from said jaw plates and engaging in apertures in said rails, and lugs projecting from said side walls and extending partially over the jaw plates from the inner sides for aiding in holding the jaw plates in place.

1,782,154. MACHINE FOR GRINDING MOWER ELEMENTS. ROBERT A. THOMAS, Lombard, Ill. Filed June 16, 1928. Serial No. 285,920. 1 Claim. (Cl. 51—95.)

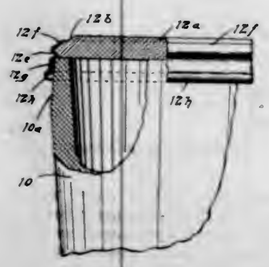


A grinding machine comprising a horizontal support or bed plate, an upwardly projecting longitudinal flange along one edge thereof provided with a longitudinal groove in its inner face, an upstanding longitudinal rib between the side edges of said bed plate parallel with said flange and having a V-shaped groove in its upper face, a carriage provided in its lower face with a V-shaped groove opposed to the groove of said rib, antifriction balls interposed between said rib and said carriage and confined in said grooves, an arm on said carriage equipped at its outer end with a roller engaging in the groove of said flange, a downwardly extending flange on said carriage overhanging said rib and provided in its exposed face with a longitudinal groove, a member removably mounted on said bed plate and engaging in said last-named groove, arms at opposite ends of said carriage provided at their outer ends with formations to receive and pivotally engage the axial terminals of a rotary cutter and hold the latter against longitudinal movement relatively to said carriage, a grinding wheel rotatable on an axis parallel with that of the supported rotary cutter arranged for adjustment toward and from said carriage, and a vertically adjustable stop element arranged proximately to the circumferential face of the grinding wheel and adjustable toward and from the carriage for cooperation to maintain a blade to be ground properly positioned relatively to the grinding wheel during reciprocation of said carriage, the said wheel rotating in a direction to maintain the blade being ground in firm contact with said stop element.

1,782,155. NAUTICAL CYLINDER OR TUBE. ARCANGELO TOSCANO, New York, N. Y. Filed June 13, 1929. Serial No. 370,497. 2 Claims. (Cl. 244—18.)

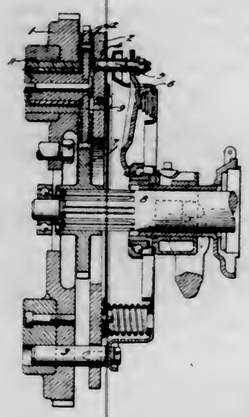
1. In combination with a motor driven propeller, a tubular member in line with the discharge of the propeller and arranged to canalize the discharge and prevent lateral escapement, and horizontal and vertical rudders arranged in the discharge of the tubular member, said rudders being arranged for adjustment relative to the discharge end of the tubular member, spindles projecting from said rudders and extending thru slots in said tubular member, bearings supporting the ends of the spindles, and screws at right angles to the spindles adjustably supporting the bearings and rotatively mounted on the tubular member accomplish the adjustment of the rudders.

1,782,156. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. JAMES J. VANHORN, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 18, 1930. Serial No. 436,743. 3 Claims. (Cl. 246—3.)



2. In combination, a stretch of railway track divided into sections, track circuits including track relays for said sections, a switch C^A in the track section at the east end of said stretch and a switch C^B in the track section at the west end of said stretch, a west-bound signal S^1 and an eastbound signal S^2 governing traffic into said stretch, a west-bound signal S^3 governing traffic into the track section at the west end of said stretch, an eastbound signal S^4 governing traffic into the track section at the east end of said stretch, a polarized relay P^A for the control of signals S^1 and S^4, a polarized relay P^B for the control of signals S^2 and S^3, a home relay H^B associated with said signals S^2 and S^3 and having a front contact included in the control circuit for signal S^2, a circuit for relay H^B including front contacts of all of said track relays except the one for the section at the west end of said stretch and a back contact of relay P^A, a branch for said circuit around the back contact of relay P^A and including a front contact of relay P^A and a polar contact of relay P^A closed when the relay is energized to clear signal S^4, and means for controlling said switch C^B by said relay H^B.

1,782,157. COVER AND PROCESS OF MAKING. AXEL M. WALSTROM, Minneapolis, Minn., assignor to Elgin Butter Tub Company, Elgin, Ill., a Corporation of Illinois. Filed Apr. 14, 1927. Serial No. 183,691. 11 Claims. (Cl. 217—76.)



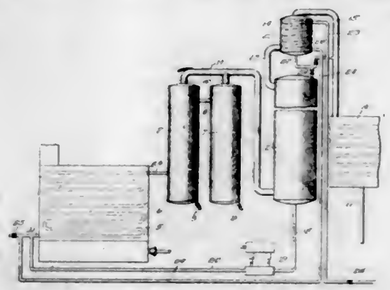
6. The method of forming a cover for a container which consists in providing a nonmetallic central portion forming

the edge thereof of convex shape in radial cross section, forming a hoop of a strip of metal and spinning said

hoop about the edge of said central portion so as to embrace the same and be secured thereto with its upper edge below the top of said central portion.

1,782,158. DIFFERENTIAL-ACTION CLUTCH. ERNEST E. WEMP, Detroit, Mich. Filed Aug. 24, 1928. Serial No. 301,803. 2 Claims. (Cl. 74—34.)

1. In a clutch, the combination of a driving member, stub shafts journaled in the driving member, a pinion mounted on each stub shaft, said pinions having friction material on each side, a pressure plate mounted upon the opposite side of the pinions from the driving member, a driven member including a gear which meshes with the said pinions, and means acting upon a pressure plate to pack the pinions in between the driving member and pressure plate to frictionally hold them against rotation so that they positively drive the geared driven member with the driving member, said pinions being free so as to rotate upon relief of the pressure by the pressure plate, which rotation is effected by relative rotational movement between the driving and driven members, the inertia incident to the setting up of rotary movement of the members being effective so as to tend to cause rotation of the driven member with the driving member.

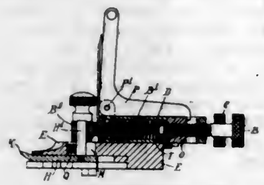


1,782,159. SHADE HOLDER. CHARLES J. AUSTIN, Utica, N. Y., assignor to Robert E. Roberts, Utica, N. Y. Filed May 29, 1930. Serial No. 457,452. 8 Claims. (Cl. 156—10.)

4. A shade holder comprising an open-sided and open-ended tubular casing adapted to house a shade roller and a shade thereon and having opposing spaced flanges at the edges of said side opening, end members removably mounted in the ends of said casing and having bearings

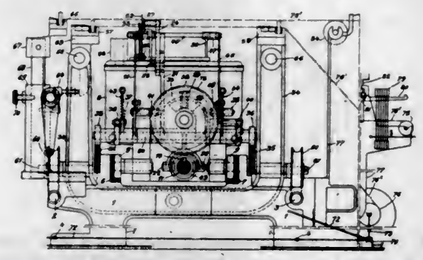
to engage the shade roller pins, means engaging the opposite casing flanges near their ends for contracting the casing to hold the said end members therewithin.

1,782,160. ART OF CONVERTING HIGH-BOILING HYDROCARBON OILS. EDWARD E. BARTELS, Whiting, Ind., assignor to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Filed July 12, 1926. Serial No. 121,850. 2 Claims. (Cl. 196—48.)



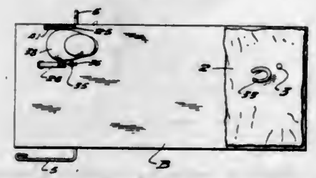
2. The method of forming desired low boiling products of the nature of gasoline from higher boiling products which comprises passing the higher boiling oil to be converted through a confined passage in which it is heated to conversion temperature under pressure, the oil being passed through said passageway at a rate such as to prevent substantial deposition of coke therein, maintaining the oil at conversion temperature to effect the desired conversion thereof, separating the conversion products into a vapor portion and an unvaporized portion, passing the vapors through a dephlegmating chamber in countercurrent to reflux condensate, passing all of the fresh oil entering the system into indirect heat conductive contact with the uncondensed vapors from said dephlegmating chamber in a reflux condensing zone, separating the condensate formed from said vapors by the cooling action of said fresh oil, returning a controlled proportion of said condensate from the refluxing zone to the dephlegmating chamber, to pass therethrough in countercurrent to the vaporized portions of the converted products, discharging the remainder of said condensate together with the uncondensed vapors into a condenser and charging the feed stock preheated by said vapors into the confined passageway.

1,782,161. CIRCULAR-KNITTING MACHINE. JOHN HENRY GLENN BAYLES, Nottingham, England. Filed Nov. 26, 1929, Serial No. 409,856, and in Great Britain Dec. 12, 1928. 4 Claims. (Cl. 66—101.)



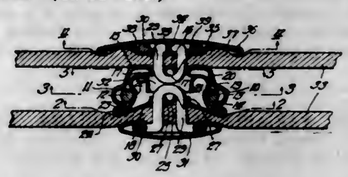
1. In a circular knitting machine, means for adjusting the presser and sinker cams comprising in combination a sinker cam ring, a housing secured on the upper face of

the said cam-ring, a series of adjustment screws disposed in the housing said screws having screw-threaded parts engaging in the housing or parts disposed therein, and



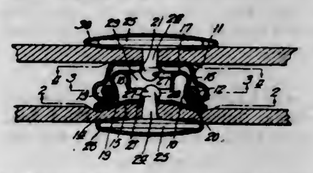
screw-threaded parts of a different pitch engaging in sleeves which are connected to the respective cam-slides on the underside of the cam-ring, substantially as described.

1,782,162. MACHINE FOR KNOTTING WARPS. ULRICH BISCHOF, Aarau, Switzerland. Filed May 29, 1929, Serial No. 367,024, and in Switzerland Oct. 4, 1928. 2 Claims. (Cl. 28—49.)



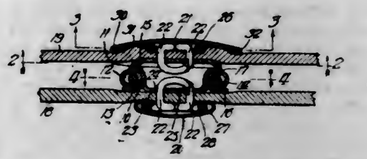
1. A machine for knotting a fresh warp to an existing warp, which warps are clamped and secured in grips, comprising grip carrying members which are constructed as downwardly bent bows, comprising bridge pieces passing through underneath the driving shaft, and the machine further comprising a toothed rack fixedly mounted upon the machine, a second toothed rack fixed to the warp carriage and displaceable with it, both of the said toothed racks being arranged inside the warp carriage in such a way that the transverse bridge pieces of the downwardly bent rows are continuous underneath the racks so that one and the same rack is made continuous for a plurality of machines coupled together, toothed wheels rotatably mounted on the knotting carriage and meshing with the said racks, ratchet wheels associated with the toothed wheels, and ratchet mechanisms for rotating the ratchet wheels and thereby displacing the knotting carriage and the warp carriage automatically and uninterruptedly.

1,782,163. AMUSEMENT DEVICE. LAWRENCE L. COOK, Indianapolis, Ind. Filed Mar. 19, 1929. Serial No. 348,308. 8 Claims. (Cl. 46—40.)



1. An amusement device of the class described comprising a base, an upstanding post mounted thereon, a member pivotally engaged with said post and extending upwardly therefrom, said post having a stop with which said member contacts to limit the upward swinging movement of the member, means for normally maintaining said member at said limit of movement, a projector arm carried by said member, and means for imparting requisite movement to the projector arm, said means also operating to impart downward swinging movement to the member.

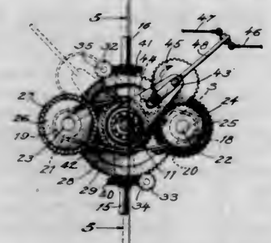
1,782,164. SECURING MEANS. IRA D. FORD, Roseland, Ontario, Canada, assignor to Universal Button Fastening & Button Company, Detroit, Mich., a Corporation of Michigan. Filed June 11, 1928. Serial No. 284,313. 9 Claims. (Cl. 24—208.)



1. A snap fastener structure comprising in combination a snap fastener element having a cloth engaging base pierced to provide spaced openings and an intervening attaching bar, the metal displaced to provide said openings being curled inwardly to provide up-standing marginal flanges for said bar, said base being corrugated to reinforce the same, and an attaching fastener having a head and spaced pointed prongs, said head and base being of a size to present substantial cloth engaging faces, said prongs piercing the cloth without severing any part thereof and being bent around the attaching bar under pressure to cause said head and base tightly to grip opposite sides of the cloth.

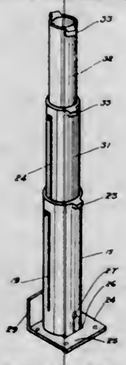
1,782,165. SECURING MEANS. IRA D. FORD, Roseland, Ontario, Canada, assignor to Universal Button Fastening & Button Company, Detroit, Mich., a Corporation of Michigan. Filed June 11, 1928. Serial No. 284,314. 6 Claims. (Cl. 24—208.)

6. A snap fastener structure including two spaced cloth engaging members, one being a base, a headed and flanged stud element having the flange thereof secured to said base, the head of said element being circular and having an inwardly extending annular stiffening flange, and attaching means for said members including a single pointed prong projecting from the other of said members and extending through said base, the pointed end of said prong being upset after entering the base and being adjacent the annular stiffening flange aforesaid.



1,782,166. SECURING MEANS. IRA D. FORD, Roseland, Ontario, Canada, assignor to Universal Button Fastening & Button Co., Detroit, Mich., a Corporation of Michigan. Filed Dec. 22, 1927. Serial No. 241,761. 8 Claims. (Cl. 24—208.)

1. Means for securing cloth fabric together comprising in combination a pair of interfitting snap fasteners each having a relatively large base constructed and ar-

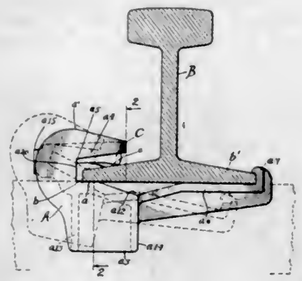


ranged to engage a substantial area of cloth, a fastener attaching means for each fastener part comprising a cloth engaging head corresponding in size to the fastener base and having a pair of spaced cloth piercing prongs projecting therefrom, each base being pierced at separated points and providing spaced openings and an intervening bar, said intervening bar being flat and continuously smooth on both sides thereof, prongs of the attaching means being bent around the bars of the respective fastener parts under pressure, whereby a substantial area of cloth is gripped between the fastener base and the attaching head and the area of cloth between the fastener prongs cooperates to prevent separation of the fastener from the cloth.

1,782,167. VARIABLE-PITCH PROPELLER. CLARENCE KIRK GREENE, Cananea, Mexico. Filed Nov. 20, 1928. Serial No. 320,640. 11 Claims. (Cl. 170—163.)

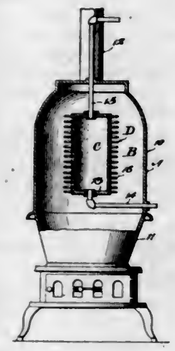
1. A rotary propeller having blades adjustable to vary the angles of incidences thereof, means including a gear rotatably mounted on the propeller shaft, for moving the blades to vary their angles of incidences in response to driving of said gear at a speed different from the propeller speed, means for driving said gear at a speed different from the propeller speed including a driving gear fixed to the propeller shaft, and means for operatively connecting the driving gear to and disconnecting it from the first mentioned gear.

1,782,168. COLLAPSIBLE POST. LAWRENCE JOUBERT, Williamstown, Ontario, Canada. Filed Sept. 9, 1929. Serial No. 391,491. 3 Claims. (Cl. 105—381.)



3. In a collapsible post, an angle plate having a slot in one section parallel to the other section, a bolt hole in the latter section, a tubular extensible post having its length telescopically arranged, a longitudinal slot and a locking slot in one of the inner lengths, a stop carried by a length within said inner length, said stop receivable in either of said slots, lugs carried at the outer ends of each length for extension purposes, the outer length having a supporting lug projecting therefrom, a slot in said lug, a second slot in said outer length opposite said first mentioned slot and a bolt through said slots and through said bolt hole in said angle plate and fastened by a nut.

1,782,169. PROCESS FOR PREVENTING THE WEATHERING (ESPECIALLY CLOUDING, TARNISHING, AND LUSTERING) OF THE SURFACE OF GLASS. KIYOSHI KAMITA, Ushigome-Ku, Tokyo, Japan, assignor to The Asahi Glass Company Limited, Tokyo, Japan. Filed Sept. 9, 1927, Serial No. 218,580, and in Japan Oct. 21, 1926. 1 Claim. (Cl. 49—77.)



A process for preventing the weathering, clouding, and tarnishing of the surface of glass which comprises treating the surface of the glass with an acid gas at a temperature between 300° C. and 600° C., the said acid gas being a mixture of gas normally present in the leer and additional acid gases.

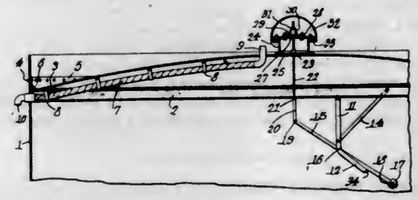
1,782,170. RAIL ANCHOR. WILLIAM ALEXANDER KENNEDY, Oak Park, Ill. Filed May 27, 1929. Serial No. 366,354. 9 Claims. (Cl. 238—316.)

1. A rail anchor comprising a body, and a split spring washer held non-rotatably by the body and in a position wherein one end thereof is adapted to bite directly against one of the base-flanges of a rail and prevent the anchor from moving lengthwise of the rail in one direction.

1,782,171. HEAT-CONDUCTING MEANS FOR STEAM GENERATORS OR FLUID HEATERS. PAUL M. LATTNER, Cedar Rapids, Iowa. Filed Oct. 31, 1928. Serial No. 316,234. 2 Claims. (Cl. 257—263.)

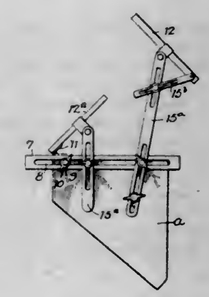
1. In combination, means for confining a medium to be heated, means for confining a heating medium in heat exchange relation with the first mentioned medium, and a plurality of arched members arranged in staggered relation with respect to each other and having the ends of their parallel leg portions connected to one of said means and projecting into the space confined by the other of said means.

1,782,172. CUTTER BIT AND CARRIER THEREFOR. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, Columbus, Ohio, a Corporation of Ohio. Filed Mar. 8, 1924. Serial No. 697,789. 16 Claims. (Cl. 262—33.)



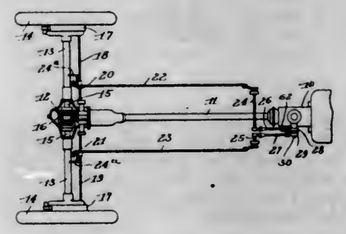
1. In a coal cutting apparatus, the combination with a cutter chain, of a cutter bit having a plurality of cutting arms adapted to be successively placed in coal cutting position upon the chain, and means upon the chain to engage at least two of said arms to hold the bit against bodily displacement and at least one arm in coal cutting position.

1,782,173. AUTOMOBILE DOOR OR WINDOW SCREEN. LEONARD H. NICHOLSON, Chula Vista, Calif. Filed May 7, 1928. Serial No. 275,769. 1 Claim. (Cl. 156—14.)



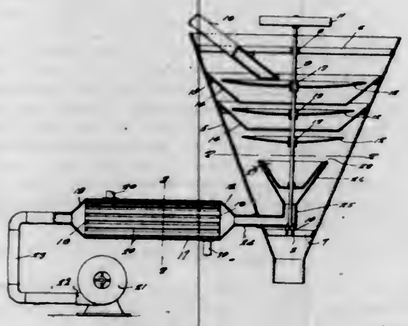
In a screen for placing within the opening formed by a lowered, vertically adjustable vehicle door or window pane, a screen, a unitary, rectangular frame, including upright and horizontal channel portions adapted to embrace the marginal portions of said screen, said upright portions adapted to fit snugly against the sides of said opening, the upper horizontal portions adapted to fit snugly within the slot normally receiving the upper margin of said pane when closed, the lower horizontal channel member having extended marginal portions, said portions being bent initially downwardly, then curved outwardly and downwardly, forming together a substantially U-shaped channel, a relatively soft, resilient channel member securely clamped within said U-shaped channel and forming depending lip portions for receiving and gripping the upper margin of said pane.

1,782,174. WATER ROOF TANK. JOHN FRANKLIN PATTERSON, Warren, Ohio, assignor to The Warren City Tank & Boiler Company, Warren, Ohio, a Corporation of Ohio. Filed Oct. 8, 1927. Serial No. 224,956. 3 Claims. (Cl. 220—44.)



1. In a device of the class described, a tank having a flexible roof, a tubular member mounted on the roof, a valve seat carried by the tubular member, a spider mounted in the tubular member, a connecting rod slidable in the spider, a valve which closes against the under side of the seat, means for mounting the valve on the connecting rod for adjustment longitudinally of the connecting rod, a frame work within the tank, a fulcrum bracket mounted on the frame work and having an inclined end, a lever pivotally mounted intermediate its ends on the bracket, a link pivoted to one end of the lever and to the connecting rod, a weight adjustable along the opposite end of the lever, means for holding the weight in adjusted positions along the last-specified end of the lever, and the last-specified end of the lever being engageable with the inclined end of the fulcrum bracket after the lever has tilted a predetermined amount, thereby to stop the movement of the lever and the valve and to permit the seat to move with the roof, away from the valve, when the roof flexes beyond a predetermined point, thus bringing about a venting of the tank through the seat.

1,782,175. ILLUMINATED SIGN. JOHN D. PEARMAIN, Scarborough, N. Y. Filed Sept. 21, 1928. Serial No. 307,506. 11 Claims. (Cl. 40—130.)



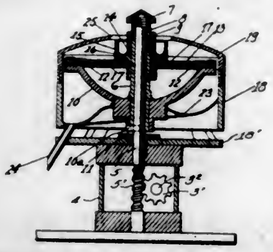
1. An illuminated sign having a stencil plate through which the daylight passes, and a reflector on one side of the plate into which the stencil is projected and in which the image of the stencil is projected and viewed; in combination with a plurality of auxiliary reflectors at different angles arranged on the opposite side of said plate to reflect artificial light from distant different sources through the plate to the first reflector normally unassociated with the sign.

1,782,176. BRAKE MECHANISM. FRANK W. PICHÉ, Detroit, Mich. Filed June 6, 1927. Serial No. 196,713. 17 Claims. (Cl. 188—16.)

1. The combination with a vehicle frame having a plurality of traction members and brakes therefor having different actuating parts, an operating device for said actuating parts mounted for movement to different selective positions to effect individual operations of said actuating parts and a guard for said operating device arranged to be moved to release position by movement of the operating device to a predetermined position in advance of its movement to said selective positions.

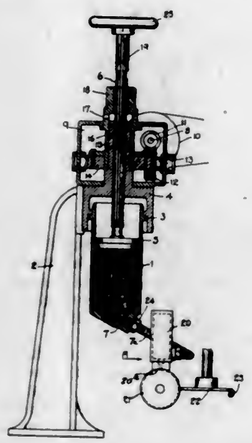
1,782,177. SUGAR DRIER. DAVID K. RICHARDS, Hilo, Territory of Hawaii. Filed July 19, 1929. Serial No. 379,541. 1 Claim. (Cl. 34—10.)

In a sugar drying apparatus, a hopper, a rotary shaft within the hopper, a disk fixed upon said shaft, and means for introducing heated air into the hopper including a funnel shaped nozzle disposed in concentric relation with respect to the shaft and positioned below the said disk, an inverted frusto-conical member nesting within said funnel shaped nozzle in circumferentially spaced relation therewith and being fixed to said shaft, said nozzle and frusto conical member being of such relative spacing at their larger upper ends as to provide a continuous vertically discharging air outlet of annular extension and having their respective side walls of such inclination as to direct the heated air in a solid annular wall to the periphery of the said disk.



1,782,178. SHOE-SHANK SUPPORT. SAMUEL RICHMOND, Batavia, Ohio, assignor to The Edwards Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 24, 1928. Serial No. 264,393. 5 Claims. (Cl. 36—76.)

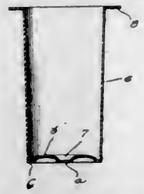
5. A metal shank support for shoes comprising a formed strip of sheet metal having its forward end enlarged and slitted to provide strips, adjacent strips being bent in opposite directions and providing spaced supporting means for superposed shoe sole members between which the shank support may be mounted.



1,782,179. CENTRIFUGAL EXTRACTOR. FRED RODLER, Cincinnati, Ohio. Filed Nov. 2, 1927. Serial No 230,609. 7 Claims. (Cl. 210—63.)

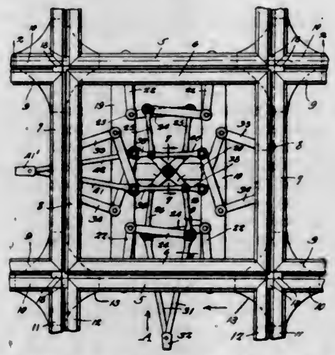
1. A centrifugal extractor comprising a rotatable shaft, a bowl, a cover for said bowl, means for clamping said cover on said bowl, a casing surrounding said bowl having a lid, a sleeve detachably mounted on said shaft, said sleeve and shaft extending through said bowl cover, said bowl attached to and rotatable with said sleeve, said bowl cover having an extended hub having an annular groove

therein with a passage extending from said groove to within said bowl for directing the flow of fluid to the outer periphery of said sleeve.



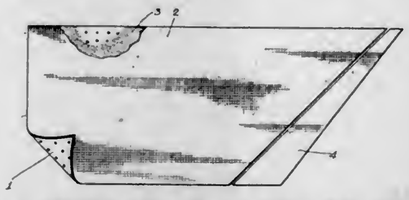
1,782,180. CIGARETTE-MAKING MACHINERY. FÉLIX FRÉDÉRIC RUAU, Deptford, London, England. Filed July 23, 1928, Serial No. 294,753, and in Great Britain Aug. 20, 1927. 1 Claim. (Cl. 131—39.)

In a device for applying adhesive, the combination with a receptacle having an aperture at one end thereof through which adhesive may be introduced and discharged, a piston movable in said receptacle toward the apertured end thereof for discharging adhesive from the latter, a threaded piston rod associated with said piston, a frame on which said receptacle is removably supported, threaded means held against rotation by said frame and engaging the threaded portion of said piston rod, a rotatable element journalled on said threaded means, a member splined to said piston rod and having a disengageable clutch connection with said rotatable element, an adhesive furnishing roller, a nozzle disposed adjacent the periphery of said roller for delivering adhesive thereto, and a detachable flexible conduit interposed between said aperture and said nozzle for conveying adhesive to the latter whereby said receptacle may be readily removed for filling and replaced without disturbing the relative positions of said nozzle and roller.



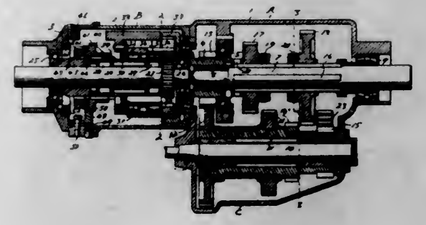
1,782,181. SIGN REFLECTOR. EMIL SIMPSON, Spooner, Wis. Filed Dec. 17, 1928. Serial No. 326,558. 3 Claims. (Cl. 40—130.)

3. As a new article of manufacture, a reflector of the class described including a tubular body with a disk at one end thereof, said disk including a plain center with an annular inwardly directed bulge portion thereabout and a plain ring portion about the bulge portion, said tubu-



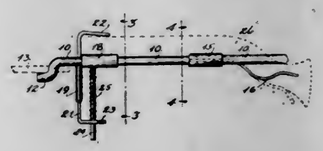
lar body tapering toward the disk end thereof, the other end thereof being formed with an outwardly directed annular flange.

1,782,182. RAILROAD CROSSING. MICHAEL G. STOLLER, Paulding, Ohio. Filed May 10, 1930. Serial No. 451,431. 1 Claim. (Cl. 246—380.)



In a railway crossing, rail chairs having bores extending horizontally therethrough, said railway chairs having vertical openings, vertically movable rail sections operating in the vertical openings, said rail sections having grooves in the lower ends thereof, wedge shaped members mounted in the horizontal bores, the upper edges of the wedge shaped members being inclined and positioned in the grooves of the rail sections, and levers for operating the wedge shaped members.

1,782,183. TIE, TIE PIECE GOODS, AND METHOD OF MAKING. NATHAN J. STRAUSS, Lynbrook, N. Y., assignor, by direct and mesne assignments, of one-third to Freydberg Bros., Inc., New York, N. Y., a Corporation of New York, and two-thirds to Joseph Silberman and Louis Kahn, trading as Resisto Manufacturing Company, Baltimore, Md. Filed May 17, 1926. Serial No. 109,648. 5 Claims. (Cl. 2—146.)

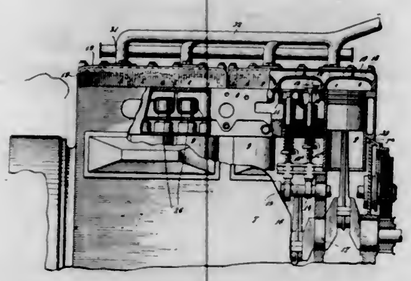


1. A necktie, composed of a face piece, a back piece, and an elastic adhesive material interposed between the two pieces and intimately uniting the same throughout the area of the pieces falling within the knot-tying portion of the tie, said three parts being resilient longitudinally.

1,782,184. TRANSMISSION. WALTER W. WELLS, Lansing, Mich., assignor to Reo Motor Car Company, Lansing, Mich., a Corporation of Michigan. Filed Dec. 22, 1924. Serial No. 757,504. 2 Claims. (Cl. 74—58.)

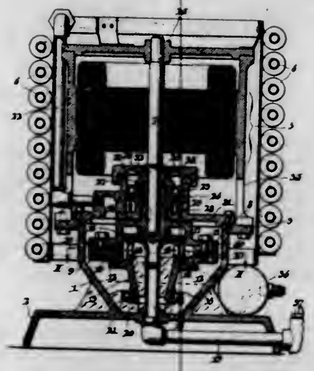
2. A transmission comprising a pair of interconnected casings, a rotatable member journaled in one of said casings and projecting within the other of said casings, a projection in one of said casings having a bearing for one end of said member, external teeth on said member between said bearing and journal respectively, axially aligned shafts in each of said casings, each having one end journaled in a casing and the other end journaled in said rotatable member, a countershaft gearing between said countershaft and said external teeth, gearing between said countershaft and one of said axially aligned shafts and internal gearing between said rotatable member and the other of said shafts.

1,782,185. HOLDER FOR PAPER SLIPS. ROBERT S. YOUNG, New Brighton, N. Y. Filed Jan. 20, 1930. Serial No. 422,210. 4 Claims. (Cl. 24—66.)



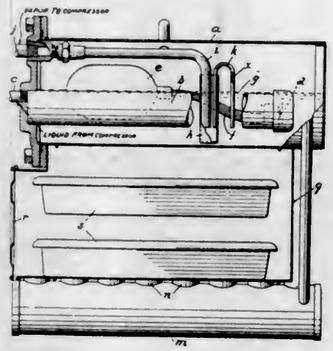
1. A device of the kind described consisting of a frame having a pair of sides and a cross end, a bridge member connecting said sides in spaced relation to said end, a clamp adjacent the other end of said frame, said sides being spaced to permit passage of a bunch of slips therebetween to extend below the cross end, and means to press the bunch of slips lightly against the cross end.

1,782,186. ASPHALTIC MATERIAL AND PROCESS FOR MANUFACTURE. GENE ABSON, Chicago, Ill., assignor to Chicago Paving Laboratory, Inc., Chicago, Ill., a Corporation of Illinois. Continuation of application Serial No. 252,945, filed Feb. 8, 1928. This application filed Oct. 25, 1929. Serial No. 402,548. 10 Claims. (Cl. 196—74.)



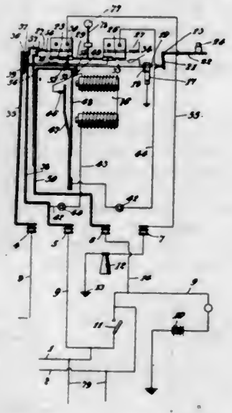
1. The process of treating petroleum residuum in the conversion thereof to blown asphalt having a higher penetration for a given melting point than can be obtained from the same residuum without treatment, which comprises incorporating with said residuum a relatively small quantity of an inorganic non-alkaline earth metallic salt which is non-volatile at blowing temperatures, said salt being in insufficient amount to effect cracking of the residuum at blowing temperatures, and subjecting the residuum to air blowing while in a heated condition.

1,782,187. INTERNAL-COMBUSTION ENGINE. BENJAMIN B. BACHMAN, Philadelphia, Pa., and LOUIS S. CLARKE, Palm Beach, Fla., assignors to The Autocar Company, Ardmore, Pa., a Corporation of Pennsylvania. Filed July 18, 1928. Serial No. 293,683. 8 Claims. (Cl. 123—177.)



1. In an internal combustion engine having a water jacket, the combination of a passage disposed longitudinally within said jacket, and at the lowest part thereof, means communicating with said passage and with a water cooling unit for delivering the cooled water directly from said unit to said passage and means for ejecting the water from said passage into said water jacket beneath the exhaust valves, whereby said valves and their seats will be subjected to the cooling influence of the water received from the cooling unit while the heat absorption capacity of the liquid is greatest.

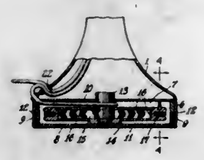
1,782,188. COMPRESSOR PUMP. EUGENE L. BARNES, Buffalo, N. Y. Filed Oct. 19, 1926. Serial No. 142,543. 2 Claims. (Cl. 230—108.)



1. In a pump, a rotor with a hollow central portion communicating with a source of mercury, said portion having a series of outlet ports, said rotor having a series of passages, the cross-sectional areas of which diminish outwardly, communicating with said outlet ports and separated therefrom by an annular interval, a stator having an axial inlet communicating with a supply of fluid to be pumped and communicating with said annular interval, and an annular ported portion within the interval aforesaid cooperating with said rotor ports to intermittently expel by centrifugal action globules of said mercury and charges of said fluid.

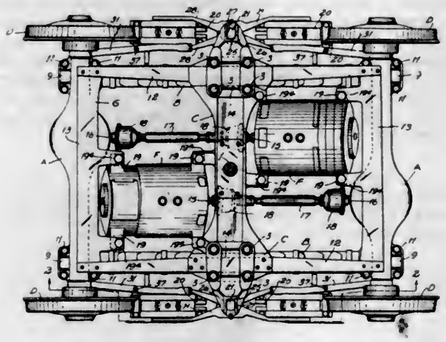
1,782,189. REFRIGERATING APPARATUS. EUGENE L. BARNES, Buffalo, N. Y. Filed Feb. 15, 1928. Serial No. 254,336. 5 Claims. (Cl. 62—115.)

1. In a refrigerating apparatus, in combination, a refrigerant chamber, means for maintaining liquid refrigerant in said chamber, a sump within said chamber extending below the level of liquid refrigerant therein, a vapor discharge conduit extending into said sump and means extending beneath the level of refrigerant in said chamber and into said sump whereby liquid refrigerant is transferred from said chamber into said sump by capillary action.



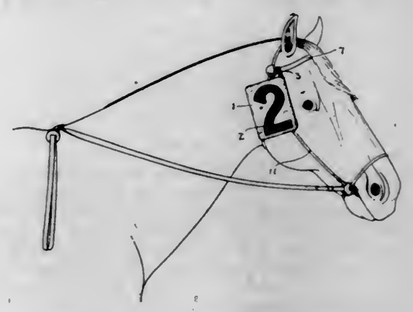
1,782,190. ALARM APPARATUS. JOSEPH ARTHUR BOLDUC, Montreal, Quebec, Canada, assignor to Automobile "Lock-Alarm" Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 26, 1926. Serial No. 90,732. 2 Claims. (Cl. 177—314.)

1. In a theft alarm system for automobiles, an alarm circuit, a switch in said circuit including a member biased for movement in one direction to circuit opening position, and latching means for holding said member in closed circuit position against said bias, a vibratory member, electromagnetic means included in a normally open circuit



for vibrating said member, inter-engaging means between the first named member and said vibrating member for moving said biased member to latched position and to thereafter permit the free vibration of said vibrating member, and means including a ratchet and pawl mechanism operated by said vibrating member for releasing said latch member after a predetermined number of vibrations of said vibratory member.

1,782,191. TELEPHONE-CONNECTER TAKE-UP. JOHN ESTEN BOLLING, East Orange, N. J. Filed May 9, 1928. Serial No. 276,271. 11 Claims. (Cl. 179—155.)



1. The combination with a telephone hand set, comprising a supporting member and a hand piece provided with transmitter and receiver, of a connecter reel connected with the base of said supporting member, a rewinding spring therefor, and a connecter connected with said hand piece, and having portions engaging said reel, adapted to be withdrawn therefrom when the hand piece is removed from said supporting member for use, and to be rewound thereon when the hand piece is replaced, and locking means for arresting said reel, said reel including interengaging portions on said reel and a part connected with said supporting member, said interengaging portions being constructed to be disengaged by a movement of the reel in either direction.

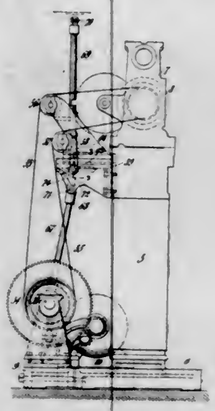
1,782,192. CAR TRUCK. NELSON R. BROWNYER, Detroit, Mich., assignor to The Timken-Detroit Axle Company, Detroit, Mich., a Corporation of Ohio. Filed Dec. 13, 1929. Serial No. 413,766. 17 Claims. (Cl. 188—165.)

1. A track brake comprising two arms adapted to extend longitudinally of the track and spaced apart from each other, supports for the remote ends of said arms permitting vertical swinging movement thereof, a member extending longitudinally of said track between the spaced ends of said arms, a brake shoe fixed to said member, and means for holding the adjacent ends of said arms and said member together to form a downwardly yieldable supporting frame for said brake shoe.

1,782,193. HEAD NUMBER FOR HORSES. PETER EDWARD CALLEN, Toronto, Ontario, Canada. Filed Jan. 5, 1929. Serial No. 330,478. 6 Claims. (Cl. 40—10.)

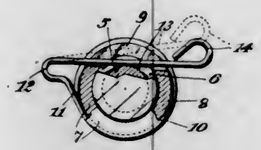
2. The combination with the head harness, of a placard having a number on one side detachably secured to said head harness with the number outermost.

1,782,194. HOLDING BAND. WINTHROP L. CARTER, Nashua, N. H., assignor to Nashua Surehold Company, Nashua, N. H., a Corporation of Massachusetts. Filed Jan. 21, 1929. Serial No. 333,915. 1 Claim. (Cl. 24—17.)



A band for holding articles, comprising an elongated imperforated strip, a narrow end edge of which is folded to provide a plurality of layers, a limited area of the strip adjacent to said folded end having a dry-gum coating.

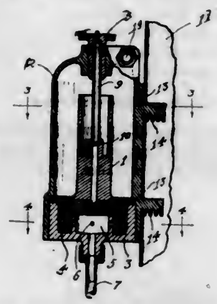
1,782,195. BELT-TIGHTENING MECHANISM FOR MOTOR-DRIVEN SUPPLY UNITS. HUBERT DALTON, Stamford, Conn. Original application filed Jan. 16, 1922, Serial No. 529,406. Divided and this application filed Jan. 9, 1925. Serial No. 1,335. 1 Claim. (Cl. 64—5.)



Belt tightening mechanism including, in combination with a horizontal driven shaft, coned pulleys on said shaft, a supporting standard therefor and a driving shaft, a pulley on said driving shaft, and an endless driving belt engaged with said pulleys; a supporting bracket fixed to and projecting laterally from one side of said stand-

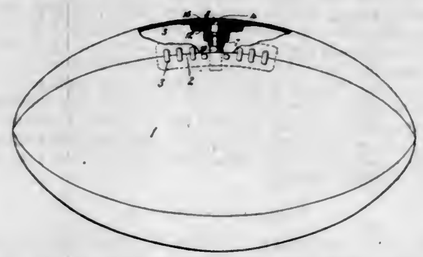
ard, a pulley carriage mounted for sliding movement on said bracket, means for adjusting said carriage towards and from the supporting standard, said carriage including a single pair of spaced bearing standards, and a pair of belt guiding pulleys journalled upon and between

said standards arranged within their axes in fixed vertically and laterally spaced relation to each other and engaged with the respective stretches of the driving belt whereby said belt stretches are simultaneously and equally tensioned in the adjustment of said carriage.



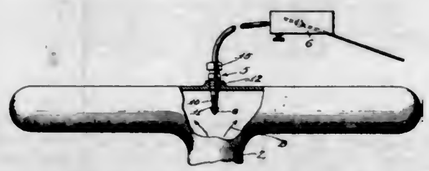
1,782,196. THREADLESS NUT OR COLLAR. HUBERT DALTON, Stamford, Conn. Filed Feb. 10, 1928. Serial No. 253,332. 3 Claims. (Cl. 287—52.08.)

1. In combination with a shaft having a circumferential groove in the face thereof, a collar for said shaft having a transverse slot in one side extending entirely through the wall thereof, and a retaining member for said collar consisting of a length of resilient wire held at one of its ends in fixed relation to the collar and having an intermediate bend therein extending laterally from one side of the collar, and a substantially straight portion extending through said slot inwardly of the inner face of the collar and terminating in a loop projecting laterally from the opposite side of the collar, said straight portion of the retaining wire adapted for engagement in the groove in said shaft and said portion of the wire adapted to be sprung outwardly by pressure against said terminal loop to permit of the axial movement of the collar relative to said shaft.



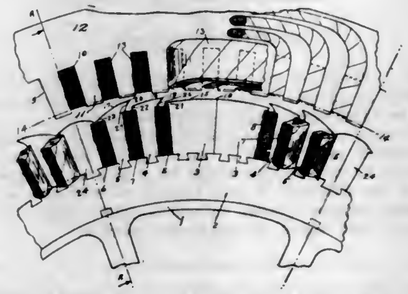
1,782,197. HUMIDIFIER. MARTIN DE GRAAF, Grand Rapids, Mich. Filed Feb. 25, 1928. Serial No. 256,861. 2 Claims. (Cl. 126—113.)

1. A humidifier of the class described comprising an outer container of thermally expansive material provided with means for securing it to the casing of a hot air heater or the like in heat absorbing relation to said casing, said container having a water inlet and a water outlet for supplying water to the hot air heater, an interiorly arranged valve mounted on the said container at one end thereof, and a cooperating valve seat on the opposite end of said container for controlling said water



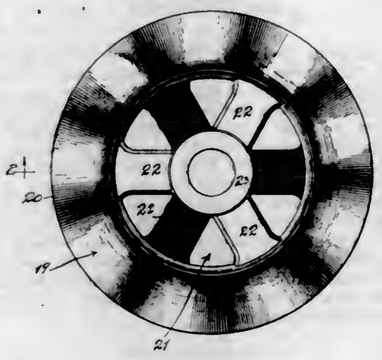
inlet, said valve and valve seat being in spaced relation with the walls of the container so as to be surrounded by water and thereby shielded from external heat.

1,782,198. INFLATABLE PLAYING BALL AND BLADDER THEREFOR. JAMES R. DENKERT, Johnstown, N. Y. Filed Jan. 25, 1930. Serial No. 423,307. 7 Claims. (Cl. 273—65.)



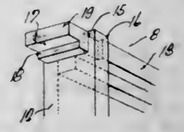
1. In an inflatable playing ball, the combination with a cover provided with a minute inflating aperture, of a bladder of rubber provided with a rubber valve enclosing sleeve having portions projecting from the bladder and provided at their outer end with a laterally extending rubber attaching and cushioning disc, provided with a plurality of stitch receiving apertures and stitched therethrough directly and permanently to the inner face of said cover adjacent the aperture, substantially co-axially with respect to said aperture, and valve mechanism, including a metallic valve sleeve, secured within said enclosing sleeve and out of contact with the cover.

1,782,199. VACUUM INDUCING CONSTRUCTION. ADIEL Y. DODGE, South Bend, Ind. Filed Sept. 29, 1927. Serial No. 222,705. 4 Claims. (Cl. 230—95.)



1. A suction inducing device having provisions for communication with a suction conduit and an intake conduit of an internal combustion engine comprising a tubular member having an enlarged head portion and a reduced shank portion, said shank portion having a longitudinal passage in communication with said suction conduit and leading to a position adjacent said enlarged head and having a transverse passage-way which places said longitudinal passage-way in communication with said intake conduit, said transverse passage-way opening into said intake conduit at a place adjacent the junction of the shank and head.

1,782,200. SYNCHRONOUS DYNAMO-ELECTRIC MACHINE. JOHN F. H. DOUGLAS and EDWARD W. KANE, Milwaukee, Wis. Filed Apr. 27, 1925. Serial No. 26,113. 9 Claims. (Cl. 171—252.)



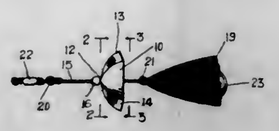
1. The combination with the armature of a dynamo electric machine, of a field magnet having a distributed winding comprising a plurality of coils for each pole, and pole members, each member of the pole so shaped with reference to its adjoining member that air-gaps on the two sides of any coil separating adjacent pole members are to each other as the magneto-motive forces on the respective faces of said pole members.

1,782,201. ROLLER PULVERIZER. RAY E. DUNHAM, Berea, Ohio, assignor to The Dunham Company, Berea, Ohio, a Corporation of Ohio. Filed Feb. 23, 1928. Serial No. 256,131. 7 Claims. (Cl. 55—77.)

1. A roller pulverizer disk having a concavely beveled periphery forming a circumferentially extending laterally undulating cutting edge, the roller disk being hollow and provided on each side with spokes merging into a centrally disposed hub, the spokes on one side being arranged in staggered relation with respect to the spokes on the other side, substantially as described.

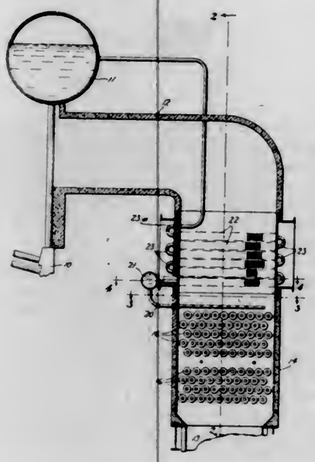
1,782,202. HIVE FRAME. GORDON G. FRATER, Watertown, Wis., assignor to G. B. Lewis Company, Watertown, Wis., a Corporation of Wisconsin. Filed Dec. 7, 1929. Serial No. 412,433. 3 Claims. (Cl. 6—2.)

1. A device of the character described including a top bar and side pieces, the side pieces having their upper ends bifurcated to receive the top bar therein, and an abutment on the top bar adjacent each end and located medially of the adjacent side piece outer surface and the top bar end, said abutments being formed by reducing the outer end portions of the top bar.



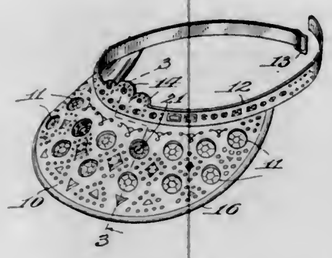
3. A device of the character described, including a top bar and side pieces, the top bar having recesses in its opposite sides of a width substantially equal to the thickness of the side pieces, and the adjacent ends of the side pieces being bifurcated and having spaced projections received within the recesses of the top bar, abutments formed on the top bar adjacent its ends and outwardly of the side pieces, said abutments providing means limiting endwise movement of the frame within a hive, means securing the top bar to the side piece, and said abutments being inclined downwardly and inwardly.

1,782,203. SCREEN. WILLIAM HANLEY, East Orange, N. J., assignor to Ferguson Brothers Manufacturing Company, Hoboken, N. J., a Corporation of New Jersey. Filed Dec. 2, 1929. Serial No. 411,078. 4 Claims. (Cl. 45—106.)



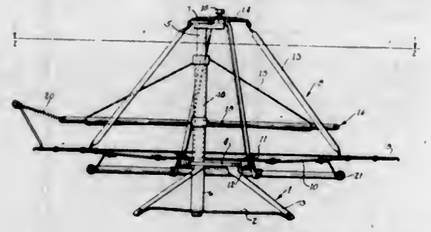
1. A screen comprising a panel of double-faced corrugated board, and a metal cross brace rigidly connecting the sides of the frame between its top and bottom, said cross brace being housed within the panel and the frame sides.

1,782,204. FISHING LURE. JOHN EDWARD JENSEN, Toronto, Ontario, Canada, assignor to The Allcock-Laight & Westwood Co., Toronto, Canada. Filed Oct. 10, 1929. Serial No. 398,632. 1 Claim. (Cl. 43—45.)



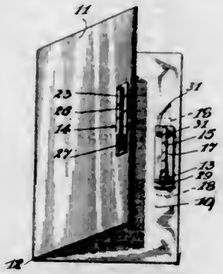
A fishing lure, comprising a draw wire terminating in a suitable tail, a spinner freely mounted on said wire intermediate of the length thereof between ball members and having a bell mouth facing said tail and spiral fixed fins projecting from the outer surface of said spinner and rotating it to produce air bubbles in the wake through which said tail trails.

1,782,205. ECONOMIZER. WALTER F. KEENAN, Jr., Pelham Manor, N. Y., assignor to Foster Wheeler Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 17, 1929. Serial No. 355,815. 13 Claims. (Cl. 257—220.)



1. An economizer for heating boiler feed water by means of products of combustion comprising a flue having an oblong cross-section, a first group of tubes extending transversely of the flue in the direction of greater dimension, a second group of tubes extending transversely of the flue in the direction of lesser dimension, the cross-sectional area of flow of the second group being greater than the cross-sectional area of flow of the first group, and connections for passing fluid through the groups of tubes in series.

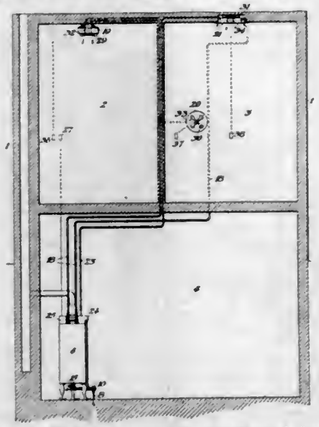
1,782,206. DECORATED VISOR. SAMUEL A. KORNSWEET, Venice, Calif. Filed Mar. 6, 1928. Serial No. 259,446. 2 Claims. (Cl. 2—12.)



1. In a decorated visor, an eyeshade portion provided with openings, an inturned retaining lip on the lower edge of said eyeshade portion, a member detachably applied to the under face of said eyeshade portion and having its lower edge positioned behind said retaining lip, means for detachably connecting the upper edge of said member to the upper portion of said eyeshade portion, portions of which detachable member are visible through the openings in the eyeshade portion, and said detachable member being provided with relatively small sight openings that are adapted to register with certain of the openings in said eyeshade portion.

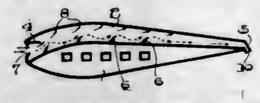
1,782,207. ROUNDABOUT. DELL J. LAHAY, Carney, Mich., assignor, by direct and mesne assignments, to Universal Playground Equipment Company, Menominee, Mich., a Corporation of Michigan. Filed Feb. 14, 1929. Serial No. 339,840. 5 Claims. (Cl. 272—33.)

1. A device of the kind described embodying therein a base, an annular member on said base, an upright member arranged eccentrically of said annular member, a seating means supported on said upright member for rotation concentric with respect to said annular member, means carried by said seating means for a guiding engagement with the periphery of said annular member and an actuating member rotative on said upright member but eccentric with respect to said seating member.



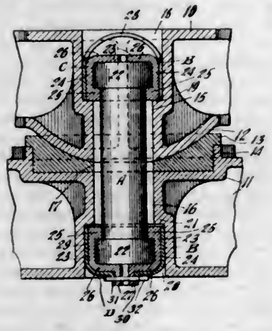
1,782,208. FASTENING DEVICE FOR POCKETBOOKS AND THE LIKE. HARRY LEBERMAN, New York, N. Y., assignor to Groove Lock Co. Inc., New York, N. Y., a Corporation of New York. Filed Jan. 22, 1929. Serial No. 334,336. 4 Claims. (Cl. 24—223.)

1. A fastening device for the purpose set forth comprising a rail having base portions and a head, a button slidable along the head of the rail, a securing plate provided with a guide slot and an opening, both being entirely through the plate transversely thereof and defined by edge walls which extend from the inner face of the plate to the outer face thereof, the head of the rail being insertable between the edge walls of the slot and opening so as to permit the inner face of the plate to rest upon the base portions, said button being insertable through the opening and constructed to have sliding contact between the head of the rail and the edge walls of the slot, and projections on the button adapted to slide in contact with the outer face of the plate when the inner face of the plate rests on said base portions.



1,782,209. WATER HEATER. VICTOR MAUCK, Merion, Pa. Original application filed Sept. 13, 1926, Serial No. 134,964. Divided and this application filed May 5, 1927. Serial No. 189,090. 3 Claims. (Cl. 257—248.)

1. In a heating system, a heater unit of cellular structure, including a congeries of thin sheet metal flue tubes, having their opposite ends expanded to polygonal form, and fitted tightly together with their intermediate portions in spaced relation, affording space and passageways between said tubes for a fluid to be heated; a casing around said congeries, inclosing said space and passageways between said tubes; an inlet and an outlet in closely spaced relation, transversely to the axes of said tubes, and leading to and from said passageways; and a baffle plate, between said inlet and outlet, and extending in said pas-

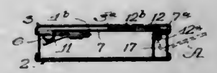


sageways, to the entire axial extent thereof, between adjoining tubes in said congeries; whereby the heated fluid is prevented from short-circuiting, from said inlet to said outlet, and compelled to tortuously traverse all of said passageways around said flue tubes, laterally, and transversely with respect to the axes of said tubes.

1,782,210. AEROPLANE. TOICHI NOSE, Kamakura Machi, Kanagawa Ken, Japan. Filed July 6, 1929, Serial No. 376,322, and in Japan Oct. 24, 1928. 1 Claim. (Cl. 244—12.)

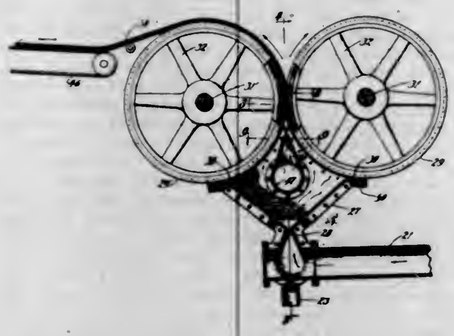
An aeroplane provided with air compartments adapted to receive air current at their front ends and discharge it at their rear ends said air compartments being provided with deflectors for deflecting the passing air current and provided in their top walls with small perforations to assist the upward thrusting of the air current.

1,782,211. CAR CONSTRUCTION. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Jan. 6, 1930. Serial No. 418,799. 7 Claims. (Cl. 105—200.)



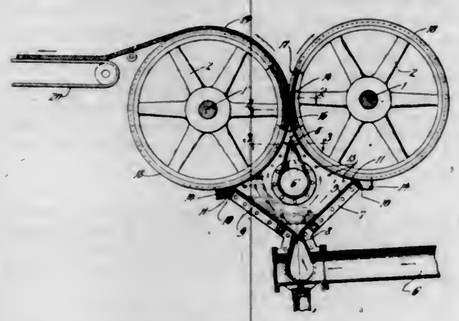
1. In car construction, the combination with body and truck bolsters having alined center pin receiving openings, each bolster having a head receiving pocket adjacent its opening, said pocket being of larger diameter than the corresponding opening, thereby providing an annular retaining shoulder at the inner end of the pocket; of a center pin member having a shank of smaller diameter than said center pin openings, said pin having cylindrical enlargements at opposite ends thereof, of not greater diameter than said pin receiving openings but of smaller diameter than said pockets, thereby providing annular retaining shoulders at opposite ends of said shank; and a plurality of locking blocks at each end of the pin providing sectional head members embracing the corresponding enlargements and each having an inwardly projecting annular sectional flange of a width corresponding to that of the annular shoulder of the corresponding enlargement, each set of blocks together defining a sectional head member of smaller diameter than the corresponding pocket and overlapping the annular retaining shoulder thereof, the combined width of said inwardly projecting flange and the overlap of said head with the retaining shoulder of the corresponding pocket being greater than the clearance between said head of the side wall of said pocket, said pin member being laterally displaceable in said pin receiving openings to permit insertion of the parts of the sectional heads within said head receiving pockets between the side walls of said pockets and the enlargements of the pin member.

1,782,212. KEYLESS LOCK. JOHN RECKER, Newark, N. J. Filed Jan. 23, 1928. Serial No. 248,594. 3 Claims. (Cl. 70—55.)



1. A keyless bag lock comprising a casing having two sections, one being fixed on the outer side and the other to the inner side of one of the bag frame sides, a catch carried by the mating frame side to enter the inner section, a spring actuated slide to normally retain the catch in said section, a plate slidable in the outer section directly connected with said slide to communicate motion thereto, means on the outer section to actuate said plate, and a pair of independently operable means when set in a predetermined position permitting movement of said plate and when in any other position preventing movement thereof.

1,782,213. COIN SAVINGS BANK. WALTER P. SCULLY, Chicago, Ill., assignor to G. Felsenthal & Sons, Chicago, Ill., a Firm composed of L. J. Felsenthal and I. G. Felsenthal. Filed Feb. 6, 1928. Serial No. 252,153. 5 Claims. (Cl. 232—4.)



1. A coin savings bank comprising a body portion having an inwardly extending marginal flange about its open edge, a flanged cover member adapted to close the open side of said body and having an integral hook-shaped hinge member adjacent its periphery and projecting from its under side with its free end spaced therefrom, there being a slot in said flange adapted to receive said hinge member with its free end extended outwardly beyond one end of said slot, said flange being slit adjacent said opening to permit the material of said flange to be yieldingly depressed to effect the insertion of said hinge member into said opening, and a leaf spring mounted on said flange and bearing at its free end against said hinge member.

1,782,214. PROCESS AND APPARATUS FOR PRODUCING FELTED FIBROUS BOARD. EDWARD S. SHEPPERD, St. Joseph, Mo., assignor to Albert D. Stewart, St. Joseph, Mo. Filed Sept. 6, 1928. Serial No. 304,254. 9 Claims. (Cl. 92—39.)

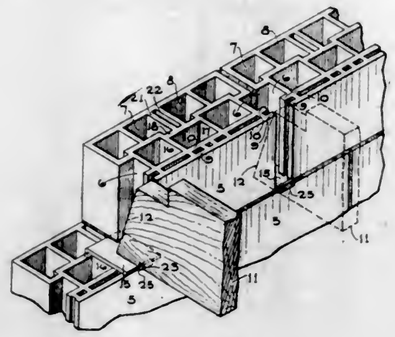
1. A machine comprising in combination, forming cylinders geared together to rotate in unison, a forming chamber disposed below said forming cylinders substantially centrally of the bite between, and communicating with, said forming cylinders, a seal disposed adjacent the sides of the forming cylinder for preventing leakage past the sides of the forming cylinder and the forming chamber and separate inlets for supplying water and pulp to said forming chamber, one disposed adjacent the lower end thereof and the other disposed above said lower inlet.

1,782,215. APPARATUS FOR PRODUCING FELTED FIBROUS BOARD. EDWARD S. SHEPPERD, St. Joseph, Mo., assignor to Albert D. Stewart, St. Joseph, Mo. Filed Sept. 6, 1928. Serial No. 304,255. 6 Claims. (Cl. 92—39.)

1. An apparatus comprising in combination, forming cylinders geared together to rotate in unison, a forming chamber disposed below and in communication with said forming cylinders, means for introducing to said forming chamber pulp suspension under hydrostatic pressure, and means disposed on both sides of the forming cylinders for preventing leakage past the ends of the forming cylinders and the forming chamber, consisting of a stationary seal adapted to register with opposed grooves in said cylinders.

1,782,216. JOIST BEARING PLATE AND ANCHOR. JOHN G. SHODRON, Fort Atkinson, Wis., assignor to James Manufacturing Company, Fort Atkinson, Wis., a Corporation of Wisconsin. Filed Aug. 22, 1928. Serial No. 301,205. 5 Claims. (Cl. 72—108.)

2. The combination with load bearing tile provided with a plurality of longitudinally extending webs along the inner face of the tile and transversely extending webs, of a bearing plate spanning said longitudinally extending webs and certain of said transverse webs and adapted to distribute load therebetween, means carried by said



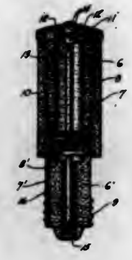


plate positioned for engagement with certain of the longitudinal and transverse webs of the tile on which said plate rests, a joist, and means for securing said joist against longitudinal displacement with reference to said plate.

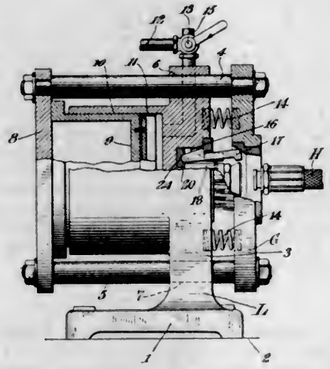
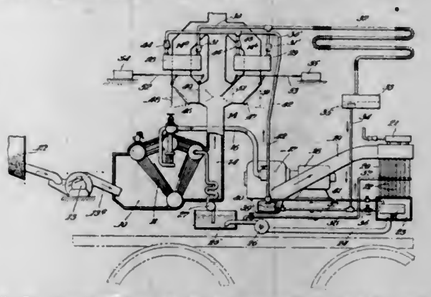
1,782,217. PLAY PEN. BEATRICE M. STODDARD, Dedham, Mass., assignor to Dorothy Dewey Comstock, Dedham, Mass., doing business as The Kiddie-Rhester Co. Filed June 8, 1929. Serial No. 369,300. 2 Claims. (Cl. 5—99.)



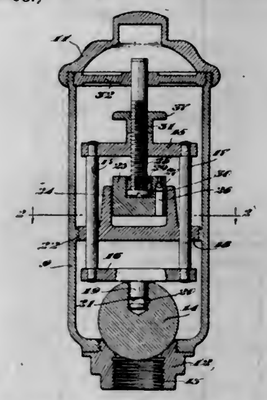
1. In combination with a portable pen comprising a plurality of thin, rectangular sections pivotally interconnected to form an upright, rectangular enclosure when erected and to fold into parallel juxtaposition when closed, a combined bottom mat and casing consisting of a sheet of flexible material having a substantially rectangular body portion shaped to underlie the bottom of the erected pen and to fold over the bottom, sides and top of the folded pen, and having a pair of oppositely disposed, substantially rectangular side wings, the wings being substantially as long and as wide as the respective ends of the closed pen to cover said ends when the sheet is used as a casing, the opposed margins of the body portion and wings of the casing overlapping each other completely to enclose the folded pen therewithin, cooperating fastener elements spaced along said margins for securing the casing about the folded pen, and fastener elements spaced along the bottom of the sections at the sides of the erected pen, cooperating with the fastener elements at the side margins of said body portion for attaching the sheet to the bottom of the erected pen.

1,782,218. INFRA-RED ELEMENT FOR THERAPEUTIC LAMPS AND HOLDERS. ERNEST SUTER and JULIUS NUETZI, Milwaukee, Wis. Filed Apr. 25, 1928. Serial No. 272,672. 1 Claim. (Cl. 174—177.)



A therapeutic element, comprising an insulating core having a spiral groove, a coiled resistance wire extending into the groove, and a screen coating for said wire consisting of aloxide, neutral magnetic iron oxide black, silicon soda, and red phosphor zirconium oxide.

1,782,219. MACHINE FOR USE IN ASSEMBLING HOSE-COUPLING PARTS AND THE LIKE. ARCHIBALD L. WALLACE, Brooklyn, N. Y., assignor to Metal Hose & Tubing Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 24, 1928. Serial No. 321,693. 4 Claims. (Cl. 29—88.2.)

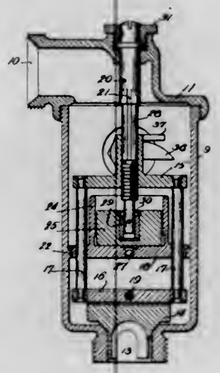


1. A machine for assembling coupling parts where one annular coupling part is intended to be connected to another by constriction of the diameter of the first coupling part, said machine comprising means to support the first coupling part, a plurality of presser members arranged side by side in position to surround said first coupling part movable toward a common centre for pressing against said coupling part to constrict its diameter, means by which said presser members are pivotally supported to swing toward and away from said common centre, resilient means urging said presser members away from said common centre, and a single ring shaped cam engaging all of said presser members for simultaneously moving them in opposition to said resilient means.

1,782,220. STEAM-GENERATING APPARATUS. ERNEST WANAMAKER and LAURENCE C. BOWES, Chicago, Ill., assignors, by direct and mesne assignments, to U. S. Oil & Service Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 25, 1929. Serial No. 349,737. 5 Claims. (Cl. 60—95.)

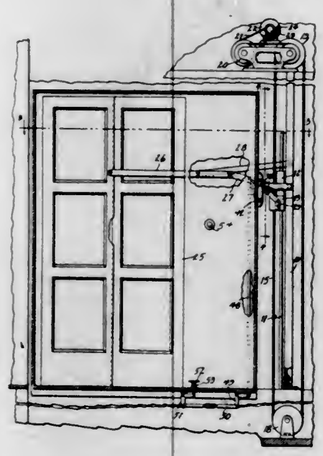
2. In combination, a steam generator, steam driven power means associated therewith, a condenser for condensing the exhaust steam of said power means, and a refrigerating apparatus activated by heat from said generator for augmenting the condensing action of said condenser.

1,782,221. FLUSH VALVE. HAROLD WESSON, Springfield, Mass., assignor to Smith and Wesson, Inc., Springfield, Mass., a Corporation of Massachusetts. Filed July 28, 1927. Serial No. 209,097. 10 Claims. (Cl. 137—93.)



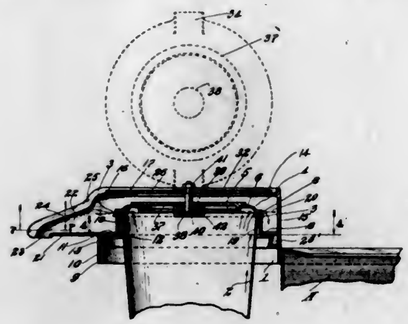
1. A valve comprising a casing having a fluid outlet at its bottom, a valve within the casing for closing the outlet, said valve being normally seated by pressure of the fluid within the casing, a carriage within the casing connected to the valve and movable therewith longitudinally of the casing, a rotatable shaft having a cam adapted upon rotation of the shaft to engage and lift the carriage to move the valve off its seat against said fluid pressure, manually controlled means for rotating said shaft, a dash pot consisting of a cylinder fixed transversely of the casing and a piston adjustably mounted in said carriage adapted to retard the seating of the valve, so that a predetermined volume of fluid is delivered through said outlet before the valve is seated.

1,782,222. FLUSH VALVE. HAROLD WESSON, Springfield, Mass., assignor to Smith and Wesson, Inc., Springfield, Mass., a Corporation of Massachusetts. Filed Apr. 22, 1929. Serial No. 356,947. 2 Claims. (Cl. 137—93.)



1. A flush valve comprising a casing having a valve seat at one end, a guide in the casing intermediate its ends, a

cylinder on the guide having an open end facing away from the valve seat, a carriage having rods sliding in the guide and cross-heads interconnecting the rods on opposite sides of the guide, a piston mounted on one cross-head to cooperate with said cylinder and a valve on the other cross-head to cooperate with said seat, a threaded stem for



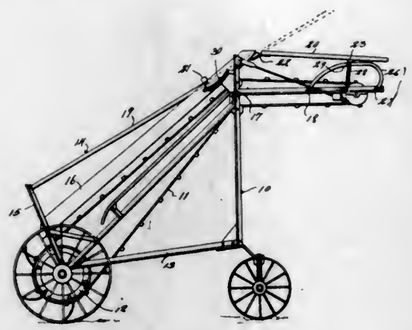
adjusting the piston longitudinally of the cylinder, and a sleeve journaled in the other end of the casing for rotating the threaded stem from outside the casing, said sleeve having sliding but non-rotating relation with the stem, so that the position of said piston may be adjusted without moving the sleeve longitudinally of the casing.

1,782,223. ELEVATOR-DOOR-OPERATING APPARATUS. GUY L. ALLEN, Dallas, Tex. Filed May 12, 1928. Serial No. 277,181. 15 Claims. (Cl. 187—52.)

14. In an elevator door operating apparatus, the combination with a horizontally slidable elevator door, of door operating means connected with said door, automatic door opening means connected with said door operating means and normally locked against operation when said door is closed, a door closing element normally disconnected from the opening means, means for releasing the door opening means to open the door and for causing said means to connect with the closing element, and means for actuating said door closing element to close the door.

1,782,224. LAUNDRY APPARATUS. ALPHEUS W. ALTORFER, Peoria, Ill., assignor to Altorfer Bros. Company, East Peoria, Ill., a Corporation of Illinois. Filed Mar. 4, 1927. Serial No. 172,644. 23 Claims. (Cl. 210—75.)

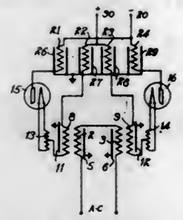
20. A revolvable housing for a centrifugal extractor, including a water receiving and conducting chamber having a radially arranged conduit and discharge opening therefor and a transfer shelf partitioned from said conduit.



1,782,225. RECOVERY OF SULPHUR FROM PYRITES. RAYMOND F. BACON, Bronxville, N. Y. Filed Apr. 6, 1927. Serial No. 181,359. 1 Claim. (Cl. 23—227.)

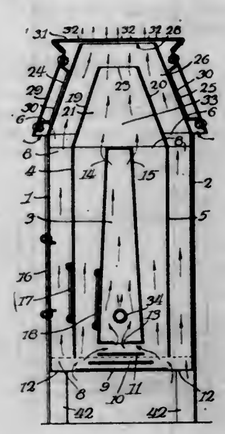
The method of recovering sulphur from iron pyrites which comprises heating the iron pyrites to a temperature of about 600° C. and not in excess of 700° C. in a rotary retort, subjecting the said heated pyrites while still in the said retort to the action of steam at a temperature of about 600° C. and not in excess of 700° C., thereby forming a gaseous product containing elemental sulphur and hydrogen sulphide together with an excess of steam, treating said hot gaseous product with sulphur dioxide at a temperature of about 600° C. and not in excess of 700° C., thereby producing additional elemental sulphur through the reaction of sulphur dioxide with hydrogen sulphide, subjecting the so treated gaseous product to a condensation operation in which the elemental sulphur is in large part condensed without substantial condensation of the steam, reheating the exhaust gases of the condensation operation by heat derived from the hot gases leaving the retort, raising the said exhaust gases to a temperature of about 600° C. and not in excess of 700° C. by means of the excess heat from the retort heating device, and reintroducing the reheating gases into the retort for further reaction with iron pyrites.

1,782,226. RECOVERY OF SULPHUR FROM IRON PYRITES. RAYMOND F. BACON, Bronxville, N. Y. Filed Apr. 13, 1927. Serial No. 183,436. 5 Claims. (Cl. 23—226.)



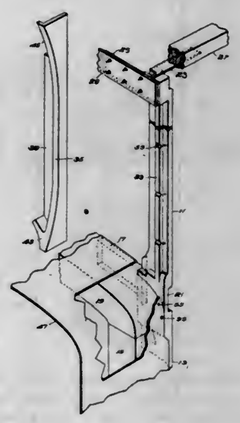
1. The method of recovering sulphur from iron pyrites which consists in effecting a partial elimination of the sulphur from iron pyrites by subjecting the pyrites to the action of steam at an elevated temperature and thereby forming a gaseous product containing elemental sulphur and hydrogen sulfide effecting a further removal of sulphur from the residual iron sulfide remaining after such a partial elimination of sulphur from iron pyrites by subjecting the residual iron sulfide to oxidation at an elevated temperature and thereby forming a gaseous product containing sulphur dioxide, and subjecting the gaseous products resulting from the foregoing operations to a condensation operation in the course of which the hydrogen sulfide and sulphur dioxide react and form elemental sulphur and a large part of all the elemental sulphur present is condensed.

1,782,227. HAY LOADER. VICTOR BAL, Hyannis, Nebr. Filed Jan. 4, 1930. Serial No. 418,570. 3 Claims. (Cl. 198—160.)



1. In combination with a hay loader, retaining means for retaining the hay on the loader, said retaining means comprising upper and lower retaining members hingedly secured to each other, yieldable means mounted on the loader and engaging said retaining member at the opposite sides thereof whereby to hold said retaining members in contact with the hay and coactively prevent the hay from being blown away during the loading operation, a pair of U-shaped supporting members secured to said loader and adapted to engage the opposite side portions of said upper retaining member whereby to maintain said upper retaining member in spaced relation to the loader.

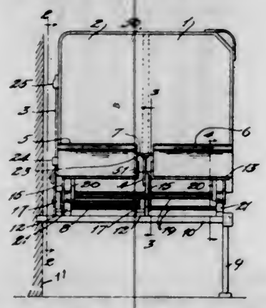
1,782,228. CURRENT-RECTIFYING APPARATUS. CHARLES B. BARTLEY and VIRGIL H. DAKE, Pittsburgh, Pa. Filed Nov. 14, 1928. Serial No. 319,276. 6 Claims. (Cl. 175—363.)



4. An alternating current rectifying device, comprising a current transformer having a plurality of sections of electrostatically shielded primary and secondary windings, a plurality of electron discharge valves for rectifying the current passing through the transformer, one valve being provided for each section of said secondary winding, a plurality of auxiliary transformer secondary windings for energizing said electron discharge valve, and a plurality of reactance coils for damping out fluctuations in the direct current provided by the rectifier; said valves, said transformer secondary windings, said auxiliary secondary windings and said reactance coils being connected in a plurality of parallel circuits each of which circuits extends from a negative terminal of the rectifier through one of said reactance coils, one of said valves, one of said auxiliary secondary transformer windings, one section of said transformer secondary windings and a second reactance coil to a positive terminal on the rectifier.

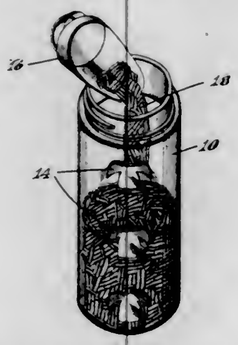
1,782,229. SPACE HEATER. ALOYSIUS W. BECKER, Chicago, Ill., assignor to Econoheet Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 17, 1928. Serial No. 326,604. 9 Claims. (Cl. 126—90.)

1. In a space heater, the combination, of an upright central heating flue having a bottom inlet opening and upper outlet openings, walls spaced from the walls of the flue to provide an air heating space all around said flue, and outer walls spaced from said first mentioned walls, forming a second air heating space all around said first mentioned walls, a heating element in said flue, and commingling means forming the top portion of the heater, said commingling means receiving and commingling the heated air discharged upwardly from the flue and the upper ends of the first and second heating spaces, provided with discharge means to discharge the commingled and heated air from the top portion of the heater.



1,782,230. AUTOMOBILE BODY AND METHOD OF CONSTRUCTING A BODY. RAYMOND CALPIN, Everett, Mass., assignor to A. S. Campbell Company, East Boston, Mass., a Corporation of Massachusetts. Filed Sept. 17, 1928. Serial No. 306,463. 16 Claims. (Cl. 296—28.)

1. The method of constructing automobile bodies which comprises constructing the body frame including top supporting body pillars arising adjacent the cowl and having



the roof hung and permanently secured thereto, securing in position a cowl panel with edges presented adjacent the front of said pillars and then assembling with the pillars by a movement of approach in substantially a horizontal plane contour-completing sections having base portions to overlie said panel adjacent the pillars and mechanically securing such sections to the pillars.

1,782,231. SEAT. JAMES WILLIAM CROSS, Finsbury Pavement, London, and ERIC ELDRIDGE JOHNSON, Tottenham, London, England. Filed Dec. 13, 1929, Serial No. 413,839, and in Great Britain Dec. 10, 1928. 6 Claims. (Cl. 155—101.)

1. A reversible double car seat including a main frame supported at the car wall and in spaced relation thereto, a pair of spaced inner and outer seat bottoms supported on said frame, the inner of said seat bottoms having a side adjacent but spaced from the car wall, a seat back frame support between the wall and adjacent seat bottom, a second seat back frame support between said seat bottom, said supports being mounted for swinging movement transversely of the seat on said main frame; and a seat back frame supported on said supports and having a portion overhanging the full width of the outer seat bottom and free from connection with the outer seat bottom and main frame.

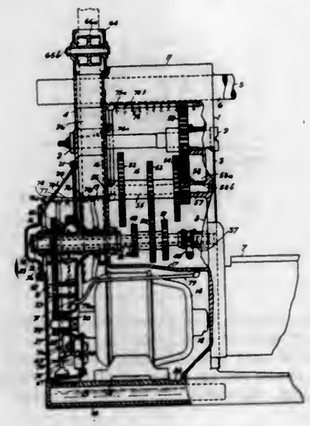
1,782,232. ORNAMENTAL FOOD PACKAGE AND METHOD OF MAKING THE SAME. ALBERT GRANDE, Boston, Mass., assignor to Beau Ideal Food Co., Boston, Mass., a Corporation of Massachusetts. Filed Oct. 10, 1929. Serial No. 398,792. 4 Claims. (Cl. 226—1.)

1. The method of making an ornamental food package which consists in preliminarily arranging in a complete pattern upon the inner curved walls of a transparent jar a plurality of food stuff units, and then filling the jar with a food stuff of contrasting color without disturbing the previously established pattern of the units on the walls of the jar.

1,782,233. LIQUID-LEVEL INDICATOR. THOMAS M. EYNON, Philadelphia, Pa. Filed Feb. 25, 1924. Serial No. 695,007. 1 Claim. (Cl. 73—54.)

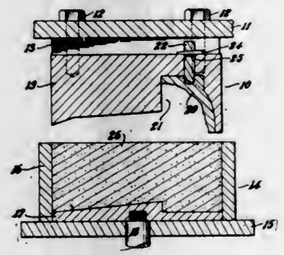
In a device of the character stated, a tank adapted to contain a liquid, a pair of open ended tubes of unequal internal volumetric capacity positioned within said tank, a pair of identical U-shaped indicating members having the upper ends of the rear arms thereof closed and the upper ends of the front limbs thereof open, and having indicating fluids in the lower portions thereof, and a corresponding pair of pipes of unequal diameters leading from the upper ends of said tubes to the respective upper closed ends of the rear limbs of said U-shaped indicating members.

1,782,234. METHOD OF WELDING AND THE RESULTANT PRODUCT. OTTO U. HOFMANN, Philadelphia, Pa. Filed Dec. 31, 1928. Serial No. 329,411. 3 Claims. (Cl. 113—112.)



1. The herein described press plate for a steam buck comprising a flat press plate, a flat back plate having its marginal wall deflected beyond its outer wall and welded to the rear wall of said press plate, said back plate having depressions with openings in the bottoms of the depressions, and welding material filling the bottoms of said openings to form a steam tight union of the juxtaposed walls of said depressions and the rear wall of said press plate.

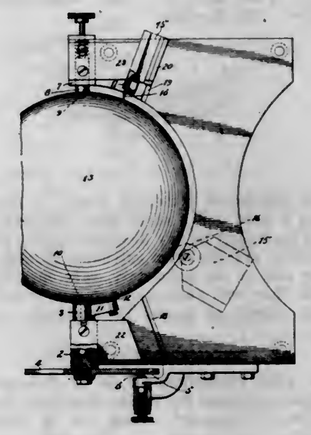
1,782,235. MACHINE-TOOL ORGANIZATION. EDWARD J. KEARNEY, Wauwatosa, and JOSEPH B. ARMITAGE, Milwaukee, Wis., assignors to Kearney & Trecker Corporation, West Allis, Wis., a Corporation of Wisconsin. Filed Jan. 20, 1926. Serial No. 82,544. 2 Claims. (Cl. 90—11.)



1. In a machine tool the combination of a plurality of transmission chambers separated by a ventilating passageway and a motor chamber substantially underneath one of said transmission chambers and connected with said passageway, a speed change transmission mechanism

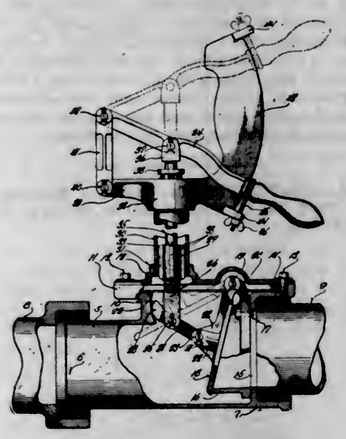
in one of said transmission chambers, gearing in the other of said transmission chambers, and transmission mecha-

nism connecting said gearing to drive said speed change transmission including a shaft passing through said passageway.



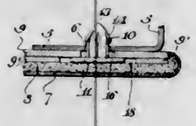
1,782,236. CLAY-MOLDING DIE. ANDREW P. KELLER, Tiffin, Ohio. Filed July 25, 1929. Serial No. 380,877. 5 Claims. (Cl. 25—27.)

1. A clay-pressing die comprising members movable toward each other to mold the plastic material between them, one of said members having a removable portion adapted to be left on the molded piece when the remainder of said member is retracted, and detachable from said piece transversely of the direction of molding pressure.



1,782,237. CUTTING MACHINE FOR GLOBE CONSTRUCTION. PETER J. KING, Detroit, Mich., assignor to C. S. Hammond & Company, Inc., Brooklyn, N. Y. Filed Dec. 13, 1929. Serial No. 413,802. 4 Claims. (Cl. 164—63.)

4. In a cutting apparatus for trimming gore sections mounted on a geographical globe comprising a globe support for holding a globe on its pole axis, means to permit said globe to be freely turned for one operation, means to hold said globe at certain predetermined positions against being turned for another operation, a movable cutter, and means for supporting and guiding said cutter in the direction to trim a gore on a globe along a meridian line while the globe is stationary and also to support said

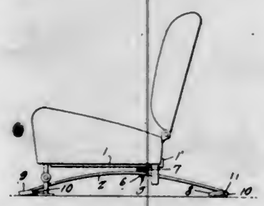


cutter in another position to trim the ends of all the gore sections on a line equidistant at all points from a pole end of said globe while the latter is being revolved.

1,782,238. VALVE. ROBERT O. KIRCHHAN, Milwaukee, Wis. Filed Mar. 9, 1928. Serial No. 260,310. 4 Claims. (Cl. 251—17.)

1. In a drain valve including a body member having an inlet and an outlet, a valve within the body member and adapted to either communicate or disconnect the inlet from the outlet, a link extended from the valve and having one end abutting an iner wall of the body member when the valve is in closed position, a cover member carried by the body member, a tube extended from the cover member, an operating rod positioned within the tube, means connecting one end of the rod with the link, said means forming a guide for the rod to maintain the same properly spaced from the walls of the tube, and means connected with the free end of the rod for actuating the rod to either of its positions.

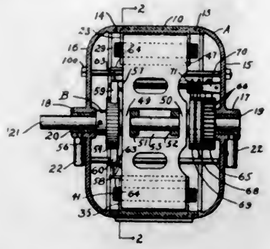
1,782,239. MEANS FOR ATTACHING UPHOLSTERY IN AUTOMOBILE BODIES. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 30, 1924. Serial No. 740,795. 20 Claims. (Cl. 45—138.)



1. In an upholstery attaching means, a fastening device having a head and a stem, said head being disposed for lateral movement in any direction within the body of the upholstery, and the stem extending through an opening in one side of the upholstery, said opening being of greater size than said stem, and a frame or panel having an opening therein to receive the projecting end of the stem.

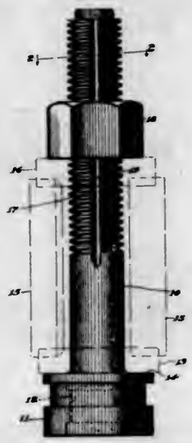
1,782,240. BAG CLOSURE. ISAAC W. LITCHFIELD, Boston, Mass., assignors to Bemis Bro. Bag Company, a Corporation of Missouri. Filed Jan. 5, 1928. Serial No. 244,601. 13 Claims. (Cl. 229—62.)

1. A bag closure formed by a fold of one end of the bag upon itself to one side of the bag, fastenings securing said end in its closed and folded condition, the folded-over portion of the bag being extended on the bag side of the fastening line a sufficient distance beyond a line of flexure in the other side of the bag adjacent to the fastening line to constitute with said fastenings a lever tending to rock said closure about said line of flexure and means on the other side of said bag adjacent the fastening line adapted to establish said line of flexure.



1,782,241. SEAT SUPPORT. LESTER B. MARVIN, Pueblo, Colo. Filed Feb. 18, 1929. Serial No. 340,814. 5 Claims. (Cl. 155—55.)

5. In combination with a pivoted seat, a bar engaging the under side of the seat, a spring swivelly secured intermediate its ends to the bar and having portions which are adapted to serve as legs for the seat and means for adjusting the spring at its point of connection with the bar toward and away from said bar.

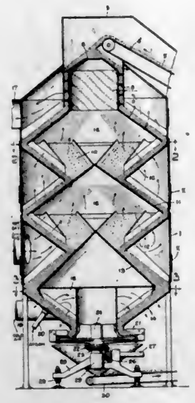


1,782,242. ELECTRIC MOTOR. BERNARD L. MCNERNEY, Minneapolis, Minn. Filed July 30, 1928. Serial No. 296,274. 5 Claims. (Cl. 172—126.)

1. An electric motor comprising a stator, a shaft journaled in said stator, a series of electromagnets mounted within said stator, a second series of electromagnets spaced from said first series of electromagnets, plate-like members mounted for oscillation upon said shaft and adapted to move between the corresponding magnets of the two series of magnets, a commutator on said shaft connect-

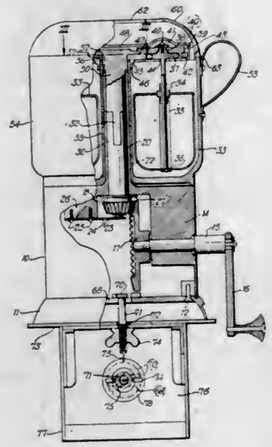
ed to said magnets for alternately energizing adjoining magnets of each of said series of magnets to cause the oscillation of said plate-like members between said magnets, and means for effecting rotational movement of said shaft through the oscillation of said members.

1,782,243. CUTTER SPINDLE. FRANK S. MCQUESTON, Winchendon, Mass., assignor to Baxter D. Whitney & Son, Inc., Winchendon, Mass., a Corporation of Massachusetts. Filed Aug. 29, 1929. Serial No. 389,132. 1 Claim. (Cl. 144—231.)



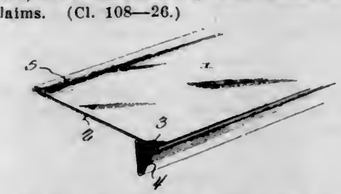
A wood shaper spindle constructed to prevent dirt and dust from accumulating between the cooperating threads of the spindle and nut, comprising, a threaded spindle portion adapted to receive a cutter, and a nut for clamping the cutter upon the spindle, the threaded portion of the spindle being provided with a clearance slot formed longitudinally of the spindle to receive the compressed dirt and dust from between the cooperating threads and constructed so that its side walls converge towards the bottom of the slot.

1,782,244. BRIQUETTE OVEN. THEODORE NAGEL, Brooklyn, N. Y. Filed Jan. 3, 1927. Serial No. 158,789. 14 Claims. (Cl. 34—34.)



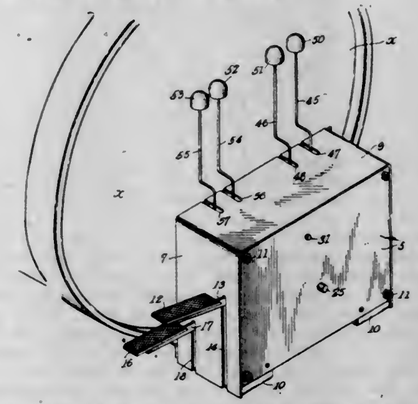
13. A continuous oven comprising a vertically arranged cylindrical shell having a restricted entrance neck com-

prising spaced apart walls concentric with the vertical axis of the shell, a spiral chute in said neck for feeding



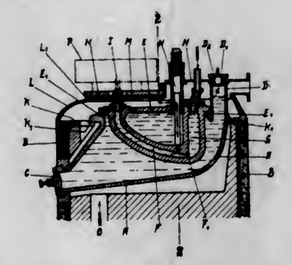
material through the neck to the body of the oven, and means within the oven to continuously feed material therethru.

1,782,245. INTERCHANGEABLE APPLIANCE FOR MIXING, BEATING, ETC. FREDERIC W. PARKHILL, Kansas City, Mo. Filed Oct. 1, 1929. Serial No. 396,487. 11 Claims. (Cl. 259—102.)



1. A device of the character described comprising a body member, driving means mounted in said member and including an upwardly projecting shaft, a receptacle on the top of said member and having a sleeve or housing enclosing such shaft, and a material treating device mounted in said receptacle with journal bearing support on the top of said sleeve and provided with a detachable drive connection with said shaft.

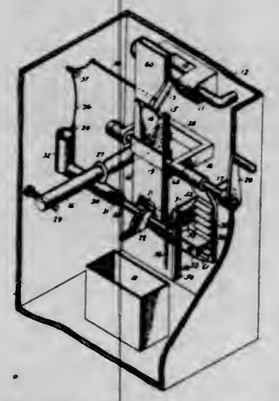
1,782,246. FLASHING. MICHAEL J. N. SCHNEIDER, Winter Haven, Fla., assignor to Walter G. Meyer, Milwaukee, Wis. Filed Feb. 14, 1930. Serial No. 428,344. 9 Claims. (Cl. 108—26.)



1. A flashing composed of sheet metal sections, each having a top plate provided with a protruding flange at its forward edge and a longitudinal hook positioned below said flange for abutting engagement with the face of a wall or partition, and a counterflashing engaged in said longitudinal hook.

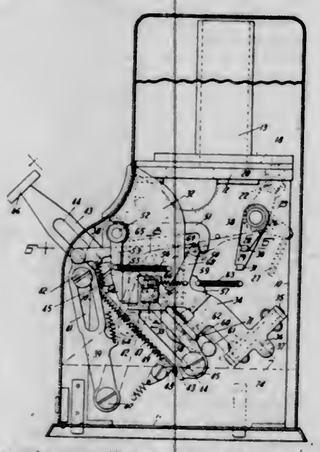
1,782,247. AUTOMATIC DRUM PLAYER. JOHN VERRECCHIA, Newark, N. J. Filed Oct. 24, 1927. Serial No. 228,168. 4 Claims. (Cl. 84—422.)

1. A drum beater comprising a pair of beater hammers adapted to strike a drum, a single pedally actuated lever to impart motion to said hammers, intermediate gear means for causing the hammers to strike alternately, and resilient means for imparting the stroke of the hammers.



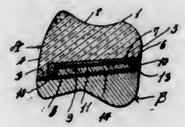
1,782,248. PRESSURE DIE-CASTING APPLIANCE. KARL FRIEDRICH WAGNER, Feuerbach, near Stuttgart, Germany, assignor to Elektronmetall G. m. b. H., Cannstatt-Stuttgart, Germany. Filed Feb. 17, 1928, Serial No. 255,093, and in Germany Feb. 19, 1927. 7 Claims. (Cl. 22—69.)

1. In a pressure die-casting apparatus a melting and charging device comprising, in combination, a closed crucible serving as a metal container, a feeding shaft extending upwards from said crucible, a substantially U-shaped casting vessel suspended by and within said



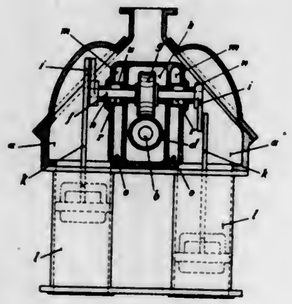
crucible, means for introducing a fluid under pressure into one end of said casting vessel, a nozzle for discharging molten metal from the opposite end of said casting vessel and a valve connecting the interior of said casting vessel with the interior of said crucible.

1,782,249. MECHANISM FOR RECEIVING AND WEIGHING COINS. MAX WOLNIK, Brooklyn, N. Y. Filed July 19, 1929. Serial No. 379,365. 20 Claims. (Cl. 194—103.)



1. The combination with a coin chute pivoted at a point intermediate the ends thereof, open at both ends thereof for the passage of coins and slotted at said ends to expose parts of said coins, of a member of a vending mechanism arranged in the path of the uppermost coin in said chute and adapted to be operated by said member on the swinging of said chute, a lever near the bottom of said chute, a coin supporting member on said lever arranged across the lower slot of said chute, means for swinging said chute for operating said vending machine member, and a flexible member connected to said vending machine member and to said lever for swinging said lever after said vending machine member has been operated whereby the coins are discharged from said chute.

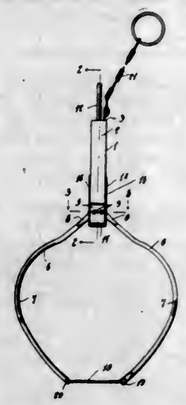
1,782,250. COIN-CONTROLLED APPARATUS. ABRAM L. ZENT, Dayton, Ohio. Filed Jan. 7, 1929. Serial No. 330,732. 17 Claims. (Cl. 194—88.)



1. In a coin controlled apparatus having a plurality of parts to be operated, an actuating member to actuate a selected one of said parts to be actuated, a coin controlled device to position said actuating member in operative relation to one of said parts to be operated, and means for imparting operative movement to said actuating member.

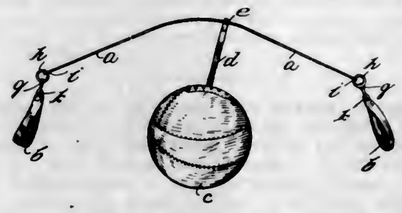
1,782,251. BICUSPID AND MOLAR BRIDGE TEETH. ROBERT W. BECK, Lewiston, Idaho. Filed Feb. 9, 1928. Serial No. 253,084. 2 Claims. (Cl. 32—9.)

1. A tooth comprising a pontic, a metal occlusal block, one of said parts being provided with two grooves, a U-shaped anchor carried by the other of said parts, said anchor being located and cemented in one of the grooves, the last mentioned part also being provided with a crimped cross member, and said crimped cross member being located and cemented in the other of said grooves.



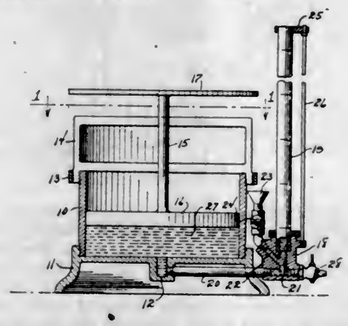
1,782,252. LIQUID PUMP. HEINRICH BEYER, Flensburg, Germany. Filed Dec. 20, 1928. Serial No. 327,240. 2 Claims. (Cl. 103—183.)

1. A power driven piston pump, comprising in combination with two parallel cylinders, a housing on said cylinders, a driving shaft journaled in said housing and having a worm portion, a piston in each cylinder, a transverse shaft in said housing above said driving shaft, a worm wheel keyed on said transverse shaft, a crank on each end of said transverse shaft, a connecting rod connecting each crank with its piston, a casing in said housing enclosing said worm gear mechanism and the corresponding portions of said shafts, and a separate chamber at each side of said casing designed to prevent the entrance of liquid under pressure from said pressure chamber into said casing.



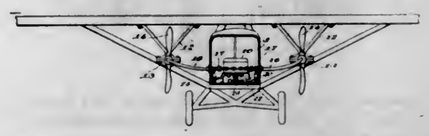
1,782,253. ANIMAL TRAP. BENJAMIN W. BOOTH, Ketchikan, Alaska. Filed Aug. 21, 1929. Serial No. 387,450. 2 Claims. (Cl. 43—89.)

1. In a trap, a body member having its opposite sides open, jaws pivotally secured to said body member, a plunger slidably mounted in said body member, said plunger having portions extending through the openings in the body member and provided with slotted openings engaging said jaws, spring means normally urging said plunger



to close said jaws, and means pivotally engaging one of said jaws and releasably engageable with the other jaw to hold the jaws distended.

1,782,254. GAME. MAX BREIDENBACH, Mainz, Germany. Filed May 20, 1929, Serial No. 364,547, and in Germany Oct. 1, 1928. 5 Claims. (Cl. 273—1.)



1. An apparatus for a ball game comprising a single elastic support, a ball carried by the support, and handles at each end of the support whereby the elastic is extended or allowed to retract by a force at the handles.

1,782,255. HYDRAULIC SCALE. GEORGE WASHINGTON CALVERT, Rushville, Mo. Filed Sept. 20, 1929. Serial No. 394,001. 2 Claims. (Cl. 265—47.)
